NCC 1985

The National Computer Conference is the biggest and most important conference in the world and it is going to be held July 15th-18th, in Chicago, Illinois this year! The NCC issues will have a readership of over 600,000 readers. With extra distribution at the show itself. This could be one of your smartest advertising moves of the year. Computerworld is giving you the opportunity to reach the show's attendees.

PREVIEW - July 8th
SHOW - July 15th
WRAP-UP - July 22nd

Our open line rate is $10.35 per line and the minimum ad size is 2 column inches (1 column x 2" at a price of $289.80). We are $144.90 per column inch. Send us camera-ready copy (negative or velox) or copy to be typeset by us at no extra charge. Enclose any logos, artwork, or borders that you want to use in your ad. Our Bulletin Board section allows you to sell equipment quickly at a low cost of $140 per inch. We also have a team of ad takers that will accept simple copy over the telephone.

THE LEADER IN COMPUTER LEASING FOR TWENTY YEARS.

Randolph Computer Corporation was founded 20 years ago when IBM announced the S/360 — back when the concept of computer leasing was brand new. The company grew by staying ahead of the industry, constantly developing new ideas to solve the problems of a fast-changing market.

Today, staffed by seasoned professionals with an average of 16 years experience in data processing and computer leasing, Randolph continues to have the expertise and management skills to not only respond to but anticipate the effects of new hardware announcements, interest rate fluctuations and changes in tax laws or delivery schedules.

As a subsidiary of Bank of Boston, Randolph continues to offer a level of financial stability unmatched in the industry.

Twenty years of innovation and experience are your assurance that Randolph will continue to meet the demands of a volatile market, providing high quality leases for IBM computers and related equipment...living up to the terms and conditions of its agreements...providing upgrades...and fulfilling all its commitments.

Call William Rooney, Vice President, 800-243-5307 (in CT, 661-4200).

CLASSIFIED ADVERTISING ORDER FORM

Computerworld's Classifieds work.

Issue Date: Ad closing is every Friday, 10 days prior to issue date.

Sections: Please be sure to specify the section you want: Time and Services, Software for Sale, Position Announcements and Buy/Sell/Swap. (Available upon request: Software Wanted, Real Estate, and others).

Copy: We'll typeset your ad at no extra charge. Please attach CLEAN typewritten copy. Figure about 25 words to a column inch, not including headlines. Any special artwork should be enclosed with your ad also. Logos must be submitted on white bond paper for best reproduction.

Cost: Our rates are $144.90 per column inch. (Each column is 1 13/16") Minimum size is two column inches (1 13/16" wide by 2" deep) and costs $289.80 per insertion. Extra space is available in half-inch increments and costs $72.45. Box numbers are $15.00 extra per insertion.

Billing: If you're a first-time advertiser, (or if you have not established an account with us.) WE MUST HAVE YOUR PAYMENT IN ADVANCE, or a Purchase Order Number. Any extensions on this policy must be made through our Credit Department.

General Cable & American Software: The Right Decision Brings The Right Results

Seeking a coordinated plan to improve the performance of its distribution, production, and marketing operating groups, General Cable Company, a unit of the Penn Central Corporation, decided on American Software and achieved results!

General Cable discovered "The Power of the Right Decision™" when it purchased American Software's Demand Forecasting, Inventory Planning, and Distribution Requirements Planning software systems. General Cable also discovered the many advantages which these systems provide to companies around the world—happier customers, as well as operating and freight savings, smoother manufacturing schedules, improved inventory turns, and maximized return on plant investment.

Join General Cable and over 300 of the Fortune 1000 by discovering American Software's applications software systems: MRP-8® (manufacturing), DRP-8® (distribution), and FINANCIAL-8® (financial operations).

Make the right decision for the right results!

American Software: The Right Decision Because We're the Best.™

MAP: GM's Attempt To Set Standards

By Ron B. Koll

The flurry of activity aimed at automating the factory floor is creating a nightmare for those responsible for networking. GM's Manufacturing Automation Protocol is an attempt to bring order to this area.

19

One User Gives MAP a Try

By David C. Scott

Deere & Co., the equipment manufacturer and a leading-edge user in factory automation and CIM, decided to incorporate MAP in a pilot project in 1984. Here's what the company found out.

27

But How Do You Cost-Justify It?

By Alan Sood

Factories that wait "just one more year" may find out that was the year the competition pulled out in front. CIM is a complicated investment, but these strategies will help you justify the expense.

29

Computer-Integrated Manufacturing: The Key Word Is *Integrated*

By Stan Kolodziej

CIM is beginning to tie together all the different pockets of automation that exist in the factory. If this integration is going to be successful, MIS had better get involved now.

32

Automation Heats Up At Lukens Steel

By Lee White

Lukens Steel took a hard look at its future and made some big changes in how it was doing business. The result? A real success story, complete with a place among the Fortune 500.

35

Decision Support Systems — New Tool For Manufacturing

By Allen F. Ayers

When the problems are so complex they change while you're trying to solve them, the answer is a decision support system. See how they can help manufacturers.

39

Micro-Based CAD Systems — From Plain Vanilla To Thirty Flavors

By Stan Kolodziej

The price of computer-aided design systems has curled the hair of some would-be users. Now micros have brought those prices down and opened a market 10 times larger than the traditional CAD field.

41

JIT: What Is It? And How Does It Affect DP?

By Lee White

Just in Time encompasses a whole philosophy of manufacturing. It worked in Japan and now it's beginning to work here, too. It may affect the way you do your job.

43

Cadd/CAM Acquisition: Who's In Control?

By Joel N. Orr

Engineering, manufacturing and DP too often fall into an adversarial relationship. This can be a crisis when it's time to implement Cadd/CAM.

The New Cincom: experience for integrated

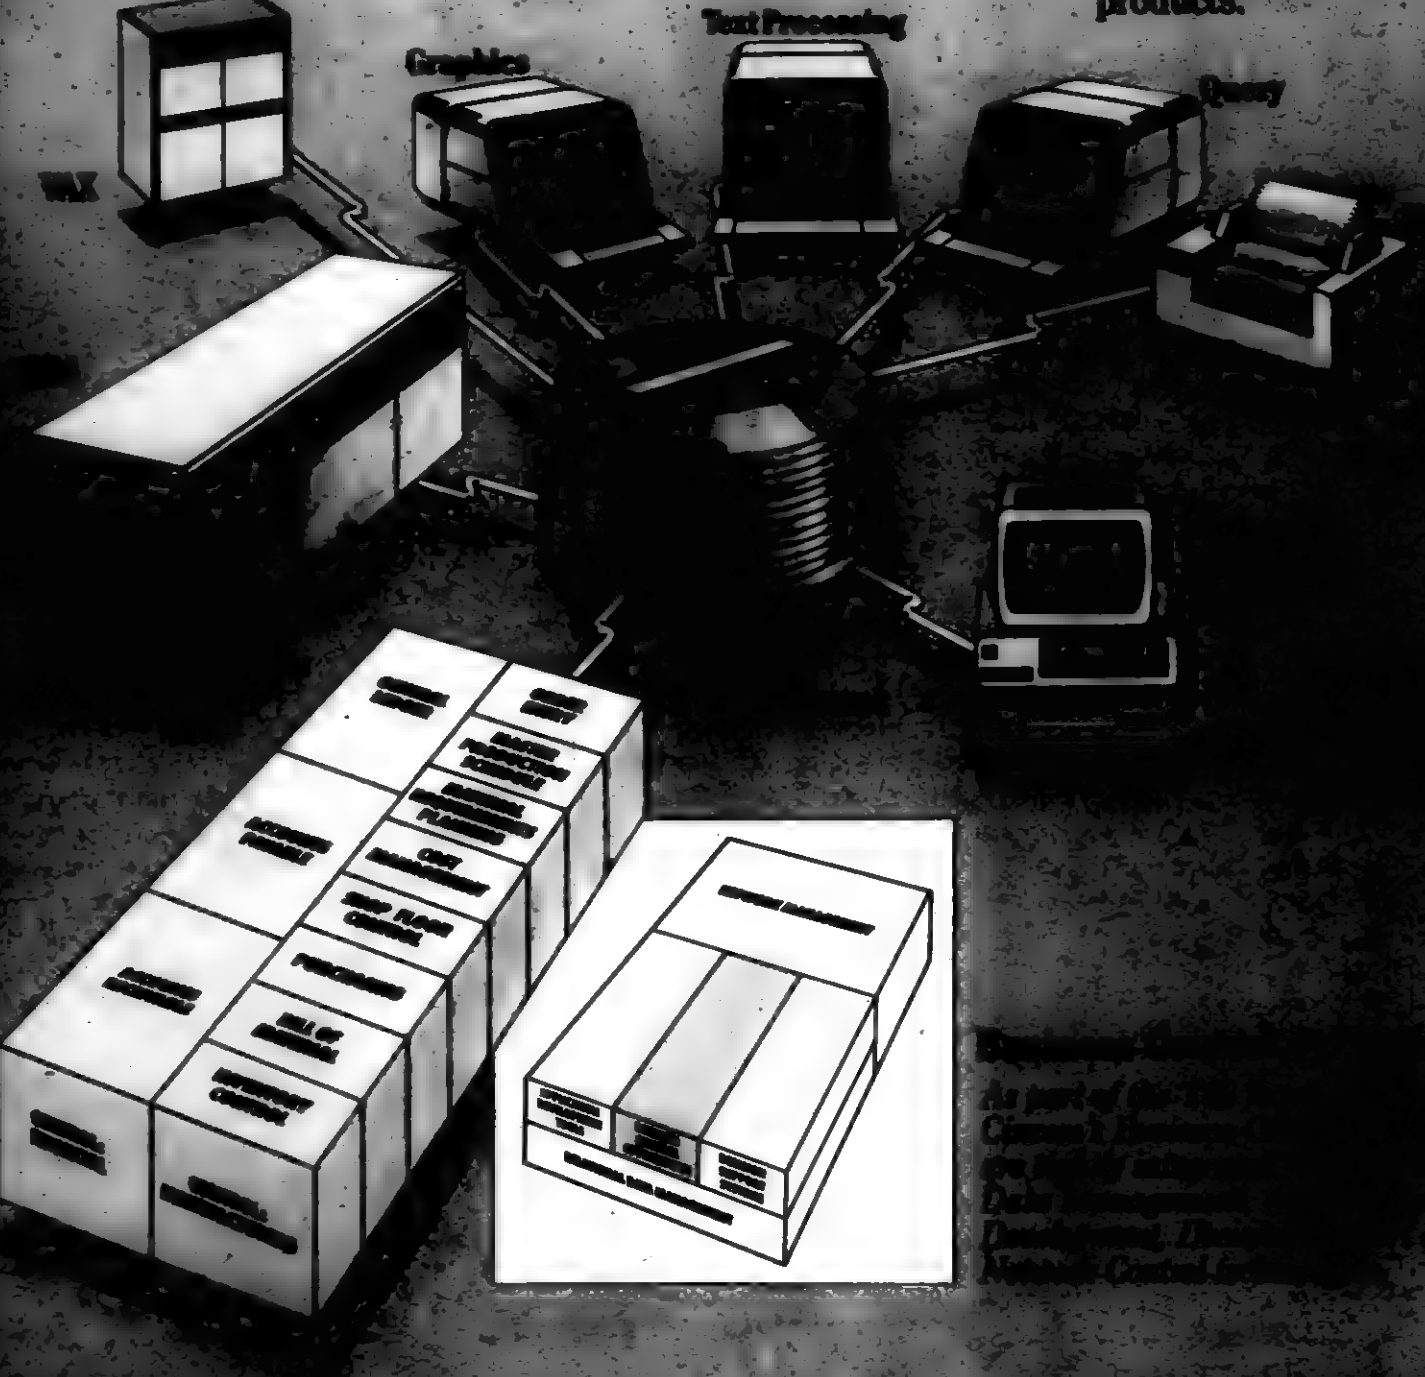
The New Cincom's Business CONTROL™ Systems are appropriately named. That's because they deliver the *control* you need to optimize production, reduce costs, and improve profits.

The New Cincom is uniquely qualified to deliver powerful integrated control in these vital areas. Here are three important reasons why:

#1 A Broad Scope of Proven Applications

The New Cincom Business CONTROL System applications help you perform all of the *predictable* functions common to the manufacturing environment. They also provide the capabilities you need—planning, execution and financial tracking—to improve dramatically your company's profit picture.

Our CONTROL™: Manufacturing system (MRPS) is the perfect example. It satisfies the needs of a wide variety of manufacturing environments including discrete, repetitive, and batch/process. CONTROL: Manufacturing systems are in use today by food and drug manufacturers, automotive suppliers, government contractors and manufacturers of a wide range of industrial and consumer products.



As part of the [illegible]
Cincom's [illegible]
are [illegible]
Data [illegible]
Development. [illegible] and
Network Control [illegible]

Proven technology and manufacturing CONTROL™.

Virtually everything you need to control your manufacturing world is available with Cincom's CONTROL: Manufacturing:

- **Bill of Materials and Routings**
- **Material Control**
- **Master Production Scheduling**
- **Material Requirements Planning**
- **Shop Floor Control**
- **Purchasing**
- **Cost Management**
- **Order Entry**

And, each CONTROL: Manufacturing component is tightly integrated with the corresponding components of our CONTROL: Financial systems:

- **Accounts Receivable**
- **Accounts Payable**
- **General Ledger**

As a result, complete financial tracking and reporting is assured.

[illegible]

Cincom's Business CONTROL Systems are an integral part of the "TIS" family [illegible]. They are [illegible] our highly acclaimed [illegible] Generation [illegible] MANTIS®

For *unpredictable*, ad hoc information needs, Cincom offers decision support and data retrieval systems. Our network management software and the availability of our IBM or DEC™ VAX™ modules allow you to establish multi-plant and/or single plant integration. In short, you can create a truly "borderless" system that will serve your entire organization for years to come.

#3 Extensive Implementation Experience

Cincom Systems has been helping manufacturing companies implement manufacturing and financial systems since the late 1970's. Our *people* who support these products are some of the best in the business. From education, to documentation, to on-site service; Cincom knows what it takes to produce the kind of productivity improvements today's manufacturing organization needs. In many ways, the experience of our people is as important a part of our Business CONTROL Systems as the software itself.

Powerful Control For Today And Tomorrow.

Scope. Technology. Experi- [illegible] and enjoy the benefits of truly integrated control for years to come.

So take control. Call or write us today and we'll rush you a more detailed look at our integrated Business CONTROL Systems. We'll even arrange for a personal demonstration. When you see for yourself how powerful and productive these systems really are, then you'll understand why the words "Excellence in software technology" fit so well under our name.

Find out more about our Business CONTROL Systems by requesting our brochure "THE NEW CINCOM: WHAT EVERY INFORMED SOFTWARE BUYER SHOULD KNOW.

Cincom Systems, Inc.

Editorial

Blue Collar for Big Blue?

In the eyes of the computer industry, the factory floor represents an area of virtually untapped purchasing potential. Almost all parts of the manufacturing arena have withstood the onslaught of computers, particularly of integrated computer systems. Now that the assault on the desktop has slowed, the fight for the factory may be about to begin.

Ten years ago, computers as tools for white-collar workers was an unheard-of idea. Recent activity in that area, however, has been nothing short of legendary, both in the form of technology introduced by the vendors and in the thirst for computing capacity shown by the new user groups. Even as the office market is evolving (and at the moment softening), vendors are sniffing out new and unclaimed territory, which is almost certain to be the factory floor.

Although automation is certainly not a new idea in the manufacturing environment, most systems in use today are assembly line or stand-alone. The computer revolution/evolution that swept up the office worker yesterday is heading straight on for the factory worker today. Computer-aided design and manufacturing, manufacturing resource planning, robotics and the new buzz word, computer-integrated manufacturing, will not happen overnight, however. Factory automation and integration will be subject to the same waves of technological advancement and user demand that carried along office automation and the microcomputer phenomenon. In the meantime, vendors are working toward a long-range goal of automating the factory and then tying it into corporate systems linked to offices and the data center.

Notwithstanding that this will be a long-term conversion and persuasion effort, computer makers are beginning to gear up for this new market. And even as the stampede is set to begin, the industry is wondering (and worrying about) how powerful a factor IBM will become.

In a recent speech marking Honeywell, Inc.'s centennial, James Renier, Honeywell vice-chairman, summed up the hopes of many other computer vendors when he predicted that IBM will not be able to hold sway over the industrial segment of the marketplace to the same extent it has over the other computer markets. In the meantime, vendors are waking up to this new market, reassessing resources for the factory, beginning product development and market strategy and trying to jump in before IBM — their seemingly eternal nemesis — gets there first.

None of this will happen overnight, but the seeds have been planted. Now we can wait and watch the rush for positioning and users can hope to take advantage of the product harvest.

Insider

A Better Cost Cutter

By Adam S. Zais

Manufacturing enterprises are beginning to realize that information automation is a better cost cutter than production automation. This will remain the primary driving force behind this fast-expanding market.

Computer-based manufacturing planning and control systems have finally shed the image of being a technology that is better in theory than in practice. Manufacturing resource planning (MRP II) is not only a hot topic, it is fast becoming a vital topic if manufacturing enterprises are to survive. The question many companies now face is when — not if — a system will be implemented.

Market shipments are growing at a compound annual rate of 37.4% through the end of this decade. Nearly 51% of the domestic manufacturing plants will have installed some form of manufacturing information system by 1990, according to a recent research report by International Data Corp.'s Computer Integrated Manufacturing Service. This figure represents a conservatively estimated investment of more than $16 billion in the next five years.

The long sought-after integration of manufacturing and design within manufacturing operations — sometimes called computer-integrated manufacturing (CIM) — is taken a step closer to reality with the development of interfaces designed to link design and manufacturing systems. These links are typically being established between either MRP II or data collection systems and the product design data base.

The introduction of increasingly powerful microcomputers has created a market for smaller, less expensive and more easily implemented and managed systems. In fact, the microcomputer segment of this marketplace is showing the most rapid growth as a heretofore unserved end-user — the small manufacturer — is jumping on the manufacturing information system bandwagon.

There has been a tremendous move away from in-house development — "made" systems — toward packaged software.

The value of the software content of the total system sale is rising. In 1982, the software percentage in the average system sale was 13.5%; in 1984, that percentage had reached 27%. As the average percent value of software content rises, the average value of the total system is dropping at a rate of approximately 6% to 7% compounded on an annual basis. By factoring this out, a total system (hardware and software) that costs $400,000 in 1984 will cost $250,000 in 1990.

Many available systems offer vastly improved software capabilities and a greater degree of module integration. This is transparent to the user who sees only a whole system. These systems more accurately reflect the manufacturing organization's real day-to-day needs by offering developments such as the following:

- On-line — Users have access to the system through transaction terminals or linked micros.
- Real-time — The system supports the user in his time frame, not in a batch mode.
- Net-change — The system continuously updates itself following every transaction; also not a batch mode of operation.

Developments such as these enable users to distribute specific application and information requirements to areas of the plant or office on an as-needed basis, while simultaneously effecting a data base integration strategy (for example, linking the shop floor to the front office to the engineering/design staff).

Manufacturing is increasingly an information-driven activity. Manufacturing information systems are, essentially, information-gathering, decision-making and business-planning automation systems that utilize the abilities of the computer to optimize the use of information in an automated organization.

The philosophy of present-day MRP II systems offers a blueprint for companies to begin designing a single information system that integrates financial, manufacturing, engineering and administrative applications under data base technology. The corporate information management solution will mirror this structure on a much larger distributed scale. This enterprise-level data base system will be a logical but physically linked group of data bases, not one gigantic machine. A heterogenous distributed data base system implementation topology will be the lasting CIM design in the factory of the future.

XEROX

Each of our manufacturing system experts has a record.

Our 200 Xerox APICS certified experts are proud of their record. They should be. It's the best in manufacturing software systems.

That record didn't come easily. Over the last 15 years this group has installed hundreds of successful systems. From high tech start-ups to billion dollar divisions of Fortune 500 companies.

That's the kind of experience you can put to work for you. It's part of the package when you call Xerox. We can help your company grow with the most complete manufacturing system on the market today. It's totally integrated and ready to run on IBM computers. Our customers call it a total solution.

If you'd like to avoid costly mistakes, call the people with the best record. Xerox Computer Services. 800-223-3799. Or write Ralph Merbaum at 5310 Beethoven Street, P.O. Box 66924, Los Angeles, CA 90066.

Q&A

Jim Stifler is director of Industrial Automation Marketing at IBM. Computerworld Focus *talked with him about IBM's expanding role in computer-integrated manufacturing (CIM).*

IBM has been criticized in some quarters for not actively aiming a more aggressive marketing strategy at the factory floor but instead concentrating almost exclusively on management information systems [MIS]. Do you think that's valid?

No. A lot of information is coming from IBM systems that people in manufacturing use today — applications attuned to production scheduling, inventory, bills of material, graphics and so forth. The fact that we've taken our Personal Computer technology and ruggedized it to use in the harsh environment of manufacturing represents an interest on our part to expand the use of IBM systems in the manufacturing area.

Manufacturing seems to have grown in pockets of automation distinct from each other — the factory floor, manufacturing resource planning [MRP], computer-aided design [CAD] and MIS. Do you see IBM tying these isolated areas together?

Customers are certainly asking for more integration of these manufacturing components. Companies spending money on factories are asking to have the planning system, which has traditionally been in the data processing arena, tied very closely to what's going on in the plant on a minute-to-minute basis. In the past, people may have been satisfied with overnight reports.

Today, however,, with new manufacturing technologies, with flexible assembly or flexible machining operations, you really need access to things like scheduling, bills of material and parts data. This means MIS will be playing a larger role because MIS has traditionally been the controlling factor in planning systems. Planning has a major impact on purchasing, shipping and receiving, accounting, cost accounting and order entry — all of those things that drive manufacturing.

At the engineering level, we're seeing that if customers are handling numerical control [NC], for example, they want to have a terminal doing functions similar to those of an IBM Industrial or Personal Computer — they want to be able to look at a drawing on a screen and also use that same system to inquire into a bill of material, specification files and tooling and then be able to download the actual NC instructions into that device and drive the NC tool. When you tie all those requirements together, the result is a device like an industrial computer that, for less than $10,000, has the ability to get at the planning data as well as the graphics and NC data — basically a universal workstation.

Where should the focus of CIM be placed in a user's organization?

IBM's view right now is that CIM is something customers build. No single vendor, to my knowledge, can now provide CIM in total.

Customers really need to have a plan for product strategy, and they need to understand what will drive that product strategy to make them more competitive in their particular markets. Depending on the industry, customer competitiveness hinges on factors such as better planning, improved order entry, the way customers participate in their specific markets, their market share and customer service. It can also come from something more directly product-related — something like CAD, for instance, that can allow customers to be more competitive because they can get their designs out faster than other manufacturers. Customers want to sit down with us and start planning CIM from any one of these areas. What they want from us is the integration of communications, data and cross offerings of products in all CIM areas.

What do you see as the major obstacle in implementing CIM?

Getting a commitment from high-level management to agree to the changes in a business that CIM warrants in order to become more productive.

Too many of us in organizations tend to delegate problems to lower levels and order them to be fixed. CIM has to involve top-level executives directly because it involves so many areas within the corporate structure. Many of those business procedures still used today to justify corporate investments — decisions based on short-term; payback considerations — just can't be applied to something involving the resources and long-range planning of CIM. Resistance by top management to making commitments to these long-term goals will be one of the key inhibitors to CIM for the next five years.

IBM recently entered into OEM agreements with Calma Co., Computervision Corp., McDonnell Douglas Automation Co. and other CAD systems vendors. Do you see that increasing?

Yes. In the industrial environment, we've opened relationships with a number of what we call industrial distributors, organizations that have traditionally sold devices such as programmable controllers and instrument packages to manufacturing and process people. These people now carry our computer line.

We've also opened a number of OEM agreements with manufacturers of programmable controllers, machine tools and other industrial instrumentation, and we're expanding our traditional value-added remarketer channels. Because the technology is moving so fast, many companies that once built their own hardware now find their sales volumes can't justify the necessary research and development to bring state-of-the-art technology to the market. Such turnkey systems vendors are finding it easier to buy hardware and add to it.

What area within IBM would guide a customer toward CIM?

We have an organization called the Industrial Sector, which is part of our marketing group. Within the Industrial Sector we have a number of specialists who work with our branch-office people. A customer can have one of his marketing representatives or industry specialists bring in someone from our Industrial Sector group to discuss IBM's industrial products and planning. We also have demonstration centers to show our products and analyze what the customer ought to do first. Beyond that, we also provide application transfer teams, also part of the Industrial Sector, which conduct joint studies between IBM and a customer concerning the customer's needs in CAD/CAM, industrial automation and business planning.

Who Really Pays Hacker's Phone Bills?

The Q&A clip from the March 20, 1985 issue of *Computerworld Focus* recently appeared in my in-basket, and I felt that in order to assert the innocence of the Tandy Corp. Model 100 portable computer, I should respond to the column.

The interview with the computer hacker who uses his knowledge to break through computer security to do such harmless things as "getting secret codes so I can make free long-distance calls" reflects an attitude adopted by other dishonest people to minimise their crimes. Most of us are astute enough to realise the costs of his "free" calls are passed on to the rest of us consumers.

I can't help but flinch when I see an excellent product like the Model 100, which has proved to be an outstanding performer in so many applications, used for dishonest purposes.

The factory of the future is no longer a theme at some trade show.

It's become a definable, realizable goal for manufacturing executives. The product of a hard look at manufacturing costs, quality standards, and efficiency targets, it's the factory we'd build today if we could. It's the factory we'll all have to build tomorrow to survive.

In the factory of the future, automation and integration are key. So is an overall design that allows for growth and minimized obsolescence.

We think the factory of the future will be built around our Sperry CIM system. Because it's a comprehensive, secure data base that can bridge different islands of technology, and make them part of one powerful system.

The power of Sperry CIM lies in a distributed data base which interacts with engineering design, production control and data collection systems, as well as business systems that allow you to integrate from conception, to the shop floor, to accounts payable and order processing.

What's significant is that Sperry CIM is a transportable software system that won't become obsolete. For an Information Kit, or for a demonstration of any Sperry CIM product at the Sperry Productivity Center nearest you, call toll-free **800-547-8362.** Or write Sperry Corporation, P.O. Box 500, Blue Bell, PA 19424-0024.

Costly Gear, Bad Training

Companies that invest large dollar amounts in hardware and software to solve their problems are going to be disappointed; "only people run businesses," according to Al Lanick, a consultant with Advanced Systems, Inc., a Chicago-based management consulting firm specializing in manufacturing training.

Lanick stressed the importance of training to support the implementation of elaborate and costly manufacturing systems. Reaction has ranged from total acceptance to total rejection. With the latter, an attitude of "Why should I invest more money when I'm buying all these expensive systems?" predominates. But Lanick contends that the only way to make the systems successful is to provide formalized training. Good training also allays worries about job security and helps build the confidence workers need to ensure good implementation.

Lanick cited the differences in training methodologies for management information systems (MIS) personnel and for manufacturing staff. "Unlike MIS, which has had a steady growth of professionals and a growing discipline in terms of how to use systems, manufacturing to some extent has lagged in adopting some of the new technologies," he explained.

Most effective training is done on an inhouse basis using a facilitator in a small group setting, according to Lanick. The facilitator, usually a person from the plant or facility, understands the business and speaks the jargon of the industry.

Two training audiences exist, Lanick said. The first, top management, is responsible for making sure the system does what it is billed to do; the second consists of those who have direct line responsibility for actual implementation.

Although the cost of comprehensive training varies, company size is not as important as the length of time the training might take. "I have seen $10 million companies that have spent $50,000 to $70,000 on manufacturing education, and much larger companies that have spent less," Lanick added.

No Prime Cuts Here

Each day seems to bring more bad news about layoffs, cutbacks, hiring moratoriums and "common vacations" from computer and peripherals manufacturers. The slowdown is affecting companies from the Pacific's Silicon Valley to the Atlantic's Route 128.

It was refreshing to hear that Joe M. Henson, president of Prime Computer Corp. in Natick, Mass., expects Prime to hire 1,000 additional people this year. In his address at the annual stockholders' meeting in Boston on May 15, Henson said most of the jobs will be in sales, research and development and computer-aided design and computer-aided manufacturing (CAD/CAM).

A company spokesman pointed out that the CAD/CAM market itself is growing at about 30% to 40% a year and said Prime will certainly meet or exceed those figures. Last year [CAD/CAM] accounted for about 16% to17% of Prime's total business at a growth rate of about 35%.

Although representatives from Prime would not divulge exact numbers, Bob Sanches, manager of human resources, CAD/CAM and Workstations/Terminals Group at Prime, said the increases in numbers of jobs could approach 20%. All of the CAD/CAM positions will be in the Natick/Framingham, Mass., locations.

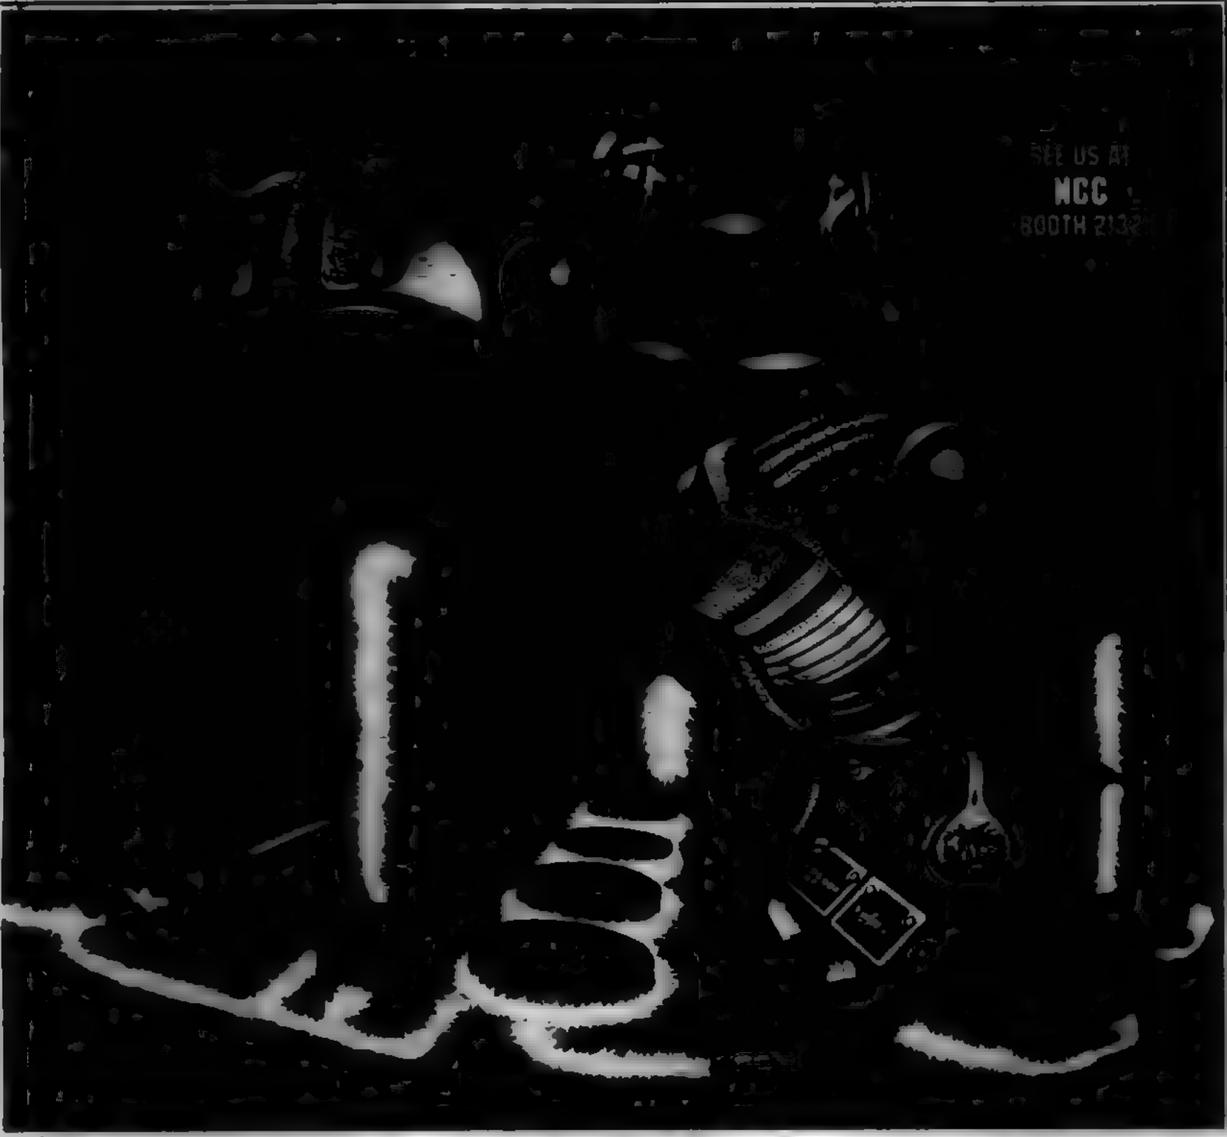
OSI Demo in November

Boeing Computer Services Co. of Vienna, Va., recently announced it will join with General Motors Corp. in cosponsoring a multivendor demonstration of the International Standards Organization's (ISO) Open System Interconnect (OSI) protocols.

The Boeing/GM demonstration will take place at the Autofact Factory Automation trade show in Detroit in November. The joint demonstration will feature interconnected OSI 802.3 and 802.4 networks via the Internet protocol, layer 3 of the OSI reference model. According to Laurie Bride, manager of network technology at Boeing's corporate headquarters in Seattle, Wash., participants include Intel Corp., AT&T Information Systems, Inc. and Honeywell, Inc. on both 802.3 and 802.4; Kodak Corp., Motorola, Inc. and Sun Microsystems, Inc. on 802.3; and IBM, Hewlett-Packard Co., Digital Equipment Corp. and Allen Bradley Co. on 802.4. In addition, the demonstration will operate with the OSI Transport, Session and File Transfer protocols, levels 4, 5 and 7 of the reference model.

Prior to the November event, Boeing has invited several major computer manufacturers to participate in the creation of an OSI testing center at its headquarters in Bellevue, Wash. Robert L. Dryden, president of Boeing Computer Services, said the testing center will be an open facility and encourages users to visit.

Doane Perry, editor of "Communications and Distributed Resources Report" for International Data Corp. in Framingham, Mass., said Boeing Computer Services is expected to grow but the aircraft industry may not. If that happens, the computer arm of Boeing could be a force in the industry, much like H. Ross Perot's Texas-based Electronic Data Services recently bought by General Motors. "Boeing Computer Services has always been quite innovative and resourceful," Perry concluded.



The Universe 2400 is the first 32-bit supermicro computer built for demanding environments.

[illegible]
The tower model Universe 2400 has a steel enclosure, tough plastic outer panels, and a steel pedestal. VME-standard PC boards with screw-in mounts and gas-tight connectors help handle high temperature, vibration, and shock.

THE 32-BIT PATH TO [illegible]
With a 32-bit, 4KB cache and a 12.5MHz 68000 microprocessor, Universe 2400 runs with no wait states at 1.25 MIPS. And its 40MB, 32-bit VMEbus supports full 32-bit data transfers to 32-bit memories and disk channels, and provides a clean path to the 68020.

THE FIRST INDUSTRIAL STRENGTH SUPERMICRO

ISO/OSI/MAP STANDARD NETWORKING
Our 7-layer ISO-standard UniverseNet™ ties Universe systems into multi-vendor networks including Ethernet (802.3) and the General Motors MAP network (802.4), making the 2400 an ideal Computer-Integrated Manufacturing (CIM) platform.

UNIX SYSTEM V AND REAL TIME
UN/System V (derived from UNIX System V under AT&T license) gives you application compatibility, plus powerful real-time extensions, contiguous files, shared data, and record/file locking.

UNDER $8,000, QUANTITY 100
That includes 12-slot VME chassis, 512KB 32-bit RAM, 4 serial ports, 68000-based SCSI/SASI channel controller, 20MB Winchester, and floppy, in tower, rack, wall, or table mount models.

In Brief

DALLAS — Intel Corp. of Santa Clara, Calif., and Westinghouse Electric Corp. of Pittsburgh, Pa., announced they had signed a letter of intent to jointly develop software products to conform with General Motors Corp.'s Manufacturing Automation Protocol (MAP) specifications.

Under the agreement, announced at a recent MAP users group conference, MAP software developed by the two companies will become the exclusive property of Intel, and Westinghouse will retain a royalty-free license to use and distribute MAP software with the sale of Westinghouse hardware products.

NORWALK, Conn. — During the next 10 years, U.S. industry will purchase a total of about 250,000 industrial robots, according to a report issued by International Resource Development, Inc. (IRD). IRD also predicted that nearly 60,000 of these robots will be equipped with vision capabilities enabling them to operate with more flexibility and safety than blind robots.

The IRD report said that although prices for vision-capable robots, currently averaging about $150,000 each, will fall rapidly, buyer resistance will likely remain for several years because of reliability problems and design bugs plaguing today's robot vision systems. IRD added, however, that recent advances in signal processing semiconductor chip sets have helped boost the performance of vision-capable robots, and even greater performance improvements are expected over the next few years.

The report also mentioned that, contrary to some industry experts, U.S. robot vendors do not seem likely to be displaced by Japanese vendors. Further information is available from IRD, 6 Prowitt St., Norwalk, Conn. 06855.

FALLS CHURCH, Va. — The American Production and Inventory Control Society (Apics) has announced publication of its 1985 Spring Seminar Proceedings, "Computer Integrated Manufacturing and Flexible Manufacturing Systems." Included in the proceedings are articles dealing with effective planning for technological change, management of implementation of advanced systems and price and performance evaluations of flexible manufacturing systems.

The 346-page book, order number 40666, costs $20 from Apics Publications Order Department B, 500 W. Annandale Road, Falls Church, Va. 22046.

MADISON, Ga. — SEAI Technical Publications has announced two new publications on computer technology and manufacturing.

Artificial Intelligence Applications for Manufacturing is a review of the fundamentals of artificial intelligence with a description of more than 120 commercial products applicable to manufacturing. The 194-page book is available for $110.

The 1985 Handbook of Manufacturing Software is divided into two parts: Part I reviews the fundamentals of computer technology and presents a description of major application areas; Part II includes cost, computer compatibility and availability for more than 500 software programs applicable to manufacturing and industrial processes. The listing includes programs for mainframes, minicomputers and microcomputers. Computer applications for robotics are also covered. The handbook sells for $197.

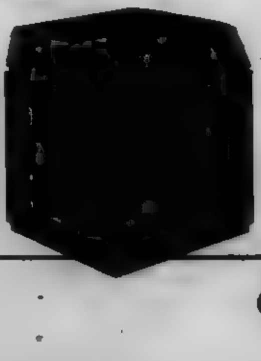
Both books can be ordered from SEAI Technical Publications, P.O. Box 590, Madison, Ga. 30650.

CHELMSFORD, Mass. — Apollo Computer, Inc. has signed with Siemens AG of West Germany an OEM contract projected to be worth $100 million over the next three years. Under the agreement, the Power Engineering and Automation Division of Siemens will purchase Apollo's Domain workstations for computer-aided design use in computer-integrated manufacturing networks, computer-aided software engineering and expert systems.

NEW YORK — The Dun & Bradstreet Corp., parent to McCormack & Dodge Corp. in Natick, Mass., recently announced the acquisition of the manufacturing software business of Rath & Strong Systems Products, Inc. (RSSP), the Dallas-based developer of manufacturing information software systems. RSSP will become a unit of McCormack & Dodge.

RSSP's software product, Production and Inventory Optimization System (Pios), is an on-line, real-time manufacturing control system made up of eight modules that can be purchased and implemented separately. McCormack & Dodge will incorporate Pios into its Millennium Series of business application software products, thus expanding McCormack & Dodge's software offerings into the manufacturing environment.

"The Rath & Strong product is a pretty well respected product, but it's a big manufacturing system in terms of its capabilities. It may be difficult for McCormack & Dodge to move [Pios] through the mid-size manufacturers that it does a lot of its business with," Damian Rinaldi, director of the Software and Services Information Program at International Data Corp. in Framingham, Mass., explained. Rinaldi also said the integration task will be fairly extensive, but "McCormack & Dodge has shown remarkable patience in terms of its long-term strategizing. The choice [of Pios] makes real good sense for the long term; in the short term, I don't know how many successes they're going to have with the product," he concluded.



Turn your typist into a typesetter
As easy as 1 - 2 - 3

Stated simply – A typeset document communicates more effectively than a typewritten or line-printed document.

"But," you ask, "how do I get from here (typist at typewriter) to there (typesetter at workstation)?"

Allied Linotype has a series of solutions – in fact, three of them, known as: Series 100, Series 200 and Series 300. Each integrates personal computers into the only typesetting system with the Mergenthaler type library. Choose the Series that provides your business with a "custom-fit" typesetting system. The Series you choose depends upon your individual requirements.

Series 100 brings genuine imaging and typesetting into the automated office. With Macintosh™ and off-the-shelf software, graphics and text are output on Linotype laser typesetters. The result – crisp, highly reproducible text and graphics output.

With Series 200, your personal computer, such as the IBM® PC, acts as a workstation for text composition and page make-up. With advanced composition software and the Linotron® 101 or 202 typesetters, your personal computer becomes a powerful, multifunctional composition tool.

Series 300, with its Bi-directional Communications Interface (LCI), makes commonplace word processors or personal computers working members of the CRTronic® typesetting family – the world's most popular desktop, digital typesetting system.

Reasons for bringing typesetting into your office are numerous; cost savings, time savings, and confidentiality are just a few. Your reason for choosing Linotype is simply this – no one else can provide you with exactly what you need – as easily as 1 - 2 - 3.

For more information, call us collect at (516) 434-2016 or write:
Allied Linotype, 425 Oser Avenue,
Hauppauge, NY 11788.

Introduce Your Database To Intelligence Of A Higher Order.

The intelligence we speak of isn't science fiction. It's science fact.

In fact, it's the Information Expert™ from Management Science America, Inc. The fourth generation technology that not only recognizes the needs of manufacturers but addresses them.

For example, Information Expert, along with our current manufacturing, cash management and human resources products, is the foundation for computer integrated manufacturing. Because Information Expert allows all your software systems to work in a completely new manner. Together. In unison. In seconds. Whether it's with existing software or new software. Whether they're our material requirements planning, inventory control, historical forecasting, shop floor control modules, or someone else's.

But not only will we put your systems on speaking terms, they'll all be speaking the same language. English (or any local language input you use). There's even a data dictionary so nothing will ever sound like Greek.

If it appears we're saying end users will find our system easy to use for designing reports, we are. Our menus guide you through the process with such ease and intelligence, they'll even tell you the proper responses to use for whatever job you need.

Information Expert also provides fourth generation language that your data processing staff can use for applications development. What's more, it's more efficient and easier to use than COBOL. So you can do in minutes what used to take hours. Or do in hours what used to take days.

Then, to speed things up even more, our system ignores all boundaries and allows borderless retrieval of information. That way, you can get all the information you need. Not all the information you don't need.

All of which proves what 1500 manufacturers already know. If you want more intelligent software, go to a more intelligent software company. MSA. For more information, call Robert Carpenter at 1-404-239-2000.

Intelligence Of A Higher Order.℠

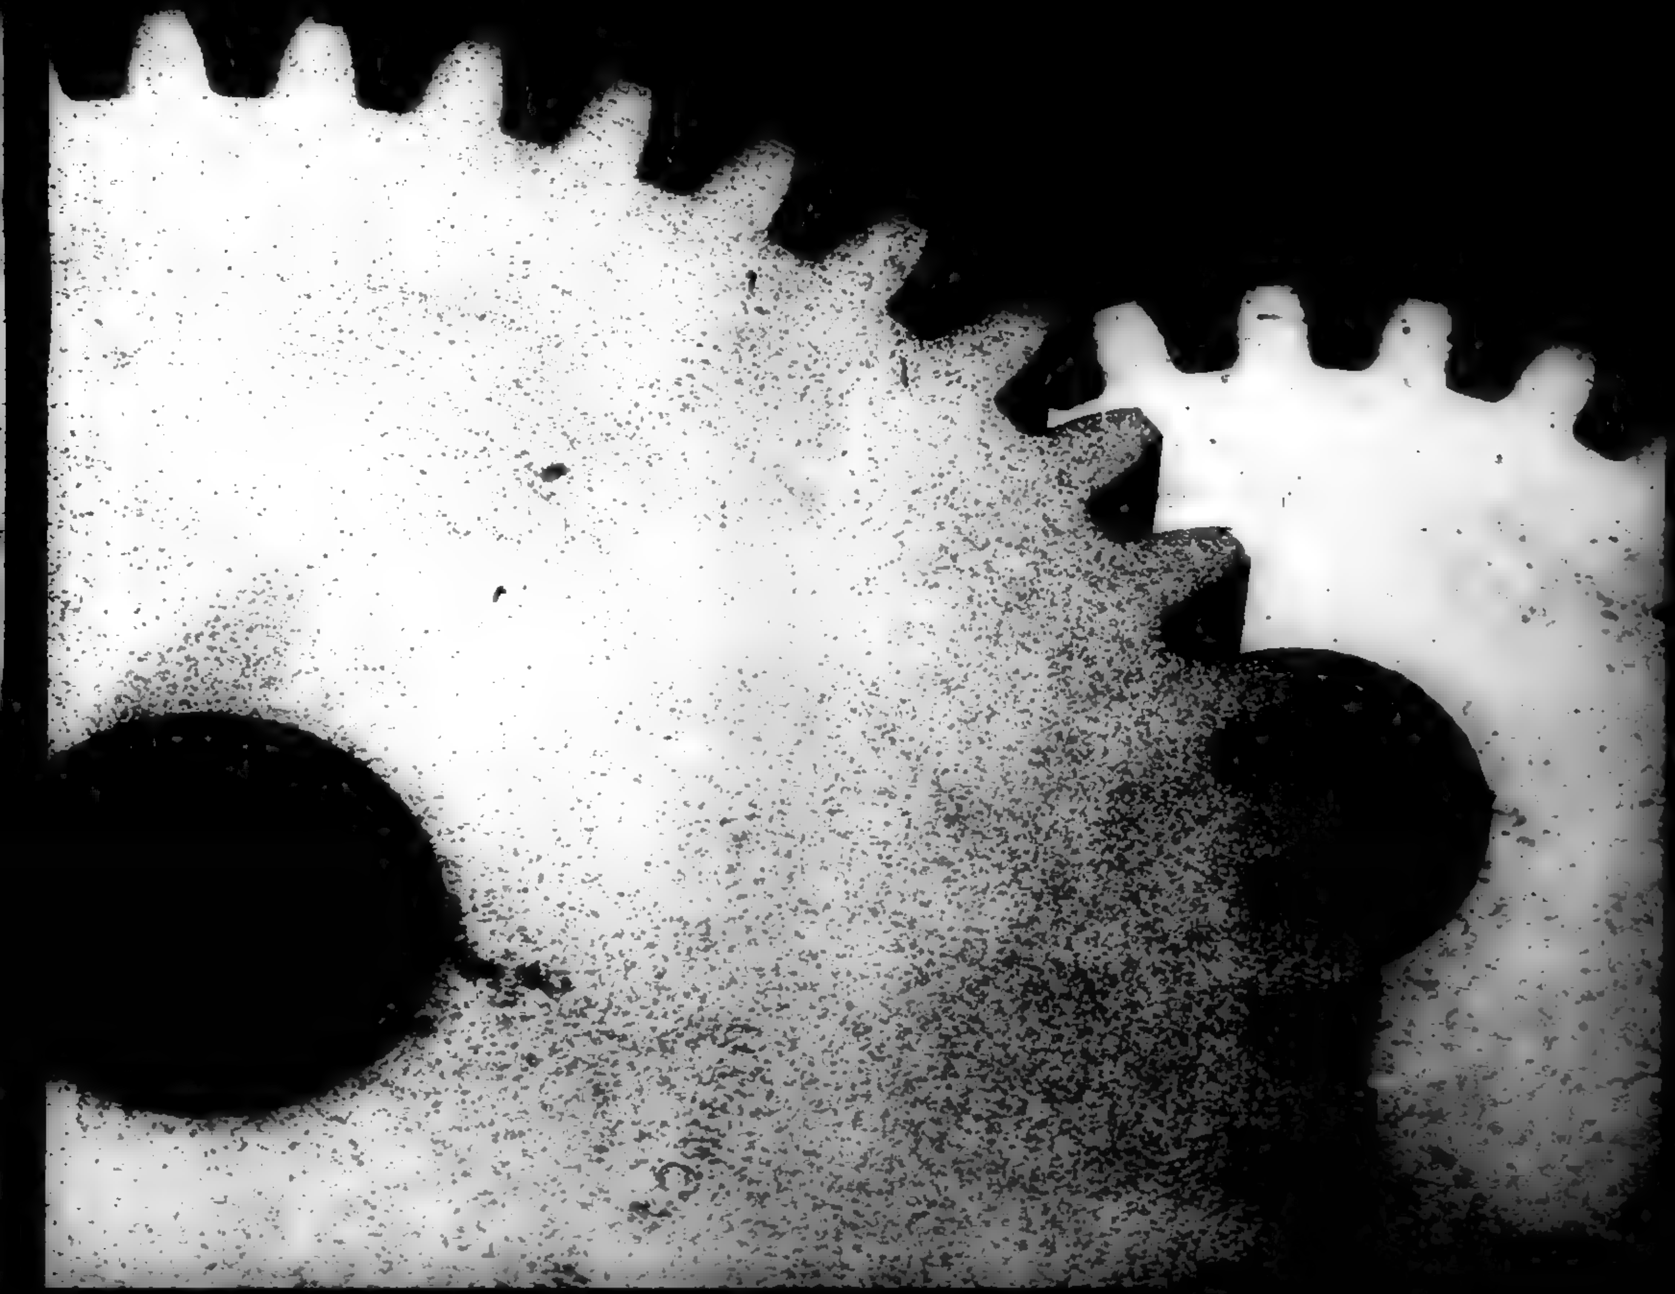
CIM Implementation— A Top-Level Priority

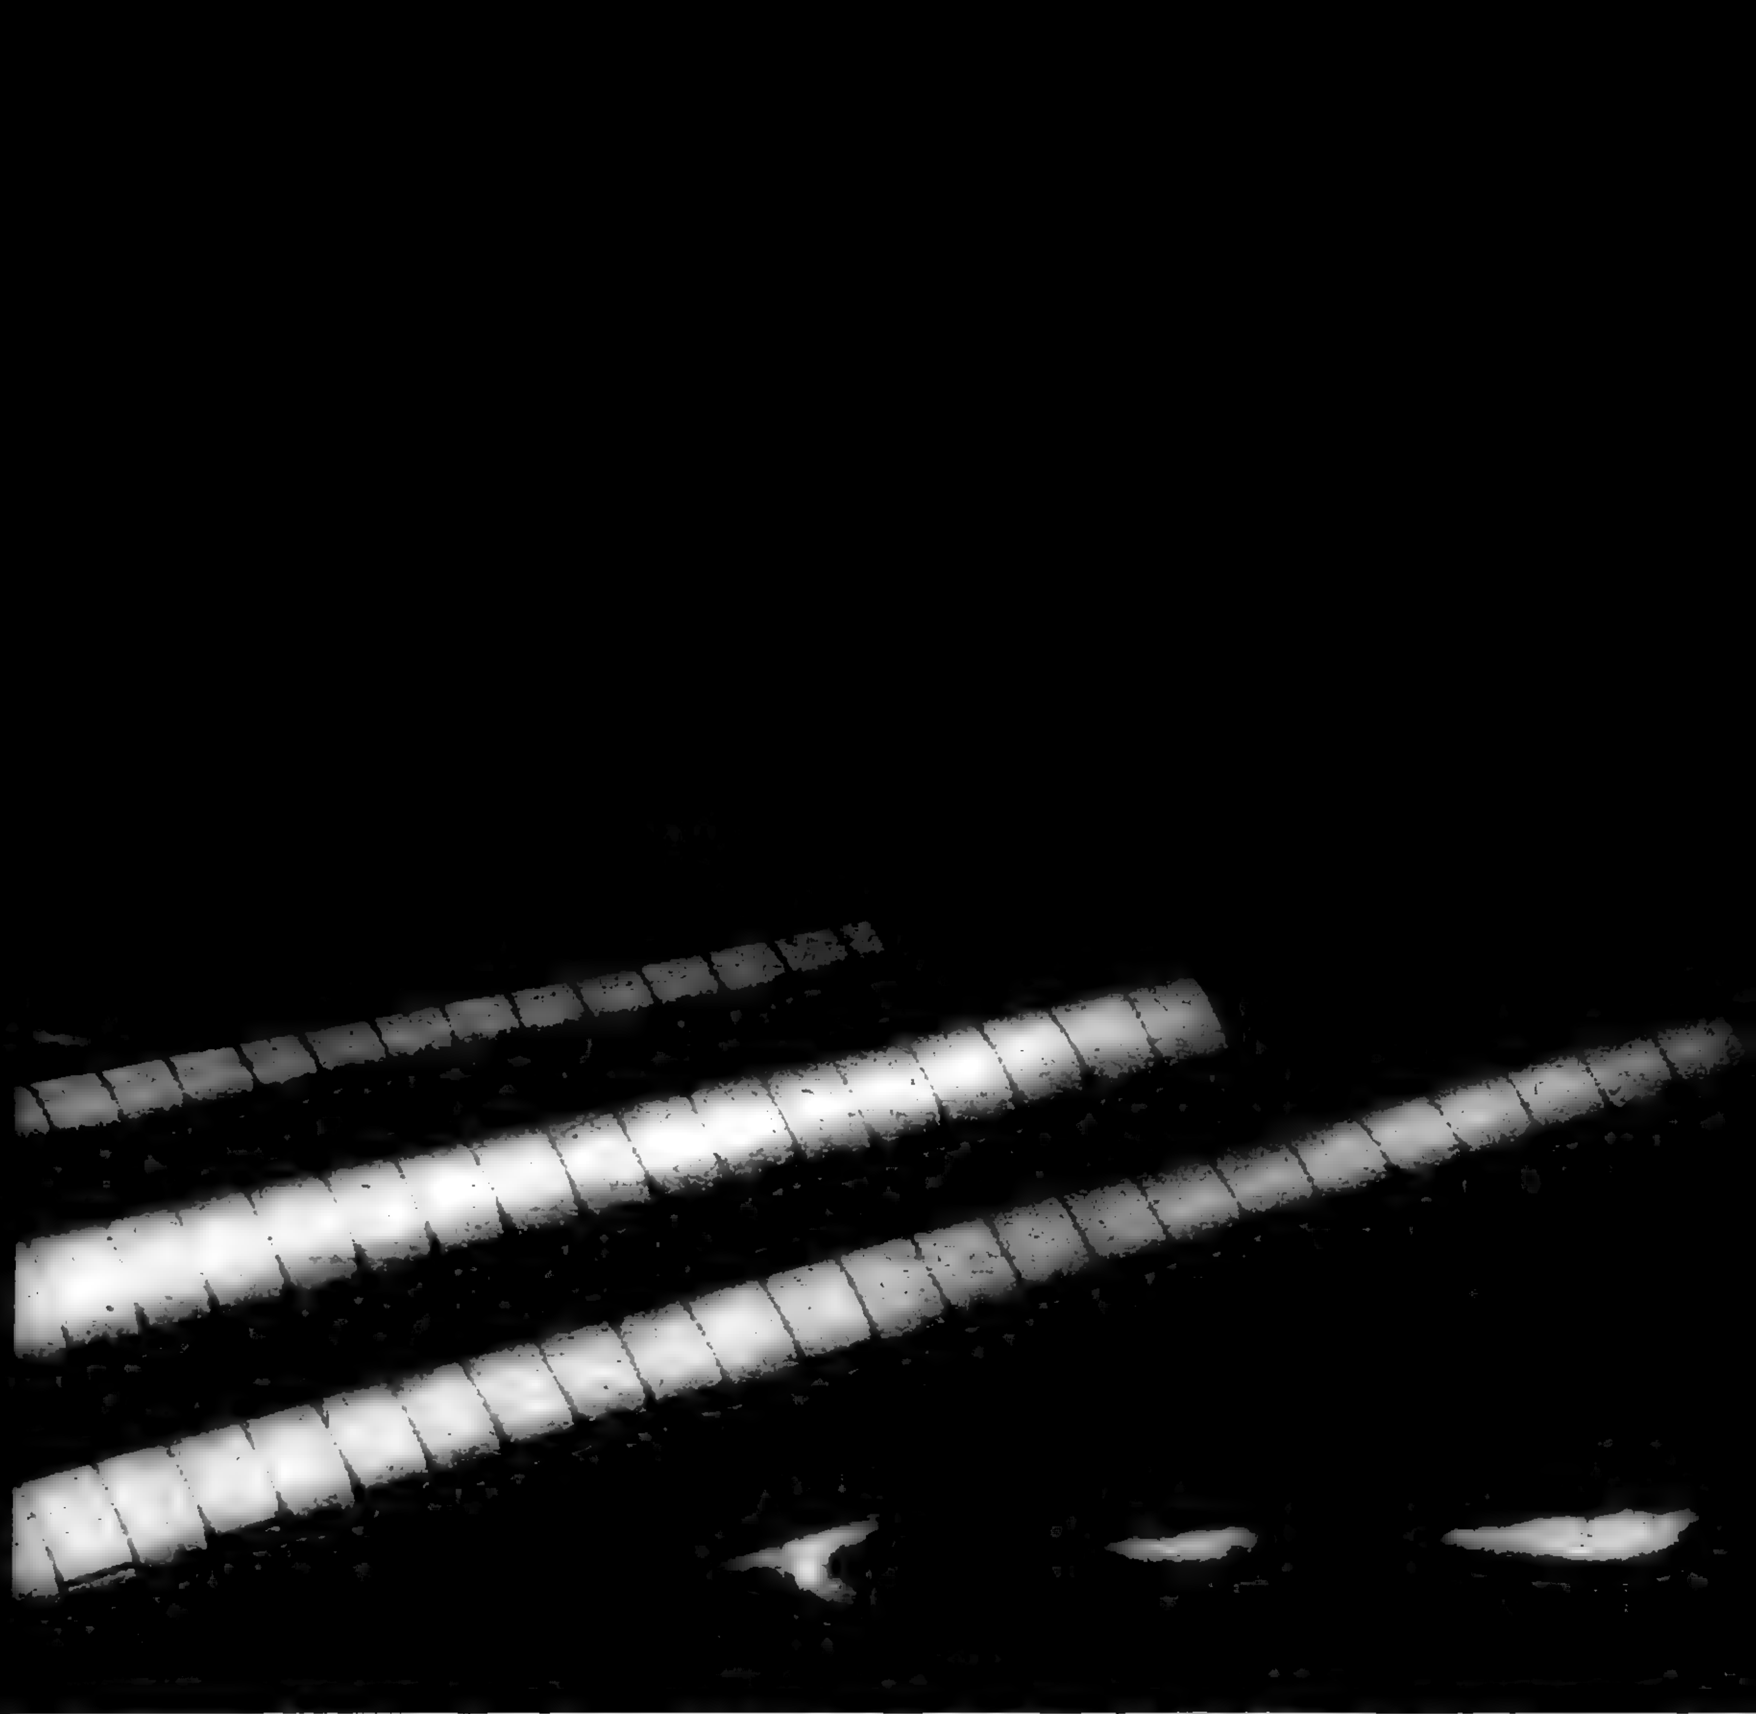
By Ray L. Dicasali

It is old news now, but no less troubling to hear. For the past 10 years, U.S. manufacturers have been frustrated. It is as if the world was stuck on its axis and nothing we could do would stop the drain on our productivity, our market and our profits. John Naisbitt elevated this trend to the status of megatrend and predicted that the U.S. manufacturing base will continue to erode as production moves offshore. Some now operate as though this process is a foregone conclusion. [illegible] question [illegible] phoning through the night?

We've discovered one part of the answer: We're not even sure we're in the right game. We know it's hardball, but the rules have changed. We've entered a new era in world manufacturing: the competition is stiffer, the life cycle of products shorter and the margins narrower. In addition, the continuing strength of the U.S. dollar has aggravated the problem by making it [illegible] foreign goods to compete in the U.S. and harder for U.S. goods to be price competitive in the world market. It's no longer enough to work harder; we must also work smarter.

Some manufacturers have taken significant strides in the past five years to gain greater control of their operations through deliberate strategic planning. The result is improved performance in all areas, from manufacturing operations to distribution





IF YOU'RE BUYING WILL YOU BE BLOWN AWAY

FOR ADVANCED INDUSTRIAL AUTOMATION SYSTEMS TALK TO DATA GENERAL. THEY'RE WHY THE MOST DEMANDING INDUSTRY LEADERS SELECT US.

To be competitive, you need the most advanced computer system to maximize productivity. For engineering design, factory automation and manufacturing and planning control.

Which is why companies with demanding needs such as GE, 3M, Armstrong Rubber, Texaco and National Can select Data General.

COMPLETE INDUSTRIAL AUTOMATION

To help you stay ahead, we offer a complete range of computer-based solutions—used in everything from monitoring mammoth petroleum refineries. Streamlining production and inventory flow in sophisticated manufacturing plants. To controlling

UNIX is a trademark of Bell Laboratories. LISP is a trademark of Gold Hill Computer, Inc. Ada is a registered trademark of the Department of Defense (OUSDRE-AIPO).

YESTERDAY'S TECHNOLOGY, BY THE COMPETITION?

advanced new medical systems.

Our systems are price/performance leaders, which gives your engineers and designers even more of an edge over the competition. Plus all systems are compatible. From our new DATA GENERAL/One™ portable, to our powerful mainframe systems.

And we adhere to communications standards, so we can tie into almost any existing computer network—including IBM. We also offer hundreds of world-class software solutions. Along with UNIX,™ LISP™ and Ada.®

KEEPING YOU ADVANCED

We keep your system advanced too. With an investment in research and development that's well above the industry average. And with comprehensive service and support.

If you risk buying yesterday's technology, your production line may be on the firing line. To keep yourself ahead of the competition, talk to Data General at 1-800-DATAGEN, or write: Data General, 4400 Computer Drive, Westboro, MA 01580 MS F134.

These manufacturers have focused as much attention on planning for obsolescence as on introducing new products to the market, and they have a host of new tools to aid them.

Important advances such as robotics, computer-aided design (CAD), computer-aided manufacturing (CAM) and computer-aided engineering (CAE) have taken place in technology. Much attention is being focused on Just-in-Time manufacturing, zero inventory and optimization; flexible manufacturing and group technology are not far behind. All of this is supposed to combine to comprise the focused factory or the factory of the future.

This proliferation of technology and terminology seems at times to resemble confusing clutter. Does it make sense? What does it mean for data processing personnel?

The new term for this technology is computer-integrated manufacturing (CIM). CIM is the umbrella under which the independent pieces — CAD, CAM, group technology, robotics and so on — are organized to work together. The definition is not yet complete, but it has reached a point where several major components of CIM can be described.

CIM is computer-based, and it is hardware. It is also software. At its core, CIM is a view of the layout of the manufacturing plant from an information processing perspective. It is as much a way of managing information as it is machinery and manpower. CIM is also firmware — dedicated pieces of automation, whether robotics, CAD/CAM or automated storage and retrieval systems for materials handling.

These three components, as well as some pieces not yet envisioned, are combining to comprise a powerful new tool for manufacturing. Information drives the tool, and DP will play an increasingly larger strategic role. In 1990, U.S. manufacturers will spend $33 billion on this technology, according to International Data Corp., a research firm in Framingham, Mass. Nearly one third of that amount — a fourfold increase over the amount spent in 1984 — will go for management information systems (MIS) and materials resource planning (MRP). In spite of all the excitement surrounding CIM and what it will mean for U.S. manufacturing, however, CIM is not the goal of all this activity. The goal is competitive survival — shortened development time, reduced costs and improved quality. We must be more responsive to the market and more profitable.

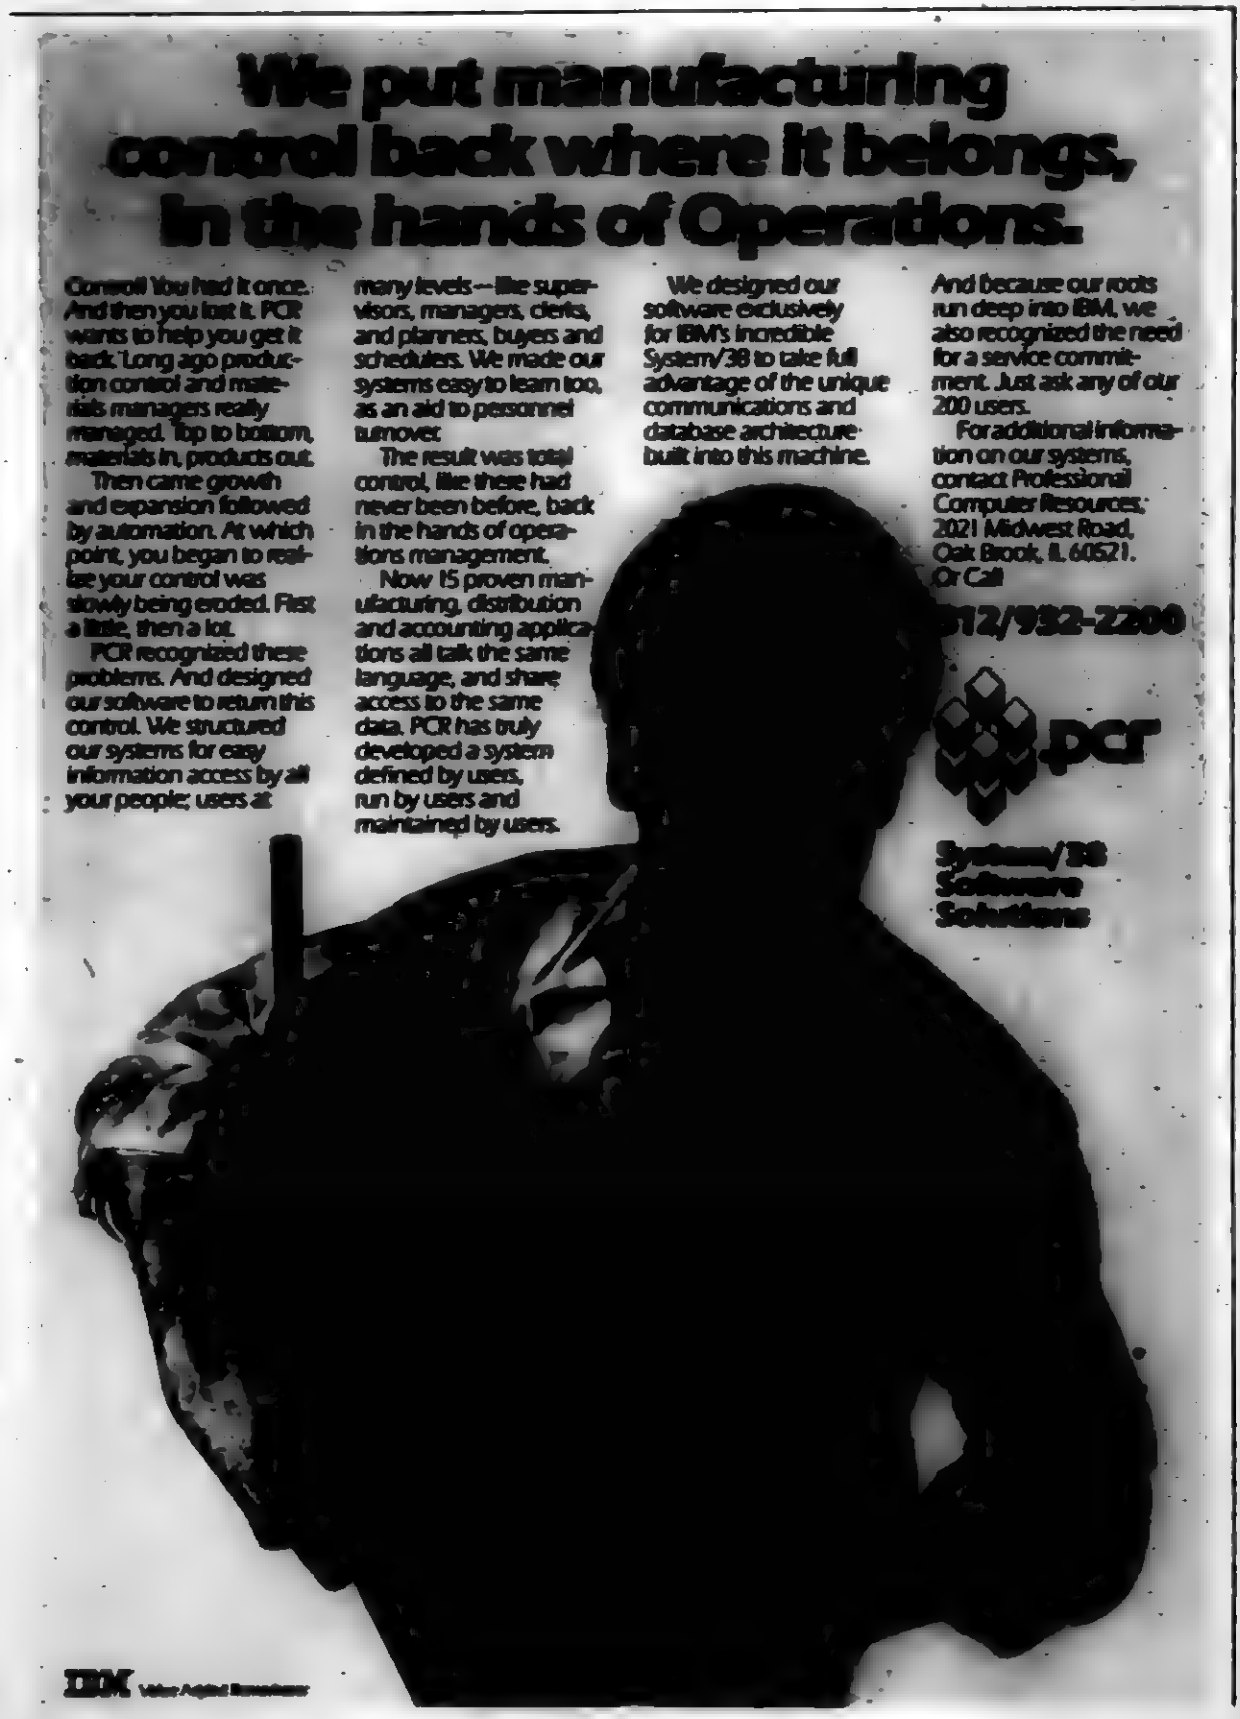
This task will not be accomplished merely by throwing around corporate assets such as money and manpower, although these will, of course, be required. Capital resources alone won't get the job done. The real issue will be how well the technology is managed. The challenge of CIM is an executive challenge, and the question will be how well top management does its job.

What is called for on the front end is a clear, precise, corporate strategy for implementing CIM. Each manufacturer will have to determine what its strategy will be. Although the strategies will be different for each industry and for every manufacturer, success will hinge upon careful planning of several logical steps:

- *Prime the corporate culture for change.* In order for the implementation of a CIM strategy to be a top corporate priority, preliminary education will be required. Management must have a basic understanding of how the new technology will fit in the overall operating plan, whether the strategy calls for a completely new facility or incremental implementation of new technology. Sustained commitment to the project will be difficult without a realistic understanding of the technology and of the required time for implementation. Without top management's strong commitment, the project will face impossible barriers.
- *Clearly define expectations.* Be sure you know what problems you are trying to solve. By defining your expectations, you will establish a blueprint for making wise investment decisions. This preparation will serve you in two ways: First, you will eliminate technology that doesn't yield targeted results. Second, you will have a benchmark to guide you in a process that could take several years to complete.
- *Appoint a CIM champion.* The role of CIM project team leader is as much an advocacy role as it is a leadership role. CIM is not only a new tool, it is a new way of doing business. A CIM project needs someone to champion its cause and that person should be someone with no vested interest in old departmental divisions of authority.

The role of project team leader is a full-time job. The leader should be experienced — someone who understands the problems to be solved and who either is at board level or has board-level backing and commitment.

- *Establish a project team.* Because the project team is charged with changing the manufacturing corporate culture, it is important that the group should be a representative body and include people from all areas of the company which will be affected. It is particularly important to include people from DP, marketing, engineering, purchasing, production and finance because those people will be expected to increase efficiency and productivity with the new technology.
- *Perform a detailed environmental analysis.* This step is one of the most crucial, yet it is the step most frequently overlooked in the process of implementing new manufacturing technologies.



We put manufacturing control back where it belongs, in the hands of Operations.

Control! You had it once. And then you lost it. PCR wants to help you get it back. Long ago production control and materials managers really managed. Top to bottom, materials in, products out.

Then came growth and expansion followed by automation. At which point, you began to realize your control was slowly being eroded. First a little, then a lot.

PCR recognized these problems. And designed our software to return this control. We structured our systems for easy information access by all your people; users at many levels — like supervisors, managers, clerks, and planners, buyers and schedulers. We made our systems easy to learn too, as an aid to personnel turnover.

The result was total control, like there had never been before, back in the hands of operations management.

Now 15 proven manufacturing, distribution and accounting applications all talk the same language, and share access to the same data. PCR has truly developed a system defined by users, run by users and maintained by users.

We designed our software exclusively for IBM's incredible System/38 to take full advantage of the unique communications and database architecture built into this machine.

And because our roots run deep into IBM, we also recognized the need for a service commitment. Just ask any of our 200 users.

For additional information on our systems, contact Professional Computer Resources, 2021 Midwest Road, Oak Brook, IL 60521. Or Call

3310-01

Only when you have a detailed analysis of current operations in hand will you have a clear picture of where to focus your efforts. Technology can help you solve problems, but it is not a miracle cure for bad communications, bad production flows and bad management.

One of the chief benefits of implementing new technology is gaining a fresh perspective on how you do business. In the process of performing an environmental analysis, you may discover that new technology is not necessary, at least not in the form you had initially envisioned. There may be simpler answers: For example, you might find that shortening a production line (thereby decreasing the time needed to move a product between workstations) is a better answer than installing automated handling systems.

A detailed environmental analysis is time-consuming. Nevertheless, it is not only well worth the effort, it is the foundation upon which to build your future.

Know what you want to accomplish, then look for the means to achieve it and keep it as simple as possible.

• *Identify the technology your strategy requires.* After you have a clear picture of how you currently operate and of the problems you need to address, you're ready to clearly document the specific details of your CIM strategy.

You might decide you need an integrated manufacturing control system that ties production more closely to distribution. You might find that a CAD system would greatly increase productivity, but a CAM system would have little impact. The need will be different with each manufacturer; therefore the strategy will be different.

The point is this: Know what you want to accomplish, then look for the means to achieve it and keep it as simple as possible.

• *Formalize your operating policies.* Moving from an informal manufacturing system to a formal one requires time. It's possible that 70% of the life of the project will be spent performing this task and the prior one. It's also possible that 50% of the benefit of the project will occur here as well. If the new system is to work effectively, however, you must have the proper disciplines in place to reinforce a formal approach. This is a good time to call on the expertise of experienced outsiders — people who know not only the details of the new technology but also the nature of your business.

• *Establish working partnerships with suppliers and vender.* A good businessman takes control of factors that are controllable and anticipates those that are not. All too often, manufacturers believe they are at the mercy of their suppliers — suppliers of materials, machinery or computer hardware and software. One of the chief goals of a CIM strategy should be to gain greater control in this area and to build working partnerships with people you must depend on.

Quality and service are becoming as important as price (and in many instances, more important) to maintain a competitive edge in the market. For the partnership to work, suppliers need to know you are as concerned about quality and service as you are about price. You need to select your partners carefully.

Can material suppliers, for example, deliver what and when they say they can? Can you monitor and track their performance? Can you furnish them with long-range visibility of your material needs? If technology is being supplied, is it applicable and proven, or is it still just promises? How does it integrate with the technology you already have? Before you invite anyone to be a partner in the success of your business, you want to know the answers to these basic questions.

• *Follow a sound, proven implementation methodology.* Can the partners supplying you with new technology offer you a proven implementation methodology? If not, you should seriously question their ability to play an active, beneficial role in your business.

• *Track and report your progress.* Whether you plan to build an entirely new manufacturing plant or a factory of the future from the ground up or plan to implement the new technology in incremental steps, you will probably need to rethink your cost-benefit analysis model.

Moving toward CIM is not a quick fix. It is a long-term project, and it requires a long-term investment strategy. Return on investment is not justified under a two- to five-year model, judging from the experience of leading-edge manufacturers already implementing CIM strategies.

One major industrial manufacturer is planning to spend $50 million over 10 years to develop a state-of-art factory of the future. Whatever your strategy calls for, be realistic about the payback cycle. If you underestimate the time it will take to see return on investment, you may undermine commitment to the project.

■

Dicewell is vice-president of the Manufacturing Systems Division of Management Science America, Inc., Atlanta, Ga.

CHANGE THE WAY
YOU DESIGN SYSTEMS

Excelerator brings computer-aided design (CAD) to software engineering by automating the job of developing systems specifications.

Excelerator provides facilities for creating data flow diagrams, data model diagrams, structure charts, presentations for end users, report mockups, and screen mockups. Special analysis reports validate the logic and completeness of your data flow diagrams automatically. The extended data dictionary stores all the information about your specification, including record and file layouts, data elements, and relationships, so that you can cross-check all aspects of the system specification for completeness and accuracy. Facilities are also provided to pass data to and from other data dictionaries. An integrated report writer and document preparation facility allow analysts to generate mini-specs for project reviews or the complete specification document ready to deliver to clients. Excelerator provides an interface to most of the popular word processing packages.

Your specification is more complete and consistent than using manual methods—and finished in a fraction of the time.

Excelerator is the most complete workbench for the systems analyst available on the IBM PC-XT, 3270-PC, and PC-AT.

Manufacturing Networks Can Be Tricky Areas

MAP: GM's Attempt To Set Standards

By Ron B. Keil

Worldwide competition is exerting increasing pressure on the automotive industry in its own basic business — providing transportation products. To meet these challenges, General Motors Corp. has stepped up the pace of a number of programs aimed at continuous improvement in the cost and quality of manufactured products. In this process, large numbers of robots, programmable controllers and other programmable devices have been introduced into the manufacturing process, and statistical process control tools are being used to monitor "as built" quality. Accompanying this growth in the number of programmable devices has been a growth in GM's requirements in other areas. In addition to an increased need for computer support for programming, documentation and backup, the need for sophisticated communication has been outstanding. A review of some components involved will point out why GM's Manufacturing Automation Protocol (MAP) is so important. Among the areas affected are the following:

- Work force involvement has proven to be a valuable tool for GM's quality and cost-improvement effort. In an attempt to provide facts about the state of the business, employees are told GM's competitive position in relation to quality and costs. This information is

(Continued on Page 20)

One User Gives MAP a Try

By David C. Scott

Amid all the hoopla about computer-integrated manufacturing (CIM), most organizations have reached only a couple of concrete conclusions. First, achieving true CIM will be an evolutionary process. The last of the turnkey CIM believers has faded away, and the word evolution is appearing in nearly all articles and discussions on the subject. Second, the computing environment on the CIM shop floor will include a multitude of vendors selling computers of varying types, computer numerical control (CNC) machinery, process controllers, reliability and quality inspection and computing equipment, robots and automated material handling and storage systems.

Those who agree with these conclusions must also acknowledge the need for a flexible yet powerful communications infrastructure for the factory floor. Indeed, putting such a system in place should occur relatively early in the move to CIM because it will provide a technological foundation for factory automation.

General Motors Corp. dealt with this situation by initiating its Manufacturing Automation Protocol (MAP) effort. MAP is an attempt to develop a specification for a set of standards to allow a multiple vendor computing environment on the shop floor. Testament to the wide acceptance of the above conclusions is the fact

(Continued on Page 22)

(Continued from Page 18)

communicated by video setups at numerous locations in the plant complex.

- An indirect effect on manufacturing costs has been the escalating cost of utilities. To try to control this area GM measures usage of water, gas, pressurized air, steam, electricity and other resources — often by means of computers and programmable controllers.
- GM is investigating and, in some cases, implementing asynchronous machining and assembly systems that are much more flexible than the traditional systems of the past. To facilitate flexibility, the communication requirements increase in order of magnitude.
- To protect its large investment in facilities, GM uses closed circuit TV surveillance and computerized monitoring systems to warn of fires or other dangers.
- Accounting systems, personnel systems, material and inventory control systems, warranty systems and others use large mainframe computers with remote terminals located throughout the manufacturing facility.

As the above mentioned items indicate, the need for communications in GM plants is considerable. That communications system must be able to accommodate voice, video and high-speed data. The communications network therefore becomes an integrating force for factory operations. And, of course, because the automotive industry is a highly competitive business, any communications system GM installs must be cost-effective.

GM realized in the middle 1970s that, because of its requirements for an integrated communications system and the diversity in programmable device vendors, communications standards were needed for the factory floor. Some ad hoc task forces were formed to focus on broadband coaxial cable.

In early 1980, with corporate support, the Manufacturing Automation Protocol (MAP) task force was formed and included former broadband task force members. The original MAP task force objectives were to define a MAP message standard that supports application-to-application communication, to identify application functions to be supported by the message formatting standards and to recommend low-level protocols that meet functional requirements. The task force is comprised of representatives from about 15 GM divisions and from the corporate manufacturing staff (see Figure 1).

Soon after its formation, the task force identified the International Standards Organization's (ISO) seven-layer model for open systems interconnection (OSI) as a basis for standardized networks. Because the model specifies function rather than protocols, however, compliance with it does not ensure multivendor communication. The strength and current support of the MAP specification is its selection of existing or emerging standard protocols. All seven layers of the MAP specification will be international standard protocols. The current version of the MAP specification is 2.1. GM has committed to upward compatibility for all future versions since 2.0.

**CIM?
MRP III?
JIT?
What you Really
Need is DSI.**

relax. We're not another buzzword. We're Data Systems for Industry. Our friends call us DSI.

And when it comes to installing manufacturing management software for the HP3000, Stratus/32 and IBM System/88, those same friends will tell you we've chalked up a track record that everyone envies. But nobody beats.

Consider QED, our fully integrated, closed loop manufacturing management system. Unexcelled at Sales Order, Materials, Production, Cost and Financial Management. QED leads the way in handling repetitive processes, bar code data I/O and automated material handling.

Over the last nine years, we've installed state-of-the-art management systems at General Electric, Lear-Siegler, Xerox, Hughes, and dozens of other firms, large and small.

So if you're ready to do more than talk about CIM, MRP, or JIT, give Don Whipple a call at 213-493-4541. He'll show you how to turn those buzzwords into real solutions.

Data Systems for Industry, 3942 Cerritos Ave., Los Alamitos, CA 90720 (213) 493-4541

Reach over 60,000 computer professionals in Sweden.

Your ad in CW Communications' Swedish publications will introduce your company to 63,000 computer professionals in Sweden's flourishing market. According to International Data Corporation (IDC), the world's leading information industry research firm, Sweden's total data processing expenditures are expected to soar from $2.3 billion in 1983 to $6.3 billion by 1989.

Computer Sweden, the only Swedish MIS/DP publication, reaches 15,000 readers each week. Every Monday DP professionals turn to *Computer Sweden* for updates on the latest developments in hardware, software, terminals and supply products.

Svenska PC World is the magazine 12,000 IBM PC users rely on twice each month for timely information on program reviews, user reports, new products, tests and recommendations. IBM has the largest market penetration in Sweden with revenues for 1983 of nearly half a million dollars.

MikroDatorn is written specifically for the Swedish microcomputer market which, according to IDC, is growing at an annual rate of 46%. *MikroDatorn* is the monthly magazine that reaches 36,000 business/professional and home/hobby micro users with up-to-date industry information.

CW International Marketing Services makes advertising your products in Sweden, and around the world, easy. We have over 50 publications in more than 25 countries. For more information on our wide range of services, complete the coupon below and mail today.

GM's goal for MAP is that it become an open national standard with widespread use. The 1984 National Computer Conference demonstration took MAP a step nearer this goal.

- Layer 7, application (has responsibility of providing communication services to user programs): currently specified as a GM manufacturing messaging format standard (MMFS), the ISO common access service elements (Case), ISO file transfer and some preliminary network management and directory services.
- Layer 6, presentation: currently null.
- Layer 5, session: currently specified as the ISO session kernel.
- Layer 4, transport: the ISO transport protocol.
- Layer 3, network: the ISO connectionless network services (CLNS).
- Layer 2, data link: specified as the IEEE 802.2 LLC procedures.
- Layer 1, physical: specified as IEEE 802.4 token bus broadband.

MAP currently specifies broadband coaxial cable for the physical media in factory floor local-area networks. For several reasons, GM believes broadband is the best choice among current available media.

First, broadband coax accommodates multiple networks on the same media. Second, it will simultaneously support high-speed data as well as voice and video. A final point in support of broadband coax is that it is flexible enough to accommodate GM's rapidly changing plant requirements.

GM chose a token bus access method for factory floor local-area networks. In a token access procedure, a predetermined device generates a token and passes it around the network. A device can transmit only while it has the token. All devices listen and respond to data addressed to them. A token passing procedure is deterministic because the maximum response time can be explicity calculated. The token bus access method (IEEE 802.4) is supported by the programmable controller industry.

The layers above transport are value-added to the local-area network. MAP specifies session kernel to provide the connection establishment and management of the users. Session's dialogue management provides the application with standard mechanisms for synchronization and full-duplex and half-duplex communication. The application layer protocols provide the communications to the user program. Applications (user programs) talk about the application layer as their universe; the official term is universe of discourse.

The application layer elements specified in Version 2.1 of MAP include Case, MMFS and file transfer and access management (Ftam). Case provides connection, context switching and other services common to any user. MMFS, which was developed by GM and its vendors to provide necessary services and messaging to programmable devices, is currently undergoing a thorough review in the Electronics Industries of America's Committee 31 as Draft 1393A. A national standard should be available in 1986. Ftam provides services for file users. An application uses the services necessary for its particular function.

GM's goal for MAP is that it become an open national standard with widespread use. The 1984 National Computer Conference demonstration took MAP a step nearer this goal when it proved that a multivendor networking project can work. GM and Boeing Computer Services Co. are sponsoring another networking demonstration at the Autofact Conference in Detroit in November. At that time, Boeing's 802.3 local-area network will be connected to MAP's 802.4 local-area network. MAP Version 2.1 will be implemented. GM believes Version 2.1 finally offers a minimum set of services for an operating local-area network — a significant step.

The ultimate goal is that through standardization and proliferation, very large-scale integration chips will be developed and will drive the connection cost for each programmable device below existing point-to-point connections. GM is committed to the development and worldwide use of MAP and will seek a competitive advantage on the use of the network, not on the standards.

Finally, a computer that runs your plant the way you do. In English.

When you're part of the team responsible for daily plant operations, you don't have time to learn a new language. Thanks to our Mentor® computer and applications software systems, all you have to understand is plain English.

If you can two-finger-type words like LIST, SORT, COUNT, WITH, IN, AND, OR and FILE, you can put your Mentor computer with its enhanced Pick operating system to work right from the start. You'll have control over your entire plant—from material resource planning and full accounting to ensuring on-time delivery.

And while other computers test your nerves, ADDS Mentor will test itself continually to be sure it's working properly.

Mentor is so easy to use, everyone will want to use it. Great. Because Mentor can handle up to 64 English-speaking, two-finger-typing people at the same time.

You don't have to learn a new language to increase your plant's productivity. Just return the attached coupon today.

IT ALL ADDS UP.

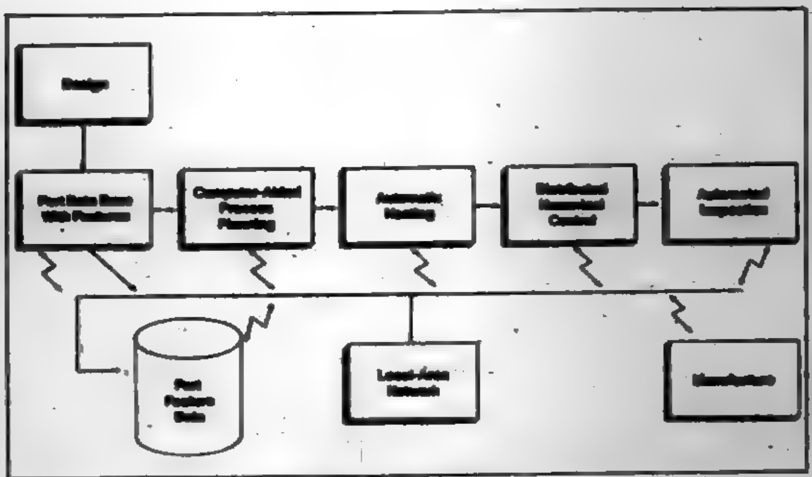
that over the past two years, the MAP Users' Group has grown phenomenally and now includes representatives of virtually all of the largest U.S. manufacturers.

One of MAP's early supporters outside of General Motors was Deere & Co., the large manufacturer of agricultural, industrial, forestry and consumer equipment. Deere has often been recognised as a leader in the areas of factory automation and CIM. In 1981 the Computer and Automated Systems Association (Casa) awarded Deere's Tractor Works in Waterloo, Iowa, its first Lead Award, presented annually to a company in recognition of a leading edge implementation of CIM. Other examples of advanced automation and integration of computer-based systems can be found throughout the company.

Deere has, however, paid a high price for that integration. Up to 50% of the final costs of introducing automated processes and systems have gone to installation and integration of computerised equipment with existing systems. The bill for ongoing support of such systems from a communications and integration viewpoint has limited the advantages gained. The current direction of the CIM movement has the potential to amplify these problems because it emphasises the use of many new shop floor computing devices: powerful microcomputers and engineering workstations in an hierarchical, distributed computing environment for functions such as cell controllers, distributed numerical control (DNC), adaptive control of processes and real-time scheduling to accommodate concepts such as Just-in-Time manufacturing. These devices will be required to communicate not only among themselves but also with the various computers arriving on virtually every piece of new manufacturing equipment. Thus the rationale behind MAP is very appealing to Deere because it strives for plug-in automation and shop floor communications, basics for the realization of true CIM.

To emphasize its commitment to MAP, the company incorporated what turned out to be the first manufacturing production MAP-compliant network in a CIM pilot project in 1984. The intent of the project, as depicted in Figure 1, was to demonstrate CIM by developing techniques to transform computerised designs into completed manufacturing instructions that could be transmitted directly to and from the shop floor using a DNC system. The system was to support sheet metal parts to be manufactured in a cell including a turret punch press with laser and a straight shear.



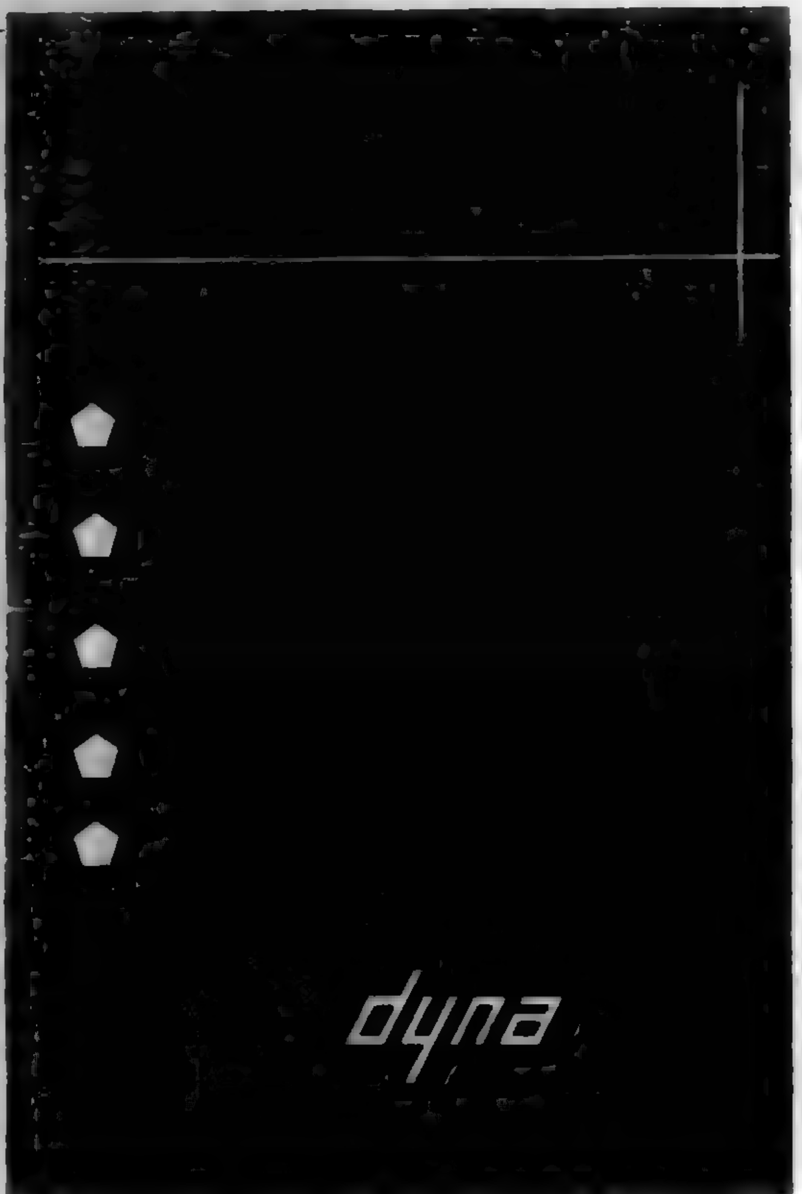
Design
Computer-Aided Process Planning
Distributed Numerical Control
Automated Inspection
Local-Area Network

Figure 1. A CIM Pilot

Starting with computer-based design geometry augmented by feature-type data, computer-aided process planning would develop a manufacturing plan and instructions, including a numerical control (N/C) program for each part. A nesting package on a Computervision Corp. system would then nest many of the same or different parts on the same raw material sheet and finalise a program to drive the N/C punch press with laser. Finished plans would be transmitted to a DNC host computer where they would be archived and managed. From the DNC host they could be downloaded directly to the machine controller. The need for a communications backbone, which would also need to accommodate all other emerging automation and CNC equipment in the factory, was discovered as the project planning proceeded. Local-area net technology was seen as a logical solution, and a work package to pursue a local-area net was formulated. The initial application would be the DNC system.

In May 1984, requests for proposals for a local-area network were sent to several vendors. Deere's involvement with MAP had progressed during the planning phases of the local-area network package, and the company decided to include MAP compliance as a bid requirement. Although installation of a broadband backbone and associated one-time start-up costs is more expensive than traditional point-to-point coaxial wiring schemes, the expenditure was approved because it would both save cabling dollars in future rearrangements and accommodate CIM.

The local-area net was designed and implemented by an in-house team. The broadband utility was designed by an electrical engineer from plant engineering with training from an equipment vendor. Other team members included representatives from computer systems to handle interfacing and protocol problems and from manufacturing engineering systems to address DNC and process application questions.



Reach over 69,000 French computer professionals.

Advertise in CW Communications' French publications and sell your products directly to the thriving French computer market. According to International Data Corporation (IDC), the world's leading information industry research firm, France is the second largest market in Western Europe with DP expenditures for 1984 at more than $14.4 billion (U.S.) and a projected growth to over $30 billion (U.S.) by 1989. Our publications can help you reach all segments of the computer industry in France.

Each week 20,000 MIS/DP executives read *Le Monde Informatique* to keep abreast of the latest developments in the industry.

Each month *OPC (PC World France)* reaches over 15,000 IBM PC users and potential buyers who are looking for the latest information on the IBM PC and compatible products.

The plant engineer developed a computer program that allows graphical design of cabling schemes and automatically computes signal levels and other parameters and then inserts required components (amplifiers, couplers and so on). This allows quick evaluation of feasibility and cost of several alternatives for cabling. The 3,300 feet of broadband was installed by a cable television contractor. MAP-compliant network interface units (NIU) were purchased from Concord Data Systems, Inc. and a DNC host computer was purchased from Numeritronix. The network was operational by Nov. 1, 1984.

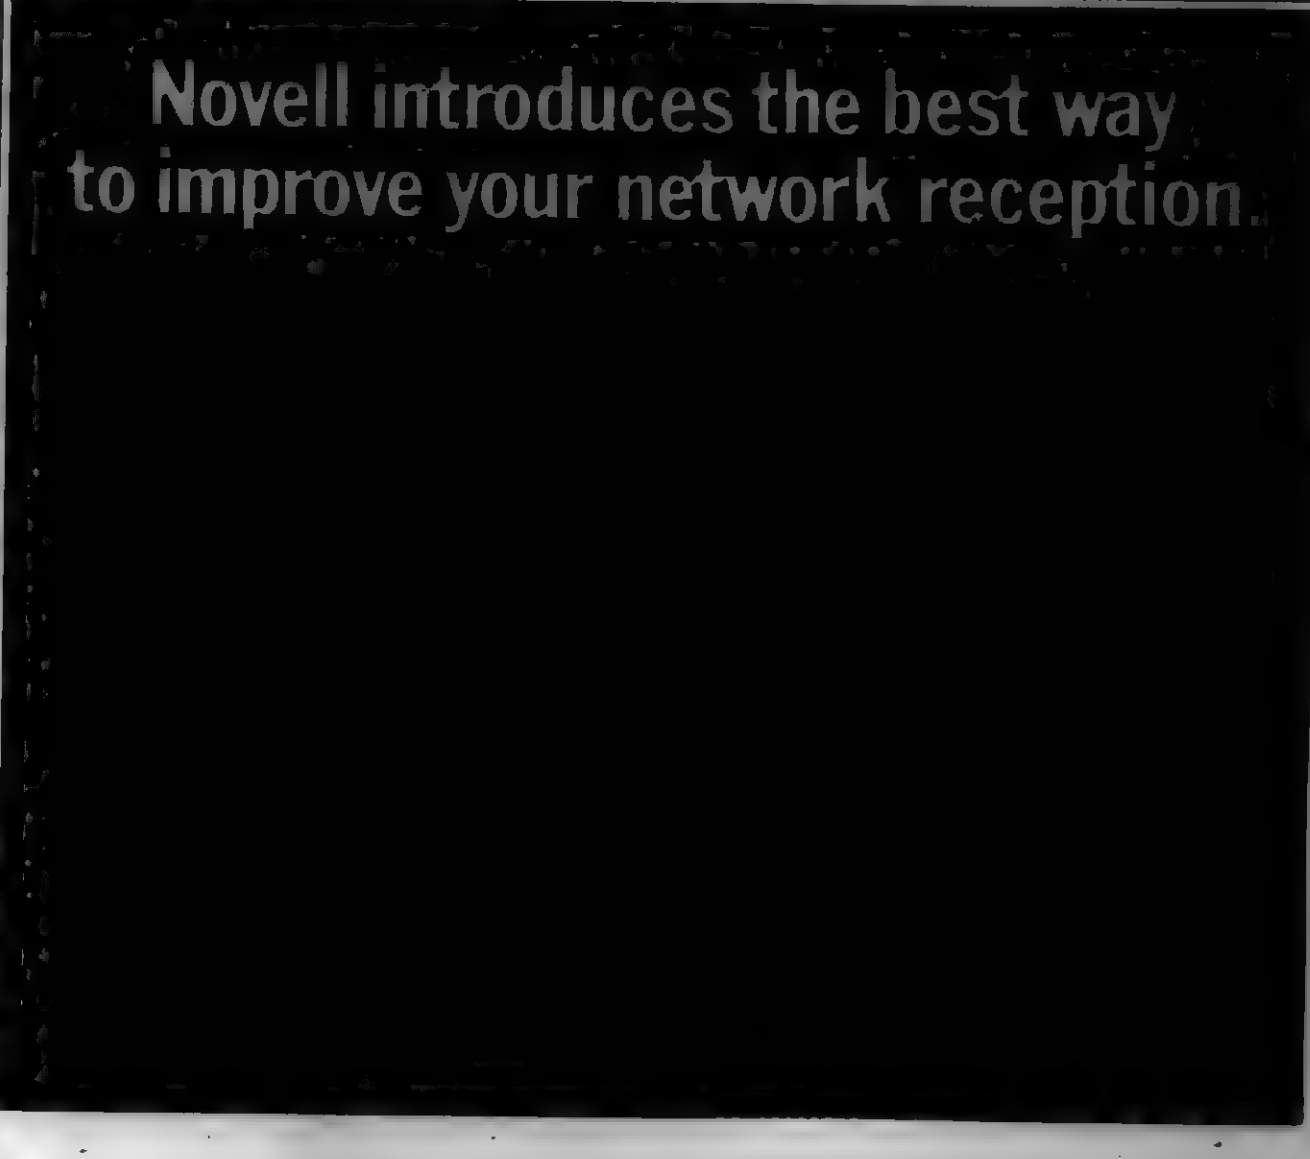
Pilot members were excited when they compared future possibilities of using the network with their former experiences.

Attempts were then made to link the Numeritronix computer and the punch/laser machine tool's General Electric Co. 1050 controller. The problems encountered read like a Why MAP? listing. The implementation team still had to resolve incompatible protocols and speeds; only the first two layers of the MAP specification, which provide media access control (getting you on and off the network), were being implemented in the NIUs. Connections to nodes from the NIUs were RS-232 links, making the initial DNC application appear like a point-to-point connection via the broadband. The RS-232 standard provided several challenges; the various devices were using different pin configurations. Perhaps the biggest stumbling block was the lack of complete communication specifications; as a result, data scopes were needed to figure out exactly what speeds, protocols and other communication parameters were being used.

After nearly a month of uncovering and solving such problems through both software and hardware, a successful link between the DNC host and the first machine was completed. Having learned from the first machine, the team successfully connected the second machine, the shear, much more quickly even though it encountered many of the same problems. NIUs were connected to Computervision and Digital Equipment Corp. VAX systems and, using the routing capability of the NIU, connections were made to an Okidata Corp. printer, a Sun Microsystems, Inc. engineering workstation and several types of terminals. The cell was released to production Feb. 1, 1985.

The consensus among pilot participants was that it was a very worthwhile learning experience. The critical need identified was that more complete and detailed specifications regarding communication requirements should be provided to vendors and received from vendors so that debugging could be more direct. Pilot members were excited when they compared future possibilities of using the network and the ease of adding additional devices with their former experiences stringing additional cables for each new or relocated device. Even though device connection was usually straightforward, protocol and messaging problems reinforced the desire for completion and commercial offerings of the upper layers of MAP, which will address these areas. Additional applications that would take advantage of the video and audio capabilities of the broadband, (for example, plant security video, interactive training of operators and video teleconferencing) are already being discussed. Plans are being finalized to extend the network to accommodate an additional application — a DNC-like system to download computer-optimized control parameters to a series of resistance welder controllers.

Perhaps the largest remaining challenge is planning for and managing the shop floor communications, computing and



Novell introduces the best way to improve your network reception.

In a relatively short time, the local area network (LAN) market has attracted a host of suppliers. Each has a LAN system to sell. And each is fighting for a proverbial piece of the LAN pie.

Amid all those LAN contenders, only one company is out to make all LAN systems perform better. Only one company offers high-powered LAN operating system software that improves the performance of every major LAN system on the market. Only one company is finishing the job the other LAN makers begin.

The company is Novell. The company's solution is NetWare.

NetWare performs.

How good is NetWare? In recent benchmark tests conducted by Novell as well as Belmont Laboratories, NetWare significantly improved the performance of every LAN system tested.* In fact, NetWare currently runs on 24 different LAN hardware systems, outperforming the original software for every one.

Serving all LANkind.

Whichever LAN hardware you choose, NetWare is the LAN software designed to get the most out of your network. When it's time to improve the reception your network gets from those who use it every day, plug into NetWare. It's from Novell, the people dedicated to serving all LANkind.

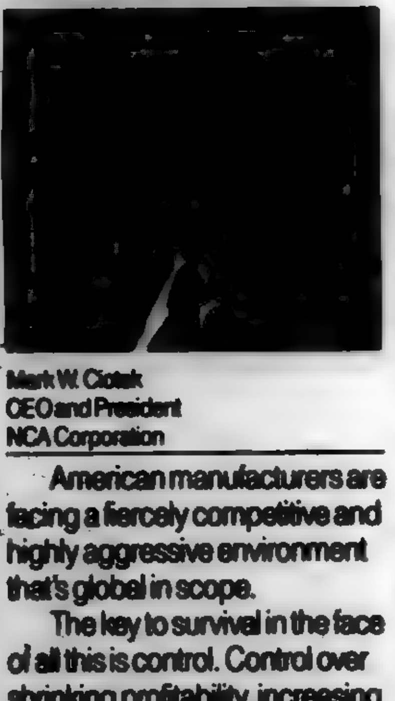
"MORE MANUFACTURERS CHOOSE US BECAUSE OF WHAT WE CHOSE: VAX."



Mark W. Ciotek
CEO and President
NCA Corporation

American manufacturers are facing a fiercely competitive and highly aggressive environment that's global in scope.

The key to survival in the face of all this is control. Control over shrinking profitability, increasing costs and reduced planning times. Which means automation through computerization.

But computerizing the manufacturing process is no guarantee of survival. Choosing the wrong approach could be just as costly as not automating at all.

As one person intimately involved with manufacturing, Mark W. Ciotek, explains: "Manufacturing today has to be treated as an integrated process instead of as isolated functions. Successful manufacturers are discovering that with the right approach to computer-integrated manufacturing (CIM), you can produce goods quickly without sacrificing quality."

Mark is CEO and president of NCA Corporation, a leading software developer and marketing company that's helping manufacturers stay competitive with a manufacturing resource planning (MRP II) system called MAXCIM.™

With 20 integrated modules, MAXCIM is designed to handle everything from financial planning in the executive office to job tracking on the factory floor.

"Our comprehensive approach requires a flexible computer system with a wide range of solutions," Mark points out. "That's why we chose Digital's VAX™ computers for MAXCIM. And that's why manufacturers are choosing us."

"VAX GIVES YOU THE WORLD'S MOST FLEXIBLE ARCHITECTURE."

Digital designed the VAX computing environment in a unique way – around one architecture and Digital's VMS™ operating system. "They're the only ones who have done this," Mark states. "As a result, we know we're working with the most flexible system available."

Included within the VAX computing environment is the VAX Information Architecture, a comprehensive system of integrated information management software products. From this vast array of products, NCA's customers can select those best suited for their needs.

Three of these VAX Information Management products – FMS™ forms management system, DATATRIEVE™ query language and report writer, and Common Data Dictionary – are used in conjunction with MAXCIM. By incorporating these products, MAXCIM optimizes the user-interface, and provides easy access and universal definitions for all of your data.

Customers also have the option of adding other Digital software such as DECnet™ networking software. The tremendous communications capabilities between Digital systems allows for unequalled distributed processing power. So you can access and exchange information –

whether it's stored across the plant or at a plant across the country.

"Digital's approach to software is ideal for MAXCIM because the performance of an MRP II package is enhanced by the degree of integration between modules," Mark says. "And the superior integration within both MAXCIM and the VAX Information Architecture gives manufacturers the most flexible solution possible."

"AS PRODUCTION INCREASES, SO CAN THE POWER OF VAX."

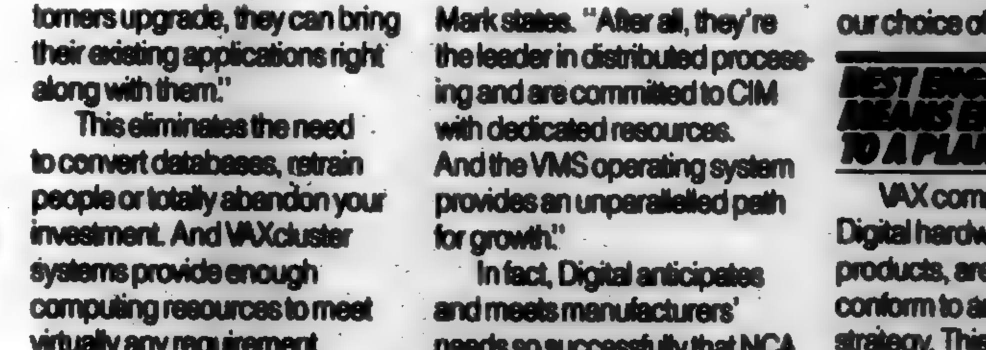
"The economies of manufacturing demand standardization and growth," Mark points out. "With VAX computers, our customers have both."

Every model in the best-selling 32-bit architecture, from the MicroVAX I™ system right up to the largest VAXcluster™ system, is compatible, providing an economical growth path from desktop to data center.

"Because of this compatibility, you can use MAXCIM across the entire line of VAX systems," Mark says. "So when our customers upgrade, they can bring their existing applications right along with them."

This eliminates the need to convert databases, retrain people or totally abandon your investment. And VAXcluster systems provide enough computing resources to meet virtually any requirement.

"VAX computers let us meet the needs of just about any manufacturer," Mark says. "The low-end of the VAX family is ideal for smaller manufacturers, while clustering makes our solutions attractive to much larger companies. Some of our business now comes from existing customers who are upgrading their Digital systems to meet their growing needs."



"DIGITAL IS THE LEADER IN THE MANUFACTURING MARKETPLACE."

"Digital has a solid reputation among manufacturers," Mark states. "After all, they're the leader in distributed processing and are committed to CIM with dedicated resources. And the VMS operating system provides an unparallelled path for growth."

In fact, Digital anticipates and meets manufacturers' needs so successfully that NCA developed MAXCIM to run exclusively on Digital systems.

"We've never felt the need to offer MAXCIM on any other system," Mark says. "They're the experts in systems and we're the experts in MRP II software. Together, we can offer manufacturers the most comprehensive solution.

"Our customers have found that this is the ideal solution for them. With this kind of success," Mark concludes, "we'll never second-guess our choice of VAX computers."

BEST ENGINEERED MEANS ENGINEERED TO A PLAN.

VAX computers, like all Digital hardware and software products, are engineered to conform to an overall computing strategy. This means our systems are engineered to work together easily and expand inexpensively. Only Digital provides you with a single, integrated computing strategy direct from desktop to data center.

To learn about Digital's VAX system, call 1-617-467-CAEM. To learn about MAXCIM, call 1-800-622-6584. Or write to Digital Equipment Corporation, 200 Baker Avenue, West Concord, MA 01742.

THE BEST ENGINEERED COMPUTERS IN THE WORLD.

digital™

automation directions to accommodate CIM in a large decentralized company such as John Deere. If experiences such as those in the pilot are to be worthwhile, they need to be shared and incorporated in future efforts. Deere has taken several steps to address this challenge:

At the corporate office, a CIM systems organization was formed with computer-aided design and manufacturing (CAD/CAM) systems departments within it. CAM systems responsibilities include factory automation planning, factory local-area networks and MAP activities. A Shop Floor Computer Communications and Control (SFCCC) Users' Group has been formed under this group's leadership. A steering committee formed to coordinate and provide input to the overall group has members from corporate manufacturing engineering, computer systems, quality and reliability engineering and CIM systems. This general group is composed of factory representatives from the same disciplines as the steering committee. As in the pilot, each unit is encouraged to form a core shop floor communications team with members from plant engineering, computer systems and manufacturing engineering systems. Similar to the GM MAP Users Group experience, response to the SFCCC has been very enthusiastic; all units have experienced the above problems as individual machines and cells have been installed.

The role of the SFCCC is threefold: education, coordination and direction. At the overall meetings, educational segments on topics such as MAP are included with unit updates on experiences and current problems and issues being faced. Members are asked to share lists of vendors, contacts, informational sources and any data that may be useful to others. As issues are brought to the surface by the group, plans are formulated for their resolution in an effort to provide future direction.

At the first general meeting, users decided to form three interim working groups to develop guidelines for the three primary issues identified during the meeting. The first group will develop boilerplate specifications for inclusion in shop floor equipment specifications that will deal with the desired capabilities of the computer control. It will cover physical and electrical characteristics, protocols and general capabilities required to integrate the equipment into an overall CIM system. Basic examples are upload and download commands and terminal mode. The application layer of MAP using the EIA-1393 specification will be the ultimate answer when complete. The second group will work on guidelines for the communication utility and physical cabling schemes, including plans on how to evolve from current systems (for example, PBX) to the ultimate broadband for MAP in a cost-effective way. The final group is addressing flow and placement of data in the evolving distributed hierarchy on the shop floor.

The largest remaining identified need is training at all levels. To address this, outside training vendors are being contacted to provide courses ranging from overviews of local-area networks to MAP to detailed broadband engineering instruction. Extensive contacts are being maintained with vendors of local-area networks, computer equipment and controllers to obtain education on their directions and products and to encourage their participation on future pilot projects stressing MAP.

CIM will become a reality on a broad scale within the next few years. If companies are to be ready, however, foundations must be laid now. The communications schemes for the shop floor are essential, and the MAP approach offers a very attractive alternative with an expanding support base from users and vendors. Rather than just waiting for MAP to happen, companies that hope to realize the CIM potential must now begin planning and learning through activities such as pilots and users groups. The benefits are tremendous.

Scott is division manager, Computer-Aided Manufacturing Systems for Deere & Co. in Moline, Ill.

OUR ZEBRA'S EARNED ITS STRIPES.

Our Zebra® printer has proven itself in the industrial jungle. And left its indelible mark in bar-coded and alphanumeric labels, tickets, and tags.

Nothing's tougher than a Zebra.

Ruggedized design and internal media supply safeguard the Zebra and your paper stock from harsh environments. And Zebra's lean enough to go anywhere it's needed—from receiving room to shipping dock.

Precision stripes are Zebra's forte.

Built for superior "scannability," Zebra prints in-specification bar codes. With dot overlapping that eliminates gaps and variation. With optical feedback for precise dot positioning. Quality bar codes—without sacrificing format flexibility or image durability.

Zebra runs smoother, longer.

Zebra's print head glides evenly across the label. Unique bidirectional harmonic drive motion eliminates the wear and vibration that cause mechanical problems in other serial printers. Zebra's print head life is rated at 150 million characters. And all parts and labor are backed by a full six-month warranty.

Zebra offers no-fade printing economically.

Zebra's stripes don't fade in the sun. Long-lasting, high-resolution Zebra labels withstand the ultraviolet rays that make expensive thermal labels pale in contrast. Better still, Zebra prints on a variety of locally available label stocks, not expensive thermal paper that can cost you more than the printer itself in less than two years. Zebra's low initial cost and economical diet save you money up front and in the long run.

Zebra, the smarter breed.

Zebra offers maximum flexibility to meet your needs. Nine different high-quality bar code symbologies in 37 sizes. OCR and five sizes of alphanumerics, too. Plus colors and graphics for fast visual identification. Just interface Zebra with any RS-232C device: basic CRT, PC, or host computer. You'll get the labels you need—when and where you need them.

To find out how Zebra can earn its stripes in your jungle, call or write today.

But How Do You Cost-Justify It?

By [illegible]

In that article, Hayes and Abernathy concluded that "the key to long-term success, even survival, in business is what it has always been — to invest, to innovate, to lead, to create value where none existed before. Such determination, such striving to excel requires leaders — not just controllers, market analysts and portfolio. In our preoccupation with the braking systems and exterior trim (for example, return on investment), we have neglected the drive trains of our corporations."

Although enlightened leadership is surely required to create value, reduced dependence on analyzing investment returns is not the answer either. Measurement methodologies are not the problem; the way many companies use them needs to be reexamined.

Consider the way many companies justify CIM (and other DP) investments. The corporate controller prepares and distributes instructions and forms for evaluating capital expenditures as part of the capital budgeting and authorization system. For expenditures that involve business expansions or cost reductions, the instructions and forms typically call for the following:

- Forecasting differential cash outflows — for example, for a 10-year period or the life of the investment. Outflows include the initial investment, training and start-up expenses; operating costs; changes in working capital; and income taxes paid.
- Forecasting differential cash inflows for the same period. Inflows include revenues, recovery of working capital and a residual value in the last year of the forecast.
- Subtracting the cash outflows from the inflows to calculate a net cash flow by year.
- Discounting the net cash flows by a cost of capital to determine a net present value or calculating an internal rate of return (the discount rate where net value of inflows exactly equals outflows). Figure 1 (above) shows a format used for this purpose.

	Year 0	1	2	n

Figure 1. Capital Expenditure Budgeting Process

Although this methodology is conceptually correct, in practice it is commonly misapplied in several ways. It is unfortunate that this misapplication provides an uneconomical bias in favor of short-term projects at the expense of investments, such as CIM, that offer long-term strategic benefits. Five common pitfalls are:

- Evaluating CIM investments as stand-alone, cost reduction-oriented, capital expenditure proposals rather than as business-building strategic investments.
- Overlooking indirect cost reductions.
- Using excessive discount rates.
- Underestimating the residual values of CIM equipment.
- Relying on a single conclusion when a range of likely outcomes would be more appropriate.

The CIM investment decision is usually a strategic investment that a company makes to gain a competitive advantage, and it should therefore be evaluated in its entirety. The company should forecast and discount all the differential cash outflows and inflows associated with the strategy, not just the cash flows associated with the cost-saving component of the investment.

Differential cash flows are elements of cash inflow or outflow that are expected to differ if one course of action is adopted rather than another. Such cash flows may be estimated by adding up cost savings and marginal profit contributions before noncash charges (such as depreciation) or subtracting base case forecasts from forecasts that reflect an investment in CIM. The base case forecasts should reflect various competitive scenarios (for example, "the competition does not install CIM" or "the competition installs CIM"). The CIM installation forecasts should also reflect alternate investment and operating scenarios.

The base case is not zero. There is no such thing as a no-change alternative. If a company does not invest in CIM but its competitors do, the firm will lose competitive position. No change often translates into a decline and an eventual abandonment of a business. Decline and abandonment, therefore, may be the scenario that should be forecast as the base case for purposes of estimating the differential cash outflows and inflows for the CIM investment alternative.

Although direct cost savings are often relatively easy to identify, some companies overlook the impact CIM installations have on indirect costs. For example, CIM may require less supervision because fewer people are required. Fewer people reduce payroll and human resources department costs. Direct and indirect payroll cost reductions also translate into reduced payroll tax, pension fund obligations and other employee benefit costs. Reduced space requirements mean lower heat, light, janitorial, maintenance and other building occupancy costs. Improved quality results in reduced inspection, material handling, rework, scrap, yield and sales adjustment costs. Lower inventories result in lower inventory carrying costs. Such indirect cost reductions often exceed the direct cost savings associated with the installation of CIM systems.

Forecasts of net cash flows are usually discounted by a rate that reflects the perceived time cost of the capital (money) invested in a project. This discount rate is intended to reflect a company's capital cost based on the financial characteristics of the business. The National Association of Accountants defined the cost of capital in their publication, "Statement on Management Accounting: Cost of Capital" [Nov. 1, 1984]. According to that definition, the cost of capital is "a composite of the cost of various sources of funds comprising a firm's capital structure. It is the minimum rate of return that must be earned on new investments that will not dilute the interests of the shareholder." In practice, the cost of capital is supposed to be the weighted cost of debt and equity to be employed over the time horison of the prospective investment (see Figure 2 below).

The cost of capital is not the same as a hurdle rate, which is simply a benchmark that some companies use to screen prospective capital expenditures. If the likely internal rate of return of a project exceeds the hurdle rate, the project presumably merits further consideration.

		After Tax Rate (Percentage)	Mix Debt/Equity (Factor)	Weighted Cost (Percentage)
Debt (54% x 12.8%)		6.9	.27	1.9
Equity (using Capital Asset Pricing Model)				
Equity Risk Premium (Assume)	6.0%			
Company Risk Adjustment (Beta Value Line)	.80			
Company Risk Premium	4.8%			
Treasury Bond Rate	11.0%			
		15.8	.73	11.5
			1.00	13.4%

Figure 2. Example of Cost of Capital Calculation

For at least three reasons, many companies discount their net cash flow by rates that exceed their actual cost of capital. Those reasons are the following:

- Because of the federal budget deficit, the current cost of debt and equity capital may be abnormally high and may not reflect future capital costs. Future costs of capital over the time horison of the investment are the numbers that are most relevent for the investment decision.
- In a quest for financial conservatism, many companies underutilize long-term debt. A high proportion of equity tends to increase a company's cost of capital and the discount rate that is applied; a high proportion of debt tends to lower this rate.
- Also in a quest for conservatism, controllers tend to round up their calculations of their company's cost of capital. Thus, a calculation of 13.4% (shown in Figure 2) becomes 15% rather than 13%.

High discount rates favor projects that pay off in the short term rather than projects that, like CIM, offer long-term strategic benefits because of the effect of compounding.

Management may underestimate the residual values of prospective CIM investments, for example, by assuming that machinery and equipment will have a useful life of, say, 10 years and will be worth a scrap value at the end of that period. This is hardly the case. Not only may CIM investments (like commercial airplanes) have economic lives that will substantially exceed their book lives, but their residual value at the end of the tenth year will reflect the impact of inflation during those 10 years. Even assuming 4% per year inflation, today's residual value of $1 is equal to $1.57 in 10 years. This figure increases to $1.80 if a 6% annual inflation assumption is used. The problem is that while companies usually impound inflation in the discount rate they use, they often ignore it when they estimate residual values.

Financial managers often seek a single number forecast rather than an estimate of a high, low and most-likely outcome of alternative competitive and economic scenarios and discount rates. The forms are designed for one set of numbers so that each proposal can be compared with others. In reality, economic justifications are based on estimations subject to error in both directions. Thus, forecasts for CIM investments should reflect various scenarios and assumptions. Alternative assumptions, for example, should include a reasonable range of forecasts of the timing and amount of cash flows, residual values and discount rates. The array of computer-generated answers should be assessed using good, old-fashioned business judgment. Analysis should be used as a tool to assist economically sound decision making rather than relegated to the realm of braking systems.

If data is estimated objectively and biases favoring short-term payouts are eliminated, internal rate of return and net cash flow techniques can well serve corporate executives in justifying investments in computer-aided manufacturing systems.

Computer-Integrated Manufacturing: The Key Word Is *Integrated*

By Stan Kolodziej

The computer industry has always found manufacturing a tough nut to crack. The separate pockets of operations in manufacturing companies have resisted integration by computers. On the factory floor, for example, automated test equipment, programmable logic controllers and numerical control equipment, isolated from corporate management, have worked within their own closed-loop environment of specialized data and instructions. Beyond the shop floor, supervisory material scheduling and control also worked within its own requirements and cluster of work cells.

In the early 1970s, however, the first steps toward integration of the various components occurred. The advent of minicomputers allowed data processing to be dispersed at a lower cost among various corporate departments. Operating systems were more powerful, and programming was becoming easier for in-house personnel. On-line, real-time report writers provided quick distribution of materials handling, inventory and other data without the traditional time lag and channeling through MIS.

Also in development was the concept of materials requirements planning (MRP), an attempt by manufacturers to utilize the newly available corporate processing power to integrate applications such as billing, work in process, inventory, cost accounting, purchasing and other direct manufacturing procedures.

The emphasis was on integration. This emphasis on data integration, however, has occurred more often in theory than in practice. One major obstacle has been built-in resistance by various departments within manufacturing, which were driven by fear of change and reluctance to relinquish control.

Faced with the daunting complexity of the manufacturing market, turnkey systems houses had little choice but to produce specialized vertical market products that worked in relative isolation from systems in other departments. Aggravating the situation were the number of proprietary operating systems and software produced; interfacing with other vendor systems became impossible without extensive and expensive reprogramming.

Only In Hollywood

The word robot conjures up images of science fiction anthropomorphic androids wreaking vengeful havoc on its human creators or dutifully carrying out mankind's salvation. Of the estimated 19,000 robots now toiling in U.S. industry, however, most look more like one-armed cuisinarts than humans. The intelligence of most robots consists of taking a few simple orders and performing tasks that would tax the patience of a child.

Today's robots are used on the assemblyline to spot weld, arc weld, spray paint, move material and perform minor assembly jobs. Robots can work in areas that are toxic and dangerous to humans; they do not take breaks, do not belong to unions, do not demand sick pay, rarely countermand an order and really don't care how the Celtics are doing. Management likes robots.

Robots are incredibly structured workers. They have to be. The average robot is not a jack-of-all-trades. In fact, the average robot performs only a single function — but does it very well. Robots represent specialized labor to the nth degree. The curious fact that robots work in clusters, or cells, has nothing to do with their being gregarious. They are merely being cost effective. While one robot is doing a spot weld on one side of an automobile chassis, another can do the same on the other side. When they are finished, the chassis will continue down the conveyor belt and meet other welding robots whose areas of expertise might be doors. After these come the painting robots, and then the finishing robots. True division of labor, but hardly renaissance machines.

Times are changing. The buzzword in manufacturing is *system*. Customers want robot systems, with system applications, not just single machines. They want robots to be integrated, not segregated. They want robots to be holistic, not individualistic, to work in kind with other processing machinery, with support systems, with inventory control — to become part of the new team flexible manufacturing.

Robot makers have heeded the word. Systems they want, systems they'll get. Sometime in the future. Right now the robot industry is busy reaping what it has sown. Multiple vendors with multiple protocols, control systems and programming languages. No SNA-like standard exists in the robot industry. The closest is General Motors Corp. Manufacturing Automation Protocol (MAP), but it will be several years before MAP is strong enough to force robot vendors to conform to its standard. Until then, integrating robots into flexible manufacturing systems will cost dearly.

All is not gloomy. Robots are beginning to see the light — literally. Vision-capable robots are better, smarter and more reliable, thanks to major advances in signal processing semiconductor technology. These robots promise to be the leading edge in manufacturing systems of the future.

As for those Hollywood robots shown balancing the company books, don't hold your breath.

Rapid growth occurred in yet another relatively independent and very important area of manufacturing: computer-aided design and computer-aided manufacturing (CAD/CAM). CAD/CAM has also attracted its own set of systems vendors which, until recently, provided application-specific products that remained all but isolated from other DP operations within manufacturing. With the recent economic downturn and increased competition from foreign manufacturers, however, U.S. industry has again been taking a long hard look at how computers and the linking of manufacturing operations can help increase profit and efficiency. A primary impetus has come from within the manufacturing industry itself.

Manufacturing resource planning (MRP II) goes a few steps beyond its predecessor, material requirements planning. MRP II is a planning and operating system that includes all manufacturing functions — material, capacity, finance, engineering, sales, distribution and marketing. MRP II is meant to be a generic set of operational rules applied to all manufacturing companies, regardless of size and product. Its basic premise is integration; its modus operandi is computers.

A working MRP II system is in place at the Pratt & Whitney Aircraft Co. in East Hartford, Conn. Ted Brindamour, Pratt & Whitney's manager of office automation, described the company's MIS data base as "very elaborate," and said the entire shop floor control systems of several regional plants provide data to it.

"Numerical control machines and logical controllers on the shop floors are online to the IBM mainframes in MIS at the East Hartford head office," Brindamour explained. "Data from the shop floors is used to produce work schedules, parts forecasting, machine time scheduling and identifying manufacturing bottlenecks for engine parts.

"Every two weeks we produce a new schedule, listing what kinds of engines we're going to ship, what kinds of spare parts, and then the system creates a new schedule for the shop floor to build to. What we're working on now is using the raw and finished material tracking to interface more with the financial group to do 'what if' scenarios and strategic planning."

Though this installation uses a relatively advanced MRP II system, it is only the first step in what the manufacturing industry has designated as computer-integrated manufacturing (CIM), deemed the ultimate evolution of computerized manufacturing. CIM has come to mean the implementation of a fully integrated data base that flows through the entire manufacturing process from process control to finance, with all intermediate steps — such as production control, scheduling, inventory, cost accounting and engineering — driven from the same data base.

Implementing CIM is a huge undertaking, one fraught as much with organizational considerations as with the actual availability of CIM technology. Digital Equipment Corp., for instance, advises its clients that the implementation of its Baseway integrated manufacturing system should be overseen by a controlling group within an organization and not on a departmental basis.

"MIS is a service organization which has a heavy influence and responsibility in supporting the computer systems that are supporting the manufacturing environment," Denney LaBarge, DEC's marketing manager of manufacturing, architecture and networks, explained. "However, though the actual implementation of CIM systems might not come from MIS but from the various departments themselves, the strategic implications of a truly integrated environment require a focus by something like an MIS group to make sure the integration can be handled in a flexible and expandable manner. The market is moving toward a high degree of compatibility in the multivendor environment, but you still need either MIS or some other technical resource to oversee and advise."

ASK Computer Systems, Inc., a Los Altos, Calif., turnkey systems house and producer of the manufacturing management (Manman) integrated manufacturing system, sees nothing wrong in individual departments taking control of CIM integration.

According to David Sohn, ASK's vice-president of marketing, "The impetus to install a system like Manman can come from one of three places. The manufacturing department is often a key mover because they know they need a better tool for scheduling and planning. The financial side is also interested because by integrating manufacturing with the financial area, you can get better control over the financial end. The third area is MIS, which may be responding to questions from both the manufacturing and the financial groups, then coming to us for answers. Departments can implement almost in a vacuum, unconcerned about what the next department is doing, since we've already taken care of that problem through built-in controls."

Of those few computer vendors now beginning to offer several pieces of the CIM puzzle, DEC is in an unusually good position, in large part because of the early dominance of its PDP-11 computer on U.S. factory floors. PDP-11s control individual work cells through programmable logic controllers; the PDP-11s, in turn, are further clustered into groups of work cells usually controlled by DEC VAX minicomputers.

DEC has used this base to further penetrate into the MRP and MIS functions of large manufacturing concerns. Recently, DEC has seen the time ripe for the introduction of Baseway, its series of software products that will serve as the core of a manufacturing environment and the means to link both DEC and other vendors' equipment. Baseway is a sophisticated communications highway leading from the factory floor to MRP and beyond. The product consists of three software components: the Shopfloor Gateway, a hardware and software communications device running on a PDP-11 system and acting as a translator between specific shop floor devices and a host computer; the Baseway Application Software Bus, which runs on the VAX/VMS operating system, communicates with control devices on the shop floor and provides a common means of sharing data throughout a factory; and the Programmable Device Support, a menu-driven application capable of downloading and uploading, reading and writing, comparing, documenting and maintaining a library of ladder logic programs.

"While MIS can use the shop floor data made available through Baseway," LaBarge explained, "most of the companies using Baseway are employing it in a decision support mode for the management functions essential to keeping the manufacturing plant operating. This includes material management, quality control, maintenance, supervision and superintending and keeping track of production statistics to reconcile against the production schedule. Reports can be created showing the current production status of an entire plant, by departments, workstations or individual machines."

DEC also seems committed to the needs of users in a multivendor manufacturing environment. Gateways from Decnet networks to IBM Systems Network Architecture (SNA) environments provide a good avenue for DEC and its large manufacturing customer base to further extend into the IBM-controlled MIS departments, a logical step if DEC is intent on influencing future manufacturing MIS purchasing decisions.

LaBarge added that DEC is also intent on producing products that will be compatible with both the International Standards Organization's Open Systems Interconnect and the General Motors Corp. Manufacturing Automation Protocol (MAP) architectures, both gaining more popularity and support in manufacturing.

Baseway represents the flagship CIM product from DEC, and more will be forthcoming from Cimlab, the company's newly opened CIM laboratory located in Shrewsbury, Mass. Cimlab will be DEC's primary facility for developing and testing its CIM products.

Computervision of Bedford, Mass., one of the pioneers in CAD/CAM application systems, has attempted to integrate MRP II and CAD/CAM through Factoryvision, a microcomputer-based factory floor management system. The heart of the system is a 32-bit Computervision CDS 3901 CPU supporting up to 16 view-only terminals. The Factoryvision data base consists of text and graphics such as engineering and detailed drawings, process plans, assembly instructions and numerical control data. Product information created and stored on Computervision CAD/CAM systems is distributed by Factoryvision throughout the various levels of factory management and operations, enabling designers, engineers and administration to maintain drawings and project data. It will also provide floor managers and production workers on the factory floor with up-to-date graphics and instructions.

Factoryvision draws on Computervision's extensive CAD expertise to tie together the CAM, or manufacturing element, with graphics, a union that until recently has been more one of words than of substance. "The general decline in computing costs has made it economical to distribute CAD/CAM data directly, instead of relying on hard copy carried by hand," John Langley, Computervision's product manager, said.

Factoryvision is aimed to achieve graphics data distribution through three modules. Planning and Administrative is used by engineers and designers for the viewing and maintenance of drawings and plans. Production System carries production data such as process plans, tool lists and work load and distribution data directly to the factory floor. Machine Tool Management enables numerical control data to be sent through the Factoryvision network to a shop floor machine tool, coordinate measuring machine or robot — without the use of tape.

"We're not creating graphics or generating requirements or detailed scheduling," Langley explained. "Factoryvision acts as a conduit to channel process information down from MRP and CAD/CAM to the factory floor. A typical application would consist of a demand created in MRP, followed by a suppply order sent to the shop in the form of a schedule. Once the order is completed, a feedback in the form of a transaction goes back to an MRP mailbox so that files can be updated to relieve demand. We're really the middleman between the business systems and the factory."

ASK Computer Systems has specialised in providing turnkey systems for MRP for almost a decade. Starting with an inventory control package, ASK has gradually extended its offerings to try to keep pace with the expanding role of MRP. "From the inventory core," Sohm explained, "we added a master scheduling module, a capacity planning module and materials requirements planning. That set was basically what people in the past called materials requirements planning. When you add order entry, accounts receivable and payable and general ledger, you have MRP II."

ASK's Manman MRP II system is structured around 16 modules, Sohm said, and runs on either Hewlett-Packard Co. 3000 series or DEC VAX series computers. Data flows in two directions. From the factory floor, process data can be keyed into terminals and fed into the central computer, which can reside in MIS or elsewhere (Sohm stressed the location was relatively unimportant). Factory floor information tracking material movement and processing is fed immediately by the central computer into general ledger files, booking those material usage costs to appropriate general ledger accounts. As this data is processed, production schedules are updated, enabling management to recalculate production schedules on a regular basis.

ASK and other CIM systems suppliers are learning that being profitable in CIM means coming to terms with a manufacturing world dominated by DEC and IBM. As MRP II becomes more of an MIS-influenced and MIS-driven function, systems vendors are providing gateway facilities to tie into IBM mainframes and DEC minis.

High-profile CAD/CAM vendor Apollo Computer Corp. of Chelmsford, Mass., for example, has made sure its new Domain networking software can tie users into IBM computers through 2780 and 3780 terminal emulation and DEC computers through an Ethernet gateway. A gateway to IBM's SNA network is scheduled soon. Bill Kaiser, Apollo's manager of CAD/CAE/CIM market development, said, "IBM will not be able to cover all the bases in CIM for some time. However, as CIM becomes more of a corporate concern, with MIS a major player, any vendor that can't relate its products to IBM MIS data bases is going to be isolated."

Analysts generally agree that if any company has the resources to market a complete CIM system in the near future, it is IBM. Though cool and reticent about its intentions in the CIM market, the computer giant has been quietly putting the pieces together for what seems to be a planned assault on a CIM market that should reach $73 billion in the U.S. by 1989, according to International Resource Development, Inc., a Norwalk, Conn., research outfit.

In the CAD/CAM area, IBM's extensive offering of software packages includes Cadam, for drafting; Catia, for three-dimensional mechanical design; Caeds, for linear analysis; and CBDS, for circuit board design. Late in 1984, IBM also lowered prices on its models 4331 and 4361, the same superminis that drive IBM's CAD/CAM systems and are used extensively throughout manufacturing MIS departments. At the low end, IBM will be introducing a Cadam version for its Personal Computer and will also announce a ruggedised version of its Personal Computer for shop floor use. At the high end of the CAD/CAM market, IBM is aggressively pursuing penetration through value-added resellers to regain an engineering segment they had all but lost over the past two decades. It is conceivable that by the end of this decade, IBM will be a major force on the shop floor, in the design and engineering departments and in corporate industrial DP, three areas that comprise the main building blocks of CIM.

Automation Heats Up At Lukens Steel

By Lee White

Lukens Steel Co. in Coatesville, Pa., has a history of making history. Brandywine Iron Works and Nail Factory became the first U.S. iron company headed by a woman when, in 1825, Rebecca Lukens took over the mill her father founded. In spite of lawsuits instituted by her family, she ran the company until 1840 and lived to see it renamed in her honor.

More than a century later, Lukens Steel made history once more. In 1960, IBM and Lukens joined forces to computerize the guiding of electric furnaces by means of an IBM 1800. Twenty-five years of computerization and 175 years of steelmaking later, Lukens hit the Fortune 500 — at the 500th place. Those 175 years were not all good years, however. Lukens' success story could be compressed into the last five of those years and can be attributed to state-of-the-art computerization and state-of-the-mind people. That success came in spite of the fact that steel production at Lukens fell from 734,000 tons to 483,000 tons between 1980 and 1984, profits declined, the number of salaried personnel was halved and the ranks of steel workers decreased by 35%. In 1983 Lukens lost $14 million.

Lukens wasn't the only organization in trouble: The steel industry was suffering across the board, partially because the economy was soft and partially because an influx of less expensive foreign steel was under way. It was during this period that management decided some drastic changes had to take place in the way business was conducted.

On the decision-making body guiding these changes was Al Eastburn, vice-president of manufacturing services and planning. Eastburn reports directly to W.R. Wilson, president and chief executive officer of Lukens, Inc. (Lukens Steel Co. is a unit of Lukens, Inc.) and reporting to Eastburn is Lukens Steel's entire DP department, which is divided into management information systems and process control. Eastburn knew that the key to competitive steel making was automation of the process and timely dissemination of information and product to Lukens' customers. For about three years, these two projects have been evolving. They are expensive, in terms both of hardware/software and of staffing requirements, but Eastburn convinced top management the money had to be spent.

Providing for efficiency in a steel mill was no easy task. After an order has been taken, mill instructions are generated by computer and can be 30 pages in length. These instructions are written by the IBM 3083 and are based on metallurgical, customer or processing requirements. If there is no plate in inventory, the order and others of the same chemistry or size are accumulated until the total approaches 160 tons. At this point, the department prepares a furnace, a process also known as "setting a heat." From this point on, the progress of the heat is tracked by local process control computers until shipment occurs.

Two systems resulted from the years of work: Materials Tracking and Expediting (Matrex) and Status On Line (Statline). Prior to Matrex and Statline, according to Mark Kamon, manager of production control and rolling, 200 people worked in production control. These people tracked 650 to 700 orders per month and coordinated 22,000 pieces of steel (in various stages of completion) through 900 acres and 50 different buildings and operation locations. The primary task of these workers was to communicate order status to salespeople and customers. A customer who called to inquire about an order got his information two days later, at which point it was two or three days old and often incorrect.

"We had this mass of people all over the plant who kept those records. They were late, transposition errors were incredible, you had handwriting off sometimes illegibly handwritten documents [that might be] the fifth copy. It was very inefficient, very unprofessional and error-prone from beginning to end. Ergo, Matrex and Statline," Kamon said.

Matrex is the system into which plant personnel key information as the raw material wends its way through processing. When enough raw material has been accumulated, it is melted, poured, cooled, heated again, rolled, laid out, cut, inspected, loaded and shipped. At each point in the process, the status is plugged into the computer. Statline is fed by the Matrex system in an on-line, real-time environment. When a customer or salesperson calls, the sales support person keys in the mill order and item number and can immediately tell the caller the status of the order.

One of the more difficult processes that culminated in Matrex and Statline began in July 1984. Martha Dixon, project manager, and Tom McFadden, lead information services analyst, were charged with automating the tracking system. "We were concerned because we were designing a system for 300 people — union people — working in a manufacturing environment. These people had no concept of computers or keyboards," McFadden said. Their motivation level was also suspect: They were asked to take time from their work to input information into a computer, but they were paid no more for the extra task. Dixon knew the solution would have to be creative.

The answer came in the form of 17 laid-off and retired Lukens plant workers who were rehired to train factory personnel. In an almost circus-like atmosphere "simultaneous activities were going on, major activities. Tom was designing [the system], the programmers were programming, the user was defining the needs. We were also reconfiguring an IBM 4381 and installing an IBM 3083. There were 55 CRTs and printers [to be installed] for this project alone," Dixon explained.

And it wasn't just the systems staff that contributed to the endeavor. Telecommunications was involved with cabling, and the cubicles that housed the computer terminals had to be built and installed. "It was a very dynamic, fluid process. The training aspect had to go on because there were about five or six major transactions that occurred; all the processes we go through with plate [steel] — all had to be designed," Dixon said. The due date for completion of all hardware and software installation, designing, testing and training for the first two buildings and personnel was Sept. 17, 1984. The staff made that deadline, and by the end of October the entire project was completed.

According to Dixon, McFadden and Kamon, the key factors in the successful completion of the implementation were the resourcefulness and motivation of the trainers and the receptive attitudes of the hourly and salaried factory workers. Dixon had high praise for the trainers. "Everybody had a great deal of respect for them. They were brought in for a very temporary assignment, and they put their hearts and souls into it. They trained the people, they learned, they tested for us and they worked odd hours. The retirees — some of them had been with the company for 20 and 30 years — knew the operations out in the mill, they knew the people and there was acceptance [of them] by the union workers."

Mill workers got equally high marks. "The hourly union people have no constraints on them. [Data entry isn't] tied to their payroll. It's strictly an honor system, and we're getting in the neighborhood of 98% of the data input into the system. I still to this day cannot believe we're getting 98%," McFadden enthused. Kamon echoed McFadden's sentiments. "They're inputting 20 characters at a pop. We want it timely, and we want it right. We audit [input] and it's 99%-plus accurate the first time."

These efforts resulted in an extremely favorable bottom line. The customer satisfaction rate, determined by quality of final product and on-time shipping, was approximately 30% in the second half of 1984. After implementation of Matrex and Statline, the customer satisfaction rate increased to 90% in the first quarter of 1985. Ron Jones, manager of customer service, sent surveys to Lukens' customers recently to see what effect Matrex and Statline have had. All surveys were returned with favorable reports.

Jones cited one example of the turnaround Lukens experienced. "There is a bridge fabricator in the South. This time last year he refused to give us another order. We went to him after we got the system in place and were able to sell him on the fact that we had changed. He gave us another chance, and we have an almost perfect record with him."

But the computerization of the tracking and expediting portions of Lukens Steel is only half the story. In the early '80s, process control (which had been phased out in the '60s) was reactivated when Eastburn hired Sharon Muscedere as supervisor of process control. Muscedere, an electrical engineer, had never worked in the steel industry, but the challenges sold her on the job. "There were a hundred different projects I could see right off the bat. The other steel companies were really ahead of us when I first got here, but we're catching up fast. Right now we've got a project priority list that can go on for the next 10 years."

> **Key factors in the successful implementation were the resourcefulness and motivation of the trainers and the receptive attitudes of hourly and salaried factory workers.**

The first step for Muscedere's process control group was a migration from the centralized 1800 to three levels of distributed control through Digital Equipment Corp. computers. Traditionally an IBM shop, Lukens made a conscious decision to go with DEC, according to Russ Melton, Eastburn's assistant. "[IBM] abandoned the process control side and all the engineers came through college learning about DEC, so that was the machine of choice. IBM would really like to get back into this business, but they've got a long, hard pull ahead of them," he commented.

After the hardware decision was made, Muscedere had to find a way to collect sensor information. Lukens chose Gould, Inc. Modicon programmable controllers for their heavy-duty construction and ability to function in a dirty, non-temperature-controlled environment. Another important reason was that the controllers require no programming language. "They use ladder logic very similar to the schematics electricians are familiar with," Muscedere said. "After we install them, the maintenance department is able to support them for us."

Another problem was data communication. Because heavy drives and machinery cause electrical interference in the plant, data communication over twisted pairs was not good enough. Muscedere and her staff decided to install fiber-optic communication lines and statistical multiplexers to put intelligence at both ends of the line.

But the biggest job was converting from the 1800 to DEC PDP-11/44s and finally to a DEC VAX cluster. "We found that the scope grew with the project. We wanted to have growth built in," Muscedere explained. At present there are three VAX-11/750s: one for the live system, one as a backup/test system and one for development. The company expects to add another live system in the near future.

The process control group had given much thought to the problem of growth. "One thing certain in process control is that sooner or later you're going to upgrade to larger computers, so there is a definite need for transportability of software," Muscedere said.

To ease the growing pains, the company custom designed a virtual operating system (VOS) for all the software. Lukens has already realised tremendous benefit from the effort; in the migration from PDP-11s to VAX-11/750s, 95% of the software did not have to be rewritten.

The general environment of the steel mill couldn't seem less well suited to computerization; the mills are dirty, noisy, old and hot. Yet an astonishing amount of automation is taking place. Describing the inside of a steel mill is difficult, but the phrase "sensory overload" is appropriate. The furnace itself has a 22-foot inside diameter. The buckets carrying the scrap steel that is dumped into the furnace weigh 70,000 pounds each when empty; the scrap charge adds another 130,000 pounds to the weight. Each heat uses at least three buckets of scrap. The roof of the furnace lifts and rotates 61 degrees to allow the bucket of scrap to be poured into the furnace, and the roof itself weighs approximately 150,000 pounds. The furnace's total weight with three buckets of scrap is 1,300,000 pounds.

The electricity consumed for a furnace's heat is so high that Lukens pays the highest electric rates in Pennsylvania. To minimise that expense, most heats take place in off-peak usage hours. The heat attained in each furnace approaches 3,000 degrees Fahrenheit. One furnace uses 800 kilowatt hours of electricity per minute; the average house uses 500 kilowatt hours per month. Strolling through the melt shop when it's 90 degrees Fahrenheit outdoors and fire is belching from the furnaces is enough to convince those who believe in hell to try and lead a better life. When one then realizes that a computer is sensing, moving, monitoring, recording and reporting all activities from the selection of the scrap to the melting of the steel, the enormity of the task is underscored.

Much of the operator's job is done from the pulpit, a glass-enclosed area a few yards away suspended about one story over the furnaces. The operator uses CRTs and buttons to monitor the scrap, the weight of the buckets and the heat chemistry. When all the numbers are correct, the furnace is turned on. Dave Kramer, lead systems engineer, explained that the entire system, called Operator Guidance and Control, exists primarily to supply just the amount of energy necessary. A secondary purpose is to collect data for an historical file, which includes targeted chemistries and unusual events of the heat. This information, combined with data from computers in the chemistry laboratory, is put into a data base that is transmitted to Mathematica Products Group, Inc.'s Ramis on the IBM 3083.

Kramer is heading up another automation project at the West Side building. At present, two furnaces heat treat high-carbon plate steel. Prior to the project's first phase, temperature was monitored by 35-year-old controls. Kramer and his group brought in a Leeds and Northrup Co. Max 1 distributed control non-language-based system, added various other digital displays and improved temperature control from plus or minus 30 degrees to plus or minus 5 degrees.

The second phase, which is in progress now, is to add a DEC PDP-11/73, a microcomputer and a Gould Modicon 584. These additions will control temperature and aid in tracking the product. Kramer's group is presently designing a touch-sensitive screen to allow operators to select information. This will produce a chronological report that can be used by the metallurgical groups to evaluate and improve the process. The third phase, which Kramer hesitated to call the last, will "beef up" the supervisory computer and automatically link the monitored information. In addition, "there will be functions to improve combustion control for energy conservation. This will be communicated to the [IBM 3083] so we can get historical production information into Ramis-like files to statistically evaluate necessary improvements."

That Lukens is on its way to state-of-the-art from a computer standpoint is obvious. But Wheeling-Pittsburgh Steel Corp. spent $700 million to modernise its steel-making operations, only to be forced into filing Chapter 11 bankruptcy in April 1984.

What sets Lukens apart is the respect its managers show for the workers and the resulting willingness of the workers to do their part to make the company function better. Kramer, who works quite closely with many of the factory personnel, said the operators have received the systems very well. McFadden added that the workers were very aware that their futures hung in the balance. "We had gone through two years of losing money. They all recognised that this was an effort that was going to make the company more profitable," McFadden said. Muscedere, whose background had included clean-tech E.I. DuPont de Nemours & Co., expressed surprise at the workers' easy acceptance of process control automation. "The operators, the union people, desperately want computer assistance. I find that attitude refreshing — really different from other places I've worked."

Rebecca Lukens might have a hard time understanding the concept of automation, but she'd no doubt be very proud of the company that bears her name.

Decision Support Systems— New Tool For Manufacturing

By Allan F. Ayers

The number of manufacturing control systems (MCS) has grown enormously in the past decade. These systems, commonly known as MRP systems, evolved from the materials requirements planning process. More than 140 of these systems are currently on the market. Some are truly full MCS; others provide only parts of the MCS. Many operate on more than one type of hardware. Some are strong in planning; others in shop floor control.

All of these systems, however, have one thing in common: They are principally operational systems — designed to process the following operational activities:

- Receiving daily or weekly input transactions such as orders, shipments, receipts and detail forecasts.
- Generating detail-level outputs such as shipping documents, production orders and requirements lists.
- Providing detail inquiries such as bills of material structures, open orders and available inventory.
- Day-by-day systems control.

What most management control systems lack is the summary-level management information managers need to plan and manage the overall performance of the business. There is a valid reason for this omission: The realm of management information cannot readily be packaged. Management styles differ; therefore presentation and analysis will vary. The actual measurement and reporting requirements are different and depend on the nature of the business and the analysis required at the moment. Management information is also less structured and cannot be routinely scheduled. This is where decision support systems (DSS) become useful.

DSS Environment: DSS are used to solve information problems in a particular environment. That environment is created through the following conditions:

- The problem is too complex to be solved by hand. Complexity may be caused by the volume of numbers, the difficulty of the analysis or both.
- The problem continues to change with the high degree of uncertainty and is probably event driven. There are frequent changes in variables that may be updated either on a time schedule or in response to some level of control feedback. (For example, decisions about inventory stocking levels may change as interest rates drop.)
- The inputs to the problem cause frequent rerunning of the process to evaluate the new results.
- The answers are needed in a short time relative to the nature of the analysis.
- Intermediate results may be used to specify the direction of the rest of the processing; therefore the problem calls for an interactive person/computer relationship.

Data Acquisition: A DSS must have the flexibility to draw data from several sources. The principal source would normally be existing computerized data bases. These bases may be in any of several forms ranging from simple sequential data files to elaborate data base structures. Because a DSS would presumably operate on a copy of the data rather than on the data base itself (to protect data integrity), this variability in structure need not be a complex problem. It may require interface programs that draw data from the data base and load it into file structures suitable for the DSS. A major problem in dealing with corporate data is the size of the data base. With very large hierarchical data bases, a thorough analysis of the data to be provided for the DSS and the frequency of revision are essential.

A second source of data would be manual inputs from the user of the system. A DSS should therefore have input loading and data file management capabilities. Many available DSS software products have complete CRT screen development and data entry editing capabilities. A company doing an analysis of requirements for selecting a particular product should pay close attention to its needs in this area.

Figure 1. Software Tools

A last source — public data bases — is becoming increasingly more significant and is now available via computerised communications. Public data bases are usually retrievable through personal computers or data terminals. To be used in conjunction with data from company resources, this data clearly has to remain in computer-readable format and be communicated to the hardware system running the DSS software. Other methods of obtaining this data include periodic computer tapes and, for larger client companies, direct computer communication.

Data Processing: A DSS should be able to perform several types of processing on the data in the system. First, the data may have to be aggregated, merged or otherwise manipulated to put it into an appropriate level of detail and configuration for analysis. This would be considered a processing step. Second, the preprocessed data will be analysed. This may include statistical analysis (such as linear regression), groupings or percentages of totals or matrix manipulation using an electronic worksheet approach. Third, all these manipulations might call for "what if" capabilities or other simulations to test results and the sensitivity of those results to changes in the data.

Data Presentation: A DSS must be able to present the results of analyses. This presentation may take the shape of either a line by line display on a video display terminal or a formal report with graphics incorporated.

Computer resources that the DSS will use has still not been addressed because the DSS can be implemented either on personal computers (linked to the corporate computer) or through computer software tools directly on the corporate computer. The technical aspects will differ, but the concepts will remain the same. Some examples of software available to support a DSS are shown in Figure 1. This list is not complete, and the breadth of capabilities varies significantly from one tool to the next. (Special-purpose tools that would add to a DSS have not been included.)

DSS in Manufacturing: The number of ways a DSS could be applied in manufacturing are limited only by the manufacturing manager's imagination. A standard MCS consists of 10 or 11 modules covering the systems shown in Figure 2, Page 38.

These systems are all oriented around transaction input and day-by-day control. Depending on the specific MCS, individual modules may have some additional features; some may have capabilities for aggregate management-level information. The latter, if available, is most likely of a limited nature.

Four DSS processes relate directly to senior-level manufacturing needs. These four, which can have a major impact on the

They've earned their stripes.

The supplies that wear the IBM stripes must first prove themselves worthy of the distinction.

Before they can join the ranks of all those IBM supplies that have gone on to serve IBM customers so well, they've got to meet some stiff standards.

Our IBM supplies have to pass a series of rigorous inspections and battle their way through a barrage of quality controls.

This means every time you buy IBM word processing or data processing supplies, you're assured of getting a supply product specifically engineered to meet the demands of your IBM equipment. Supplies that are designed to help you get the maximum performance out of your machine.

quality of decisions made and on the bottom line of the income statement are production/sales/inventory (PSI) planning, management performance, quality management and manufacturing/distribution coordination.

Production/sales/inventory planning: The PSI process provides management with a methodology by which sales, finance, production and inventory relationships can be optimized. This relationship can be improved only through the realization that the planning process is implemented from the top down and that each successive level of achievement depends on the achievement of the preceding level. Business planning leads to production planning and performance, which in turn leads to sales (customer shipments), aggregate inventory levels and, ultimately, to master scheduling (that important document that drives our total manufacturing operation).

The objective of the PSI plan is to develop a course of action that maximizes market penetration under the constraints of production capacity and inventory investment. The PSI process is an integration of sales, manufacturing, logistics and financial data to produce a continuous 12-month master production plan at a product family level. The process begins with a sales forecast by month of the number of units required in each family for the next 12 months. Production plans are then calculated to meet sales requirements and desired finished goods inventory targets. The production plans are reviewed to assess the plant's ability to respond. Finance also reviews the dollar results of the forecast, inventory and production plans.

The PSI plan is at a family level suitable for senior management attention. This implies a maximum of about 10 to 15 families.

The PSI process is iterative. Each month, sales submits necessary changes to the existing forecast and projections for the 12-month planning horizon. Manufacturing reviews required changes in light of current assembly and procurement lead time constraints, capacity limitations, inventory position and the master schedule impact. Top management has the final right of review on the PSI plan. After top management has revised and approved the plan, changes and inputs to the master schedule are made.

The implementation of the PSI planning process requires several inputs:

- Sales forecast data is usually by product family and month for 12 months. The data should be expressed in terms of units where possible. This may be obtained through a computerized or manual forecasting system.
- Production planning data (which expresses current plans for the plants) is by product family and month. These units may or may not be in the same unit of measure as a sales forecast; if not, one or the other must be converted.
- Inventory target levels are expressed in turns, weeks of inventory or units on hand.
- Financial data converts all plans to dollars to determine the financial impact.

The processing concept is relatively simple: Beginning Inventory + Production — Sales = Ending Inventory.

In the real world, sales may be projected to exceed production capacity or to be far below capacity. In both cases, decisions that will call for compromises must be made. Inventory targets may be ideal, but the actual balance of inventory between various stocking points may prohibit reaching the targets. The system would process the equation, reflect the results and provide the ability to balance the system by revising the plans to the relative satisfaction of all key managers.

To process this type of an analysis, a spreadsheet system can be used if it has appropriate links to corporate data. The corporate data would provide, among other things, current actual results as well as current master production schedules (that aggregate into the total production plan) and possibly sales forecasts.

The operating environment for the PSI planning process should include the following steps:

printheads and thermal-transfer ribbons were developed and engineered together with the hardware to work as a team. The result is a unique print technology that "paints" ink onto the page.

We've made it our business to make supplies that inspire confidence day after day. So, the next time you're in the market for supplies, choose the ones that have earned the right to wear the IBM stripes.

More convenient ways to buy. To get the IBM supplies you need, contact an IBM supplies representative or visit an IBM Product Center or IBM supplies dealer. For the store location nearest you, or to place an order by phone, call IBM Direct 1 800 IBM-2468, Ext. 90.

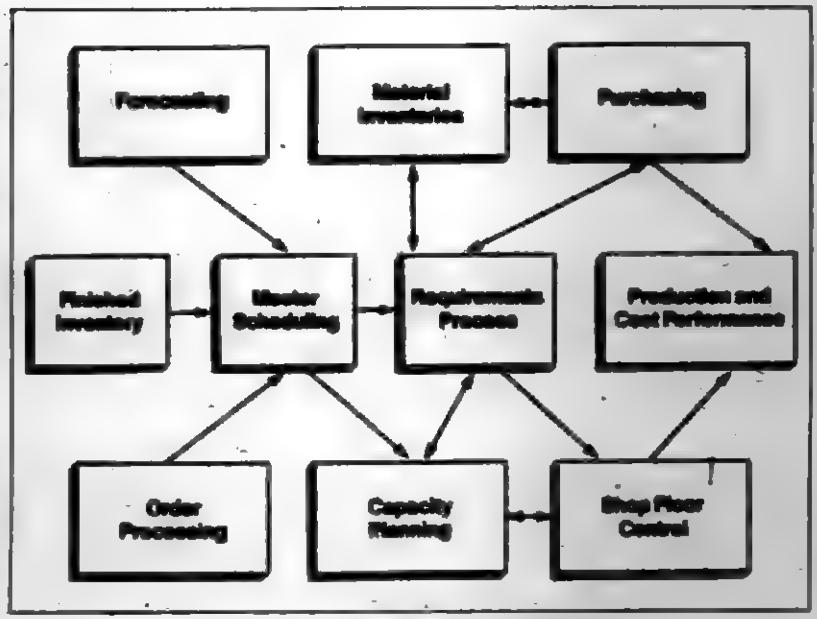

Figure 2. Manufacturing Control System

- The sales forecast would be provided either through aggregating individual item sales forecasts up to an appropriate product family level or by using product family group forecasts. The use of item forecasts would assume that the individual item forecast had already been reconciled with higher level group forecasts created independently to provide a satisfactory sales plan.
- Actual sales data as provided by customer order processing and sales history systems would be accumulated to the appropriate level.
- Inventory results would be generated based on the sales forecasts and desired targets to meet customer service objectives.
- Production needs would usually be projected based on meeting inventory targets at the product family level. Aggregate production needs may be developed by summarizing individual production requirements if item projections are used.
- Summary results would be reported comparing sales and inventories and production.
- Where problems occur, detail information must be available to be analysed to revise the aggregate results. Subsequent adjustments must be made to detail-level data (forecasts, inventories or production plans) to reflect the revised plan. This adjustment is usually an update to the master production schedule.

Production management performance analysis: The management performance process should be looking at appropriate summary-level objectives for performance and reporting actual results against those targets.

Quality management recently gained a lot of attention as a means of improving a company's competitive position. Unfortunately, quality management is a little bit of mom and apple pie. In the real world, the range of success with measuring and managing quality has been wide. Beyond the ability of tracking inspection results and measuring statistics for acceptance and rejection in materials, quality management frequently gets limited systems attention. There is a real relationship among quality, profitability and market share. In a study by the Strategic Planning Institute, the bottom line return on sales doubled with an improvement in quality, which justified a 9% increase in selling price.

Quantifying quality, especially perceived quality, is difficult. However, an index of product quality can be developed by measuring and evaluating key factors that make up quality. This index then becomes a relative measure that can be tracked and compared to predefined targets. Factors that make up quality might include level of rejects in key materials, level of intermediate assembly inspection rejects, level of final product inspection of rejects, warranty repairs, production problems and mean time between failures.

Perceived quality is more difficult to assess and will be determined through market analysis. If a measure of perceived quality can be obtained, comparing it with the quality index (based on objective data) can provide a measure of a product's present position. (See Figure 3.)

A DSS provides the tools with which current quality factors can be measured and potential improvements analysed. In addition, more detailed information could be captured for analysis. The most important additional need is to understand causes for rejects at each inspection point; failures cannot be resolved unless causes are identified.

Another process in which DSS provides useful support is yield analysis of production output. Through statistical sampling, a process can be evaluated to determine average yield (or tolerance level) of a production process. In addition, statistical boundaries can be established to provide a specificed probability that subsequent production runs are within acceptable levels. Production runs that exceed limits are then examined to analyse reasons for their being out of the acceptable range.

The DSS would be used for both statistical analysis (using suitable statistical tools) and tracking (gathering and retaining actual production data). The DSS would also be able to simulate the implications of changing the process parameters either in the statistical analysis or for tracking the process.

Rework costs and controlling rework product might also be a part of the quality management DSS if this process is not included effectively through the MCS.

Although there is a substantial overlap in the functions performed by physical distribution and materials management entities in a company, the coordination of planning and action between manufacturing and distribution is often a large black hole. Because cost economies are available through developing a well coordinated distribution and manufacturing interface, this is a fourth key role for DSS. Developing the concepts of the distribution and manufacturing coordination system begins with identifing the points of interface and working backwards to identify the source systems affected. For example:

- Customer delivery dates may have to take into consideration the next replenishment of a distribution center, which may in turn be dependent on a production run. The replenishment may be on a routine cycle that coordinates outbound shipments with pickup of material from vendors. The order due date may also have a much more direct connection with manufacturing in some process industries or job shops where production is planned on a first-come, first-served basis or on a consistent production cycle.
- Production plans may be dependent on rebalancing inventories in a distribution center or on the inability to rebalance those inventories. More and more is being heard about distribution requirements planning (DRP) as a means of developing requirements for a plant. DRP, however, is only as good as the distribution center and plant information, particularly relating to forecasts and product availability. Production planners may need to be able to review distribution center needs in light of a plant service area.
- Customer service performance is a major factor in distribution performance. But service factors also affect inventory levels and quality management. Rarely are the most appropriate service measurement factors provided in an off-the-shelf order processing system because the parameters that are effective in the real world are closely related to the company and industry in which it functions. The DSS can be used to capture basic data from the order processing system. This information might include order date, original due date, actual ship dates, lines shipped complete on each shipment and partial shipment information. Added to that data might be other measures of service. The DSS would provide flexibility to analyze this data and improve the quality of customer service.
- Transportation planning calls for the ability to combine outbound shipments with inbound receipts. If those can be balanced, there may be justification for a contract or private fleet. If that fleet is already in existence, its cost-effective use requires knowledge of both planned receipts and planned shipments.

A quality index will enable a company to track the impact of their quality practices on the market perceptions of their products. As a correlation is developed, details behind the quality measurements can be analysed to improve the production process in the future.

Steps to develop a quality index might include:

- Obtain from the manufacturing control system (or a statistically-based quality measurement system) the rejects for finished goods, assemblies and parts — either purchased or manufactured.
- For each type of rejects, develop frequency of occurrences, cost per occurrence and weighting factor that would put the various types of rejects into a reasonable balance. For example:

Type of Rejects	Number	Cost	Weight	Value
Finished Goods				
Assemblies				
Purchased Parts				
Manufactured Parts				
Raw Materials				
Internal Quality Index				xxxx

- Obtain and track field service repair information and add this information into the quality index, weighted as suitable.
- Conduct periodic customer surveys through a telemarketing organisation to appraise perceived quality of the product in the marketplace. These surveys, conducted quarterly, could rank performance on a scale of 1 to 10 for repetitive types of products or on a better/same/worse than a year ago basis for products of a more durable nature.
- Plot internal quality index, field service index and customer survey for correlation over time.

Figure 3. How to Establish a Quality Index

The DSS is the bridge that provides the capabilities to pull the source data from the various operating systems and to generate these analyses.

A decision support tool provides a mechanism for developing application systems that have a direct impact on the bottom line — reduced costs for inventory, production, freight and distribution — and improved sales through quality management and more responsive production planning.

The most effective use of a DSS in manufacturing occurs in conjunction with the already existing manufacturing and distribution control processes. A DSS should not replace routine system data collection and reporting that can be performed more efficiently through data processing production systems. A DSS will, however, contribute to the success of any system by providing a flexible set of tools for management analysis of the results.

The reason MCS took so long to evolve is that the computer power and resources were not available. Now they are — on-line processing, powerful systems to handle the complex MRP and capacity requirements processing, shop floor data collection equipment and, now, DSS to custom design management's needs.

TECHNOLOGY

Micro-Based CAD Systems–From Plain Vanilla To Thirty Flavors

By Stan Kolodziej

Until micro technology opened up the computer-aided design market to new groups of users, the only game in town was run by companies like Computervision Corp., IBM, McDonnell Douglas Automation Co. (McAuto) and Applicon, Inc. These vendors offered powerful, multiuser systems that allowed from two to four engineering and design workstations to be attached to a central minicomputer or mainframe. Although the systems were expensive — up to half a million dollars — the design features were excellent, offering 1,024 by 1,024 pixel screen resolution and dedicated CAD software with capabilities such as three-dimensional and multiple viewing, solids modeling, windowing and sharing graphics data bases with other designers.

High price tags, however, were not the only complaint users had about these large systems. A major problem was that several workstations competing for memory placed a drain on the central computer, and response times could become sluggish. CAD was meant to be transparent to designers and to augment their creativity by letting them work at the speed at which they thought rather than the much slower speed of traditional manual drafting. Sluggish response times therefore contradicted the intent of the system.

Another problem was finding time for designers on individual workstations in the multiuser systems. Per-seat prices of host-based systems remained high, availability of workstations limited and only the largest corporate users — traditionally those with revenues over $50 million — could cost-justify installing multiple CAD systems.

A new breed of CAD vendors arose to capture a share of the burgeoning CAD market and fill the demands of companies that could not afford the larger multiuser systems. These vendors began marketing relatively low-cost, single-user technical workstations that could offer many of the design capabilities of the large systems at a fraction of the cost. The new systems also satisfied a craving of large corporate users to further distribute CAD in-house while keeping costs down. As a result, these vendors began opening a market roughly 10 times larger than the traditional CAD market.

Instead of running data through a central processor, technical workstations took advantage of newly introduced 32-bit processors such as the popular Motorola Corp. 68000. The 32-bit processors could handle the rigorous floating point computation and number crunching involved in producing high-resolution CAD drawings and still provide necessary fast throughput. Another advantage was the networking options that enabled these workstations to be linked for the exchange of data. CAD users found they could now have extensive CAD capability for less than $100,000.

A good example of such a system comes from one of the pioneers in technical workstations, Apollo Computer, Inc. of Chelmsford, Mass. Apollo's Domain system consists of individual 32-bit workstations linked by a local-area network. Workstations provide from 1M bytes to 4M bytes of main memory, 1,024 by 1,024 pixel resolution and extensive hard-disk storage. Domain bit-mapped, raster-scan displays use independent 1M bytes of random-access memory for color display. Applications for which Apollo has slated Domain include three-dimensional wireframe, solids modeling and finite element analysis for mechanical engineers; schematic capture and integrated circuit design for electrical engineers; and architectural and structural drawings for the architecture, engineering and construction (AEC) market. Domain packs the punch of a large CAD system into a series of microcomputers.

Many technical workstation vendors are gradually incorporating AT&T's Unix as the operating system for their products. In a market originally known for its array of proprietary operating systems, more vendors are porting Unix versions such as AT&T's System V standard and the Berkeley 4.2 version onto their machines. By doing so, they allow users and turnkey systems vendors to produce a growing base of applications software that can be migrated among various systems without extensive modifications.

Bill Kaiser, Apollo's manager of CAD/CAE/CIM market development, commented, "More CAD vendors are realizing that in a market growing more competitive, users are not going to go with vendors that tie them into proprietary operating systems and networks. Manufacturing companies are starting to build impressive software bases in-house and are looking to try and link their own CAD applications into other areas of manufacturing such as manufacturing resource planning (MRP) and the factory floor. Vendors will have to provide for such future links."

Like IBM, Apollo realizes that value-added resellers are playing a larger role in providing CAD vendors with deeper distribution and market penetration into user markets, especially through vertical applications. One vendor especially successful in this area is Sun Microsystems, which was early to adopt Unix for its CAD products and encouraged users and OEMs to customize its systems. As a result, Sun has managed to capture 15% of the U.S. CAD technical workstation market after only two years in the business.

IBM's new aggressive CAD marketing strategy is also playing a major role in reshaping the CAD market. At the large systems end, IBM has started to intensify and broaden its CAD software offerings, using its installed base of 4300 series superminicomputers as the driving engines of its Cadam, Catia, Caeds and CBDS software programs. As the movement for the integration of CAD and MIS gains momentum, CAD vendors are feeling pressure from users to provide gateways for the interchange of graphics and design data between IBM CAD programs and their own CAD systems.

A good example is the CDS 5000 system from Computervision, a Bedford, Mass., CAD pioneer. The CDS 5000, based on an IBM 4300 computer, uses group technology software from the Organization for Industrial Research (OIR), a Waltham, Mass., subsidiary of Computervision. The system works with software that codes and classifies manufacturing components to create an elaborate parts design data base. From terminals, users can specify certain attributes of a part and receive data on what's in stock. They can also take a generic design of a part and specify characteristics such as length and diameter; they will then receive information from the data base on whether the design has already been done or whether a design can be standardised to use a part already in stock.

"Such a system, where group technology meets with inventory and work in progress, is the beginning of the interaction of MIS, CAD and CAM technologies," explained Bruce Jenkins, senior editor at Daratech, Inc., a Cambridge, Mass. research firm. "For IBM, it represents an opportunity for engineers and designers to see that IBM's data base management systems are truly premier; it also shows MIS departments that computer integration can start in their area. Companies like Computervision are also in a position to say, 'Look, we can use existing IBM computers to create a top-notch CAD system.' That means the user can get started on computer-integrated manufacturing at a fraction of the cost of dedicated high-end CAD systems."

The revolution IBM unwittingly started in the low-end, micro-based CAD market is already having a profound effect on the higher priced technical workstation segment. Two years ago, the low-end CAD market consisted mainly of dedicated technical workstations in the $25,000 to $50,000 range. That period was followed by one dominated by vendors that intended to use the IBM Personal Computer as a proficient, serious design tool with price tags below $10,000.

After initial resistance from CAD users, these predominantly IBM PC-based plain vanilla systems began to gain acceptance. Their first conquests were in the educational environment as CAD learning tools. Next, small AEC firms that could not afford multiple technical workstations saw these new PC-based CAD systems as an opportunity to gain a foothold in automated design. Shortly thereafter, large AEC companies also saw the benefits of some of these PC-based systems. Users were surprised to find that not only was PC CAD software inexpensive — generally between $500 and $1,500 — but many programs actually lived up to the performance claims of their vendors, especially those from the more successful California PC-based software vendors such as Autodesk, Inc., Personal CAD Systems, Inc. and Futurenet Corp. Larger AEC companies that had purchased large numbers of IBM PCs and were now at a loss as to how to utilise them found they could divert some machines to engineering and design departments to offload some of the front-end design burden from the larger CAD systems. Another advantage of PC-based systems was their ability to handle word processing and spreadsheet applications, which the larger, dedicated systems generally could not provide.

Based on sales, the most successful PC-based CAD software vendor is Autodesk. The company's Autocad software recently surpassed IBM's Cadam drafting package as the most-installed CAD software in the world, with installations expected to approach 23,000 by July. Since its introduction two years ago, Autocad has captured roughly 75% of the U.S. PC-based CAD market.

Software packages like Autodesk's Autocad, Personal-CAD Systems' Cadplan and Caddraft and Futurenet's Dash-1 Schematic Designer offer the ability to create; cut and paste; edit and revise; and store and retrieve professional drawings just like their more expensive CAD counterparts.

A cross section of Autocad's users is also indicative of the broadening customer base and use for such PC-based CAD systems. Boulton said Autocad users are about evenly divided among the mechanical engineering, electrical engineering and architecture fields. Uses range from developing contact lenses to designing Olympic bobsleds. One system is even working on the design for the next U.S. entry in the America's Cup Races. The size of companies represented by users also ranges widely, from freelance designers to organisations like Ford Motor Co., General Motors Corp. and other Fortune 50 companies. These large companies are using Autocad to download and upload drawings between IBM PCs and large CAD systems from vendors such as IBM and Huntsville, Ala.-based Intergraph, Inc.

Given the low cost of such PC-based systems, however, users cannot expect performance on the same standard as more expensive CAD systems. PC-based systems are still tied to the much slower processing and response times of 16-bit microcomputers. They are also standalone devices with nonexistent or very weak networking, multiuser and multitasking capabilities. Screen graphics resolution is generally around the medium 600 by 400 pixel range, and windowing, three-dimensional viewing and solids modeling — three major components of larger CAD systems — are still beyond the capability of most PC-based systems.

Vendors of PC-based systems, however, are working to rectify these limitations. Autodesk, for example, will soon introduce additions to Autocad called Advanced Drafting (AD) extensions. Although the basic Autocad package still sells for $1,000, the AD II extension adds mirroring and drag-in capabilities as well as isometric viewing for an extra $1,000. The AD III extension will also provide three-dimensional capability for an additional $500.

Some vendors are increasing the IBM PC's CAD power by adding an Intel 8087 coprocessor to handle floating point computation and increase design throughput. Others, such as Personal CAD Systems, Futurenet and Daisy Corp. of Mountain View, Calif., are further increasing the power of their programs by having them run on the IBM Personal Computer XT and Personal Computer AT, taking advantage of the XT's hard disk and the AT's faster Intel 80286 processor. Turnkey system vendor Hi-Tech Marketing Corp. of Wakefield, Mass., for example, has introduced integrated CAD systems based on the IBM PC AT, the IBM PC XT and the Nippon Electric Corp. APC3 microcomputer. Ranging in price from $2,000 to $30,000, the Hi-Tech systems can run both off-the-shelf and custom software. One Hi-Tech product can even produce numerical control code directly from design specifications, a feat that, according to the company, is usually handled only by systems that cost much more. Users are also purchasing add-on graphics boards from companies like Tecmar, Inc. and Hercules, Inc. to improve IBM PC graphics and resolution.

The IBM PC remains the primary engine driving the extreme low end of the CAD systems market, but other vendors are attempting to place similar CAD software on several IBM PC compatibles from companies such as Zenith Data Systems Corp., Texas Instruments, Inc., NCR Corp. and Compaq Computer Corp. as well as on the new flock of IBM PC AT compatibles. Other CAD programs — for example, the popular Cadapple from Versacad of Huntington Beach, Calif. — are appearing on Apple Computer, Inc. microcomputers and even machines running the CP/M and CP/M-86 operating systems.

This increased activity in the low-end CAD market has attracted larger CAD companies. Applicon, Inc., the Shlumberger subsidiary in Burlington, Mass., has introduced the Aria workstation, based on a 32-bit processor compatible with the Digital Equipment Corp. VAX/VMS operating system. An entry-level Aria system with 3M bytes of main memory and 160M bytes of off-line storage costs $80,000. Control Data Corp. of Minneapolis, Minn., has introduced a low-cost version of its high-priced Icem system. The new Icem Intelligent Workstation has a 32-bit processor with 2M bytes of memory expandable to 8M bytes, and 240M bytes of disk storage. A single workstation configuration with dual display costs from $86,000. Intergraph recently announced Micro II, a DEC Microvax-based four-workstation system priced between $40,000 and $60,000.

Still more competitively priced is Intergraph's $20,000 32-bit workstation, the Interpro 32. The workstation can operate either as a general-purpose computer running software under the Unix 4.2bsd operating system or as an IBM PC-compatible computer running programs under MS-DOS. Computervision seems to have been the first large CAD vendor to test the waters of the PC-based CAD market with the release last year of its Personal Designer package. Other large CAD system vendors will probably follow suit, especially in light of DEC's recent introduction of its $20,000 Microvax II desktop computer and rumors that IBM will soon introduce its own CAD workstation.

Statistics certainly bear witness to why vendors are becoming more interested in the microcomputer-based CAD market. International Resource Development, Inc., a research firm in Norwalk, Conn., is projecting the worldwide CAD market to climb from $2.1 billion in 1984 to $29 billion in 1994. Within this field, low-cost CAD systems — those generally below $80,000 — are expected to capture about 20% of total CAD revenues by 1986, translating roughly into a $800 million share of a $4 billion market. In contrast, low-cost CAD systems captured only 3% of the total CAD market in 1980.

Though PC-based CAD systems still accounted for only $60 million in 1984 U.S. revenues, Los Altos, Calif.-based Creative Strategies International, Inc. has predicted that by 1988 these systems will account for the lion's share of micro-based AEC installations, an area with an annual growth rate of 60% and no signs of flagging.

TECHNOLOGY

JIT: What Is It? And How Does It Affect DP?

By Lee White

Winning the guessing game of supply versus demand in a manufacturing plant can all too often mean the difference between a large corporate profit or a large corporate loss. Tradition says that the safe bet is to have enough product in inventory to satisfy potential demand. Now, however, tradition is being challenged.

Manufacturing resource planning (MRP II) is complex systems software that can include materials requirements planning (MRP), production scheduling, inventory transactions, bill of material, purchasing, shop floor control, routing and work center identification.

At the other end of the process, no module exists to detail or control the manufacturing process itself. Enter Just In Time (JIT), a philosophy that has as its goal maintaining just enough material in just the right place at just the right time to make just the right amount of product. Guided by this philosophy (or mind-set), companies set a course to achieve the goal.

At the core of either MRP II or JIT is inventory. In the case of MRP II, the computer stores data that relates to inventory — inventory of raw material and inventory of finished product. Enough of both must be on hand to satisfy that elusive entity, demand. But there is another reason for the large amount of inventory and the accompanying need to use high-powered computers to store all data relating to it: poor quality. If some of the stored raw material is of poor quality, extra material must be on hand to serve as a substitute when the quality problem is detected. Similarly, at the other end of raw material is finished product. Excess finished product must be kept in inventory just in case questions arise about the quality of the finished product. Unfortunately, problems with raw material or finished product are usually not detected until the product comes off the last assembly line.

What made it difficult to detect these problems was that manufacturing facilities needed long production runs on machines to justify the time necessary to change over machines to make different products. The machine that turns out 26-inch bicycles may be the very same machine that manufactures 20-inch bicycles. That machine must be set up differently to run the smaller bicycles, however, and changeover may take two people four hours to accomplish the task. If that changeover time could be shortened — from four hours to 10 minutes, for example — significant saving could result. Instead of using the machine to make 10 26-inch bicycles each hour (a total of 80 26-inch bicycles daily), management could elect to make 20 each of 20-inch, 22-inch, 24-inch and 26-inch cycles daily (still a total of 80 bicycles). And if it were found that the bolts necessary to make the 22-inch bicycle were defective, a 10-minute changeover time would allow workers to make a different size bicycle while quality bolts were located for the 20-inch cycle.

Quick changeover or setup time is one of the most important components in a JIT environment. The technique began in Japan in 1957 in the setup operation at the Mitsubishi Heavy Industries shipyard in Hiroshima and resulted in marked improvement in the setup operation for a diesel engine bed planer. In 1969, management at the Toyota Motor Co. asked Shigeo Shingo, a noted Japanese consultant, to help them reduce the setup time of a 1,000-ton press. The setup time had already been cut from four hours to an hour and a half, and Shingo was able to further reduce the time to three minutes. The techniques employed to accomplish the feat resulted in a book entitled *The Toyota Production System*; this book became the bible of the JIT movement.

The U.S. company that has made the biggest splash with JIT is Omark Industries, Inc., in Portland, Ore., the world's largest manufacturer of saw chain. Larry White, plant manager, likened the shortened setup time to a pit stop at the Indianapolis 500 road race. "You know what? It'll work with anything," White enthused. "They don't have a huge investment to change those tires in five seconds, but they've got all the right equipment in all the right places. Everything's organized. Everybody knows what his job is and away they go."

It all began for Omark in 1980, when Jack Warne, Omark's president, observed JIT manufacturing in a Mitsubishi plant in Australia. Shortly thereafter, he and a group of executives from other companies went on a guided tour of Japanese factories with Norman Bodek, president of Productivity, Inc., in Stamford, Conn. On his return to Oregon, Warne organized a task force, and the company purchased 600 copies of Shingo's book.

In 1982, small study groups of managers, engineers, supervisors, secretaries, production planners, machine designers and inspectors reviewed the book. "What we were trying to do was to gain some understanding of the philosophy," White explained. Omark renamed the JIT system Zips (zero-inventory production system) and developed a three-pronged approach to implementation: Zips, total quality commitment and employee involvement.

Actual implementation of Zips was very basic. The plant manager was given a key to the room where inventory was housed. If a problem arose and more inventory was needed, workers had to justify their needs to the plant manager. If the plant manager agreed that a problem existed, he assigned "one more cupful of work-in-process," White said, "or just enough to tide you over until you have a little more time to fix the problem."

One of the teachings of JIT is that inventory must be viewed as evil. White compared excess inventory to water covering the rocks beneath the surface of a pond. "You can never see the rocks — or problems — until you lower the water — or inventory. You fix the problems and then lower the inventory some more, and then you fix that. It's a continual process of improvement."

In the first five months of Zips implementation, Omark reduced inventories by 50%. According to White, this 50% reduction translated into "double-digit millions [of dollars]" at the Portland location. A secondary result was savings in floor space. "We've now freed up well over 30% of our floor space at the same production level." This savings has let Omark use existing facilities to produce additional new products or additional volume in the same product lines.

Another critical tenet of JIT is establishing close relationships — personally and logistically — with vendors to reduce chances of defective inventory. In a large manufacturing company that does not practice JIT, the multivendor environment is the norm. When the time comes for a contract to be let, vendors' bids are requested and a group of vendors is selected. Relationships between manufacturer and vendor and between vendor and vendor become adversarial and quality may suffer. In a true JIT environment, awarding of bids is based primarily on quality and physical location of the supplier; the result is often a single-vendor situation.

The Nissan plant in Smyrna, Tenn., is a prime example of how well the single-vendor relationship can work in a true JIT environment. Although most of the manufacturing processes are heavily robotized, the trim and chassis plant is using JIT for seat procurement. The vendor is Hoover Universal, Inc., North American Seat Division, headquartered in Saline, Mich. When the Nissan plant was being built, bids were requested from seat manufacturers, with the understanding that the successful bidder would build a plant close to Nissan's location and provide seats for the trucks on an as-needed basis. According to Prince Reed, production control manager for Hoover in Murfreesboro, Tenn., orders for seats are sent from Nissan's computer to a printer in Hoover's shipping department. At the same time, the order information is sent to a robot, which goes to the rack and picks out the requested seats. Hoover's trucks leave its plant every hour and make the 18-mile trip to Nissan.

In a large manufacturing company that does not practice JIT, the multivendor environment is the norm. In a true JIT environment, awarding of bids is based primarily on quality and physical location of the supplier; the result is often a single-vendor situation.

Hoover is no stranger to JIT manufacturing. Reed said that his company is cooperating with auto makers all over the nation to fulfill their JIT requirements; he cited as examples General Motors Corp., Ford Motor Co., American Motors Corp. and Volkswagen of America, Inc.

Reed said that to his knowledge none of the contracts Hoover has with the various automobile manufacturers has been canceled. There is always the possibility that a low bid from another company could close the plant, he added, but continued good quality is Nissan's primary concern.

Another piece of JIT manufacturing is the linking or overlapping of subassembly operations. In a JIT shop, all the machines required to produce finished product are placed in close proximity, obviating the need for long-distance moves of work-in-process. Moving machinery is expensive and time-consuming, especially when it becomes a trial and error situation. "We're still moving machinery around. We're going to be spending on the order of half a million dollars this year moving machinery around one [Omark] plant," White said. Management at Omark has seen the dollar savings that result when a true JIT implementation is up and running and, as a result, is probably more understanding about expenditures of this sort.

Short setup times, overlapping subassembly operations and a small number of nearby suppliers may be the tangible hallmarks of successful JIT implementation, but consistent, thorough and sensitive employee training is the key to its success. Gerry Dorman is chairman and chief financial officer of Rath and Strong, a Lexington, Mass.-based management consulting group that specializes in MRP and JIT. He has seen problems develop when there is little flexibility in job definition. Another problem is individual incentives. "It's more difficult to put things into overlapping operations if people are used to an individual incentive," Dorman said. To overcome this problem, management often opts for group incentives. Dorman admitted that, because changes of this kind would fall into the category of change in working conditions, a manufacturing plant with union workers would have to negotiate the incentive system at contract time.

Before JIT ever hit the shop floor at Omark, most salaried workers had studied the concepts. The training has continued and White expects it to go on for about three years. "We're talking on the order of 40 hours of class time for every employee, every year — from president to janitor. It's a huge training investment," White said. The company is doing most of the training internally and has hired a professor from a Michigan university to teach statistical process control. "We didn't have anybody who had the teaching skill plus the technical knowledge to transmit that real dull boring statistics garbage. We found this guy who has the technical skill and he's a super teacher." Omark has contracted to employ the professor for 25 weeks each year, while the rest of the year he travels to IBM and other companies.

Set against each other, MRP and JIT seem outwardly antithetical. Al Lanick, consultant with Advanced Systems, Inc., a manufacturing training firm in Chicago, Ill., admitted that a controversy is raging over MRP and JIT. "There are people in the [manufacturing management consulting] industry who are racking up a lot of billable hours taking a position one way or the other, but I think you would find that most of them today say [MRP and JIT] can coexist," Lanick said. He added that changes need to be made and not every MRP application is going to be valid in a JIT environment, but corporations that have invested millions of dollars in manufacturing systems are certainly not moving away from computerization. Instead, they and their vendors are adopting a new philosophy on how to produce product. "This will require some tremendous changes in thinking and attitudes on the part of employees in those companies," Lanick concluded.

Dorman of Rath and Strong agreed that JIT does not obviate the need for MRP, referring to JIT as a philosophy and MRP as the systems and software. Dorman said the two are related; to consider the MRP/JIT question as a contest is "a false argument, or straw men at best."

As an example of the close relationship, Dorman mentioned the MRP module of shop floor control. In the pure MRP environment, the module might address three separate subassembly operations. In a manufacturing facility employing JIT, the three operations might be overlapping or linked and occur so rapidly that the result is one operation instead of three. In this case, data within the MRP software would be modified to reflect only one operation.

Standing witness to the peaceful coexistence of MRP and JIT is Omark Industries. Management at Omark has removed shop floor scheduling from the MRP system because Zips has solved that problem. Instead, MRP is being used for capacity planning, human resource planning and raw materials purchasing. What this reallocation has done is to free the mainframe for other on-line systems. "The problem with MRP is that it always runs in batch mode. If you run batch daily in a large operation, you're probably going to burn up two to four hours a day," White explained. All that has changed with the successful JIT implementation, Omark is now able to schedule daily, and process in batch weekly.

Although JIT has little if anything to do with computerization, Dorman stated there is a great need for management information systems professionals to understand the just-in-time environment. This is especially true for the analyst charged with the task of designing workable systems for the company, he added.

Whether a company uses MRP, JIT, a combination of both or neither, the days when American companies didn't have to worry about competition are gone for good, White said. "If you haven't improved, some other competitor is working on an improvement of the process, the design, the function of the part or a change to better suit the customer. The old saying, 'if it ain't broke, don't fix it,' just doesn't pertain anymore."

In spite of many recent articles in trade newspapers and magazines stating that the U.S. is fast becoming a service-oriented country and manufacturing is a dying industry, White disagreed in theory, and said he hoped such a shift would never occur. "If we aren't manufacturing anything, who in the hell is going to have any money to buy the services?" he asked. "One of my staff guys put it like this: If there isn't any manufacturing business left in the U.S. and there're only two jobs left, and one is shucking corn and the other one is selling insurance . . . ." White laughed.

White is a senior writer at Computerworld Focus.

ALAN WITSCHONKE

Cadd/CAM Acquisition: Who's In Control?

By Joel N. Orr

The engineering manager, told that data processing is to head the computer-aided design and drafting system acquisition effort, does a slow burn. Or, in another company, the DP manager considers passive resistance when he learns that DP will be required to interface to whatever engineering buys but will have no say in the selection. Who should be in control?

Computer-aided design and drafting and computer-aided manufacturing (Cadd/CAM) systems are, of course, computer systems; their selection and management can therefore best be addressed by computer professionals. But engineering and manufacturing are often reluctant to involve DP in these activities because they see DP as an adversary.

Before deciding who should own the Cadd/CAM turf, it is important to understand what Cadd/CAM encompasses.

Computer-aided design and drafting: Cadd is a phrase that glues together two terms of very different scope. Drafting is the producing of drawings; design is the ordering of intentions. Drafting is the most common way of giving form to designs, much as typing is the most common way of giving form to writing.

All Cadd systems have certain components in common: A computer, a workstation with a graphics display and an input device, a graphics output device and Cadd software. Cadd systems range in size from desktop personal computers to the largest of mainframes, supporting hundreds of workstations. They can be centralized, like the IBM Cadam system; decentralized, like Apollo Computer's Auto-Trol systems; or a bit of both, like the Intergraph Co. system. Prices cover a wide range: on the low end, $7,200 for a tiny Apple Computer, Inc. Apple-based Robographics turnkey, complete with plotter; on the high end, millions of dollars for a large Control Data Corp. Icem system with dozens of workstations.

Most Cadd systems are not used for other functions; such use would have a negative effect on workstation response time, one of the most important ergonomic characteristics of a Cadd system.

Cadd and productivity: Computer-aided drafting is easy to cost-justify because drafting has a well-defined and measurable product; the benefits of computer-aided design, however, must be taken largely on faith. Small wonder that most of the 15,000 Cadd systems in use are made to function as drafting machines and that designers seldom use them. Drafting systems for most engineering disciplines are similar; they must all permit the rapid production of drawings. Electronic, mechanical and architectural drafting demand lines and curves, text and symbols, panning and zooming and so on — but to varying degrees. Design systems are application-oriented: Schematic capture systems must preserve topological continuity, but have little use to the creator of integrated circuits. It is also helpful for design systems to interface to application-specific analysis programs, which are seldom marketed by the Cadd system vendor.

Drafting systems are usually operated by dedicated operators expert in their use. Design systems — and relatively few Cadd systems are used this way — are available to designers on an as-needed or casual basis. These arrangements make it easy to measure the productivity of a drafting system and almost impossible to do the same for a design system.

Computer-aided manufacturing: CAM is a term that can legitimately be applied to a wide variety of applications: numerical control, robotics, manufacturing resources planning, computer-aided process planning and many others. CAM predates Cadd.

CAM and productivity: Automating the factory is generally more fruitful than automating the engineering office; each gain in efficiency is multiplied by the volume of production. Furthermore, manufacturing personnel are much more accustomed than design personnel to dealing in measurables. Identification and achievement of productivity gains are therefore much easier in the factory than in the design office.

Cadd/CAM: The greatly heralded

productivity gains of industrial automation can be realized only through integration of design and production automation. The key to this process is the geometric description of the product design, which must originate with engineering. Electronic transfer of the completed design to manufacturing and electronic feedback from the manufacturing process to engineering can eliminate communication delays and opportunities for the introduction of errors.

Computer-integrated manufacturing: CIM departs from the traditional view of manufacturing in the U.S. It involves using computers to automate the entire manufacturing process in an integrated form, rather than mirroring the historical separation of engineering and manufacturing. In general, the U.S. lacks a map for moving from Cadd/CAM to CIM, although the idea is popular.

Whose turf?: The problem of ownership has several layers. Cadd is largely the province of engineering; CAM involves manufacturing. Engineering and manufacturing often find themselves at odds with each other because they work toward conflicting objectives: Engineering wants to perfect the design; manufacturing wants to get it (the product) out the door. DP, on the other hand, has often lost the trust of both engineering and manufacturing by mismanaging their expectations. Computer professionals, viewed as empire-builders who care nothing for the real needs of users, are therefore excluded from Cadd/CAM system acquisition and implementation decisions.

It's also true, however, that DP personnel commonly feel frustrated by engineering and manufacturing management's apparent lack of willingness to recognize the need to invest in training and automation, although they may be expending large sums on factory and office equipment and buildings that offer far less productivity leverage.

Objective obstacles also exist. Most DP installations in manufacturing companies are highly centralized IBM affairs. Cadd applications, because they require large message and buffer sizes and extremely fast system response, place enormous demands on computers. Installing Cadd in the central computer system causes system responsiveness to drop at a rate out of proportion to the number of users added. The drop leads in turn to the acquisition of additional CPUs and a very high cost per "seat" for Cadd.

Cadd systems require exotic peripherals — graphics workstations, plotters and digitizers — with exotic interfacing demands. Few DP departments are equipped to assist end users in the selection and installation of this type of equipment. In addition, most of these strange peripherals were designed for the minicomputer environment, not the centralized DP milieu. They typically speak Ascii, not Ebcdic; they look like teletypes, not Systems Network Architecture (SNA); and they usually require operator expertise for smooth operation.

Another trend keeping Cadd out of the computer room is the growth of microcomputer Cadd systems. Dozens of computer-aided drafting products are now available for desktop microcomputers — products functionally equivalent or superior to many of the older mini- and mainframe-based drafting packages. Although larger computers are still required for such computer-intensive functions as solids modeling and finite element analysis, most of the 20,000 mini- and mainframe-based Cadd systems in use are functioning purely as electronic drafting boards — at an average per-seat cost of more than $100,000. A complete micro drafting system — including hard disk, graphics input device, medium-resolution (480- by 640-pixel) color graphics display and small pen plotter — can be had for $10,000. And these small units can be networked.

Engineers who buy computers without the assistance of DP professionals often do so at the cost of recreating in miniature all of DP management's hard-learned lessons — the importance of backups by losing data, the frustration of device incompatibilities by not setting and imposing standards and the need for security and formal record management procedures by having valuable designs leave the premises with a fired employee.

It takes time for engineers to learn why private data bases are not good for the company and why the device that costs least in the short term often winds up costing most in the long term. By the time they learn these and other lessons, they have gone too far simply to admit their mistake and invite DP to help. The result is new mini-DP departments doomed to repeat all the errors DP itself committed in the '50s and '60s.

Cadd/CAM may not belong in the computer room, but the Cadd/CAM implementation process does need the participation of DP professionals. DP should take the initiative in bridging the existing communication gap with engineering and manufacturing by:

- Assigning personnel to learn both Cadd/CAM technology and the needs of engineering and manufacturing.
- Offering education, information and cooperation to the engineers.
- Working toward changing the situation from one that pits DP against the engineers to one that pits "our" company against the flood tide of technology.

Announcing

The one-stop, international advertising service for micro marketers.

You'll reach microcomputer buyers all over the world with *Computerworld's* International Marketing Service (CWIMS). Because we have the microcomputer market *covered* with an international network of publications. And what a market!

As the need for computerization in government, industry and educational systems all over the world becomes more acute, countries look to the cost-effective, adaptable microcomputer to bring them into the computer age. This means a very lucrative market for the U.S. micro marketer, since international product demand exceeds product supply.

Now, with the help of *Computerworld's* International Marketing Services, you can advertise in twenty magazines devoted exclusively to supplying information to microcomputer users in: Australia (*MicroWorld, Australian PC World*), Brazil (*MicroMundo*), Canada (*PC World Canada*), Denmark (*Micro Verden*), Finland (*Mikro*), France (*Golden, OPC*), Japan (*PersoCom World*), Mexico (*Compu Mundo*), Norway (*Mikro Data, PC Mikrodata*), Sweden (*MicroDatorn, Min Hemdator*), Spain (*Micro Sistemas*), Sweden (*Svenska PC World*), The Netherlands (*Micro/Info*), West Germany (*MicroComputerwelt, PC Welt, Run*). And your advertising message can reach buyers of microcomputer products and services around the world through special micro sections in any of over 40 publications in 25 countries.

Act now—and take advantage of this international demand for microcomputer products. Whether you want to test the market—or locate a distributor or representative—our publications will put you in touch with the right people around the microcomputer world.

For more information on getting international micro coverage, call Diana La Muraglia, General Manager, International Marketing Services, toll-free, at 800-343-6474. In Massachusetts, call 617-879-0700 or return the coupon below.

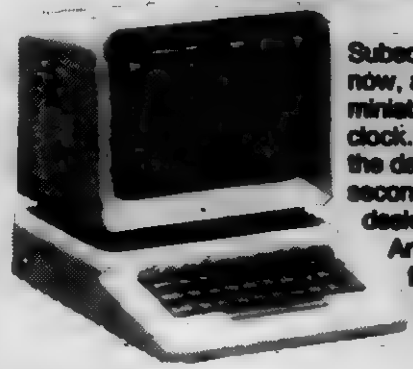
Why the time has never been better to get your own subscription to Computerworld.

FREE CLOCK WITH YOUR SUBSCRIPTION



Subscribe to *Computerworld* now, and we'll send you this miniature, personal computer clock. Free. The clock displays the date, the hour, minute and second, and makes a handsome desk-top piece for your office. And as we said, it's a gift from us to thank you for becoming a new subscriber to *Computerworld*.

51 ISSUES OF *COMPUTERWORLD*

In addition to the free clock, of course, you'll receive 51 issues of *Computerworld*. So you won't have to wait for a co-worker's copy to keep up-to-date on what's taking place in the computer field.

YOU'LL ALSO RECEIVE SPECIAL FOCUS ISSUES

As a *Computerworld* subscriber, you'll also receive our highly-acclaimed COMPUTERWORLD FOCUS issues — at no extra charge. Published once a month (except July and December), these bonus issues focus on a single topic. Here is a sampling: UNIX™, Office Automation, Microcomputer Software, Business Graphics, Applications Software, Manufacturing, Networks, Systems Software, Microcomputer Hardware. COMPUTERWORLD FOCUS helps you plan, purchase, and save money. And these bonus issues are sent only to *Computerworld* subscribers — it's like getting a subscription to a second magazine FREE!

As you can see, there are plenty of reasons to subscribe to *Computerworld*. So don't rely on someone else to lend you theirs. Be well-informed — with 51 issues of *Computerworld* plus the COMPUTERWORLD FOCUS issues — without having to wait.

Now you know why the time has never been better to subscribe to *Computerworld*.

UNIX is a trademark of AT & T Bell Laboratories.

☐ **Yes!** Please enter my subscription for one full year (51 issues) of *Computerworld* at $44. Plus all 10 COMPUTERWORLD FOCUS issues at no extra charge . . . plus my FREE gift with my paid subscription. (Please allow 6-8 weeks for shipment of your free gift.)

Products

CDS II

BEDFORD, Mass. — **Computervision Corp.** has announced Phase II of its Computervision Distributed System (CDS), a network of central host-based systems and remote engineering workstations for the manufacturing industry.

CDS II uses an industry-standard Ethernet-TCP/IP network architecture and Computervision's Fastlink communications link, a 10K-byte/sec file transfer bridge between a Computervision CDS 4000 computer and Digital Equipment Corp. VAX computers.

According to the vendor, its Communications Concentrator can simultaneously connect up to six remote intelligent workstations to a host server CDS 4000 through the TCP/IP architecture.

Systems that Computervision said could be integrated with CDS II include Computervision's Personal Designer software running on an IBM Personal Computer XT or Personal Computer AT; and Digital Equipment Corp. VAX-based systems running Medusa, as well as others.

Prices for the CDS II system can run from $30,000 to $2 million, depending on the configuration. For further information, contact Computervision Corp., 15 Crosby Drive, Bedford, Mass. 01730.

BURLINGTON, Mass. — **Matra Datavision, Inc.** has announced its Series 50 computer-aided design (CAD) workstations, which, according to the vendor, allow users to tailor the workstations to their specific CAD requirements. The Series 50 workstations use Motorola, Inc. 68000 processors with 1M byte of main memory and offer direct memory access of 2M bytes to increase throughput speed.

Matra Datavision also introduced Euclid Turbo 3D/2D, a software package aimed at providing a smooth transition from three-dimensional solids modeling to two-dimensional drafting applications.

Prices of the Series 50 workstations start at $40,000. The Euclid Turbo 3D/2D package is priced at $60,000. For further information, contact Matra Datavision, Inc., Corporate Place 1, 99 S. Bedford St., Burlington, Mass. 01803.

MINNEAPOLIS — **Honeywell, Inc.** has introduced its Plant Management System, designed to improve production management, energy consumption, product quality and product yield. According to the vendor, the system permits on-site production scheduling, maintenance management and material management and storage.

The system also enables customers to link their off-site Honeywell or non-Honeywell corporate computer systems, giving on-line plant data to company planning and administration areas.

Honeywell also introduced the Work Center Controller 1250 from Honeywell's **Digital Datacom, Inc.** subsidiary located in Long Beach, Calif. The controller automates the collection and processing of data on work in progress, inventory, maintenance scheduling and quality assurance and testing.

A full-scale Plant Management System ranges in price from $750,000 to $1 million, excluding license fees for selected applications. The desktop Work Center Controller 1250 is priced at $10,000. The floor or rack-mounted versions range in price from $30,000 to $100,000.

For further information, contact Honeywell, Inc., Honeywell Plaza, Minneapolis, Minn. 55408.

LOWELL, Mass. — **Wang Laboratories, Inc.** has introduced its Engineering Support System, a system combining the Wang PIC workstation and Autocad, a computer-aided design (CAD) package from Autodesk, Inc. of Sausalito, Calif.

The PIC workstation is priced at $15,935; Autocad is priced at $2,000. For further information, contact Wang Laboratories, Inc., One Industrial Ave., Lowell, Mass. 01851.

SCHAUMBURG, Ill. — **Cad Design Systems, Inc.** (CDSI) has introduced a turnkey computer-aided design (CAD) system that retails for under $10,000. Cadstation includes an IBM Personal Computer with high-resolution graphics monitor, 640K-byte random-access memory, 10M-byte Winchester disk drive, 360K-byte disk drive, 8087 math coprocessor, two RS-232 serial ports, one parallel port, MS-DOS 2.1, six-pen plotter, digitizing tablet and Autodesk, Inc.'s Autocad software enhanced by CDSI's Acadplus.

More information is available from CDSI, Suite D, 1305 Remington Road, Schaumburg, Ill. 60195.

SUNNYVALE, Calif. — **Adept Technology, Inc.** recently introduced Adeptvision, a vision system to accompany its direct drive robot system, Adept One.

Adeptvision

Adeptvision is completely integrated with the Adept One robot and operates from the same controller, thus eliminating interface problems, according to the vendor. The vision enhancement can recognize either stationary parts or those on moving conveyors. Adeptvision can also reportedly identify touching or overlapping parts.

The price of the robot averages $40,000, depending upon options; Adeptvision adds $17,000 to the price. For more information, contact Adept Technology, Inc., 1212 Bordeaux Drive, Sunnyvale, Calif. 94089.

MAYNARD, Mass. — **Digital Equipment Corp.** has introduced the Microvax II system based on DEC's "VAX-on-a-chip" processor, the Microvax 78032. Also introduced was the Vaxstation II graphics workstation based on the new very-large scale integration processor.

The Microvax II will reportedly run all VAX software and give VAX 11/780-level performance at a fraction of the cost, DEC said. Four Microvax II systems will be offered, ranging from an $18,840 single-user model with 2M bytes of main memory and a 31M-byte hard disk drive to a $43,780 16-user system with 5M bytes of main memory, 213M bytes of disk storage and a 95M-byte streaming cartridge tape drive.

The Vaxstation II workstation based on the Microvax CPU offers 2M bytes of memory, bit-mapped video graphics, a 19-in. monochrome monitor, dual floppy disk drives, a 31M-byte Winchester disk drive and MicroVMS software. It is priced at $26,500. The two machines will replace, for the most part, the Microvax I and Microvax I-based workstations, DEC said. The new products are targeted for the engineering, commercial, education and computer graphics market.

For additional information, contact Digital Equipment Corp. in Maynard, Mass.

SAUSALITO, Calif. — **Autodesk, Inc.** recently announced that Autocad, its microcomputer-based computer-aided design (CAD) software, has been linked with IBM's mainframe-based Cadam via a translator developed, sold and supported by Cadcor of Mountain View, Calif.

According to the vendor, Cadam/Autocad Translator will allow engineers to work at personal computer-based engineering workstations that run not only Autocad but also programs such as Lotus Development Corp.'s 1-2-3 and Symphony, Ashton-Tate's Dbase III, Microsoft Corp.'s Word and Micropro International Corp.'s Wordstar. Autocad drawings can reportedly be transferred to and from the centralized Cadam data base on the host.

Translation is accomplished through a Fortran program on IBM 4300 or 3080 mainframes operating under VM or MVS. Communication between Autocad and Cadam is accomplished via an IBM 3270 coaxial connection or serial asynchronous Ascii transmission.

Cadam/Autocad Translator costs $10,000 per Cadam site and $200 per Autocad workstation.

For more information, write to Cadcor, 175 E. Dana St., Mountain View, Calif. 94041.

IRVINE, Calif. — **McDonnell Douglas Computer Systems Co.** has announced a manufacturing control software package designed to run on its own Microdata M4700, M6320, M6525, M9100 or M9208 minicomputer systems.

Called the Manufacturing Management and Control System (MMC), the system consists of the following modules: Engineering, Sales Order Processing, Master Production Scheduling, Work in Process Costing, Shop Floor Control, Standard Costing, Inventory Planning, Purchasing, Work Order Launching, Accounts Receivable, Accounts Payable, Payroll and General Ledger. The modules may be purchased separately or as a total package.

MMC is reportedly a fully-integrated, on-line system designed to accommodate companies with 50 to 800 production workers. The one-time license fee ranges from $2,500 to $37,500, depending upon the combinations of modules chosen and the Microdata computer on which the system runs.

For more information, contact McDonnell Douglas Computer Systems Co., 17481 Red Hill Ave., Irvine, Calif. 92714.

SCHENECTADY, N.Y. — **General Electric Co.** has demonstrated Modelmaster, its factory simulation software that runs on IBM Personal Computers, IBM Personal Computer compatibles and General Electric's Workmaster Programmable Control Information Center, an industrialized version of the IBM PC.

Modelmaster

According to the vendor, Modelmaster creates realistic representations of factories or parts of factories complete with icons that resemble robots, forklift trucks and so on.

To model a factory with Modelmaster, the user interacts with the computer using a typewriter-like terminal and a graphics tablet with a mouse input device. The vendor claimed the typical manufacturing engineer can learn to use the system in half a day. Shipments of Modelmaster are expected to begin in the third quarter of 1985.

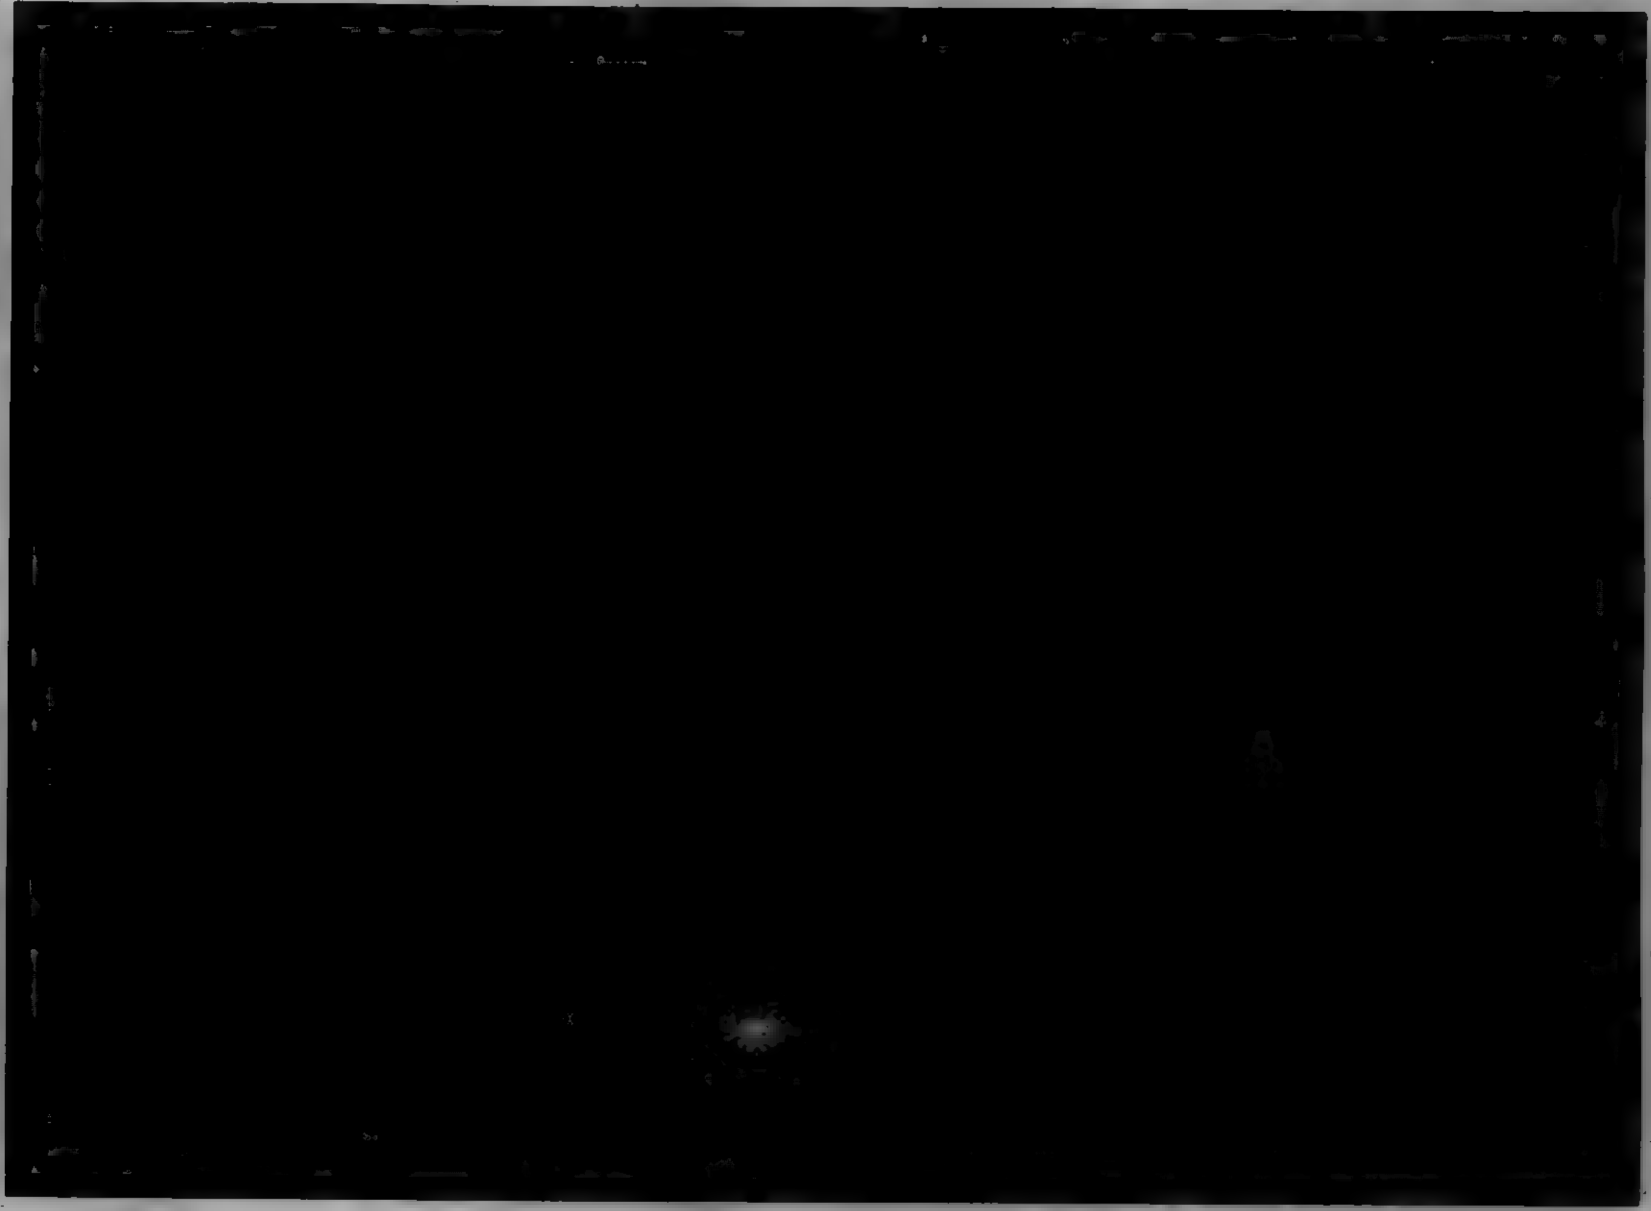
For further information contact the General Electric Research and Development Center, P.O. Box 8, Schenectady, N.Y. 12301.

BURLINGTON, Mass. — **Applicon, Inc.** has introduced Aria II, a family of advanced 32-bit engineering workstations designed for the technical professional.

The Aria II uses the newly announced Microvax II processor boards manufactured by Digital Equipment Corp. The workstations include 3M bytes of memory and a 160M-byte disk drive for mass storage, as well as Applicon's Bravo data base management and user interface capabilities.

Aria II workstations also have a 22 in. by 27 in. by 36 in. processor module with a hardware floating point accelerator and MicroVMS operating system. The workstations are available with a choice of 13-in. or 19-in. displays.

Aria II will be available in July 1985, the vendor said, at prices ranging from $99,000 to $125,000. For more information, contact Applicon, Inc., 32 Second Ave., Burlington, Mass. 01803.



"The only thing we haven't outgrown is our Honeywell Manufacturing System."

Manufacturers who have invested in Honeywell Manufacturing Automation have discovered something that you should know. No matter how their business has changed or how they've had to expand, they've found their Honeywell systems have been able to keep pace.

These companies got the flexibility and cost efficiency they needed because Honeywell offers its comprehensive array of capabilities in modular form. You buy what you need, and put it to work.

Manufacturers of every size and type can choose from a broad array of products including Master Production Scheduling, Material Requirements Planning, Purchased Material Control, Shop Floor Control, Inventory and Product Management, Capacity Requirements Planning, even total-business systems with integrated Financials and Sales Order Processing. And to complete the picture, Computer Aided Design is available, along with a Factory Data Collection System that's designed to simplify the feedback process and "close the loop."

Because these systems are modular, you can custom tailor yours to meet your own individual requirements. And if you need help, Honeywell can provide support all the way from initial consultation to installation and implementation. We'll help you facilitate your own efforts, too.

In short, Honeywell can help you build the kind of manufacturing system you need to compete today. One with integrated capabilities that give you the ability to plan and control the entire manufacturing process from ordering raw materials through shipping the finished product.

Let Honeywell work with you to put together a comprehensive and cost-efficient manufacturing system that meets your needs.

"The computer is down."

As manufacturing edges toward a total commitment to computers, it is coming face to face with a terrifying reality: Lack of reliability.

The computer industry reliability standard of 98.5% means that your computerized manufacturing system will go down once every two weeks on a statistical average. This is unthinkable for modern manufacturing.

It is for this reason that many companies, from those who are planning a "factory of the future" to those who just want foolproof shop floor data collection, are taking note that Stratus computers are designed not to fail; not once every two weeks, or once every 200 weeks, or once every 2000 weeks!

Stratus: The fault tolerant standard of the computer industry.

As it has already succeeded in the business, banking, and brokerage worlds, Stratus is now making its mark on the plant floor. Its acceptance in this arena is, in part, due to its acceptance as the de facto standard of fault tolerance. Not only our customers but industry analysts look to Stratus as the standard meeting today's requirements. This inspires the confidence that manufacturers need. When you're thinking millions or tens of millions of dollars for a modern new factory, you need that confidence.

Stratus has the power, networking ability, and expandability of the best names in the computer industry.

Stratus should not be looked at merely as a fault tolerant specialist, but as a total computer that includes fault tolerant abilities. In an *overall* price/performance comparison against IBM, DEC, and Hewlett Packard, Stratus led the pack.

	STRATUS XA400	IBM 4381	HP 3000 68	DEC VAX-11/782
RELATIVE PERFORMANCE*	125	100	64	109
PRICE	$446,350	$707,897	$437,754	$656,889
PRICE PERFORMANCE	$ 3,571	$ 7,079	$ 6,840	$ 5,999

Relative Price Performance Index

**Computerworld, August 20, 1984*

All systems are comparably configured with identical amounts of memory, disk space, and communication lines. But, only the Stratus price includes fault tolerance

Stratus offers the best transaction processing capabilities for your plant floor. It is designed to fit into a total planning and operating system.

It is the one computer that can do everything you need, while putting you at ease as you move your plant floor into total computerization.

For information, contact your local Stratus sales office, or call Peter Kastner in Massachusetts at (617) 460-2192, or toll-free at 1-800-752-4826.

Stratus.

AMAPS
The Only Software
Your Manufacturing Company
Will Ever Need

AMAPS Gives You the Best of Both Worlds:
Superior Leading Edge Technology and Unbeatable User Benefits

AMAPS has been recognized in survey after survey as providing the most complete application functionality and highest system reliability. Our new technology utilizing state-of-the-art on-line architecture, with full support of Data Dictionary and 4th generation productivity tools, delivers the best to both users and data processing professionals.

Comserv offers AMAPS/3000 for minicomputers, AMAPS/Q for mainframes, and AMAPS/G for Government Contractors. Each of these systems offers true integration of Business Planning, Material and Production Planning and Control, and Financial Management with unsurpassed ease of use. All supported by the industry's most complete line of education products and experienced professional services.

Experience AMAPS yourself! Call to arrange for a demonstration. Or to help in your software evaluation, attend one of our nationwide seminars which provides an in-depth review of the features, functions and architecture of our AMAPS products. Contact Lynn Johnson at 1-800-328-2030, or in Minnesota 1-612-681-7243.

IBM launches multiproduct blitz

Announcements reveal moves to integration

By Peter Bartolik
CW Staff

ANALYSIS

If an overload of products is a contributing factor to the current computer industry slump, IBM's announcements did nothing to ease the problem.

With the release of a desktop version of the System/36, three Personal Computer AT versions of the 3270 Personal Computer and realignment of both the System/36 and 38 product families, users have yet another mass of product specifications to swallow. And if that isn't enough to chew on, AT&T is expected to unleash today its own volley of announcements.

Through the 237 pages of technical specifications that IBM issued describing its announcements, some strategies and directions are becoming more evident.

■ Mainframes may still be the mainstay of IBM's business strategy, but last week's announcements underscore the fact that the No. 1 computer vendor recognizes that its future growth hangs on moving — or communicating — the back room processing power to desktops.

In just a few tumultuous years, the once-maligned IBM Personal Computer has traveled, philosophically, from a fringe position as an entry system to a crucial role on IBM's product chessboard.

See ANALYSIS page 5

Adds desktop version to System/36 family

By Eric Bender
CW Staff

RYE BROOK, N.Y. — IBM last week let loose a barrage of product announcements, price cuts and improved product delivery dates affecting virtually every major product line the company offers.

In all, IBM made 60 separate announcements. Industry analysts said they believe many of the products had been planned for introduction later in 1985 and early in 1986 but were accelerated after it became clear that the sluggish sales IBM reported in the first half of 1985 will persist.

Headlining the product debuts was the System/36 PC, which combines a slimmed-down System/36 with a directly attached Personal Computer and supports up to four workstations. Big Blue also announced memory upgrades for other System/36 models.

Designed for small business and departmental applications, the System/36 PC is based on the new 5364 processor, a desktop or floor-standing unit said to run existing System/36 application programs without recompilation. For the three additional workstations, users can choose among Personal Computers equipped with terminal emulation; 3180, 5250 or 5290 family terminals; and several workstation and Personal Computer printers.

DG posts first loss, lays off 1,300

Joins ranks of vendors ailing from sales slump

By Clinton Wilder
CW Staff

Data General Corp. led the parade of continuing bad news in the computer industry last week with its announcement of 1,300 layoffs, the first companywide dismissal in its 16-year history.

The Westboro, Mass.-based minicomputer maker said it will post its first operating loss ever in the current quarter ending June 29 and may lose money in the next quarter. DG also said its previously announced U.S. plant shutdown, planned for July 1-3, would be extended to include the week of July 8-12, and it left open the possibility of further temporary shutdowns during the remainder of 1985.

"We were geared up for much more demand this year," DG President Edson D. de Castro said of the layoffs, which cut the company's worldwide work force by 7%. "This represents an attempt to get costs in line with demand. It was a very tough decision and clearly something we did not want to do."

DG's dramatic action marked the industry's third straight week with a four-figure layoff announcement by a major computer vendor. Previously, Wang Laboratories, Inc. slashed its staff by 1,600 employees, and Apple Computer, Inc. issued pink slips to 1,200 workers (see chart page 11).

In a separate announcement last week, Honeywell, Inc. said its second-quarter earnings will decline sharply from $80 million, or $1.70 per share, in the same quarter a year ago. A spokeswoman said the Minneapolis-based mainframe vendor's Information Systems Division sales had fallen substantially below second-quarter 1984 results because of weakness in industrial and computer markets.

Honeywell also said that growth for the year will be flat or slightly above that of 1984, "based on forecasts of an improved economy in the second half of the year." Honeywell earned $230 million on $6 billion in revenue last year.

NEWSPAPER

Burroughs-Sperry merger off

Users voice mixed reaction to demise of negotiations

By Peter Bartolik
CW Staff

NEW YORK — Burroughs Corp. abruptly terminated merger talks with Sperry Corp. early last week, scrapping a plan to maintain two mainframe product lines in a merged company.

Sperry, stressing that Burroughs had made an unsolicited bid, reiterated many of the doubts that had been expressed by users and analysts following the initial joint announcement that negotiations were under way [CW, June 17].

In a prepared statement, Sperry said that "there were serious concerns expressed by many customers who questioned the benefits to them of such an arrangement. Further, there was doubt that these customers could accept the credibility of maintaining separate Burroughs and Sperry product lines over the long term. Sperry management shares these concerns."

Burroughs withdrew its offer Monday morning before the stock markets opened, according to Jeanette P. Lerman, vice-president of corporate communications with Burroughs.

Lerman said terms of a proposed merger had been prepared by financial advisors and were presented to management of both companies. "It was time to decide whether or not to do it; [Burroughs] had to have a decision," she said. Sperry, according to Lerman, "decided [it] couldn't do it." Lerman said negotiations had been ongoing for a two-month period and sped up in the days prior to termination of the talks.

Sperry, however, had a different version of how the talks ended. Spokesman J. Peter Hynes said Sperry management had several concerns and sought more information from Burroughs, only to be informed that the offer had been withdrawn.

Although Burroughs said its stock exchange offer would have provided $65 worth of Burroughs stock for each share of Sperry stock, Hynes said the offer was for not less than one share of Burroughs stock and not more than 1.18 shares for each share of Sperry stock, depending on the price of Burroughs stock.

Lerman said Burroughs had planned on maintaining both companies' mainframe product lines. Despite broad skepticism about that plan, Lerman said the merged company would have enjoyed more than $1 billion in resources for R&D and engineering, could have reduced expenses by purchasing peripherals common to both and realized savings by eliminating duplicated research efforts. Additionally, Burroughs contemplated unifying the product lines of smaller computers. However, Sperry said the move "would have produced more redundant product lines than complementary ones." Sperry also said the offer did not meet its own directions, focusing more on telecommunications, software and applications, microprocessing and communications connectivity.

The negative reaction in the stock markets to the merger, Lerman asserted, had as much to do with IBM's revised financial situation [CW, June 17] as the actual terms of the merger. "It would have been interesting to see what happened if IBM didn't make that announcement," she said.

Burroughs has no current plans for similar negotiations with other companies but would consider any alliance that makes sense, Lerman said.

Despite the fact the Burroughs offer was the second this year — in March, negotiations with ITT were also terminated — Sperry said its Information Systems Group "will continue its successful program for growth through internal expansion and partnering in areas of strategic interest."

Although Sperry's statements seemed designed to assure its customer base that the company is well positioned for the future, two users contacted by *Computerworld* said they were disappointed the deal fell through.

"I was hoping they would merge," said Dan Snyder, vice-president of information systems at Tyson Foods in Springdale, Ark., which a month ago replaced an 1100/80 with an 1100/91. He said Burroughs has outstanding operating systems, while Sperry's operating system is outdated.

The merger would have provided greater competition to IBM, according to Lt. Col. Robert Shinpaugh, director of systems control at Gunter Air Force Base in Alabama, where a diversified hardware base includes four Sperry 1100/82 machines, two Sperry 1050-11s, a Burroughs B4800 and two B4700s. In addition to the competitive aspects, he said, the merger would have ensured greater job opportunities for MIS employees lacking a background in IBM systems.

One Sperry user was not unhappy, however. "I didn't see what the benefit of a merger would be, so it didn't disappoint me," said James Patterson, manager of systems and programming at Northwest Airlines in St. Paul, Minn., where 11 Sperry machines are in operation.

Burroughs users were generally skeptical about the two companies merging. "I would tend to think that an executive in a merged company would be tempted to effect a savings by combining the two service organizations," said Patrick L. Schiavo, vice-president of systems and data processing with Seamen's Bank for Savings in New York. "That's something you can't do overnight."

John J. Monaghan, executive vice-president and chief of administrative services with the Dime Savings Bank, Valley Stream, N.Y., said the merger talks had sparked concern. "I could not see it giving the customer base any additional capabilities."

CW staff members Donna Raimondi and Charles Babcock contributed to this report.

Sortland Yard warns against "Rafflles-type sort programs."

Call (201) 568-9700.

Ask for Inspector SyncSort!

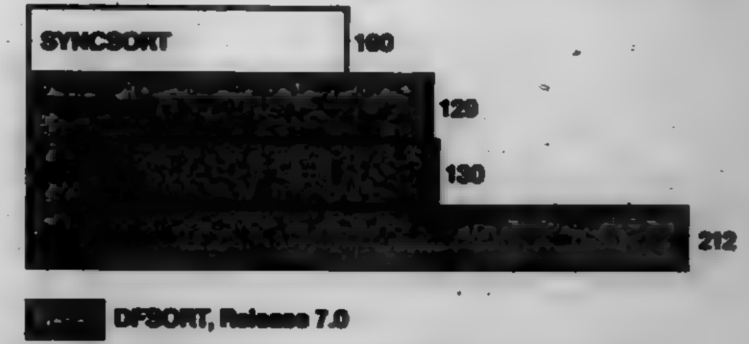
In an extraordinary move, Sortland Yard today warned data processors throughout the world to be on guard against what it termed "gentleman-bandit sort programs."

The warning was issued by one of the Yard's best known figures, Inspector SyncSort, who has sometimes been called "a legend in his own CPU time."

The inspector said, "One of the difficulties in apprehending these chaps is that they look so eminently respectable. They're members of a fine old hardware family. They've been to the right schools. And they invariably carry out their burglaries while wearing a dinner jacket from Saville Row."

EXPERT COMPUTER CRACKERS. "But once the party is underway," the inspector said, "these chaps head straight for the place where the family jewels are kept. They can crack open a computer and make off with a king's ransom in computer resources before you can say 'Hound of the Baskervilles.'"

To indicate "the true cost of this sort of misbehavior," the inspector released the following crime statistics:



SOMETIMES TAKE HOSTAGES. The inspector noted that these black-sheep programs often "take a dreadful toll" of programmers. "They are often tied up for days on end and forced to perform unnecessary coding, compiling and debugging. And they are heartlessly deprived of the labor-saving features that are taken for granted in most parts of the civilized sorting world."

Among these the inspector listed:

- **SORTWRITER**
- **MULTIPLE OUTPUT**
- **RECORD EDITING**
- **FAST FILE COPY**
- **MAXSORT**

TELEPHONE BEST DEFENSE. The inspector urged data processors to call the Yard immediately if they suspect their center is infested by a Raffles-type sort program. "The number is (201) 568-9700. We'll send over one of our highly trained sort detectives to track the culprit down."

Questioned as to what would be done with sort programs caught burglarizing computer centers, the inspector replied. "They will be given a just and speedy trial. If found guilty, they will immediately be transported to Iran!"

IBM software primes System/38 for Office Systems net

By John Gallant
CW Staff

RYE BROOK, N.Y. — Amid a deluge of product introductions and enhancements, IBM last week announced software that transforms the System/38 into a key component of its Office Systems network.

The products, which appear to fulfill Big Blue's earlier strategic commitments to the System/38, include a link between the mini and IBM Personal Computers; operating system enhancements that provide support for mainframe terminals and important IBM communications architectures; and software enabling System/38 workstations to communicate with other IBM office products.

As a result, the System/38 gains the ability to share information with Personal Computers running Displaywrite and to exchange documents with other System/38s, System/36s, mainframes running the Distributed Office Support System (Disoss) and other office systems via IBM's Systems Network Architecture (SNA) protocol LU6.2, dubbed Advanced Program-to-Program Communication [CW, May 27].

William Petrone, founder of Northeast System/38 Users, Inc., said the announcements marked "a coming of age for the System/38.

"The System/38 is no longer just an intermediate processor," said Petrone, who is also director of technical services for Computer Software and Services, Inc. in Sterling, Mass. "The System/38 can now act as a host in an SNA environment. IBM has made a commitment to the integration of its office products, and the System/38 is the answer. This adds a lot of life to the processor."

The following were among the announcements:

- Office/38 Personal Services/38 (PS/38). This, along with enhancements to the System/38 CPF, allows System/38 workstation users to participate in document exchange within IBM office networks. PS/38 offers capabilities for electronic mail through IBM's Document Content Architecture (DCA), document file, search and retrieval, messaging across one system or a network, text processing and other office functions.
- CPF Release 7.0 Office Host Services Support. This consists of enhancements to the System/38 CPF operating system. The added CPF components provide for SNA Distribution Services (Snads) document exchange with the System/36, System/38, Disoss/370 and 5520 administration system via LU6.2.

The enhancements also support IBM Document Interchange Architecture (DIA) document distribution and library services with the IBM Displaywriter via LU6.2.

Offer interfaces

IBM said the DIA and Snads components of CPF and PS/38 offer function and user interfaces similar to those provided by other IBM office systems that support DIA, Snads and Personal Services. Another communications enhancement to CPF Release 7.0 — dubbed the Distributed Host Command Facility — allows a System/38 to appear as a host for terminals attached to a 370 architecture mainframe with IBM's Host Command Facility. The terminals will appear to the System/38 as remotely attached 3277, 3278 and 3279 displays. Attachment between mainframes and the System/38 is via SNA/Synchronous Data Link Control.

- IBM Personal Computer Support/38. This provides for information exchange and resource sharing between the IBM Personal Computer and the System/38. The product consists of both a System/38 and a Personal Computer component.

In conjunction with the System/38 software announcements, IBM also unveiled an enhanced version of its 8100 Information System operating system that also provides workstation support of Snads. Release 3 of the Distributed Processing Programming Executive/System Product (DPPX/SP) allows for the distribution of documents, microcomputer files and DPPX data sets through Snads.

PS/38 and Personal Computer Support/38 are scheduled for November availability, CPF Release 7.0 for September and DPPX/SP Release 3 for January. PS/38 has a monthly charge of $400 or a one-time charge of $8,000; CPF Release 7.0 has a monthly charge of $869 or a one-time charge of $22,000; Personal Computer Support/38 has a one-time charge of $995; DPPX/SP Release 3 has a monthly charge of $869 or a one-time charge of $19,600.

IBM Information Systems Group is located at 900 King Street, Rye Brook, N.Y. 10573.

Addition to System/38 family boasts multichip logic

By Tom Henkel
CW Staff

RYE BROOK, N.Y. — IBM last week replaced its System/38 Model 8 CPU with a newer technology Model 18, said to incorporate more bipolar chips than the Model 8 and to feature a higher density multichip logic module.

The company also slashed prices of other models in the line and of some related peripherals (see story page 6), while taking steps to make the line more compatible with both larger and smaller IBM processors (see story above).

The Model 18 reportedly offers about 1.1 times the internal performance of the Model 8, and users of smaller System/38 CPUs can field-upgrade to the newly announced unit, presumably through a board swapping process that IBM said takes roughly nine hours.

Available in July, the Model 18 comes in 4M-, 6M- and 8M-byte main memory configurations. The CPU features a minimum instruction cycle time of 133 nsec. An entry-level Model 18 with 4M bytes of main memory and one disk drive costs $120,000. A similar configuration with 6M bytes of main memory costs $135,000, and an 8M-byte configuration costs $150,000.

Announcement highlights

Other highlights of the System/38 announcement include the following:

- Expansion of the maximum main memory capacity on the System/38 Model 6 from 4M bytes to 6M bytes.
- The ability to attach twice as many (up to eight) workstation controllers to System/38 models with a workstation Controller-Extended feature. The availability of additional controllers means that up to 256 terminals can be locally attached to a System/38. The Workstation Controller-Extended feature code costs $6,200. It can be leased for $251 per month, and there is a $29 monthly maintenance charge.
- A System/38 X.25 Communications Attachment, an expansion of the previously available X.25 support that provides an interface for attachment to X.25 packet-switched networks through an X.21 interface at up to 19.2K bit/sec. The feature enables communication through an X.25 network to Systems Network Architecture devices attached to a System/38. It costs $5,000 or can be leased for $197 per month. There is a monthly maintenance charge of $50.

More information is available from local IBM sales offices. IBM's Information Systems Group is located at 900 King St., Rye Brook, N.Y. 10573.

CORRECTIONS

IBM's 3081 Model KX is composed of two tightly coupled processors and is not a single processor, as stated in "User: Quick installation for NAS 8083" [CW, June 17].

In the article "Enhanced Focus release out from Information Builders" [CW, May 13], Intel Corp. was incorrectly listed as the vendor of the System 2000 data base management system. System 2000 is owned by SAS Institute, Inc., which purchased the data management system from Intel in December.

In the June 10 edition, the name of Dataserv, Inc., a Hopkins, Minn.-based leasing and marketer firm, was misspelled.

Uptime

Provide 24 hour CICS access

CICS Dynamic File Allocation is a must for effective CICS scheduling. It is the gateway to non-stop, round-the-clock CICS systems. It eliminates batch update constraints. It guarantees bullet proof restarts. It allows you and your batch jobs to add and remove CICS files at will, without disrupting your user community. Site license $4,000.

Read JES Reports from CICS

Give your CICS terminals and PCs access to JES reports. Let end users (1) browse time critical reports, (2) control report distribution, and (3) schedule and submit their own jobs. The CICS Queue Command Facility (CQCF) is an efficient, cost effective tool for previewing and controlling JES II reports. Site license $3,000.

ANALYSIS from page 1

Certainly IBM is not the first or the fastest to bring departmental computing systems to desktop-size configurations — Digital Equipment Corp. had a much more sophisticated product, the 32-bit Microvax II, out a few weeks earlier — but IBM clearly is the most successful at selling small machines.

The Personal Computer AT brought multiuser microcomputing capabilities to the corporate world, and the desktop System/36 is IBM's first step to adapt the convenience of microcomputers to department minicomputers.

The prodigious list of Personal Computer products that are available today indicates that IBM is committed to ensuring it has a microcomputer targeted at just about every potential customer and that it is just as committed to the microcomputer sale providing an entree to larger systems.

■ As much as it desires a complete array of machines, IBM is also faced with the need to integrate a vast product lineup, ranging from the ubiquitous Personal Computer to the 3090 mainframe.

Software products announced

Buried in the avalanche of announcements made by IBM was a series of software products designed to link IBM processors, including the System/36 and 38 and even the mysterious 8100, to networks.

Document interchange under the Distributed Office Support System will tie the minicomputers together, and Systems Network Architecture will tap the horsepower of the mainframes to run the whole show, according to IBM.

But with each product, or rather, with each wave of products, IBM's effort to tie all its hardware offerings into one cohesive system must surely become just that much more complex.

■ IBM in recent years has shown a willingness to purchase components from other vendors, but that does not mean the company will willingly ignore any opportunities for profit.

Disk drive vendors wooed, snubbed

Microcomputer disk drive vendors have been alternately wooed and snubbed by IBM in recent years as the company doled out contracts to provide storage for its Personal Computer products. With the System/36 desktop version, IBM is offering its own 5¼-in., 40M-byte hard disk drive.

IBM showed another face with the introduction of two Ascii terminals with built-in capabilities allowing them to emulate the terminals of five other vendors, including DEC; historically, other vendors have emulated IBM.

A spokesman for DEC said that his company was flattered by the new products and that the emulation capabilities available mark a recognition by IBM of the need to coexist in multivendor environments. More likely, IBM saw a need that would be filled by other vendors if it did not act.

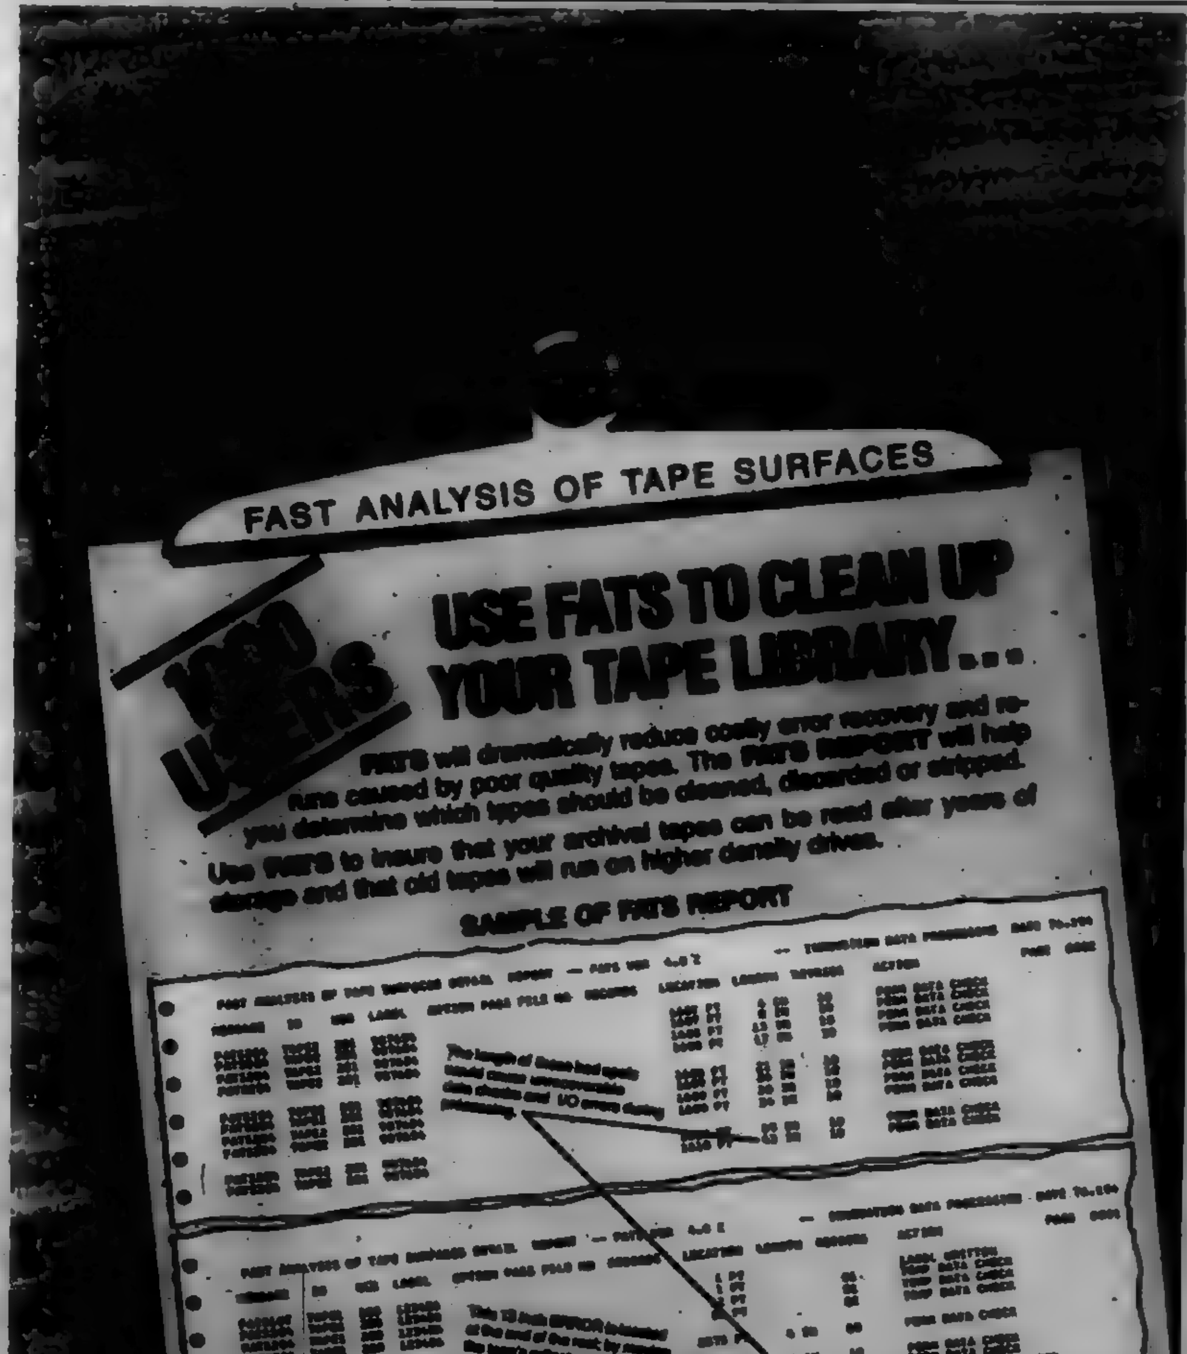
■ IBM seems convinced it can weather the current industry slump by putting products on the market as quickly as possible. Not only is some of the new hardware available almost immediately, but the company also moved up delivery dates on a broad range of previously announced software for medium- to large-scale systems.

Price cuts

Accompanying the product announcements was another round of price cuts starting with the System/36 and progressing up through the 3090 series mainframes. These cuts also seem designed to prompt decision makers to make their decisions now.

■ IBM is showing little sympathy for the MIS executives who are charged with evaluating, ordering and installing corporate information systems. While the product saturation strategy may make sense to IBM executives, it may be confusing the rest of the world.

While MIS departments are being exhorted by IBM to add 3090 mainframes and enticed to add 3080 models, they are under increasing demand to integrate corporate processing strategies. And with traditional minicomputers facing off against a new generation of miniaturized superminicomputers, integrating departmental processing with corporate processing is no mean feat.



FAST ANALYSIS OF TAPE SURFACES

1000 USERS

USE FATS TO CLEAN UP YOUR TAPE LIBRARY...

FATS will dramatically reduce costly error recovery and reruns caused by poor quality tapes. The FATS REPORT will help you determine which tapes should be cleaned, discarded or stripped.

Use FATS to insure that your archival tapes can be read after years of storage and that old tapes will run on higher density drives.

IBM pares purchase, upgrade [illegible]

RYE BROOK, N.Y. — In an apparent effort to make its larger systems more attractive [illegible] IBM last week pared 5% off the purchase price of its 3080-series and 4361 series processors while knocking [illegible] to 8% off the 4381's price.

More hefty price cuts were made on IBM's midrange System/38, with reductions on for some of those processors and related peripherals of up to [illegible].

In what was believed to be an early glimpse of a price cut IBM had been holding for the fourth quarter, IBM dropped the purchase and model-to-model upgrade charges for machines purchased after June 18. On-order machines and model conversions installed after June 18 will automatically receive the lower price.

Memory enhancements within the mainframe product lines were not affected by the price cuts. For example, users can get a discount by upgrading from a 3083 CPU complex to a [illegible]

[illegible] on 3080 series

Both the base and X models of the 3080 series received 5% across-the-board purchase price cuts. For example, a 3081 Model KX2 CPU with 32M bytes of main memory was [illegible] to $3,310,000. The price to upgrade the Model KX2 to a 3084 Model QX2 configuration was cut from $3,585,000 to $[illegible].

The prices of the 4361 Model Group 4 and 5 processors were also reduced. A [illegible]-byte 4361 Model Group 4 was reduced from $1[illegible] to $126,900. A 12M-byte 4361 Model Group 5 was reduced from $255,000 to $24[illegible]. All 4381 Model Group upgrades were cut by up to 12%. For example, the price to upgrade a [illegible]

IBM 3270 AT touts twice its predecessor's performance

NEW YORK — Last week's wave of IBM product introductions also included the 3270 Personal Computer AT, said to offer more than twice the average performance of the 3270 Personal Computer.

Available in August, the 3270 Personal Computer AT provides concurrent operation of up to four host interactive sessions, two notepad sessions and multiple PC-DOS 3.1 sessions, IBM said.

Price of the basic system unit, with 512K bytes of random-access memory (RAM) and a 1.2M-byte diskette drive, is $6,090. A high-end system unit with 640K bytes of RAM, a 20M-byte hard disk drive and an Extended Graphics Adapter (providing all-points-addressable graphics capability) costs $8,145. The 3270 Personal Computer Control Program Version 2.1 costs $300.

Two graphics models also debuted; the 3270 Personal Computer AT/G and 3270 Personal Computer AT/GX, both designed to access data from IBM 370-based host computers to create and display charts, diagrams, drawings and text. The memory addressing capabilities of the AT/G and AT/GX can be extended to 2.5M bytes, IBM said. Both will be available in August.

The AT/G reportedly features a 14-in., eight-color display with 720 by 512 user-addressable points. A basic configuration will cost $11,670.

The AT/GX is offered with either a 16-color or monochrome display, each providing 960 by 1,000 user-addressable points, IBM said. Price for a starting configuration with 19-in. color display is $18,920.

The systems will run under the 3270 Personal Computer Graphics Control Program Versions 2 and 3, with Version 3 supporting extended memory capabilities. Version 2, available in August, costs $450. Version 3, out in September, costs $550.

More information is available from IBM Information Systems Group, 900 King Street, Rye Brook, N.Y. 10573.

IBM graphics unit debuts

RYE BROOK, N.Y. — A color graphics terminal for IBM mainframes and two Ascii terminals that can emulate other vendors' products were among the peripheral products unveiled by IBM last week.

The 3179 Color Graphics Display Station is available in two models, the G1 and G2. The Model G1 has a 122-key typewriter keyboard, and the Model G2 has a combination 122-key typewriter and APL2 keyboard.

The units both feature an eight-color, 1,920-char. or 2,560-char. alphanumeric display on a 14-in., all-points-addressable screen.

At the same time, IBM unveiled a 3979 Expansion Unit that provides auxiliary device ports to attach an IBM 5277 mouse and an IBM 7371 or 7372 color plotter. The 3179 Model G1 and G2 cost $2,995. The Expansion Feature costs $295. All three are available immediately.

IBM also introduced the 3161 and 3163 Ascii display stations Models 11 and 12 to replace the older 3101 Model 881 terminal, which IBM said it will stop marketing in September.

The newly announced units were designed to be attached to IBM or non-IBM systems. The entry-level 3161 offers basic features such as menu setup, definable function keys and split screen. It also has an auxiliary port and a cartridge capability for the addition of emulation modules. The unit also includes an Ascii keyboard with numeric pad.

The 3163 includes the same features as the 3161 but adds smooth scrolling, windowing, double-height and double-width characters and a redefinable keyboard, IBM said.

Both terminals can emulate the 3101 Model 881, as well as terminals manufactured by other vendors. The 3161 can emulate Applied Digital Systems, Inc. Viewpoint terminals, Hazeltine Corp. 1500 terminals, Lear Siegler, Inc. ADM-3A and ADM-5 terminals and Televideo Systems, Inc. 910 series terminals. The 3163 can emulate Digital Equipment Corp.'s VT52 and VT100 terminals via a plug-in cartridge emulation package.

Available immediately, the 3161 Model 11 costs $695, and the Model 12 costs $774. The 3163 Model 11 costs $1,095, and the Model 12 costs $1,174. The plug-in cartridge, which allows the 3163 to emulate DEC's VT52 and VT100, costs $50.

IBM's Information Systems Group is located at 900 King St., Rye Brook, N.Y. 10573.

Accept the VMSORT challenge. Run the VMSORT race in your VM data center.

VM Software is now offering a special 30-day introductory free trial so you can benchmark VMSORT in your own environment.

Save $2,500

And if VMSORT performs the way we bet it will ...you can also take advantage of our 50% introductory DISCOUNT...and save $2,500.

REXX Appeal

In addition to being fast on your CPU, VMSORT is also fast and easy for your end users...with the ability to be called interactively from a terminal as well as user exits that can be easily coded in REXX!

With more user exits (and no exit required for data introduction) VMSORT is more flexible and powerful for your end users. VMSORT can be invoked from most program languages including PL/1, Cobol and Assembler! It will even accept your existing OS and DOS sort statements without modification.

Fast in VM . . . Because It's The Only Race We Enter.

VMSORT is developed solely for the VM environment by VM Software, Inc.,...a recognized leader in software for the VM operating system. Because we concentrate 100% of our efforts in the VM environment (and not in OS or DOS)...all our software performs efficiently and dependably on your VM System...without modification.

Internal Documentation, Too!

VMSORT also takes the headaches out of reviewing and modifying sort statements with full control statement documentation ability...and statements can be kept in a file for easy retrieval.

Take Control of Your Data Center

VMSORT is available individually or as a component of VMCENTER, the most comprehensive data center management system for the VM environment.

Free 30 Day VMSORT Trial Run

Don't miss out on this exciting race. In fact, run it on your own course...and see for yourself how the new VMSORT is the ultimate sort utility...fast for you, and fast for the end user.

To take advantage of our 50% introductory discount, call or mail the coupon below—before July 31, 1985.

Hiring execs don't see ICCP certification as critical asset

Experience, education more important for choice

By Donna Raimondi
and Clinton Wilder
CW Staff

Do DP managers consider the certification of data processing professionals a significant factor in making hiring decisions? Not according to most hiring managers in several companies contacted by *Computerworld*.

The 12-year-old Institute for Certification of Computer Professionals (ICCP) claims that voluntary certification is a valid and useful way for employers to recognize expertise and professional attitude among computer professionals. However, the majority of managers said that certification does not even show up on the list of winning attributes.

Member organizations represented on the ICCP's board include the Data Processing Management Association, the Association for Computing Machinery, the Computer Society of the Institute of Electrical and Electronics Engineers, Inc. and the Association for Systems Management.

"We are more interested in a person's reputation than in his credentials," said Jerry Downer, director of systems development at Best Western International, Inc.'s corporate headquarters in Phoenix. Best Western, an IBM shop, has one staff member with an ICCP Certificate in Data Processing (CDP), but the certificate held no weight in the decision to hire that person, he said.

That opinion was echoed by Mike Accurso, director of systems at National Car Rental Systems, Inc. in Minneapolis. Experience and education are the factors he considers when hiring for his application systems programmer slots, which range from entry- to management-level, he said.

Accurso noted that some certification programs allow people who have been in a field for five years to obtain credentials, but "when you look at the field, length [of employment] does not indicate competence," he said.

"I'm always impressed when I see an [ICCP] certificate because I see so few of them," said Charles Connoy, manager of systems at GTE Data Service Co. in Marina Del Rey, Calif. Connoy's shop has an IBM 3084 and a National Advanced Systems Corp. 9070. There is no way to seek out certificate holders because they are so rare, Connoy said. When he does see one listed on a resume, he automatically selects that person to be interviewed, he said.

> *'We are more interested in a person's reputation than in his credentials.'*
>
> — Jerry Downer
> Best Western International, Inc.

However, education comes first, experience second and a certificate third on his priority list for hiring, he noted.

A company-developed test of specific skills at Consolidated Cigar Corp. in Secaucus, N.J., makes ICCP certification unnecessary, said George Rey, director of systems and data processing. The test, which includes basic Cobol questions, a logic test for approaches to programming and some testing of math and verbal abilities, effectively screens out unqualified applicants, he said.

If nothing else, certification shows the applicant's career initiative, said Bobby Webb, director of MIS administration, planning and research at Hardee's Food Systems in Rocky Mount, N.C. "If I had two exactly equal candidates, and one had a CDP, I'd lean toward that candidate . . . but the situation has never come up," he said. Less than 10% of the resumes Webb sees include ICCP certification.

"I think it measures motivation more than talent," said Robert J. Woodrow, director of MIS at Agway, Inc. in Syracuse, N.Y. "I don't think we are in a position yet where testing reveals performance. . . . You can test for technical skills [but] not [for] performance."

For Rich Mathy, assistant manager of data processing at Manitowoc Co., in Manitowoc, Wis., education is the most important criterion when hiring entry-level people. Experience is the chief factor for higher level jobs, and certification does not hit the list at all, he said.

A certificate would demonstrate that a prospective employee's quest is to be more professional in his area, and it would earmark a resume for special attention, according to the manager of a 50-member DP applications department staff in a large research and development contracting firm in New Mexico. The company hires only master's degree-level analyst/programmers, the manager said, and as far as he knows, nobody on his staff has a certificate. He did not foresee a time when certification would be a necessary qualification in his organization.

"For this company, they should save their money [spent for certification]," said Bob Kist, vice-president and manager of systems and programming at Pittsburgh National Bank. The most important qualification is specific experience with banking applications or IBM systems, he said.

IDMS/R is proving to be what most people expected it to be:

Simply the best.

For nearly a decade, in survey after survey of the data processing community, one database management system was consistently rated first in user satisfaction—IDMS.

So when we announced IDMS/R in April of 1983, expectations naturally were high for a versatile database management system that would combine the ease-of-use of a relational architecture with high performance.

That was the promise we made. And that, in fact, is the product we've delivered.

With IDMS/R, people whose only data processing experience is an encouraging "you can do it" from the dp department are finding themselves able to create their own customized applications. They're doing it quickly, easily and, best of all, *independently*. And that comes as a welcome relief for overburdened dp personnel.

As for complex, high-volume production applications, IDMS/R is without peer. Thanks to the unique architecture of IDMS/R, data processing can tune the database and thereby benefit from a dramatic boost in performance. Moreover, IDMS/R has the most sophisticated back-up and recovery capability of any database management system—an absolute must for on-line applications.

And when one considers that IDMS/R is the cornerstone of the only information management system available today that fully integrates database, applications and decision support software, choosing a relational dbms becomes a very simple decision.

DEC moves to support international standard protocols

By John Gix
CW Staff

MAYNARD, Mass. — Digital Equipment Corp. said last week that it will modify its network architecture during the next three years to comply with international standard protocols, a commitment that the company said is aimed at facilitating communications between different makes of computers.

In a sweeping announcement, DEC said it will do the following:

- Adopt the approved levels of the International Standards Organization's Open Systems Interconnect (OSI) network reference model.
- Build a software product implementing the OSI's transport level.
- Support the CCITT X.400 messaging recommendations.
- Modify its current X.25 support to conform to the revised CCITT standard.
- Provide hardware and software support of General Motors Corp.'s Manufacturing Automation Protocol (MAP).

Users contacted for comment on the DEC announcement said they were interested and pleased with the commitment but that the real importance of OSI support will only be realized if other vendors follow DEC's lead.

Of perhaps the most significance is DEC's intention to use the four lower layers of the seven-layer OSI network reference model in its Digital Network Architecture, industry analysts said. Computer systems of various makes that comply with OSI-specified protocols will be able to communicate, or so is the intent.

"OSI is going to provide users with a great deal of vendor flexibility by enabling information systems from various manufacturers to communicate. Users won't be tied into one manufacturer's implementation," said Harold Folts, executive director of Omnicom, Inc., a consulting services company in Vienna, Va., that works with computer vendors to help apply these standards. "This is a key milestone in the evolution of OSI."

> *'OSI is going to provide a great deal of vendor flexibility by enabling information systems from various manufacturers to communicate.'*
>
> — Harold Folts
> Omnicom, Inc.

DEC will, during the next three years, adopt OSI layers one through four, the only OSI layers that have been ratified as international standards, the highest level of specification, according to John Adams, manager of strategic planning and marketing for DEC's Distributed Systems group.

Level 4 of the model, the so-called transport layer, provides for virtual circuits between computers and ensures that data arrives correctly and in the order sent, Adams explained. "It is the foundation for other network capabilities."

Even though OSI layers one through four are now international standards, OSI is still a reference model and, as such, offers a menu of class options. Vendors that implement different OSI classes will not be able to communicate, Adams said.

For this reason, DEC will try to build a superset transport that incorporates components specified by user-driven standards, specifically GM's MAP and Boeing Computer Services Co.'s Technical and Office Protocol (TOP). MAP and TOP are modeled after OSI and use a similar transport layer but differ in their specification of layers above and below the fourth layer.

Adams said that for upper levels of the OSI, DEC will replace its protocols where practical and coexist with the standard where needed. "For DEC-to-DEC communications at the applications level, we will probably maintain our own proprietary protocols because it will allow us to support more functions and achieve higher performance than we would if we supported the industry-standard protocol," Adams said.

"DEC's announcement shows the maturity of OSI," noted John Heafner, chief of systems network architecture with the National Bureau of Standards in Gaithersburg, Md. "Large organizations have a need to buy from multiple vendors, and in order to put multivendor products together, they have to have some kind of industry-supported standard."

Some analysts, however, fault OSI because of its options. "While OSI appears to be a standard, it is implemented slightly differently by almost everybody," said John King of James Martin Associates, a consultancy in Carmel, Calif. "OSI really isn't a standard; it is, as they call it, a reference model."

The first product that DEC will build to OSI will be the VMS OSI Transport Service. This product will reportedly facilitate task-to-task communications between a program running under VAX/VMS and a program running on another vendor's system that implements the OSI model. The product is scheduled to be released in early 1986.

Other standards DEC has committed to include the latest release of the CCITT's X.25 and X.400 recommendations. DEC will modify its current X.25 network support to comply with the newly revised 1984 X.25 standard, the company reported. The latest revision specifies use of a symmetrical protocol that enables data terminal devices to communicate without going through a public data network, Adams explained.

DEC said that, in 1986, it would begin to incorporate the X.400 mail and messaging recommendations into its products. This standard reportedly specifies how OSI-compliant networks exchange electronic messages.

Finally, DEC also committed to developing and delivering hardware and software systems that comply to Version 2.1 of GM's MAP. In 1986 DEC will deliver software for VAX/VMS and Microvax/MicroVMS, the company said. Controllers and modems that implement MAP protocols will also be made available at that time.

DEC is headquartered in Maynard, Mass. 01754.

BARRAGE

from page 1

Available in July, a starting configuration with 256K bytes of internal memory; a 5¼-in., 1.2M-byte floppy disk drive; a 40M-byte hard disk drive; and a link to the directly attached Personal Computer costs $5,995. The 5364 System Support Program sells for an additional $995.

The machine received mildly favorable reviews from industry analysts. Several noted the popularity of the two-year-old System/36 family and the thousands of software programs available for the latest arrival but questioned the system's performance characteristics.

"The direction [in which IBM is] heading with the System/36 PC is a very good one," said Gwen Peterson, director of business computer services at Dataquest, Inc. in San Jose, Calif., but she also listed some important system limitations.

Constraints

"There are only three local workstations, and that will be a major constraint," she said. "And there are so many restrictions on how you can use the required [Personal Computer]; in many respects, it ends up just being a very expensive systems console." Additionally, some form of disk backup is desirable, she suggested.

"I have some real concerns with the performance," said George Colony, president of Forrester Research, Inc. in Cambridge, Mass. Compared with new supermicrocomputers such as Digital Equipment Corp.'s Microvax II, the System/36 line "looks like junior varsity, at this time," he maintained.

Among limitations in running microcomputer software on the attached Personal Computer, IBM said its Topview and Business Management series software, Microsoft Corp.'s Multiplan, Borland International's Sidekick and Microstuf, Inc.'s Crosstalk XVI "should not be loaded while the IBM System/36 PC is active." Various problems also arise with other applications, including Lotus Development Corp.'s Symphony, and some PC-DOS 3.1 functions may not be used, IBM said. Additionally, IBM's PC Network is not supported.

The System/36 PC can handle external communications through a single communications line interface for Binary Synchronous Communications (BSC) or Synchronous Data Link Control (SDLC) on the directly attached Personal Computer. A prerequisite is BSC or SDLC hardware and software on the Personal Computer. The communications line reportedly can handle up to 64 remote displays or printers.

The IBM System/36 PC

Using the previously announced PC Support/36 program, Personal Computer users can share PC-DOS data stored on 5364 disk drives and can hotkey between Personal Computer and System/36 sessions, IBM said.

A $325 diskette exchange facility, used with a Personal Computer AT attached to a System/36 Series 5360 or 5362, permits converting between the 8-in. format used by the larger machines and the System/36 PC's 5¼-in. format.

IBM announced a host of software packaged for the new machine, including RM/Cobol Runtime ($250); RM/Cobol Compiler and Runtime ($1,250); Professional Visual Aid Composer ($1,500); Composition Utility Version 2 ($4,500); Business Management Accounting System ($995 per module); and Business Report/Application Development System ($1,250). Personal Services/36 will be available for the new machine in first-quarter 1986.

A second 40M-byte hard disk drive costs $2,095. A $495 add-on card that expands internal memory to 512K bytes is scheduled for first-quarter 1986 delivery.

Minimum system requirements include a System/36-supported printer, the directly attached Personal Computer (with between 256K and 512K bytes of random-access memory) and PC-DOS 3.1.

The System/36 PC will be sold through IBM's National Accounts, National Marketing and National Distribution divisions. Sales channels will include value-added dealers, selected authorized dealers and selected product centers.

The internal memory enhancements for existing System/36s will be offered in first-quarter 1986. Up to three 512K-byte cards (priced at $2,500 each) can be added to 5360 Model B processors for a total of 1.75M bytes. Up to four 256K-byte cards (costing $1,250 each) can be installed in the 5362 for a total of 1M byte.

More information is available from IBM Information Systems Group, 900 King St., Rye Brook, N.Y. 10573.

SLUMP

from page 1

Also last week, Hewlett-Packard Co. said it would shut down all of its domestic operations July 1-3 as a cost-cutting measure. HP had announced last month it would restrict hiring, travel, overtime and contract labor expenditures. Apple, Wang and DG had all announced domestic plant shutdowns similar to HP's before instituting massive layoffs.

Across-the-board layoffs

A spokesman said the DG layoffs, announced June 17, will affect employees at all levels of the company, including 150 in sales and marketing support positions. Dismissals include 450 workers at three Massachusetts facilities; a total of 200 in Westbrook, Maine, and Portsmouth, N.H.; and 250 among production workers at three plants in North Carolina, two in California, one in Austin, Texas, and one in Mississauga, Ontario. Layoffs will affect 250 overseas employees.

DG's announcement reflected the suddenness of the industrywide downturn, which began early this year and caught computer executives, analysts and market researchers by surprise. Booming sales of minis and superminis to the scientific and technical user market through direct and OEM channels had produced DG's best quarter ever at the end of 1984, with the company earning $23 million on a record $333 million in sales.

"The minicomputer business was going great guns six months ago. Data General hired people to position the company for continued growth and got caught with bloated expenses," said Craig Symons, an analyst with the Gartner Group, Inc. in Stamford, Conn. "I think all the major layoffs represent companies streamlining, paring away the fat. I really don't think they're cutting the meat yet."

DG's orders took an anticipated start-of-year dip in 1985 and continued to decline thereafter. Profits for the quarter ended March 30 dropped 36% to $9.1 million from $14.2 million in the same quarter of 1984. DG's deCastro said he held little hope for improvement in the minicomputer market before 1986.

Symons said major cost-cutting announcements are a good indicator of vendor pessimism for the near term. "If they were optimistic that things would get better, they would batten down the hatches and ride through the down cycle," he said. "If they're not optimistic, they take steps like this to downsize their companies."

Bob Randolph, a market research analyst for International Data Corp. in Framingham, Mass. and a former DG consultant, said that recently announced products from Digital Equipment Corp. have cut into DG's sales. "The [DEC] VAX 8600 is a watershed product that is getting high-end supermini people back in the DEC camp," he said. "DG is taking some heat there, and the Microvax II may hurt them in the workstation area, too."

Plans to cut 11,000 positions.

IBM micros get Plus hard disk drive

By Kathleen Sullivan
CW West Coast Bureau

MILPITAS, Calif. — Plus Development Corp. today is expected to introduce its first product, Hardcard, a 10M-byte hard disk drive mounted on an IBM Personal Computer plug-in card.

Hardcard contains a hard disk drive system in a card measuring 4 by 13 by 1 in., according to company President Stephen M. Berkley. Designed to fit into an IBM Personal Computer expansion slot, the Hardcard includes a 3½-in. hard disk drive, a controller, drive electronics and file management and installation software.

The Hardcard can be installed in any IBM Personal Computer or Personal Computer XT as well as compatible computers, he said. Its retail price will be $1,095.

According to Berkley, the 2-lb Hardcard has an average access time of 65 msec. When in operation, it uses 10.9W of power. Its specified mean time between failures (MTBF) is said to be 25,000 hours, a figure that puts the Hardcard's MTBF at twice the industry norm for IBM Personal Computer XT-type devices, Berkely said.

The Hardcard comes with the Hardcard Directory, a file management program that allows users to load and locate applications programs and data files on the hard disk. It was developed by Software Publishing Corp., a Mountain View, Calif.-based software firm known for its PFS series of applications programs.

The Hardcard will be produced in Japan at Matsushita Kotobuki Electronics, Berkley said, and will be ready for shipment in October.

At present, the Hardcard is being tested at several companies in the San Francisco Bay area, Berkley said. At the San Francisco-based Bank of America, the Hardcard was installed in an IBM Personal Computer that handles calls to an internal electronic telephone directory.

"We put the Hardcard in about a month and a half ago and it has worked without missing a step," said George Miller, a vice-president in the bank's advanced research and development division.

However, Miller did have problems when he tried to install the device in one of the original IBM Personal Computers residing in his shop, because the read-only memory (ROM) in these early systems was not designed to recognize the existence of a hard disk. As a short-term solution, Miller installed a software program that tells the machine to talk to the Hardcard; in the long run he plans to install an updated Bios ROM, he said.

Hank Chesbrough, Plus Development's product manager for Hardcard, confirmed that users would have to update their systems with the Bios ROM if they own the early versions of the IBM Personal Computer.

More information is available from Plus Development, 1778 McCarthy Blvd., Milpitas, Calif. 95035.

Ten banks form lockbox-based cross-country network

By Charles Babcock
CW New York Bureau

NEW YORK — Manufacturers Hanover Trust Corp. in New York and Wells Fargo Bank N.A. in San Francisco, along with eight other banks, have found that a little technology can stretch a long way.

Using little more than a micro-based program and standard asynchronous communications, they have formed a cross-country network out of their individual lockbox fund collection services.

Lockbox is the practice of a bank collecting receivables for a corporate customer, saving the time the corporation formerly spent transferring payments from itself to its bank. The collection service has been around since the 1940s and can be viewed "as a mature product," said Georgette Cipolla, a vice-president at Manufacturers Hanover and president of the new network, U.S. Dollar Net (U.S.$Net).

One day of 'float' eliminated

Accounting firms estimate that lockbox service saves a company at least a day of "float," the period it must wait for customers' checks to clear and funds to be released into its account.

By forming a network, the 10 banks have added several new features to an old service:

■ A corporation can have its customers send payments to the network bank nearest them, saving part of the time that a check spends in the mail. A company in New York, for example, could have a customer in San Francisco send its payment to a Wells Fargo lockbox there. Wells Fargo would then effect an electronic transfer to Manufacturers Hanover in New York during the same day, eliminating two or more days delay before the money would be booked to the company's account, according to Cipolla.

■ A corporation that previously set up its own lockboxes in several cities with several banks may be able to achieve the same goal dealing with one bank in the network. "It totally eliminates the geographic nature of your receivables," Cipolla said.

■ Although a company may have lockboxes at 10 banks on the network, its fees are not increased by the same factor. Cipolla said she could not reveal Manufacturers Hanover's fees without violating antitrust regulations, but there would be a price break over opening separate lockboxes at each bank, she noted.

Features provide added reach

These features give the lockbox service added reach, and in a competitive banking climate, that could be an advantage, according to banking observers. But the banks achieved the service enhancements with only a modest addition of technology.

"I wish I could tell you we use a [Cray Research, Inc.] mainframe, but we don't," said John J. Cipriano, vice-president in charge of product management at Wells Fargo; one of the banks that originated the regional network that served as the model for U.S.$Net.

When funds are deposited in a lockbox, they are entered into the general accounting system, much as any other deposit, on the bank's mainframes. From that point, the data is accessed, tabulated and moved about by a program written for the IBM Personal Computer, Cipriano said.

Exchanges net dollar for dollar

The banks do not do a dollar-for-dollar exchange in each lockbox transaction. Rather, they net out the difference between what they would send to another bank vs. what they would receive, one of the key functions of the software, Cipriano said.

"We had developed our own treasury workstation and used bits and pieces of it" for the U.S.$Net program, he said.

The treasury workstation is a proprietary program for a personal computer that helps a corporate treasurer interface with several banks, retrieve financial data soon after it appears in an account and put data into a standard Lotus Development Corp. 1-2-3 format, he said.

Standard transmissions used

The U.S.$Net software uses standard asynchronous data transmissions to effect transfers. "It is a rather simple application, but it has enormous leverage," Cipriano said.

Charles L. Biggs, a partner in charge of banking service at the New York office of Touche Ross & Co., a Big Eight accounting firm, said the lockbox network will probably cut "two, three or four days off the float of a corporate payment, and that's really dynamic. They're taking a little bit of technology and adding value to their product."

The network was incorporated March 5 in California. Cipolla said 24 of Manufacturers Hanover's 400 corporate lockbox customers have requested the service so far.

In addition to Manufacturers Hanover and Wells Fargo, the following banks are involved in the network: Bank of Hawaii, Bank of New England N.A. in Boston, Centerre Bancorp in Missouri, First National Bank of Maryland, National City Bank of Cleveland, Rainier Bank of Washington State, United Bank of Denver and Valley National Bank of Arizona.

Realia COBOL.
Migration without migraines.

Until recently, you had to abandon the business computer language when you developed microcomputer application software. The available micro COBOLs were inadequate—too limited, too slow. The best alternative—the XT/370 or AT/370 using IBM's COBOL—was very expensive and still too slow. To get acceptable performance, you had to retrain your programmers in Pascal or C.

Realia COBOL is the cure for such headaches.

Realia's compiler supports most IBM VS/COBOL and VS/COBOL II features, such as:
- COMP and COMP-3 data
- SELECT assignment names
- Multiple entry points
- GOBACK, EJECT, and SKIP statements
- Structured programming extensions of VS/COBOL II

You can download mainframe systems for development, maintenance, and testing. Productivity will soar.

You can compile faster with Realia COBOL than in most mainframe environments, even on floppy-based systems. Compile-time options allow cross-reference, brief and full code listings, and helpful features like subscript and decimal value checks.

Our interactive debugger lets you follow the program source, display and modify data, and set breakpoints using the normal optimized machine code.

The results are startling.

Our users report that their systems run up to 20 times faster when compiled by Realia COBOL. That's compared to our nearest micro competitor. The ratio is up to 100 times faster when compared to any of the others.

On the IBM PC AT, your programs can run at 370/148 to 370/158 speed. Realia's file system really makes your machine deliver, giving it a distinct edge over Pascal or C. Our indexed file system even has full key compression and buffer controls just like VSAM. The generated code is pure MS-DOS, so it can be run on most of the 8088/8086 machine family.

And you can sell your programs without paying us a royalty fee.

Realia COBOL is priced at $995, including one year of maintenance and upgrades. Subsequent maintenance and upgrade contracts are currently priced at $125/year/copy. Available for the IBM PC, PC XT, 3270 PC, PC AT, PC-compatibles, and the TANDY 2000.

Realia COBOL. What a relief.

IBM, IBM PC, PC XT, 3270 PC, XT/370, PC AT, and AT/370 are registered trademarks of International Business Machines Corporation. MS-DOS is a registered trademark of Microsoft Corporation.

Virtual private net cuts firm's phone costs by up to 15%

FIRST USER

By Paul Korzeniowski
CW Staff

NEW YORK — Home Insurance Co. here, the first user of Isacomm, Inc.'s Virtual Private Network, reported that the network has cut monthly telephone costs by from 5% to 15% and paid for needed network equipment in three months.

"We chose U.S. Telecom's [Isacomm is a U.S. Telecom company] Virtual Private Network because it would provide us with reliable transmission and cut costs," noted Seth Lewis, telecommunications manager at Home Insurance.

Home Insurance's relationship with U.S. Telecom started before the installation of Virtual Private Network. "We have U.S. Telecom's long-distance service at our home office, so we were interested in its virtual private network when it was first announced," Lewis said.

When Virtual Private Network was announced, the insurance company decided to install it at 15 field offices. While the home office had used U.S. Telecom's long-distance network, the field offices had worked with a number of carriers such as AT&T and MCI Corp. for their long-distance requirements. Home Insurance's Virtual Private Network replaced the various dial-up long-distance services.

Many features provided

A virtual private network provides a number of features. Companies can, for example, create seven-digit corporate dialing plans without having to install a private line to every location supported. The system automatically converts seven-digit numbers to 10-digit numbers when a trunk is full. Speed numbers can reduce dialing to three or four digits. Authorization codes prevent nonemployees from accessing the system, and account codes supply billing information.

Fifteen Home Insurance offices located throughout the U.S. have been connected to the U.S. Telecom network since it was first cut over three months ago. A Northern Telecom, Inc. SL-1 private branch exchange in each office is connected through dedicated lines, leased by U.S. Telecom from a local operating company, to U.S. Telecom's point of presence in each locale. Major locations include New York; Chicago; Columbus, Ohio; Los Angeles; Denver; St. Louis; Kansas City, Mo.; Phoenix; and Boston. Lewis plans to add three offices to the network during the summer and a number of branches in the fall. The network has resulted in reduced long-distance costs, Lewis said.

He estimated that installing Virtual Private Network cost $30,000. "We had to purchase some PBX line cards and other small items," he said. The cost included some needed changes to Home Insurance's telephone network. "Some offices needed additional trunks, so we decided to install them with the new network," Lewis said. Savings from reduced long-distance costs have paid for the equipment, he said.

Normal installation problems

The telecommunications manager reported that Home Insurance experienced normal first-time installation problems. "There were some problems with branch transmissions," he said. "Sometimes, the problem was with the local telephone company, and other times it was with the office line. At one location, U.S. Telecom was unable to transmit a microwave shot. But there weren't any major glitches." The service is primarily used for voice transmission. "There is some dial-up data transmission, but it is minimal," the telecommunications manager noted.

The network has the potential to transmit the company's data as well as voice transmissions. Currently, the company transmits branch data on IBM System/34 or 36 minicomputers over AT&T private lines to Home Insurance's IBM 3084 mainframe.

Lewis listed a number of reasons why the company is not using Virtual Private Network for data transmission. A major factor is that U.S. Telecom does not plan to complete its fiber-optic network until 1988. "I am not sure that some of the present facilities would be able to meet our data transmission speed requirements," he said. "Once the fiber-optic network is in place we may take a closer look at transmitting data on the network. Until that time, we will keep our present network."

Lewis added, "Our data network is dispersed through the U.S. and Canada. [Virtual Private Network] is not available in all these locations at this time."

National Semi posts loss

SANTA CLARA, Calif. — National Semiconductor Corp. said last week it lost $2.7 million, or 3 cents per share, in the fourth quarter ended May 31. The loss reflected a 9% drop in revenue from $470.8 million a year ago to $428.6 million, evidence of the current downturn in the semiconductor market.

National Semiconductor's loss was cushioned by a $3.8 million extraordinary credit from an accounting use of foreign operating loss carry-forward charges. In the year-earlier quarter, the company earned $24.4 million, or 28 cents per share, including an extraordinary credit of $7.8 million.

The company posted record sales of $1.79 billion in the fiscal year ended May 31, compared with $1.65 billion in fiscal year 1984. But profits plummeted 32.5% from $64 million in the previous year to $43.2 million in fiscal 1985.

Novell unwraps IBM AT-based fault-tolerant local net

CW AT PC EXPO

By Eric Bender
CW Staff

NEW YORK — Novell, Inc. unveiled personal computer local-area networks built around off-the-shelf hardware and offering three levels of fault-tolerant operation at PC Expo here last week.

Supported under Novell's Advanced Netware/286 network software, "basic fault-tolerant systems can be put together for under $30,000," President Ray Noorda claimed. He pointed to potential use in financial, manufacturing and other applications in which avoiding system downtime is essential.

The Novell offerings are not the first to provide fault tolerance on microcomputer local-area networks, but they are the first to be configured around industry-standard hardware, according to Novell Marketing Vice-President Craig Burton. Nestar Systems, Inc. of Palo Alto, Calif. began shipping fault-tolerant products a year ago.

The Advanced Netware/286 fault-tolerant file server is a dedicated system based on an IBM Personal Computer AT and supporting up to 15M bytes of internal memory, 2G bytes of disk storage, 128 users and five shared printers, Burton said.

To off-load some of the disk I/O processing, the server can accept up to two Netware Disk Coprocessors, which are based on an Intel Corp. 80188 microprocessor and feature 16K bytes of random-access memory and the SCSI interface.

The system design addresses potential failures in the server's disk storage, the server itself and in the network's communications hardware, Burton said.

First-level features

Available in the third quarter, the first level of fault tolerance includes duplicate directory and file allocation maintenance, read-after-write verification and media-defect detection and correction. The software costs $2,495 per server, and the Disk Coprocessor will sell for $895.

Level two, scheduled for fourth-quarter delivery, adds disk mirroring, with storage automatically duplicated on a second disk. Using dual Netware Disk Coprocessors, the network also will provide disk and controller duplexing. Additionally, the dual coprocessors will speed performance during network reads of the disk, Burton said. Second-level software is priced at $3,495 per server.

Most Netware customers "that look at data integrity as critical" will migrate to the second level of fault tolerance, Burton said.

Advanced Netware/286's third level of fault tolerance adds server mirroring and server duplexing, Burton said. The third level will be available in first-quarter 1986 for $4,995 per server.

While Novell does not plan to offer an uninterruptible power supply (UPS) itself, Burton noted that adding a UPS is a requirement for fault-tolerant operation.

Applications written for other versions of the Netware family of network operating software will run under Advanced Netware/286, Burton said.

Novell is located at 1170 N. Industrial Park Drive, Orem, Utah 84057.

Ore. House OKs VDT bill

By Maura McEnaney
CW Staff

SALEM, Ore. — VDT legislation came one step closer to law here recently, after the Oregon House of Representatives gave a 31-28 vote approval to a bill requiring statewide education programs for VDT workers. The bill now faces final approval by Oregon Governor Victor Atiyeh.

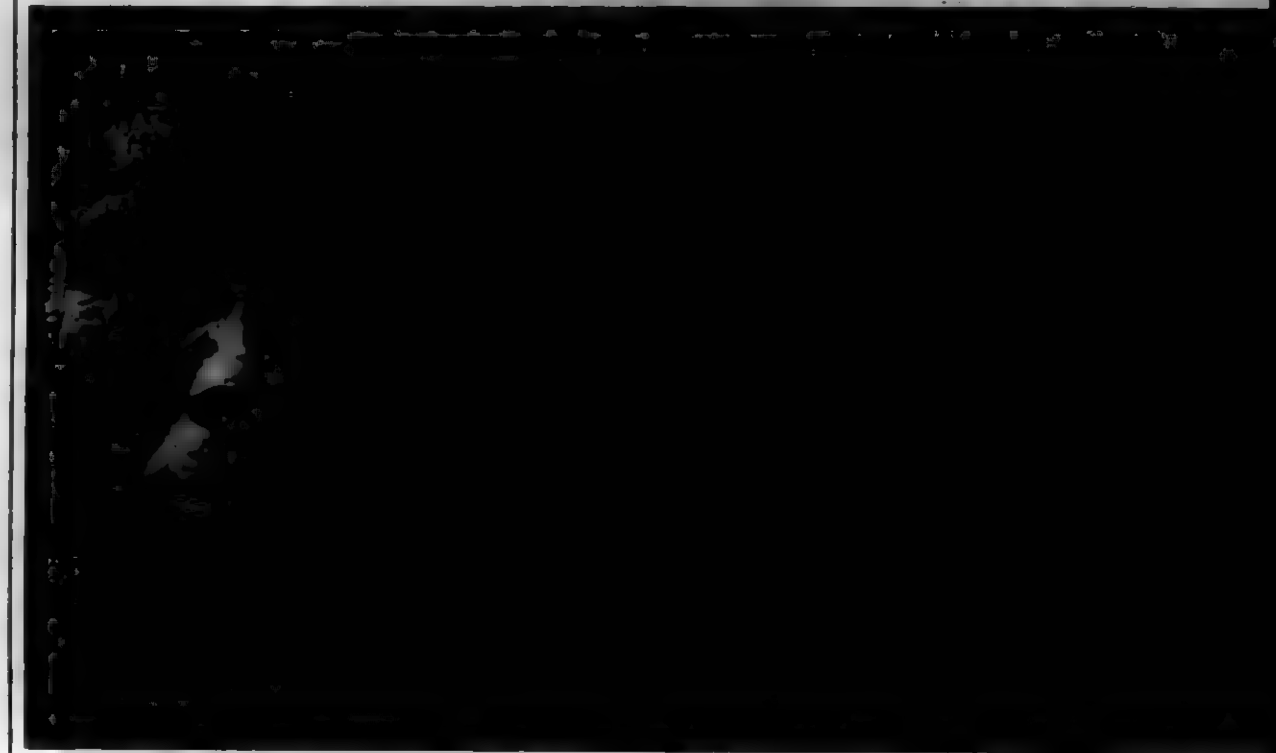
A spokesman for the governor's office, however, indicated that the governor had voiced objections to an earlier version of the VDT bill, which, the spokesman said, does not appear to be significantly different from the one passed by the House.

The spokesman also said the governor believes potential hazards that could be associated with VDT use are best addressed by existing statutes and do not merit statutory regulations. The bill could reach the governor's desk later this week.

Approved by a 27-1 margin in the state Senate earlier this year, the bill requires the director of the state's Worker's Compensation Department to set up education and consulting programs for workers using VDTs. It also requires the director to develop guidelines for the purchase, installation and use of VDTs for state workers using terminals for four or more hours per day.

The guidelines will be optional for private-sector businesses, according to a spokesman from 9 to 5, the National Association of Working Women, which is lobbying for the VDT legislation.

The Missing Link: Even if you find it, you'll find it obsolete.



Which should come as no surprise to anyone in MIS who's tried to tie managers' PCs to the company's mainframe.

Because every "link" product on the market either causes more headaches for MIS than it's worth, or more work for executive end-users than they can deal with.

That's another reason thousands of PCs are now serving either as stand-alone work tools or as executive office decorations.

That's another reason Decision Support Systems simply aren't being used by decision-makers.

And...

THAT'S ANOTHER
REASON WE CREATED
COMMAND CENTER.™

To give you a set of 4th Generation software tools that help you build a truly functional Executive Information System quickly and economically. To take total advantage of all the data packed into corporate mainframes, and turn it into concise information that makes sense to executive end-users on PCs. Information that's integrated from both internal and external databases, in both text and graphic form. Information delivered on IBM® PCs driven by the mainframe, allowing different end-users to access their slice of a common database, all at the same time, all at the touch of a button.

COMMAND CENTER:
THE FIRST TRULY SEAMLESS
MICRO-MAINFRAME
MARRIAGE.

Most emphatically, Command Center is not another "link" product that awkwardly attempts to communicate between database and decision-maker.

On the contrary, it's a single, on-line, distributed software system that resides seamlessly on both the corporate mainframe and any number of PCs, to give the user the best of both worlds: All the quick response, superior graphics, and highly interactive qualities associated with PCs, plus the database, system control, and number-crunching power of the mainframe.

All this with complete data integrity—since everything, from wire to wire, is back under MIS control.

PC/Focus gets single-user upgrade, network version

By Eric Bender
CW Staff

NEW YORK — Information Builders, Inc. has expanded its PC/Focus fourth-generation language/data base management system product with a single-user release, the addition of a network version and a host-language interface.

PC/Focus Release 1.5, now being shipped, provides major improvements in ease of use, data base efficiency and communications, the company claimed.

Among ease-of-use enhancements are a multiwindow text editor and a Hot Screen Report Output facility with full screen report scrolling and the ability to select and save report data in a file for later use, according to the vendor.

Upgraded DBMS features include an improved screen manager that can use color, reverse video, underscore and other display attributes; compiled Modify procedures; and a Combine feature permitting a set of up to 16 data base files to be relationally joined, the company said.

Added communications features

Added communications features include an enhanced asynchronous protocol that provides continuous error checking and retransmission facilities, support for CXI, Inc.'s Pcox board and support of the Hewlett-Packard Co. 7475 flatbed plotter, the vendor said.

Release 1.5 upgrade kits are free for customers now under the company's extended maintenance and service contract. For other current users, the product costs $550. The price for new users is $1,595. In addition to IBM Personal Computers, the package is available for the Wang Laboratories, Inc. Professional Computer, Texas Instruments, Inc. Professional Computer, HP Touchscreen, NCR Corp. Workstation 300 and Convergent Technologies, Inc. Ngen computers, according to the vendor.

Multiuser PC/Focus, which contains all the features of the single-user Release 1.5, will be offered on the Nestar Systems, Inc. Plan series networks in August and the IBM PC Network in the fourth quarter.

The software consists of two components — PC/Focus software, which can be loaded onto a network file server or onto a local hard disk drive workstation, and Sync software, which can be stored on the file server or on a Sync machine.

Acts as traffic coordinator

This last device, based on a 512K-byte IBM Personal Computer AT or compatible, is a network resource that acts as traffic coordinator for access to Multiuser PC/Focus data bases, a spokesman for Information Builders said.

Multiuser PC/Focus will cost $4,800 for an eight-user version and $6,800 for a 16-user version, with one year of maintenance and enhancements included.

The Host Language Interface enables programs written in traditional programming languages to create, build and maintain PC/Focus data bases. The data bases can be designed as simple relational tables or as more sophisticated hierarchical and networked structures, according to Information Builders.

Available in August, Version 1.0 of the Host Language Interface can be used with IBM's PC Assembler, Microsoft Corp.'s Fortran 77 and Pascal and Computer Innovation's C86 languages. A license for use on up to 20 personal computers costs $2,500 and includes a year of support, maintenance and enhancements.

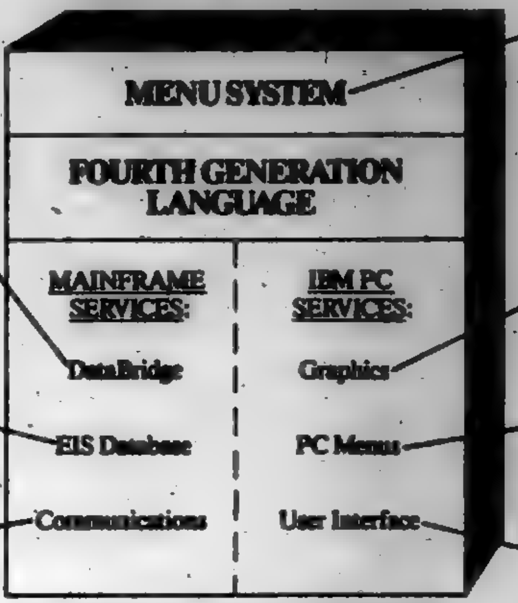
Information Builders is located at 1250 Broadway, New York, N.Y. 10001.

How it works:

DataBridge™: Brings data from widely varying systems together into one executive database. It integrates commercial databases, on-line public databases and, of course, your own in-house systems (including DSS models or 4GL DBMS).

EIS Database: A retrieval oriented relational database that handles both numbers and text, optimized for time-series data. It's smart enough to continually re-organize itself based on patterns of usage.

Smart Communications: Provides error-correcting communications with the user's PC in a protocol that produces rapid and accurate response. Also allows transfer of data from EIS database to 1-2-3™ readable PC files.



Command Center is designed for use with IBM®(VM/CMS), DEC® VAX™, or PRIME®, and any number of IBM PCs.

Menu System: Gives you mouse or touch-screen driven operation, controlled from the host. Provides the user with the ease of use of a PC with the database power of your mainframe.

Graphics: The PC graphics module creates bar, line, scatter, cross-sectional charts, and mixed text and graphics from data and commands sent from the mainframe.

Local Menu Storage: Menu screens can be stored on the PC so they don't have to be re-transmitted from the host.

User Interface: Non-keyboard pointing devices such as a mouse or touch are used for menu selection. Keyboard access is an option.

THE SYSTEM AT WORK:

Because Command Center is a single, 100% integrated micro-mainframe system, it gives MIS a way to serve a wide variety of purposes throughout the managerial structure of a company. For example:

One of the country's largest consumer products companies is using Command Center to build an executive system for presidents of its ten operating companies. Key items tracked include weekly sales, financial data, competitive information and industry news stories.

A major manufacturing company uses Command Center as an interface to the corporate data center to give non-technical senior managers financial information such as monthly closings, corporate consolidations and forecast updates.

A leading fast-food franchiser has developed an information system to give managers immediate access to historical operating results for 1200 franchise outlets, and to display growth rates, productivity, profitability and return on assets.

In short, Command Center is a tool that can dramatically disperse computer usage, while putting the management of information systems back in the hands of MIS.

And MIS back in the most productive ranks of management.

DEMONSTRATIONS AND EIS SEMINARS.

For more information, please call us collect. We can elaborate by phone, send literature, or meet you for a personal demonstration.

In addition, we hold frequent Executive Information System seminars throughout the U.S. and Canada. For reservations, call Ruth Englar, Seminar Manager.

SAS statistical package expands firm's micro offerings

CW AT PC EXPO

By [illegible]
CW Staff

NEW YORK — SAS Institute, Inc. expanded its line of personal-computer-based products with its recent announcement of SAS/Stat, a statistical package designed to be used with SAS base data management and analysis software running under the IBM PC-DOS operating system.

The company also announced a terminal emulation product that allows users to produce hard-copy graphics with an IBM Personal Computer. The announcements were made last week at PC Expo here.

SAS/Stat, scheduled for release in the fourth quarter, reportedly offers interactive statistical procedures for simple and complex analyses and includes an interactive windowing facility for editing and managing I/O and messages.

The SAS/Stat software can be integrated with the SAS System on mainframes and minis, the vendor said. SAS under PC-DOS, scheduled for release in the third quarter, includes an Irma Decision Support Interface that allows SAS data sets to be uploaded or downloaded from the host computer to the micro.

The annual license fee for SAS/Stat software, which is delivered on IBM Personal Computer XT-formatted master diskettes, varies according to the number of workstations supported — 50 workstations would cost $2,000.

Also announced was SAS/Rterm, a remote communications product that can emulate Digital Equipment Corp.'s VT100 terminal as well as the graphics commands of Tektronix, Inc.'s 4696 ink-jet printer, the IBM Personal Computer Graphics Printer and Hewlett-Packard Co.'s 7470, 7475 and 7550 plotters. The SAS/Rterm capabilities can be accessed via the device driver in SAS/Graph Version 5 graphics software.

When a user wants to print a particular graph, the image reportedly is transmitted to the printer, allowing the user to move on to another task while the graph is being printed.

SAS/Rterm connects to the host through Ascii asynchronous support and requires 256K bytes of memory. A color monitor and color/graphics adapter are required for graphics previewing.

A first-year license for the SAS/Rterm software is $1,500 for 50 workstations.

SAS Institute can be reached through Box 8000, SAS Circle, Cary, N.C. 27511.

CW AT SYNTOPICAN XIII

Ramblings from the floor of Syntopican XIII last week:

■ It would have been easy for Syntopican attendees to take a wrong turn and sit down for a session titled "Ideas on Increasing Production in Conveyor Car Washes." That's because the annual convention of the International Car Wash Association/National Car Wash Council was sharing the Washington Convention Center with Syntopican last week.

■ Are your micro users frustrated by the bureaucratic procedures developed to enhance security and protect data integrity? Kenneth G. Rau, a partner in the Winchester Consulting Group, a consulting firm in Woburn, Mass., recommended the use of an automated data distributor hardware and software program to control data access.

"Standing between the [micro] user and the corporate data base, the automated data distributor, or ADD, acts as interpreter, sentry and translator for the users' data needs," Rau said in a Syntopican paper. ADD provides tailored data files to micro users based on previously submitted user data requirements, he said.

■ The Association of Information Systems Professionals (AISP), the sponsor of Syntopican, will be making some changes for Syntopican XIV, to be held in San Francisco next year. At a recent summit meeting with leading vendors about the decline in vendor participation in trade shows, the AISP staff got at least 20 practical suggestions for changes.

In addition, the AISP has formed Information Systems Exhibits, Inc. to manage future Syntopican shows. AISP allowed its contract with Prestige Expositions, Inc. to expire.

Syntopican XIII had only 50 exhibitors, but vendors said they had good traffic at hours when there were no educational sessions.

■ One exhibitor, Lanier Business Products, Inc. of Atlanta, drew a crowd by staging a trivia game show, sprinkled with trivia questions about Lanier products and markets.

■ Telecommunications managers can advance their careers if they demonstrate ways that the telecommunications system can enhance the company's products and services, according to Robert A. Derounian, telecommunications specialist at Eastman Kodak Co. in Rochester, N.Y. "Demonstrate your business acumen before selling technology" to corporate executives, he recommended.

Gun scare at DEC plant all wet

LITTLETON, Mass. — High-tech high jinks brought the local police to a Digital Equipment Corp. small systems engineering plant here one morning last week. Officers from Littleton and nearby Boxboro responded to a report that someone had walked into the plant carrying a concealed weapon; specifically, the report said, a powerful Israeli-made Uzi machine gun wrapped in a towel.

Between 200 and 300 employees were evacuated by fire alarm — a method chosen by police so as not to provoke the would-be gunsel.

But police found no Middle Eastern terrorist inside blasting DEC Rainbow computers.

Instead, investigation revealed the weapon was actually a sophisticated, state-of-the-art water pistol — unloaded. Apparently, several DEC employees at the plant were similarly armed for battle in an ongoing game — a fact unknown to the DEC employee from another facility who spotted the alleged gunman while waiting in the lobby.

The incident, however, did not damage DEC's reputation for pride in expert engineering. "It turned out to be a $20, battery-powered water pistol that can shoot 25 feet," a Littleton police officer said. "It's amazing — it looks very real. I've never seen one like it in my life."

Another Smart Solution From AVATAR

It's a sad sight. Seeing your IBM 3270 printer falling further behind every day. Outpaced by ASCII printers that deliver far greater performance at a much lower cost. ASCII printers that, until now, didn't link to your 3270 system.

Enter AVATAR's PA1500 protocol converter. It lets you attach virtually any ASCII printer directly to your 3270 network with a simple coax connection — including printers that are three times as fast as your IBM printer and cost half as much.

Now you can select the printer that matches your system needs. For greater speed, letter quality printing, better performance. Fast dot matrix or line printers. Bar code or graphics printers. Even the newest ink jet or laser printers can be a part of your 3270 network.

Together, the PA1500 and the printer of your choice give you all the capabilities of your IBM printer...and more.

So get yourself an AVATAR PA1500. And bring your 3270 printer up to speed.

DEC adds financial application to All-In-One system

MAYNARD, Mass. — Digital Equipment Corp. last week continued the expansion of its All-In-One Office and Information System with the introduction of a financial and operations planning package. The Business Operations and Strategy System (Bossystem) is the second in a series of departmental applications based on All-In-One that also includes the All-In-One System for Sales and Marketing introduced in February [CW, Feb. 11].

According to a DEC spokesman, the All-In-One Bossystem consists of five major components designed to provide corporate and financial data to departmental managers. The components include menus that provide an interface to overall systems functions, a spreadsheet with communications capabilities for the distribution of data, a data management facility, a report generator for ad hoc and periodic reports and an applications template library. All components can be customized by individual data centers.

The spokesman said the Bossystem gives departmental managers and staff access to data through the product's data base.

Integration options

The product can be integrated with the System for Sales and Marketing package and third-party software packages. It is accessible from the All-In-One Version 2.0 menu and provides what the spokesman labeled "high-level report access techniques" that allow users to view key departmental data.

The applications templates can be used for developing forecasts, budgets and reports, and the product includes additional facilities for developing project and manufacturing control and investment and long-range planning applications.

Also included with the Bossystem is the capability to send live spreadsheet and graphics documents among users and a data link that allows users to transfer information to and from spreadsheets and to reports from the departmental data base.

Scheduled for October availability, the All-In-One Bossystem costs $10,000 for the VAX-11/730, 11/750 and 11/785 systems and $15,000 for the VAX 8600. Prices range from $6,000 to $9,900 per CPU for VAX cluster systems.

DEC is located in Maynard, Mass. 01754.

Another Smart Solution From AVATAR

The idea is simple. Make your PC spreadsheet even more powerful by giving it mainframe data. But getting that data out of your mainframe, into your PC and onto your spreadsheet isn't that simple.

Until now, you've had three choices. Transfer entire files from the host and risk choking your PC with data. Not very efficient. Or find the information in printed reports, then reenter and reformat it. Very tedious. And the alternative of asking your DP department to write special host software...well, they're overburdened already. Three choices, no real solution.

Now there's TURBO, the newest micro-to-mainframe link from AVATAR.

TURBO's Data Capture lets you select just the information you need from the mainframe. And use it immediately in any of your PC applications – Lotus, dBASE, you name it. Without re-keying, reformatting, re-anything.

And you can use TURBO's host-assisted File Transfer the way file transfer was meant to be used – for sharing data with other PC users on the 3270 network.

If that isn't enough, TURBO's exclusive Macro Language adds a whole new dimension to your micro-to-mainframe link. Use Macros to automate file transfer and data capture. Better yet, massage host data even before feeding it to your spreadsheet.

So give your PC a TURBO from AVATAR. And delight your Lotus with mainframe data.

OA productivity requires more emphasis on training

CW AT SYNTOPICAN XIII

By Mitch Betts
CW Washington Bureau

WASHINGTON, D.C. — Corporations spend a "paltry" 6% of their office automation budget on staff training, according to Sidney E. Harris, OA expert at Georgia State University. That figure will have to be raised significantly for OA to fulfill its potential for improving office productivity, he told attendees at last week's Syntopican XIII here.

Without adequate training, expensive hardware and software will go unused, Harris said at the Syntopican session titled "Alternatives for End-User Support Strategies." He recommended development of an information center and a user group to provide training and support for end users.

Laura Scharer, manager of information systems planning and management services at O. M. Scott & Sons, Inc., the Marysville, Ohio-based lawn care firm, strongly agreed with Harris' assessment.

"Training can be what wakes up the technology," Scharer said. Teaching end users how to use their OA tools, she explained, helps the organization to obtain the return on investment projected when the OA equipment was first purchased.

To get started on a training program, Scharer suggested that the information center manager conduct a survey of the organization to understand better its state of computer literacy and find out who needs training. She provided several other tips for training programs:

- Demonstrate that the information system can solve practical business problems encountered by the users.
- Offer demonstrations, which keep the attention of users better than lectures and homework.
- Develop a "buddy system" among users so that expert users help novices.
- Provide "cheat sheets" of routine commands as part of the training materials, since users will spontaneously develop them anyway.
- Be sure to provide training for the trainers.

Harris said his 1984 study of Atlanta businesses showed that end-user support typically goes through seven stages. In the first stage, when there are few microcomputers in the organization, users must learn by doing. In the second and third stages, training classes are begun as more micros come aboard. In the fourth and fifth stages, a micro manager is appointed, an information center is formed and a user group starts. In the sixth and seventh stages, the micro department becomes so advanced that it may even sell its services to other subsidiaries and outsiders.

Harris stressed that effectiveness of the OA implementation must be continuously monitored so the organization can learn from its mistakes.

In another presentation, Theodore Stout, president of the Blake Corp., an Atlanta-based consulting firm, said OA should become an integral part of the company's facilities management program, so that OA managers have a say in the design of the office and purchase of furniture.

Major gains in office productivity are possible, he said, with improvements in furniture, acoustics and office design. In one case history Stout cited, placing acoustic boxes over noisy line printers increased office performance by 8.8% and had an investment payback of three days.

Chip meet to focus on transition

TUCSON, Ariz. — Representatives of the semiconductor industry will speak at the Semiconductor Industry Conference Oct. 14-16 at the Sheraton El Conquistador Hotel here.

The theme of the conference, sponsored by Dataquest, Inc., will be "An Industry in Transition." Topics to be discussed include high-level silicon applications and the challenge of automotive electronics.

Registration is $750 for Dataquest clients and $1,000 for others.

Information is available from Dataquest, 1290 Ridder Park Drive, San Jose, Calif. 95131.

WE SERVE OVER 800 DATA NETWORKS WORLDWIDE.

NCR COMTEN ACCEPTANCE IS GETTING AROUND.

At this very moment, NCR Comten systems are helping to manage the massive flow of data between more than 400,000 terminals and host computers around the world. It's a growing acceptance that's uncommon in this young industry.

Gaining this acceptance hasn't been easy. We've had to prove our expertise, stability and reliability to 800-plus exacting data communications users. Every day. Every month. Every year.

But prove it we have. In industries ranging from aerospace to retailing. From government services to banking. Our responsiveness to their needs is just one reason why five out of six customers we've ever had are still our customers.

But there are other good reasons why we retain our customer base. They're outlined in our special executive briefing. Write "Data Communications Systems," NCR Comten, Inc., Department 8015, 2700 Snelling Ave. N., St. Paul, MN 55113. **Or call 1-800-334-2227. In Canada, call 1-800-543-5713.**

Software suit alleges violation of shrink-wrap law

By Edward Warner
CW Staff

TORONTO — Quaid Software, Ltd., the publisher of a program that defeats the copy protection of some personal computer software products, is facing a $100 million civil suit brought against it earlier this month by Vault Corp., makers of the Prolok copy protection system.

The suit, filed in Federal District Court in Louisiana under that state's 1984 shrink-wrap software protection law, claims that Quaid Software, based here, illegally decompiled and copied Prolok. Quaid decompiled Prolok, the suit alleges, to produce its Copywrite program, which reportedly can defeat Prolok protection.

However, Robert McQuaid, Quaid Software's president, claimed Copywrite is used only for making legal backup copies of a protected program. While acknowledging that his firm has "occasionally looked at software with a decompiler," McQuaid maintained that "in the case of Prolok, it was not necessary to do something that sophisticated."

McQuaid added that his firm has done nothing wrong but is, nonetheless, eager to settle the two-week-old suit, saying, "I'm not an advocate of spending a large amount of money on lawyers." McQuaid, however, said his firm will not pay Vault the entire sum demanded in the suit.

Vault Chairman W. Krag Brotby, meanwhile, said the suit will determine whether Quaid Software can produce software that allows users to make unlimited copies of a copy-protected program "as long as [users] call them backups." Louisiana's shrink-wrap software protection law requires users to abide strictly by the license agreement of a personal computer software package when the agreement is printed on the package's exterior and the package is covered in see-through plastic wrapping. To break open the shrink wrap is to agree to abide by the license, the law states. Vault said Prolok's packaging meets that law's requirements.

The suit also alleges that "Quaid has willfully and maliciously misappropriated Vault's trade secret, the Prolok software program, and thereby violated the Louisiana Uniform Trade Secrets Act." McQuaid said that he found the claim "incredible" in light of what he said was Vault's having "distributed several million copies of its software."

Approximately half of all personal computer software in use by U.S. businesses is pirated, amounting to a loss of $600 million to $800 million annually for software publishers, according to a survey by Dallas-based Future Computing, Inc.

CALL FOR PAPERS

INTERACTIVE INFORMATION AND PROCESSING SYSTEMS FOR METEOROLOGY, OCEANOGRAPHY AND HYDROLOGY
Southeastern U.S., January 1986

Papers are solicited in the following areas: interactive systems for centers, forecast and warning offices, television stations and research; teleconferencing and local-area, national and international data networks; distribution and dissemination systems including radio, satellite and cable television systems; systems, technologies and applications for developing countries; and other topics.

The deadline for the submission of abstracts is August 1. They should be sent to G. Stanley Doore, Office of the Federal Coordinator, Suite 300, 11426 Rockville Pike, Rockville, Md. 20852. Papers are due by Nov. 1.

MANAGERS ON THE MOVE

RALPH L. BRADLEY II has been promoted to vice-president in charge of management information systems for ITT Commercial Finance in St. Louis.

In his new position, Bradley assumes full responsibility for all of ITT Commercial Finance's systems departments.

Previously he served for two years as international project manager for Heublein Corp. in Farmington, Conn.

He joined ITT just over a year ago, after serving more than two years as a manager with Peat, Marwick, Mitchell & Co., a national public accounting firm in St. Louis.

Bradley holds a bachelor's degree from Syracuse University in New York and an MBA from the University of Connecticut at Hartford.

■

RUSSELL SCHROEDER has been appointed vice-president of management information systems and data processing for Shopwell, Inc. in New York.

Schroeder has more than 16 years of experience in the MIS area of the supermarket industry. He has been with Shopwell since November 1984.

Prior to that, he was employed with Grand Union Co. for seven years, National Tea Co. for two years and Allied Supermarkets for seven years.

He graduated from the Detroit Institute of Technology with a degree in marketing management and holds a graduate degree in commercial banking from the American Institute of Banking.

Shopwell serves the metropolitan New York and southern Connecticut areas operating a chain of supermarkets under the Shopwell, Food Emporium and Value Center names.

USPS to ditch its electronic mail delivery service

WASHINGTON, D.C. — The U.S. Postal Service (USPS) recently said it will pull the plug on its electronic mail delivery service — Electronic Computer-Originated Mail — Sept. 2, ending the product's troubled three-year history.

USPS officials testifying before the House Subcommittee on Investigations said efforts to sell the electronic mail equipment had been unsuccessful because no financially attractive offers were submitted.

Approximately 900 customers use the service, which allows computerized tapes to be submitted to the USPS where the information on them is transmitted electronically to a receiving station and a hard-copy message is then printed out and placed in the mail.

HANDS-ON TRAINING THAT ISN'T SECONDHAND

When you learn the UNIX™ System directly from AT&T, you learn it firsthand—from the people who develop it.

For over fifteen years, we've been teaching our people to use the UNIX System—which makes us the best trained to help you learn.

Whether you're a first-time user or a system developer, you'll get hands-on experience with courses that keep you up to date on the latest information. At AT&T Information Systems, you get your own terminal, teachers that can stay late at night, and your choice of training centers. Or center your training right around your own office.

So take your training from AT&T. And discover the power of UNIX System V—right from the source. Call us today to reserve your seat or for a free catalog.

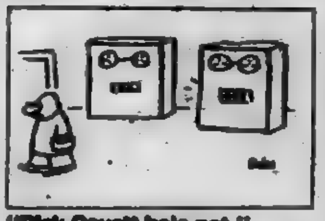
FIG users group meet scheduled

SAN JOSE, Calif. — The Seventh Annual Convention for users of the Forth programming language will be held Sept. 21-22 at the Hyatt Rickeys Hotel in Palo Alto. The convention is sponsored by the Forth Interest Group (FIG).

Registration for the convention costs $10.

More information is available from FIG, P.O. Box 8231, San Jose, Calif. 95155.



"Dick Cavett he's not."

WASHINGTON UPDATE
CW Washington Bureau

U.S. senators sponsor computer education bill

WASHINGTON, D.C. — Leading Democrats in the U.S. Senate recently introduced legislation to provide federal grants for the purchase of computer hardware and software in elementary and secondary schools, with special emphasis on schools with poverty-level children.

The Computer Education Assistance Act of 1985 (S. 1276) was sponsored by Sen. Frank R. Lautenberg (D-N.J.) and cosponsored by Sens. Christopher J. Dodd (D-Conn.), Edward M. Kennedy (D-Mass.), Robert C. Byrd (D-W.Va.), Daniel P. Moynihan (D-N.Y.), Paul S. Sarbanes (D-Md.), Quentin N. Burdick (D-N.D.) and Bill Bradley (D-N.J.).

School districts will have to make extensive plans on how they will use the computers for instructional purposes to get the federal matching grants, Lautenberg said.

The bill proposed an annual budget of $150 million for buying hardware and software and for training teachers.

If passed, the bill would also provide $20 million annually to establish teacher training institutes and would authorize the government to evaluate educational hardware and software and then disseminate the results.

High-tech panel to study effect of export controls

WASHINGTON, D.C. — The effect of national security controls on international technology transfer and the competitiveness of U.S. high-technology industries will be studied by a blue-ribbon panel.

The 21-member panel was convened recently by the Committee on Science, Engineering and Public Policy, a unit formed by the National Academy of Sciences, the National Academy of Engineering and the Institute of Medicine.

The chairman of the panel will be Lew Allen, director of the Jet Propulsion Laboratory of the California Institute of Technology, former director of the National Security Agency and chief of staff of the U.S. Air Force. The announcement said the panel expects to release its report by the fall of 1986.

Other panel members include Thomas A. Cristiansen, manager of international trade relations for Hewlett-Packard Co. in Palo Alto, Calif.; John M. Deutch, dean of science at MIT; and retired Adm. Bobby Inman, president of Microelectronics and Computer Technology Corp. in Austin, Texas.

SEC's Edgar to include public utility firm filings

WASHINGTON, D.C. — The Securities and Exchange Commission (SEC) recently announced it will expand its electronic filing and retrieval system, called Edgar, to include electronic filings from public utility holding companies.

The SEC approved temporary rules that revise its filing requirements to accommodate computer-generated filings delivered via direct digital transmission, diskette or magnetic tape. "Currently, the commission accepts filings prepared on [more than] 85 different word processors or personal computers," the commission statement said.

The rules require filings made on diskettes or tapes to be accompanied by a sheet of paper with an authorized signature attesting to the accuracy of the filing. Filings made by direct digital transmission will use personal identification numbers as signature symbols.

Afips offering NCC telephone registration

CHICAGO — National Computer Conference (NCC) registration is just a phone call away in 1985.

The American Federation of Information Processing Societies, Inc. (Afips) is offering conference registration by telephone, payable with a major credit card.

Prior to July 11, the toll-free number to call is 1-800-NCC-1985, an Afips spokesman said. Attendees can register July 9-13 by calling 312-567-8000 between 9 a.m. and 8 p.m. "This is to cut down on the lines and to provide an extra service for people registering," the spokesman said.

At the conference, early registration is offered Sunday, July 14, from 10 a.m. to 8 p.m. Registration hours July 15-17 are 7:30 a.m. to 6 p.m.; on July 18, registration is 7:30 a.m. to 3 p.m.

Afips is predicting a strong turnout of 80,000 at this year's conference, and early registration has been heavy.

"That will help ease the lines," the spokesman said. Early registrants are sent through separate lines to pick up their conference materials and preprepared badges, the spokesman said.

The advance registration fee is $125, and on-site registration costs $150.

For further information, Afips is located at 1899 Preston White Drive, Reston, Va. 22091.

We'd like to get friendly with you.

The beauties above are two of the most user-friendly pieces in all of techdom. And both are backed by yet another dynamic duo: the sterling quality of Digital and the stalwart service of Leasametric.

The Digital VT220™ terminal, to begin, is the latest model in the cost-efficient VT200 series. This monochromatic model has a sleek look that's slick to use, including programmable function keys and a plain-language menu that's a snap to set up.

The LA210™ printer's no slouch, either. It's probably the most versatile printer ever produced by Digital. This multimode desktop is compatible with all Digital, IBM® and IBM-compatible personal computers. A friend to all, and pleasant to your purse as well: one machine for letter-quality printing, high-speed drafts, and high-resolution bit-map graphics.

All this, arm in arm with great service.

Not only can you get the pair right away from Leasametric — they arrive ready to work. Because we've put them through their paces before we ship them to you. Complete with operator's manuals, cables and the like. Plus, so good friends can keep in touch, we supply a toll-free number for on-line diagnostics. On-site maintenance if it's needed. And the iron-clad guarantee to replace — immediately — any piece that isn't up to snuff.

Finally, financing that's more than friendly. In addition to standard rental agreements, we offer volume pricing, rentals with options to buy, leasing and even used-equipment purchases.

Leasametric is an authorized distributor for Digital Equipment Corporation. We offer a full range of Digital's popular, quality terminal products. Why not call Leasametric today? After all, the best way to have a friend is to be one.

In California, call 800-528-6891. Outside California, call 800-228-6314.

Copyright Office inquiry targets electronic data bases

By Mitch Betts
CW Washington Bureau

WASHINGTON, D.C. — The U.S. Copyright Office is struggling with the question of how to give copyright protection to commercial data bases that are constantly changing.

Under long-standing copyright rules, the author must deposit a copy of the work with the Copyright Office to register the copyright in order to retain full legal protection and remedies. Data bases can be copyrighted because they are compilations of information.

But the Copyright Office recently acknowledged the difficulty of registering an electronic data base that changes very frequently and that may not appear in hard copy.

In a June 10 public notice, Dorothy Schrader, general counsel of the Copyright Office, launched a regulatory inquiry on the subject and sought public comments on how to deposit and register electronic data bases.

"Data bases provide special problems for copyright deposit because they are constantly changing, and there remains some question about the copyrightability of additional small increments of information," the notice said.

Oliver Smoot, executive vice-president of the Computer and Business Equipment Manufacturers Association, said, "The real practical issue is how you comply with the registration requirements of the Copyright Act for a work that changes — you obviously can't deposit continuously."

Smoot noted that the matter would not be a problem if the U.S. adhered to the policies of the international Berne Copyright Convention, which does not require registration.

The Copyright Office's inquiry was prompted by recommendations from the Information Industry Association (IIA), a trade group for electronic data base vendors, and the Association of American Publishers.

Ultimately, IIA President Paul G. Zurkowski suggested, the Copyright Office should be able to accept data base deposits electronically, with an on-line filing system like those developed at the Securities and Exchange Commission and the U.S. Patent and Trademark Office.

In the meantime, the IIA said, data base vendors should have the option of submitting paper copies of only the first and last 25 pages of the data base, or other representative portions of the data records, for both the original data base and subsequent revisions.

The Copyright Office said it is seeking public comments on the IIA proposal. Comments are due July 15.

In a broader sense, the whole topic of copyright in the computer age is being explored by the U.S. Congress' Office of Technology Assessment (OTA), according to OTA researcher Earl Dowdy. Dowdy said it is debatable whether data bases should be granted copyright protection at all and whether such a copyright can be enforced.

"It's clear that copyright protection was intended not for information per se; it was intended for the form that information comes in," Dowdy said. "A data base is ambiguous, [because] it falls in the gray area between information and form."

OTA's report, tentatively titled "Intellectual Property Rights in an Age of Electronics and Information," will be published in late October or early November, Dowdy said.

Wohl will be honored at AWC meet

CHICAGO — Amy D. Wohl, president and founder of Wohl Associates, will receive the 1985 Augusta Ada Lovelace Award at the Allerton Hotel here July 14 during the fourth annual conference of the Association for Women in Computing (AWC).

The award will be given to honor Wohl for her "vision and pathfinding experience in the field of office automation systems and end-user computing," the AWC said. Wohl is editor and publisher of "The Wohl Report on End-User Computing" newsletter, a columnist for *Computerworld* and a frequent contributor to the trade and general business press on office automation, personal computing, computer literacy and office technology.

More information can be obtained from the AWC, 407 Hillmoor Drive, Silver Spring, Md. 20901.

INSTALLING A SERIES/1 SNA, BSC OR LCC NETWORK?

Let SSCP do the job—the whole job—for a fraction of what it would cost you to do it yourself. We manage the complete installation of your Series/1 network by providing your application programming staff or end users with a development-ready or production-ready Series/1 operating environment.

SSCP offers:

- In-depth expertise in EDX, CF and the major communications protocols supported in the Series/1, including SNA, BSC and LCC
- Extensive experience in small- and large-scale Series/1 system and network installations
- Installation planning and site preparation assistance
- System and network validation, performance evaluation and tuning
- Complete Series/1 system and application software installation and customization
- In-house training
- Optional ongoing maintenance contracts
- System backup/recovery/maintenance procedures and utilities oriented toward non-technical Series/1 maintenance personnel
- Free fixed-price estimates

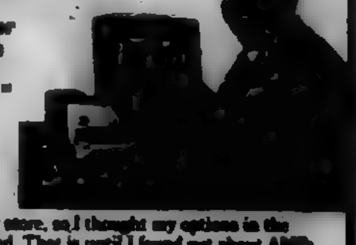
COMPUTER ENTREPRENEURS AGREE

"I've been in the computer business 20 years. There's nothing that comes close to AMI's Agent Program."
Elliot Martin
Entrepreneur
Union, NJ



"I didn't have the $200,000 needed to pay franchise fees and startup cost for a computer store, so I thought my options in the microcomputer field were limited. That is until I found out about AMI's Certified Agent Program (CAP). Now I sell systems from the nation's largest supplier of software for professionals and the IBM PC-XT. AMI gave me a week of professional product and marketing training. I sold two complete systems within my first 10 days. In my 20 years in the business, this is the fastest success I've ever experienced."

AMI's Certified Agent Program is a unique opportunity for you to profit from the microcomputer revolution with only a small investment in the tools to get your business going. There's no franchise fee, inventory or accounts receivable to worry about. And you're fully trained at AMI's expense at their world headquarters. You're backed by extensive national advertising and AMI assumes all customer training and support functions. For more information on how we can put you into business for yourself, call or write today for your Opportunity for Professionals™ Pack.

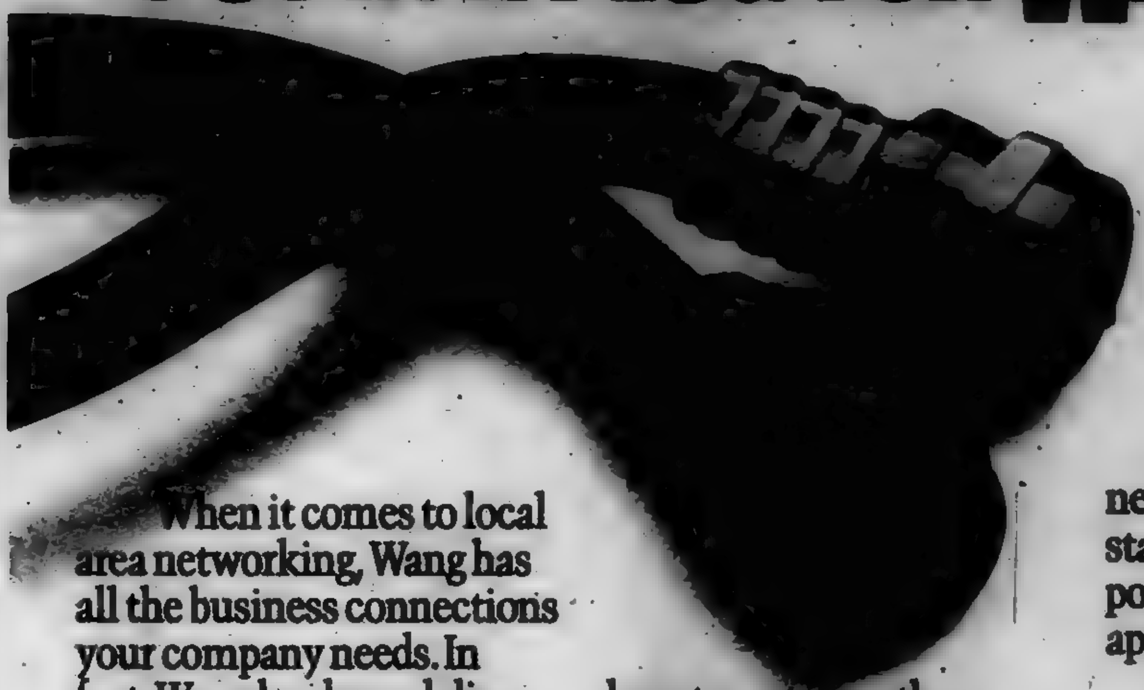
MORE THAN 50,000 USERS HAVE PUT IN A PLUG FOR WANGNET.



When it comes to local area networking, Wang has all the business connections your company needs. In fact, Wang has been delivering their LAN system to businesses, both large and small, since 1981.

It's called WangNet. And today it's helping over 50,000 users keep pace with their ever-increasing communications needs.

WangNet ties your business together – today.

WangNet permits the concurrent exchange of text, data, graphics, electronic mail, and video at a rate of up to 10 megabits per second. And it can tie all of your organization's departments together, whether they're in one building or divided among several.

Because WangNet's dual broadband cable is installed much like electrical wiring, adding on new computer equipment is as easy as plugging in a lamp. So whatever networking needs arise, you'll be well prepared to meet them with WangNet.

The architecture is wide open.

Best of all, because WangNet is an open LAN, it allows you to tie most major office systems together. WangNet offers a transparent interconnection for over 300 switched or dedicated telecommunications channels, the IBM 3270 workstation-to-controller transport, and most video applications.

Considering all the information that's inundating today's office, there's no question that local area networking is a technology whose time has come. And with 50,000 people putting in a plug for WangNet already, the question is – isn't it time WangNet came into your business?

Get the facts.

To receive a copy of our latest WangNet brochure, call 1-800-225-9264. Or write to the Wang Business Executive Center, One Industrial Avenue, M/S 5413, Lowell, MA 01851.

Hacker sentenced for accessing U.S. agency computers

By Mitch Betts
CW Washington Bureau

DENVER — A Los Angeles computer operator who pleaded guilty in May to trespassing in the U.S. Department of Agriculture's Forest Service computers in Colorado was recently sentenced to three years of probation, a $3,000 fine and 200 hours of community service.

The defendant, 26-year-old Philip Gonzales Fadriquela, also was required to forfeit his computer equipment and provide a statement to the Forest Service explaining how he gained access to the agency's computers [CW, May 27].

Cathy Goodwin, assistant U.S. attorney, called the sentence moderate, adding that it makes an important statement that computer crimes will be prosecuted and convictions can be obtained under the 1984 Computer Fraud and Abuse Act.

Sentence handed down

On June 14, U.S. District Judge Jim Kerrigan sentenced Fadriquela to three years of probation and fined him $1,000 for each of the three misdemeanor charges.

Under the Computer Fraud and Abuse Act, the maximum penalty for each misdemeanor charge is one year in prison and a $5,000 fine. The law covers unauthorized trespass in U.S. government computers.

Goodwin said the defendant asserted at the sentencing hearing that the hacking activity was innocuous and innocent and the result of curiosity. Fadriquela's attorney could not be reached for comment.

The defendant apparently dialed into the Telenet, Inc. telecommunications network and made unauthorized use of an access code to enter the GTE Telenet Communications Corp. network; he apparently then dialed numbers at random until entering a Data General Corp. mainframe at the Forest Service office in Fort Collins, Colo., sources said.

Goodwin said Fadriquela admitted that he got the Telenet access codes from hacker bulletin boards.

Goodwin said Fadriquela's statement to the Forest Service indicated that "there is a way to get in [the service's] system that they didn't even know existed — and they have since taken corrective measures.

"Once he got in [at Fort Collins]," she explained, "he was familiar with the [DG mainframe] . . . and knew ways to move around in it with ease. But it was the luck of the draw. It could have been almost anybody's system that he randomly accessed."

The prosecutor quoted Fadriquela as telling the court: "I didn't think I was trespassing because I was still in my own house. It's not like I went to Colorado and walked through their office." He complained that the computer programs did not have notices warning against trespassing, Goodwin said.

Robert Booms, Fadriquela's attorney here, criticized the broad scope of the hacker law. He said his client never went beyond using a password and identification code and never made use of the information stored in the computer. "Like most computer hobbyists, he was more interested in the computer than the contents of the computer," Booms said.

Fadriquela bought a modem around Christmastime last year, Booms said, "and basically went bananas with it," using it for periods of 12 hours or more to enter computer systems.

The trespass was made easier by the fact that the government agency used passwords such as "guest" and used the same word for the user code, the attorney said. "[Anyone] can figure that out," he said.

Discovery of the trespass

The trespass was first discovered by Kevin Abt, director of quality assurance at GTE Telenet in Vienna, Va. [CW, Feb. 11]. Goodwin said Abt "happened to be monitoring the [network] at home on his home computer, and he noticed some activity at unusual hours by the Forest Service — like 3 a.m. — when they normally wouldn't be on-line."

After monitoring the trespasses for about a week and keeping a log, authorities traced the intrusions to the telephone of a Los Angeles optometrist, a GTE Telenet subscriber who was getting unexplained charges on his telephone bills, Goodwin said.

"That was our clue, of course, that there was a tap into his line. So we had to physically trace it back to the defendant's house," she said. Fadriquela was arrested Feb. 6.

"I had an argument with the computer and it fired me!"

Upgrade gives drug firm measure of DP flexibility

LEE'S SUMMIT, Mo. — When Pfizer, Inc. opted to replace its batch order processing system back in 1983, the pharmaceutical company's Agricultural Division here had to decide whether to upgrade its own operations simultaneously.

The Pfizer Agricultural Division is a supplier of animal health products. Manufacturing, distribution and sales offices are located here; corporate headquarters are located in New York.

Faced with an obsolete corporate product distribution system and an underpowered local IBM System/3 small-business system, the company considered first replacing the IBM computer here just to handle the nondistribution applications, and then upgrading the in-house-developed corporate distribution system, said Robin Sitver, manager of financial analysis and systems development. Sitver headed a task force that evaluated product alternatives.

"The old system couldn't handle inventory control. It did order processing, but that was in a batch environment. There was no on-line edit checking or other state-of-the-art features. It couldn't handle our marketing programs, so most of our pricing was done manually. It did check inventory availability and back orders, but it really didn't offer automated lot control. Tracking orders was difficult, and although there was some credit checking, it wasn't as sophisticated as what we're doing now," Sitver said.

System upgrade an option

Upgrading the system here to handle distribution and giving the division an independent distribution system was Pfizer's other option, Sitver said. Because of the division's size and its business methods, Sitver and the task force chose to look for a customized inventory control and distribution system for an IBM System/38 at the facility here.

Because the Agricultural Division is seasonal and tends to ship larger but fewer orders than sister divisions in more conventional pharmaceutical markets, its order processing and pricing requirements did not mesh with those of the corporate system. Sitver explained, "We have several different product groups and many different channels of trade in which we conduct business. So at any one point in time, we have many specials. As a result, our pricing is often somewhat complicated.

To help with the software selection, Sitver and others on the task force interviewed major users in five departments. "We took everyone's wish lists and used [them] as requirements for our vendor," she said. The ability to implement different pricing and order requirements was another consideration, Sitver noted.

Of the three systems examined, including a proposal for an IBM customized program, the Agricultural Division selected Friedman & Associates' Customized Real-Time Installed Software Products (Crisp) program.

Flexible pricing structure

According to Sitver, the Crisp pricing routines allowed the company to set up a flexible pricing structure. "We certainly know we have fewer errors. In the past, 85% of all our pricing was done manually. Now it is all done by computer."

Editing at order entry for such variables as correct price, invalid product numbers, incorrect multiples, customer eligibility and the presence of promotional codes saves time, Stiver said. "Previously, such errors would not have been caught; the order would have been sent to our batch system. Then it would be rejected, then resubmitted. At that point, you would have lost half a day," she said.

Crisp provided inventory control and tracking and includes automatic lotting of orders on a first-in/first-out basis. The system is

WE CHALLENGE ALL COMERS TO A LASER BATTLE.

DIGITAL'S NEW LN03 IS FAST AND AFFORDABLE.

Until now, laser printers fell into the category of pure science fiction for most applications. Those that could handle even a modest work load cost more than the moon and stars. And those that were affordable just couldn't keep up with a busy office.

Now there's Digital's new LN03. The most productive laser printer you can buy for less than $7000. A lot less. In fact the LN03 costs little more than half that. Yet it leaves every laser printer in its price range in the dust.

For pure speed, nothing in the price range can beat the LN03. At 8 pages per minute – or 333 cps – it can handle the volume of a busy office with ease.

It also prints true compound documents, with business graphics and text on the same page, in a single pass. And it prints on virtually any cut sheet paper, including overhead transparencies. All of which makes it ideal for almost any multi-user environment.

IT WON'T WASTE YOUR TIME.

The LN03's real edge in speed and productivity comes from its paper handling capacity. With 250 page input and output trays, the LN03 can print thick documents – pre-collated – without reloading. Try that with any other laser printer in the class and someone will end up changing the paper 10 times or more, reverse collating every page by hand, and babysitting the entire process. Which is counterproductive to the whole idea of office automation.

BETTER QUALITY THAN LETTER QUALITY.

The LN03 also gives you advantages over daisywheel and dot matrix printers, too. Because one LN03 can do the job of the two conventional printers you're probably using now.

In fact it can do *more* than *both*. For a lot less money.

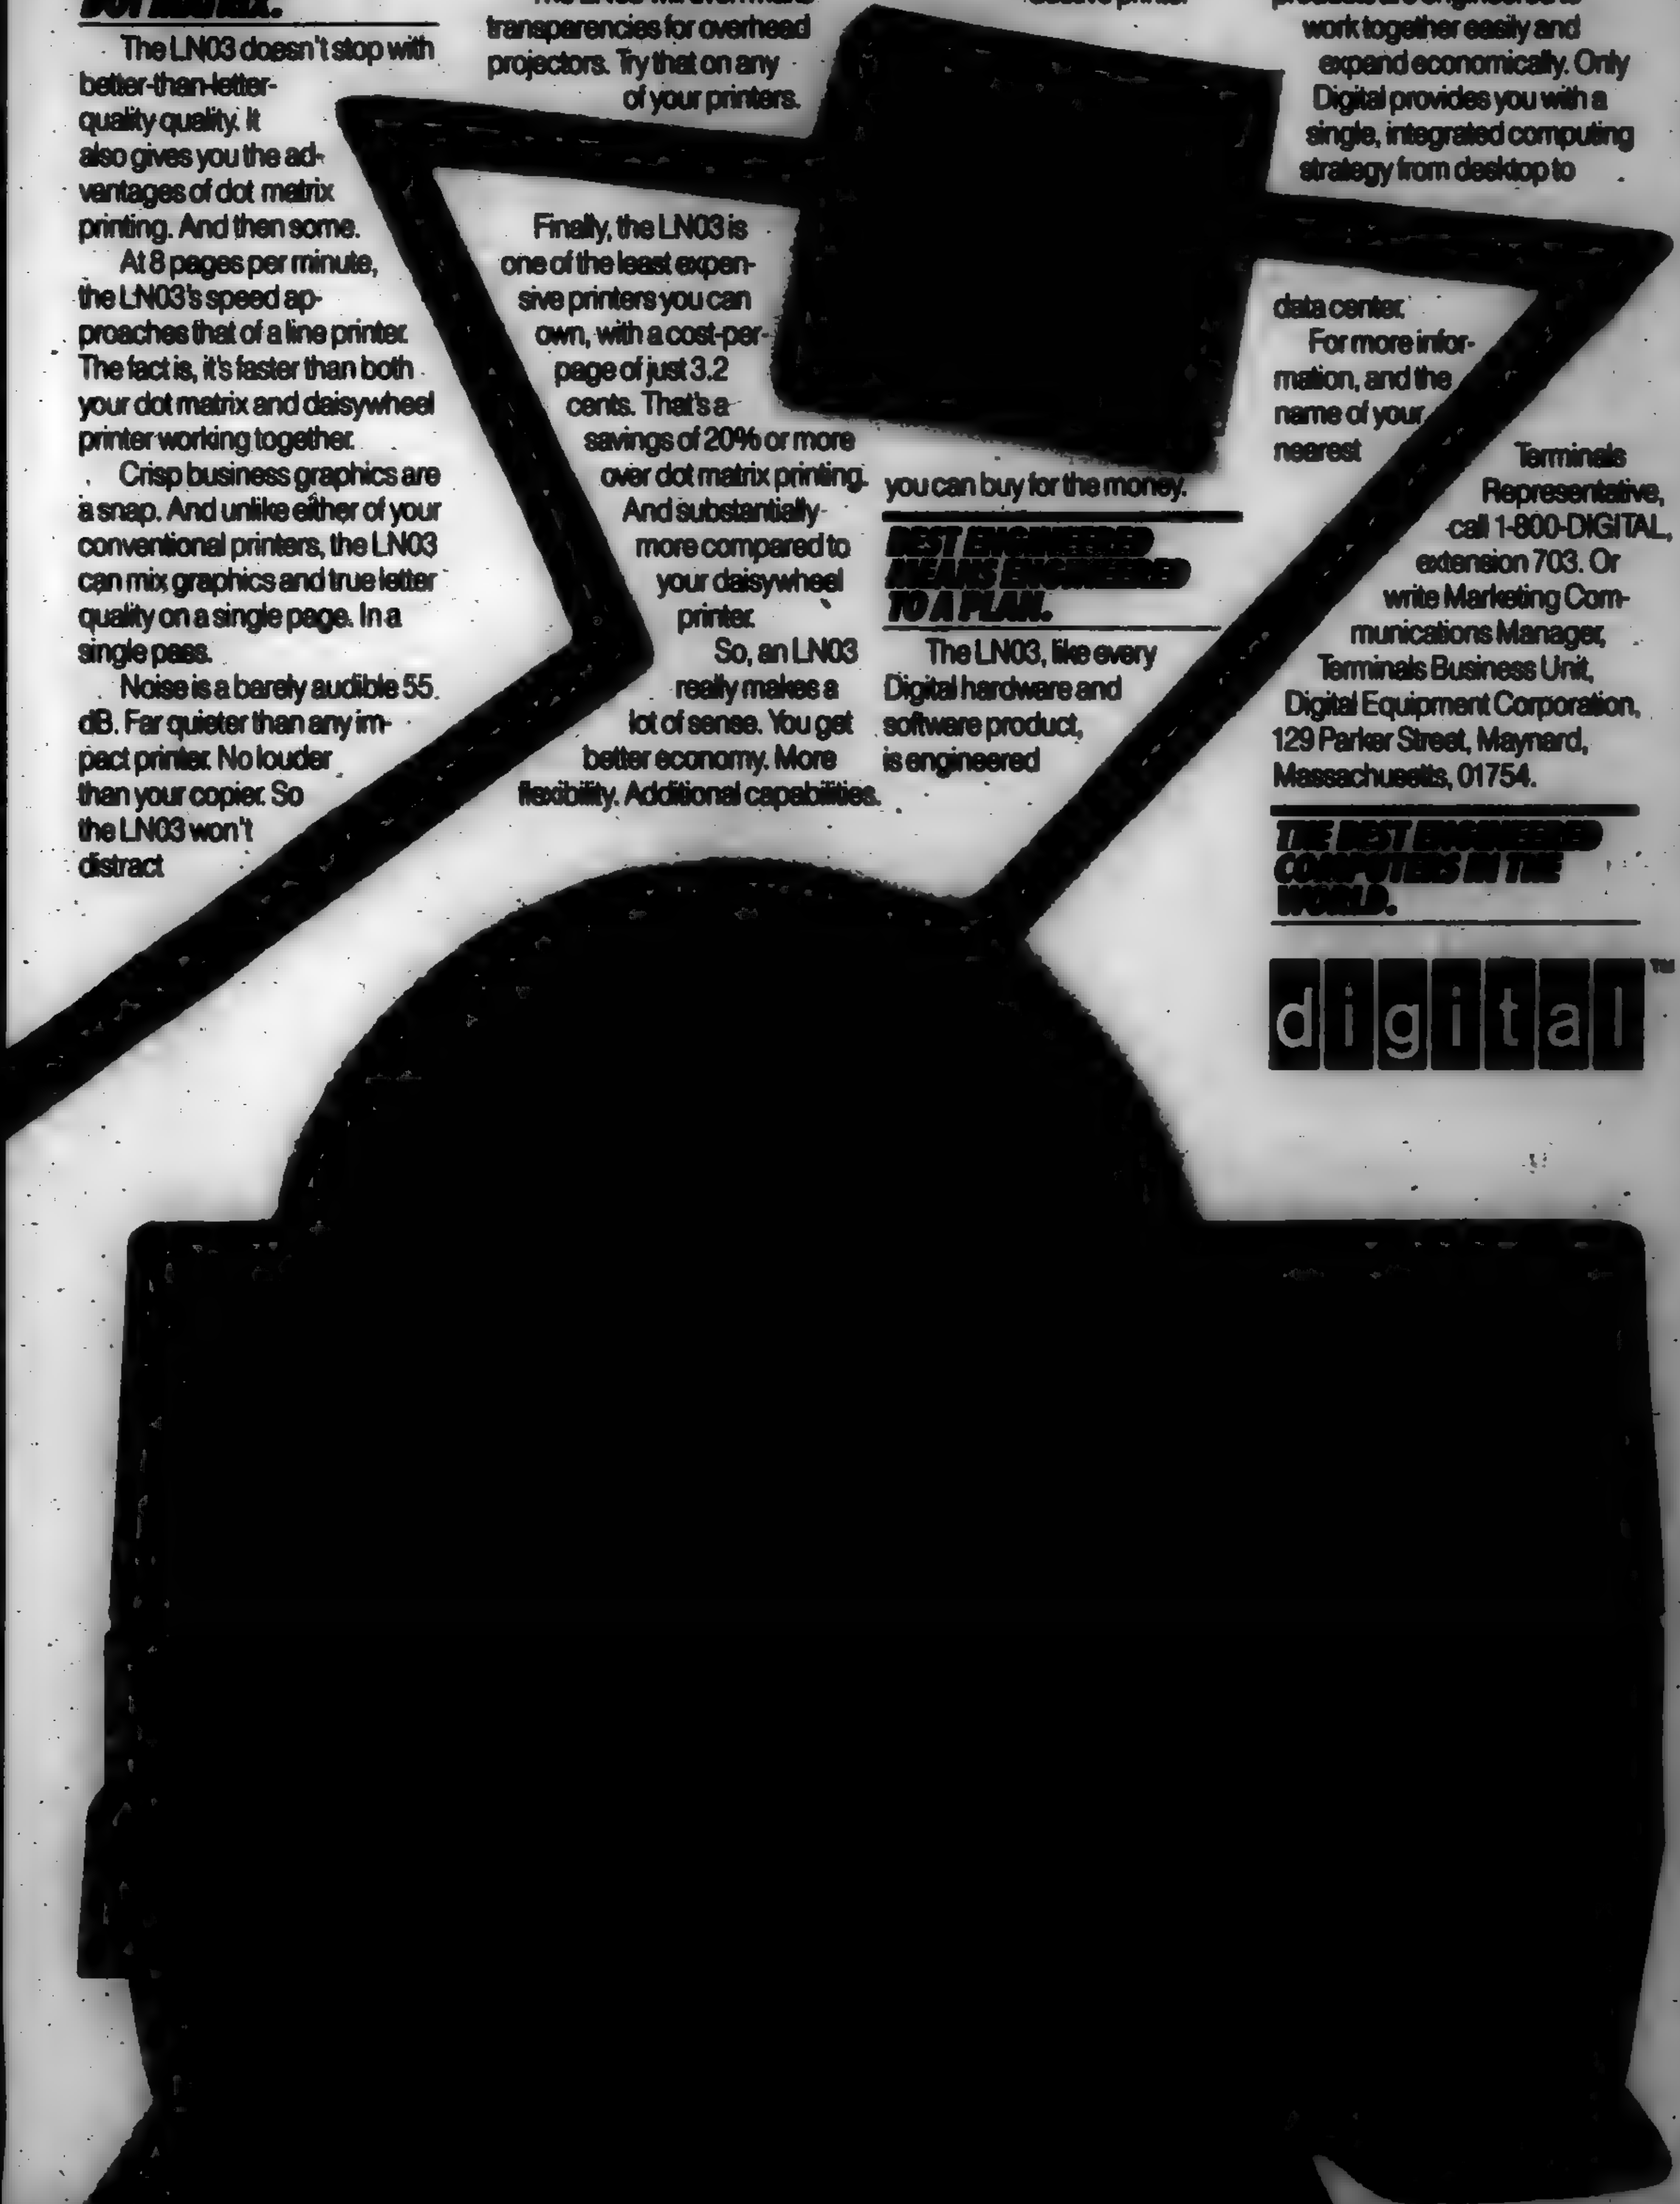
For starters, it forms characters precisely with 300 x 300 dot resolution. Characters that are not only far cleaner than your dot matrix printer, but even better than your letter quality printer. You may actually have trouble telling the difference between text that's been printed on the LN03 and text that's been professionally typeset. In fact the LN03 characters are so well formed, they're recognized by Optical Character Readers with no problem at all.

To give your documents a professional appearance, the LN03 lets you pick and choose from a virtually unlimited variety of typefaces, sizes and styles. And they've all been developed especially for the LN03 by Compugraphic Corporation, the world's recognized authority on computer-generated typefaces.

Two resident typefaces give you no fewer than 16 different sizes, styles and pitches, while optional ROM cartridges let you add just about any face or font you might consider. Including your own custom designed faces. You can even down-line load your own character set or custom designed graphics fonts to print your logo, letterhead or forms. If you like, the LN03 can print sideways, down the length of the paper as well as across, to accommodate spreadsheets, compiler listings, graph captions or other special effects.

In short, the LN03 gives you a remarkable combination of print quality and versatility. So every piece you print makes a great impression.

© Digital Equipment Corporation. 1985. Digital, the Digital logo and LN03 are trademarks of Digital Equipment Corporation.



FASTER AND MORE FLEXIBLE THAN DOT MATRIX.

The LN03 doesn't stop with better-than-letter-quality quality. It also gives you the advantages of dot matrix printing. And then some.

At 8 pages per minute, the LN03's speed approaches that of a line printer. The fact is, it's faster than both your dot matrix and daisywheel printer working together.

Crisp business graphics are a snap. And unlike either of your conventional printers, the LN03 can mix graphics and true letter quality on a single page. In a single pass.

Noise is a barely audible 55 dB. Far quieter than any impact printer. No louder than your copier. So the LN03 won't distract and annoy workers even in an open office.

The LN03 will even make transparencies for overhead projectors. Try that on any of your printers.

Finally, the LN03 is one of the least expensive printers you can own, with a cost-per-page of just 3.2 cents. That's a savings of 20% or more over dot matrix printing. And substantially more compared to your daisywheel printer.

So, an LN03 really makes a lot of sense. You get better economy. More flexibility. Additional capabilities. A professional look. Which makes the LN03 the most productive printer you can buy for the money.

BEST ENGINEERED MEANS ENGINEERED TO A PLAN.

The LN03, like every Digital hardware and software product, is engineered to conform to an overall computing strategy. This means our products are engineered to work together easily and expand economically. Only Digital provides you with a single, integrated computing strategy from desktop to data center.

TURNAROUND TIME

Larry Long

Q *The weakest of three candidates for a programming manager's job graduated from the same college as my boss, a vice-president. They hit it off very well, and my boss made it clear whom he wanted hired. However, the choice is mine, and I feel that either of the top two candidates are far superior to my boss's choice. What would you do?*

Don't let your boss's personal bias get in the way of your own good judgment. Hire the person whom you want.

Q *My present position is computer programmer/operator and has been since June of 1978. I'm the remaining programmer out of two who maintained all systems. Because of a recent merger, the present systems are being eliminated and replaced by software, which requires no programming, from an outside vendor.*

My experience is in Singer System Ten assembler language. Singer dropped out of the computer market in the early '70s, and there is little, if any, need for a Singer programmer.

For the past year, I have mailed more than 50 resumes to various programming advertisements. I have also sent resumes with descriptive letters explaining my background to three different employment agencies. To date, I have not received one interview. I thought that with a strong background in an assembler language I would be able to acquire a new programming position by now. Instead, I can't even get an interview.

If you have any ideas, I would be glad to try them.

In a resume, you want to put your best foot forward. In a small shop, you have gained experience as a systems analyst, programmer and operator. The fact that you have Singer experience is irrelevant in most instances and, perhaps, is perceived as a negative attribute by some. Emphasize hardware experience when it benefits you to do so, deemphasize it when it does not. In this case, the Singer experience will not be perceived as an asset.

To strengthen your resume, I would recommend learning at least one more language and gaining some data base proficiency. A good programmer, when making a conscientious effort, can achieve a solid base in a language within a couple of weeks. You may need to attend a seminar or enroll in a college course to gain data base expertise.

You may have the basic skills, but your experience is inconsistent with market demands, so you may have to become a bit of a salesman to get your foot in the door. Once that happens, you can demonstrate your broad range of experiences as well as your willingness and ability to learn.

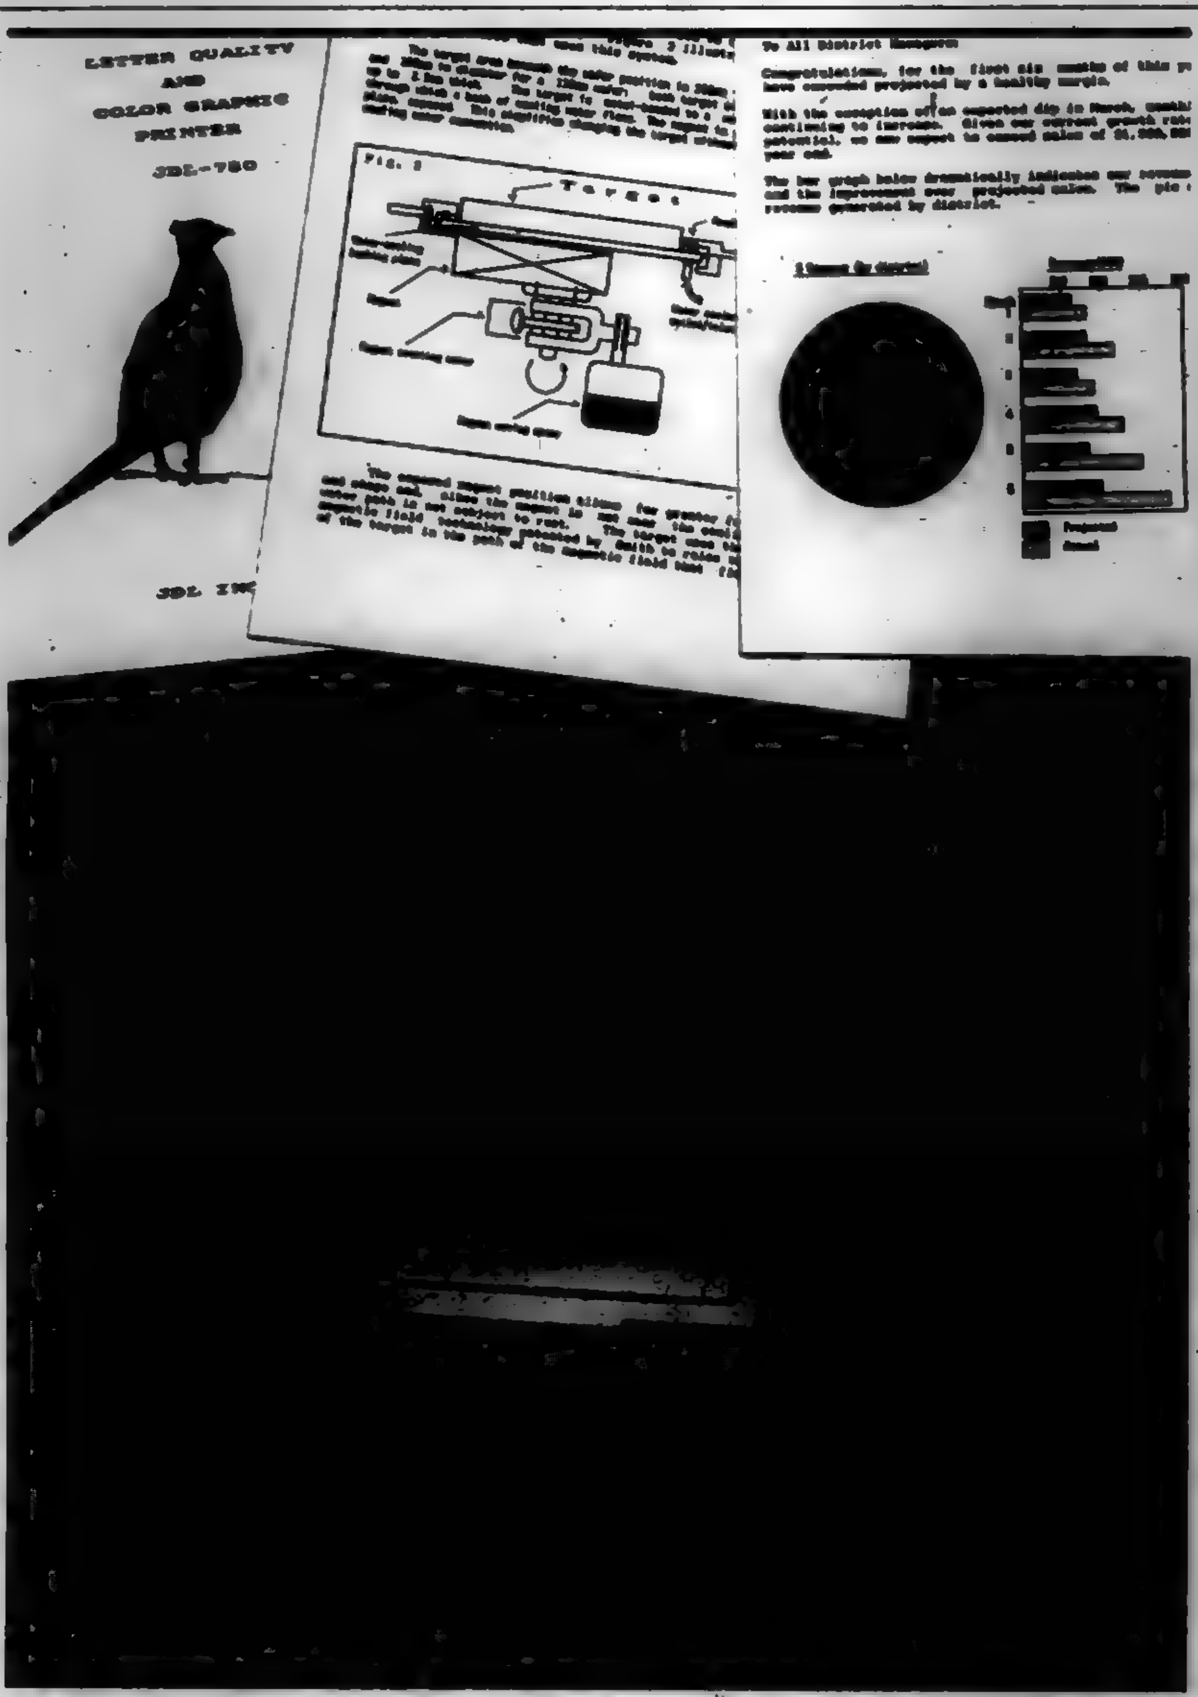
Q *I've worked with a commercial software company for almost 10 years. Two years ago, I changed jobs from creating software to marketing it. Yesterday, I received my first call from a headhunter, presumably because one of my products has been very successful this year.*

She told me that a well-known software company was seeking someone with marketing experience. She said she felt that with my track record I would probably get the job if I interviewed for it. The position pays 50% to 70% more than my current salary. Although I am happy here, my wife and I are very enthusiastic about the possibility of a large jump in income.

I have no experience in dealing with headhunters and don't wish to discuss this with my friends at work. Does a headhunter really know if I will get the job? Is this position too good to be true?

Search firms present candidates for consideration. One method of finding candidates is the blind call. She doesn't know whether you will be invited for an interview, much less get the job. I would guess that there really is an opening and that the salary range was portrayed accurately. For the more traditional technical positions, this is not always the case.

Long, president of Long and Associates, is a consultant, lecturer and author in the field of information services. If you have a question you'd like him to address, send it to Larry Long, Editorial Department, Computerworld, *P.O. Box 880, Framingham, Mass. 01701.*



BATCH

from page 27

equipped with a traffic check function that allows the division to consolidate orders for favorable freight rates. According to Sitver, "The bottleneck has gone from the shipping office to the floor. The system lots the orders faster than the people on the floor can pick them."

The software program handles the division's distribution. According to Sitver, orders are shipped and recorded into the system. "The invoice is generated, notification is sent to New York, and all corporate systems are updated."

According to Sitver, "We can handle situations with this system that we couldn't with the batch system. Now there's a lot of inquiry capability. And if you have to change customer information — name, address, special instructions — all that is done on-line."

INTERNATIONAL REPORT

CANADA

TORONTO — A $500,000 agreement has been signed between publisher Jack McClelland & Stewart Ltd. and Apple Canada, Inc. The publisher will introduce 35 Apple Macintosh 512K-byte microcomputers, Apple Laserwriter printers and the Appletalk personal network into its operations over a nine-month period. By April 1987, the publishing company plans to be fully automated, both in its publishing operations and in its general business practices, with at least 50 Macintoshes linked to a minicomputer. The publisher followed *Equinox*, *Canadian Business Magazine*, *Harrowsmith* and Canada's *Globe and Mail*, which also opted for Macintosh.

■

TORONTO — The Ontario Securities Commission is pushing Canada's over-the-counter trading community toward automation. The regulatory body for the Canadian brokerage industry plans to set up an electronic quotation system, called the Canadian Over-the-Counter Automated Trading System, in conjunction with the Toronto Stock Exchange by the end of this year.

ITALY

MILAN — The Milan fairgrounds has been selected for the first Italian demonstration of a "wired city." A 640-km network of optical fibers will link a program production and distribution center with 14 user sites around the grounds. The experiment is being conducted by Italtel, the largest telecommunications manufacturer in Italy, and Sip, the Italian operating company for communications services.

Each user site in the network will consist of a telephone, a television screen, a video camera and a microphone and will provide interactive communications between users and the TV production center, a spokesman said.

The $5 million project will provide access to 19 television channels, according to Italtel. During the first 10 days of the experiment, more than 30,000 requests for broadband services were conveyed to the production center, Italtel said.

JAPAN

TOKYO — Toshiba Ltd. has unveiled the Tosbac G8050, a four-processor superminicomputer intended for computer-aided design and manufacturing applications. The system reportedly operates at 5.6 million instructions per second, features up to 4G-bytes memory and runs Fortran and AT&T Unix-based software under the vendor's OS/V operating system. The machine is expected to ship in October.

■

TOKYO — Seibu Information Center Ltd. has introduced a voice-mail service here. The pilot system has been in operation since April at the Seibu Department Store, a subsidiary here. The Seibu service is called Dengon-Kun. Seibu has also announced plans to implement a high-speed digital private line between Tokyo and Osaka this fall.

SWEDEN

STOCKHOLM — The typical Swedish computer criminal is 36 years old and has no drug problem or criminal record, according to a recent report on computer-related crime from the National Council for Crime Prevention here. The report said the criminal is the faithful "old servant" who has worked at the company for more than 11 years.

■

STOCKHOLM — All copying of computer software should be forbidden, including copying for personal use. So said the Swedish distribution company LKD, which recently presented its ideas to the Swedish Copyright Commission here. If copying were permitted, it could mean enormous losses to software companies, LKD argued. Sweden's traditional copyright protection does not include personal use and is not adapted to protection of software. "A book is always protected by copyright law and can never be copied so that the copy looks exactly like the original. A computer program can and should, therefore, be protected," an LKD spokesman said.

■

STOCKHOLM — IBM has announced plans to build a printer manufacturing facility here in Sweden. The plant will build IBM 4245 models 12 and 20 printers, according to Karl-Erik Johansson, who is in charge of new products at IBM Sweden. The facility will also create 30 new jobs.

■

STOCKHOLM — The Central Administration of Property Data (CFD) here was recently asked to create and manage a property registration system for the government of Singapore. The CFD will send 85 consultants to help design a data processing system for the registration authorities in Singapore, who are just about to automate their operations.

■

STOCKHOLM — Sweden's study on the vulnerability of a computer-dependent society has recently fallen under attack by Minister of Defense Anders Thunborg. The minister argued that the International Federation for Information Processing's efforts have not succeeded in raising the consciousness of government workers and the public at large about Sweden's vulnerability in the state departments.

WEST GERMANY

MUNICH — Apple Computer, Inc.'s subsidiary here is tightening its belt. Effective June 30, Apple GmbH will close its West German offices in Dusseldorf, Frankfurt, Stuttgart, Hamburg and here, it was learned. Nine regional sales managers will pick up the business from these closings.

■

NUREMBURG — Philips Communications AG publicly praised the West German Postal Telephone and Telegraph authority for its "innovative strength" and its "cooperation and support in implementing new networks and services." Philips Communications is a German subsidiary of the Dutch communications giant, with worldwide revenue of $5 billion.

■

BONN — A federally funded project to promote high-tech research and development is under way here. Some $150 million has been earmarked for the project, titled "Using Microelectronics," which is intended to help young companies. More than 3,000 companies have already applied for the the R&D grants, and more than 2,400 were accepted, a spokesman said.

■

DUSSELDORF — Software pirates have cost Data Becker GmbH between $10 million and $13 million, estimated Achim Becker, the software retailer's general manager. The sum is roughly equivalent to the firm's 1984 revenue, Becker said. While software protection has been a widely discussed topic in West Germany, legislation was enacted only recently, allowing West German software houses to copyright their products.

■

MUNICH — Job control software packages are used in only 20% of West German computer centers, according to a recent survey by Diebold Group GmbH. Of 7,500 mainframe computer installations surveyed, only 200 use job control software. The remaining 80% rely on manual commands from computer operators, the survey said.

BECOME A CICS CONSULTANT IN JUST TWO WEEKENDS.

We know that it's tough for consultants to fit a weekday course into their hectic schedules. That's why SysEd offers special CICS training courses for consultants that you can complete in only two weekends.

Our intensive weekend courses in Command Level, Macro Level, Internals, Application Design and VSAM are designed to make even non-CICS programmers immediately productive in a CICS environment. Each SysEd course provides a true-to-life learning experience with "hands-on" use of the computer; up-to-date, practical information; a solid foundation in CICS fundamentals and insights into advanced materials; and individual attention from highly qualified instructors.

SysEd's special weekend courses for consultants are held regularly at our classroom/computer facilities in New York City, Chicago, San Francisco and Dallas. Because class size is limited, applications are on a first come, first served basis.

For more information, call David Shapiro (212) 564-8147

"With deregulation, there are more ways than ever to set up a network."

"AND MORE WAYS TO GET CONFUSED."
"LUCKILY THERE'S HELP. SOMEONE WHO UNDERSTANDS OUR STRENGTHS."
"WHO CAN FIGURE OUT THE BEST WAY TO INTEGRATE."
"FOR THE BEST PRICE. WITH THE LEAST RISK."
"SOMEONE JUST A PHONE CALL AWAY."
"HELLO HONEYWELL."

Presenting the Honeywell Network Design Center.

Honeywell is committed to providing customers with the best products and services available to get the most out of their information resources.

That's why we created our Network Design Center.

With deregulation of the telephone industry and the evergrowing number of network options, choosing the right alternatives can be difficult.

By going with Honeywell, you're assured of a network based on a solid understanding of your system's strengths. And how they can be best used and integrated.

You'll get expertise complemented by advanced analytic and simulation methods and techniques.

And, you'll get a realistic prediction of investment costs and potential savings opportunities relative to the design you choose.

Planning, support, problem analysis, and fine tuning are all part of our Network Design Center service.

It's only a part of what makes Honeywell's networking and data communications capabilities so worthwhile. And when you consider the very practical way it can help you *apply* our technology, it just might be the most important.

We know the value of good communications. Call us today and hear for yourself.

Call 1-800-328-5111 extension 2759. Or write:
Honeywell Inquiry Center, MS 440, 200 Smith Street,
Waltham, MA 02154.

Together, we can find the answers.

WEEK OF JULY 21

JULY 22-23, FORT LEE, N.J. — **CICS/VS Performance and Tuning.** Contact: On-Line Software International, Inc., Fort Lee Executive Park, Two Executive Drive, Fort Lee, N.J. 07024. Also being held July 29-30 in Boston.

JULY 22-24, CHICAGO — **1985 Summer Computer Simulation Conference.** Contact: Society for Computer Simulation, P.O. Box 17900, San Diego, Calif. 92117.

JULY 22-24, CARY, N.C. — **SAS Macro Language.** Contact: SAS Institute, Inc., P.O. Box 8000, Cary, N.C. 27511.

JULY 22-24, ST. LOUIS — **Standard Network Protocols: International and National Packet-Switching Networks.** Contact: Data-Tech Institute, P.O. Box 2429, Lakeview Plaza, Clifton, N.J. 07015. Also being held July 29-31 in Boston.

JULY 22-25, FORT LEE, N.J. — **Vsam From Start to Finish.** Contact: On-Line Software International, Inc., Fort Lee Executive Park, Two Executive Drive, Fort Lee, N.J. 07024. Also being held July 22-25 in Los Angeles.

JULY 22-25, WASHINGTON, D.C. — **IMS/DC (Data Communications) Programming.** Contact: On-Line Software International, Inc., Fort Lee Executive Park, Two Executive Drive, Fort Lee, N.J. 07024

JULY 22-25, SAN ANTONIO — **CICS/VS MRO/ISC.** Contact: On-Line Software International, Inc., Fort Lee Executive Park, Two Executive Drive, Fort Lee, N.J. 07024. Also being held July 22-25 in Denver and July 29-Aug. 1 in Fort Lee.

JULY 22-25, ATLANTA — **CICS/VS Application Design.** Contact: On-Line Software International, Inc., Fort Lee Executive Park, Two Executive Drive, Fort Lee, N.J. 07024. Also being held July 29-Aug. 1 in Chicago and Los Angeles.

JULY 22-26, SAN FRANCISCO — **Siggraph '85: The 12th Annual Conference on Computer Graphics and Interactive Techniques.** Contact: Siggraph '85 Conference Services Office, 111 E. Wacker Drive, Chicago, Ill. 60601.

JULY 22-26, BOSTON — **CICS/VS Internals.** Contact: On-Line Software International, Inc., Fort Lee Executive Park, Two Executive Drive, Fort Lee, N.J. 07024. Also being held July 22-26 in San Antonio and July 29-Aug. 2 in Atlanta and Denver.

JULY 22-26, CHICAGO — **CICS/VS Application Programming — Command Level.** Contact: On-Line Software International, Inc., Fort Lee Executive Park, Two Executive Drive, Fort Lee, N.J. 07024. Also being held July 29-Aug. 2 in Fort Lee; Los Angeles; and Washington, D.C.

JULY 22-26, NEW YORK — **Data Base Development Workshop.** Contact: Elise Rabelais, Learmonth & Burchett Management Systems, Inc., Suite 405, 2900 N. Loop W., Houston, Texas 77092.

JULY 22-26, HOUSTON — **Project Development and Control Workshop.** Contact: Elise Rabelais, Learmonth & Burchett Management Systems, Inc., Suite 405, 2900 N. Loop W., Houston, Texas 77092.

JULY 23-25, DALLAS — **SAS Basics Course.** Contact: SAS Institute, Inc., P.O. Box 8000, Cary, N.C. 27511.

JULY 24-25, FORT LEE, N.J. — **Recovery/Restart.** Contact: On-Line Software International, Inc., Fort Lee Executive Park, Two Executive Drive, Fort Lee, N.J. 07024. Also being held July 31-Aug. 1 in Boston.

JULY 24-25, DALLAS — **SAS Report Writing.** Contact: SAS Institute, Inc., P.O. Box 8000, Cary, N.C. 27511.

JULY 24-26, PARSIPPANY, N.J. — **Data Processing for the Non-DP Manager.** Contact: Chubb Institute, P.O. Box 342, 8 Sylvan Way, Parsippany, N.J. 07054.

JULY 24-26, WASHINGTON, D.C. — **Financial Information Systems: The New Generation.** Contact: National Institute for Management Research Seminars, P.O. Box 3727, Santa Monica, Calif. 90403.

JULY 24-26, WASHINGTON, D.C. — **Financial Information Systems — Integrating Personal Computers.** Contact: National Institute for Management Research Seminars, P.O. Box 3727, Santa Monica, Calif. 90403.

JULY 24-26, CARY, N.C. — **Principles of Regression Analysis.** Contact: SAS Institute, Inc., P.O. Box 8000, Cary, N.C. 27511.

JULY 26, COLUMBUS, OHIO — **DOS/VSE Working With Shared Dasd.** Contact: Goal Systems International, Inc., 5455 N. High St., Columbus, Ohio 43214.

WEEK OF JULY 28

JULY 29-AUG. 1, OTTAWA — **The Urban and Regional Information Systems Associations' (Urisa) 23rd Annual Conference.** Contact: Urisa Secretariat, Suite 300, 1340 Old Chain Bridge Road, McLean, Va. 22101.

JULY 29-30, ST. LOUIS — **Southwestern Bell.** Contact: Telestrategies, Inc., P.O. Box 811, McLean, Va. 22101.

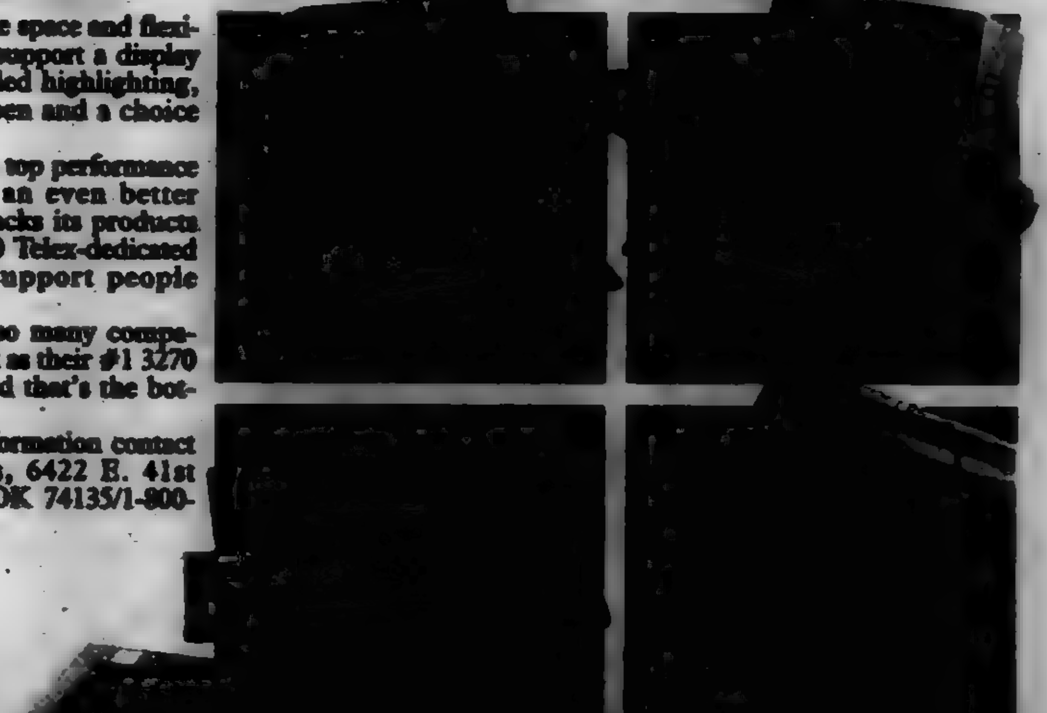
JULY 29-30, NEW YORK — **Integrating Voice and Data in the Private Branch Exchange.** Contact: Business Communications Review, 950 York Road, Hinsdale, Ill. 60521.

JULY 29-AUG. 1, NEW YORK — **IMS/DB (DL/1) Application Programming.** Contact: On-Line Software International, Inc., Fort Lee Executive Park, Two Executive Drive, Fort Lee, N.J. 07024.

JULY 29-AUG. 2, PARSIPPANY, N.J. — **CICS Command-Level.** Contact: Chubb Institute, P.O. Box 342, 8 Sylvan Way, Parsippany, N.J. 07054.

JULY 30-AUG. 1, CARY, N.C. — **SAS Basics.** Contact: SAS Institute, Inc., P.O. Box 8000, Cary, N.C. 27511.

JULY 30-AUG. 1, CARY, N.C. — **SAS Programming for New Computer Users.** Contact: SAS Institute, Inc., P.O. Box 8000, Cary, N.C. 27511. Also being held Aug. 12-13 in Toronto.



ECONOMY

The #1 3270 alternative for people who value a better bottom line.

More and more companies are building or expanding their 3270 network at a lower cost without compromising performance. The solution: Telex.

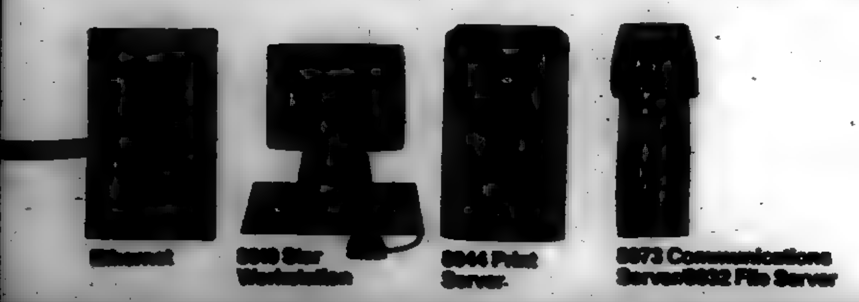
The Telex 078 and 079 displays bring full 3270 terminal performance and user comforts together with cost savings. These complete 3270 plug compatible displays are loaded with standard features. They're ergonomically designed to save space and flexible enough to support a display printer, extended highlighting, APL, a light pen and a choice of keyboards.

And to make top performance and low cost an even better value, Telex backs its products with over 2,000 Telex-dedicated service and support people worldwide.

That's why so many companies value Telex as their #1 3270 alternative. And that's the bottom line.

For more information contact John Hawkins, 6422 E. 41st Street, Tulsa, OK 74135/1-800-331-2623.

The #1
3270 Alternative
TELEX
TELEX COMPUTER PRODUCTS, INC.



Matt's office has been winning a lot of new business lately. And it's really not much of a secret.

Because he and his co-workers have been able to make more efficient use of their resources. How? Well, Matt brought in Team Xerox.

Which includes Xerox 8010 Star

"I heard you underbid us by half a million. What's your secret?"

Workstations, high speed laser printers, file servers for organizing and storing data and communications servers for accessing mainframe data bases, all linked together with a Xerox Communications Network. For complex analytical tasks, Xerox also included a Xerox Artificial Intelligence System.

So Matt (and the people in his domestic and international offices) could create, access, share and react to information more quickly and more easily than ever before.

And since Matt's office has become so much more productive, he was able to cut costs—and enter a bid that was $500,000 less than anyone else's.

To make Matt's secret yours, call Team Xerox at 1-800-833-2323, ext. 42 or send your business card to Xerox Corp., Dept. 42013, P.O. Box 24, Rochester, NY 14292.

EDITORIAL

DP's soldiers of fortune

'These are the times that try men's souls.'
— Thomas Paine

At a time when the U.S. economy is chugging along slowly but steadily after two years of rapid growth, the computer industry is mired in what is developing into the muddiest rut in its history.

The bad news pouring in so fast convinces us that this is a bad situation about to get worse. The massive layoffs at industry mainstays like Wang, DG and Apple (see story page 1) appeared in no analyst's crystal ball as recently as six months ago.

And the ongoing misery in the chip industry — which has triggered similar massive layoffs at Intel, TI, National Semi, Synertech and Signetics — has come at a time when most analysts had predicted an upswing. Instead, these companies' performance, a bellwether of things to come, attests that the situation will get worse before it gets any better.

The computer companies certainly have their problems, but how about you, the DP manager? In Thomas Paine's days — those grim years of the American Revolution — success came to those who learned to take advantage of turmoil. Those people assessed the global situation accurately and then saw how their personal fortunes could be maximized against such a stormy backdrop.

You can call it the shark ethic — eat the wounded — but there are a lot of ways you can take advantage of a climate that, over the next year or so, can truly be called a buyer's market. Virtually every vendor, from IBM to add-on board makers, will be hungrier than ever for your business. Alert yourself and others with buying power in your organization to the breadth of the industry's current dilemma, and you will have a leg up on any vendor trying to sell to you.

Look for and be wary of the following:

■ **High-pressured sales.** Some might say that every sale is a high-pressured one, but sales staffs will be under more pressure than ever in the coming months. IBM, for example, brought 400 sales representatives this month to a banking conference, which drew only 3,000 other attendees [CW, June 10]. For the companies that *have* announced layoffs — which does not include IBM — the coming six months might spell out the terms of long-term survival.

■ **Product delays.** With companies laying off 10% and more of their work forces, there are going to be delays. Be wary of anything other than firm delivery dates for equipment ordered.

■ **Degrading service.** In more than one case in the past, we have seen the service and maintenance end of a vendor's business begin to slide when trouble brews. This is by no means the rule, but it's something to watch out for.

■ **Great opportunities with IBM/great opportunities beyond IBM.** DP managers may lean more heavily toward Big Blue, observing that IBM is definitely in this for the long haul. Coupled with the fact that IBM will make its products as attractive as possible to meet its very lofty sales projections this year, this strategy has merit. But on the other hand, there will be some tremendous jockeying by IBM's competitors to maintain position.

The DP manager who has the needs of his shop and company clearly before him is about to encounter opportunities that he may never see again. You'd have to be blind not to know there's trouble aplenty out there and particularly sharp to turn it to your advantage.

Eyeball to eyeball

LETTERS

System provides 'inside-out' approach

The column "Basic design-phase flaws hinder system development" [CW, June 3] pointed a finger at the naked emperor. Even James Martin has recanted his enthusiasm for fourth-generation languages. Conventional fourth-generation language analysis and design methodologies take an "outside-in" approach: They specify all the single details and let the system generate the application.

The Pick Systems Pick operating system, by contrast, provides four languages for system specification. They are Dictionaries (data definitions), Proc (procedure definitions), Access (retrieval definitions) and Basic (data capture and manipulative definitions).

With these four languages, an analyst can prototype an application iteratively and let analytical software parse the final source statements to produce the detailed specifications. This is the "inside-out" approach.

A payroll system consisting of 80 functions, with 40 heavy-duty programs covering 30 files, can be built under the following timetable: phase one (all menus), 2 hours; phase two (all menus, screens, file dictionaries and reports), 50 hours; phase three (complete code), 800 hours; phase four (complete documentation), 200 hours.

This time line is typical of robust, custom systems being produced with appropriate software engineering methodologies under the Pick system.

VIEWPOINT

The MIS alligators are alive and kicking

MANAGEMENT MATRIX
Walter F. Cuirle

I think I last heard this chestnut from an auditor who was swinging the cost-cutting ax in the direction of maintenance contracts. It goes like this: A man is standing on a street corner, snapping his fingers. Another man sees this and, puzzled, asks, "Why are you snapping your fingers?" The snapper answers, "To keep the alligators away." The questioner protests, "But there aren't any alligators around here!" Pleased, the snapper responds, "I know. See how well it works?"

Everyone has recognized this attitude from time to time. It's frustrating at best to have someone opine that part of your work is pointless. It is the kind of conflict you can learn to deal with, but there are some areas in which you are doing nothing simply because you consider the effort pointless. Sometimes you're right to do nothing, but other times there really are alligators out there.

Consider, for example, when there is a supervisory position available within your organization. Most managers prefer to fill such positions from within; the usual reasoning goes that there is less risk in filling such a position with someone whose personality and work you know well. That makes good sense. However, some people assume that filling a position from within means that training is unnecessary. This could be a mistake — this particular alligator is often real.

Let's say you have a senior programmer or analyst whom you want to promote to group leader or supervisor. The assumption is that because this person has worked under a group leader or supervisor, he knows at least the rudiments of the new job. But if you think about it a minute, you'll realize that a programmer sees only the part of the supervisor's job that affects the programmer — scheduling, for example. Work done in other areas, such as regular reports to management or users, may not be so visible to the person coming into the job.

> **"**
>
> *All you really need is some kind of a schedule that puts the supervisor, who produces the deliverables, in touch with each person who wants them.*

Some people elect to solve this problem of the "what" of a position with a job description. These little documents are certainly necessary, but they are usually intended for general personnel planning. There are more effective ways of defining "what." Suppose the supervisor is responsible for four deliverables a month, such as reports or estimates. Each of these items is due monthly on some particular person's desk at some particular time. Together, these items make up a standing "to do" list for the new supervisor. It's not the whole job, but it establishes just enough structure to get started. Who should make up this list? A good choice is the person to whom the new supervisor is responsible. The outgoing supervisor may be of help, but then who really has the vested interest in getting the job done right?

Once the "what" of the job is known, it's time to look at the "how." Everybody has a personal bag of tricks. A new job calls for a new bag. Suppose one of the regular deliverables required of the supervisor is a monthly contribution to a budget report.

Where is the best place to get the raw information? What is a typical percentage for overhead? What's a reasonable figure for productivity?

The person who wants the report is usually the one best suited to teach the best way to put it together.

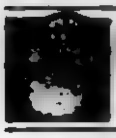
Does all of this mean that you should set up some kind of training for new supervisors? Absolutely. Unfortunately, many people will spend more time integrating some trivial piece of personal computer software into their personal operations than they will on getting a new supervisor settled in. But it does not necessarily follow that the training has to be formal — the idea that training means classrooms and instructions is often what prevents many managers from training supervisors.

It doesn't have to be that complicated. All you really need is some kind of a schedule that puts the supervisor, who produces the deliverables, in touch with each person who wants them. The time allotted doesn't have to be long — maybe only an hour or two a month with each person on the list — and it doesn't have to be particularly structured. Let them work out the topics they'll talk about. But it does have to be inviolate. This business is as important as — if not more so than — any other meeting that may come along.

It's easy, inexpensive and effective. So much so that some people may just tell you that alligator story. If they do, just smile and keep on snapping your fingers. And don't look back.

Cuirle is a senior associate with Nicholas DeMaio Associates in Bryn Mawr, Pa.

Poor systems planning impedes micro market growth



HUMAN CONNECTION
Jack Stone

America's changing attitude toward wines and spirits was not the only discussion dealing with sobriety in *Time* magazine's May 20 issue. In its business section, the well-publicized leveling out of sales of personal computers and peripherals was dramatically and soberly retold for the public in nontechnical terms. The average citizen was probably not surprised at the news, having survived the near total demise of the home computer market.

It is refreshing to read a carefully researched analysis of a segment of our noble industry by writers outside of it and savor an unbiased view of the massive deflation of the unruly, unwanted market projections of the expert forecasters within it. *Time's* editors, using engineering terms, figured about a minus 10 decibels' worth of growth difference from 1983 to 1984, contrasting an 11% gain in 1984 with 107% in 1983 — a situation that strongly suggests why so many manufacturers, software developers and even publishers have left the business for, presumably, more productive pursuits.

Certainly, part of the blame can be placed at the feet of the so-called experts who have talked DP centers, users and vendors alike into believing that the demand for personal computers is insatiable, infinite and inevitable. Their choice words have helped foul up the most creative vendor marketing strategies, the best laid of system plans by information managers and surely the fondest of user expectations.

> **"**
>
> *Large systems installed without the blessing of the computer center have greater than a 50-50 chance of being suspect and hence labeled too expensive, overpowered and underused.*

However, with all the personal computer players hopefully in an abstemious mood, perhaps a few thoughts on the reasons for the slowdown in personal computer sales will confirm what most DP managers have known all along and what many top executives are now starting to accept.

Let's look at several of the many industry axioms that the crystal ball gazers didn't grind into their forecasting algorithms.

First, users are not paid to plan complex systems, and those who try typically fall short of the mark. Basically, this is because users, by and large, do not focus on organization-wide systems needs, but only on computer services to support their local projects. As a consequence, they, like all red-blooded American end users, lobby hard for the most powerful, capable machine around without wasting an awful lot of time worrying about such arcane subjects as cost/benefit analyses, feature/function comparisons or certified user needs. Consequently, when the personal computer industry was in its infancy — when the 64K-byte personal computer was all the rage in end-user departments, for example — the impact on the master corporate systems plan was fairly straightforward, and support requirements were generally modest.

But times do change. Now that IBM Personal Computer AT-class machines are making their way onto corporate loading docks and sneaking into user offices, the systems game has shifted to an entirely new ballpark. Installing these powerhouses and all that is implied therein — integrated software, mainframe links and local-area networks, for example — requires a substantial amount of technical resource that is rarely found in end-user departments and cannot be sprung loose easily from the computer center.

What's the end result? A slowdown on personal computer orders from the larger business customers who have learned that large systems installed without the blessing of the computer center — those that are not part of the corporate plan and are subject to the same scrutiny as all other major acquisitions — have greater than a 50-50 chance of being suspect and hence labeled too expensive, overpowered and underused.

I don't believe for one moment that the demand for more powerful personal computer-class machines has subsided in the least.

I believe that corporate and government leadership is slowing down the pace of acquisition and spending more time in the long-range planning function to ensure that personal computers are properly integrated into the global information systems strategy.

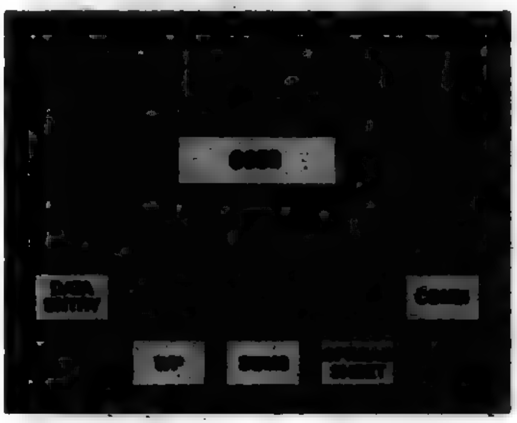
Stone is a Washington, D.C.-based independent management consultant, educator and writer, specializing in DP human communications and personnel development.

This can be the year

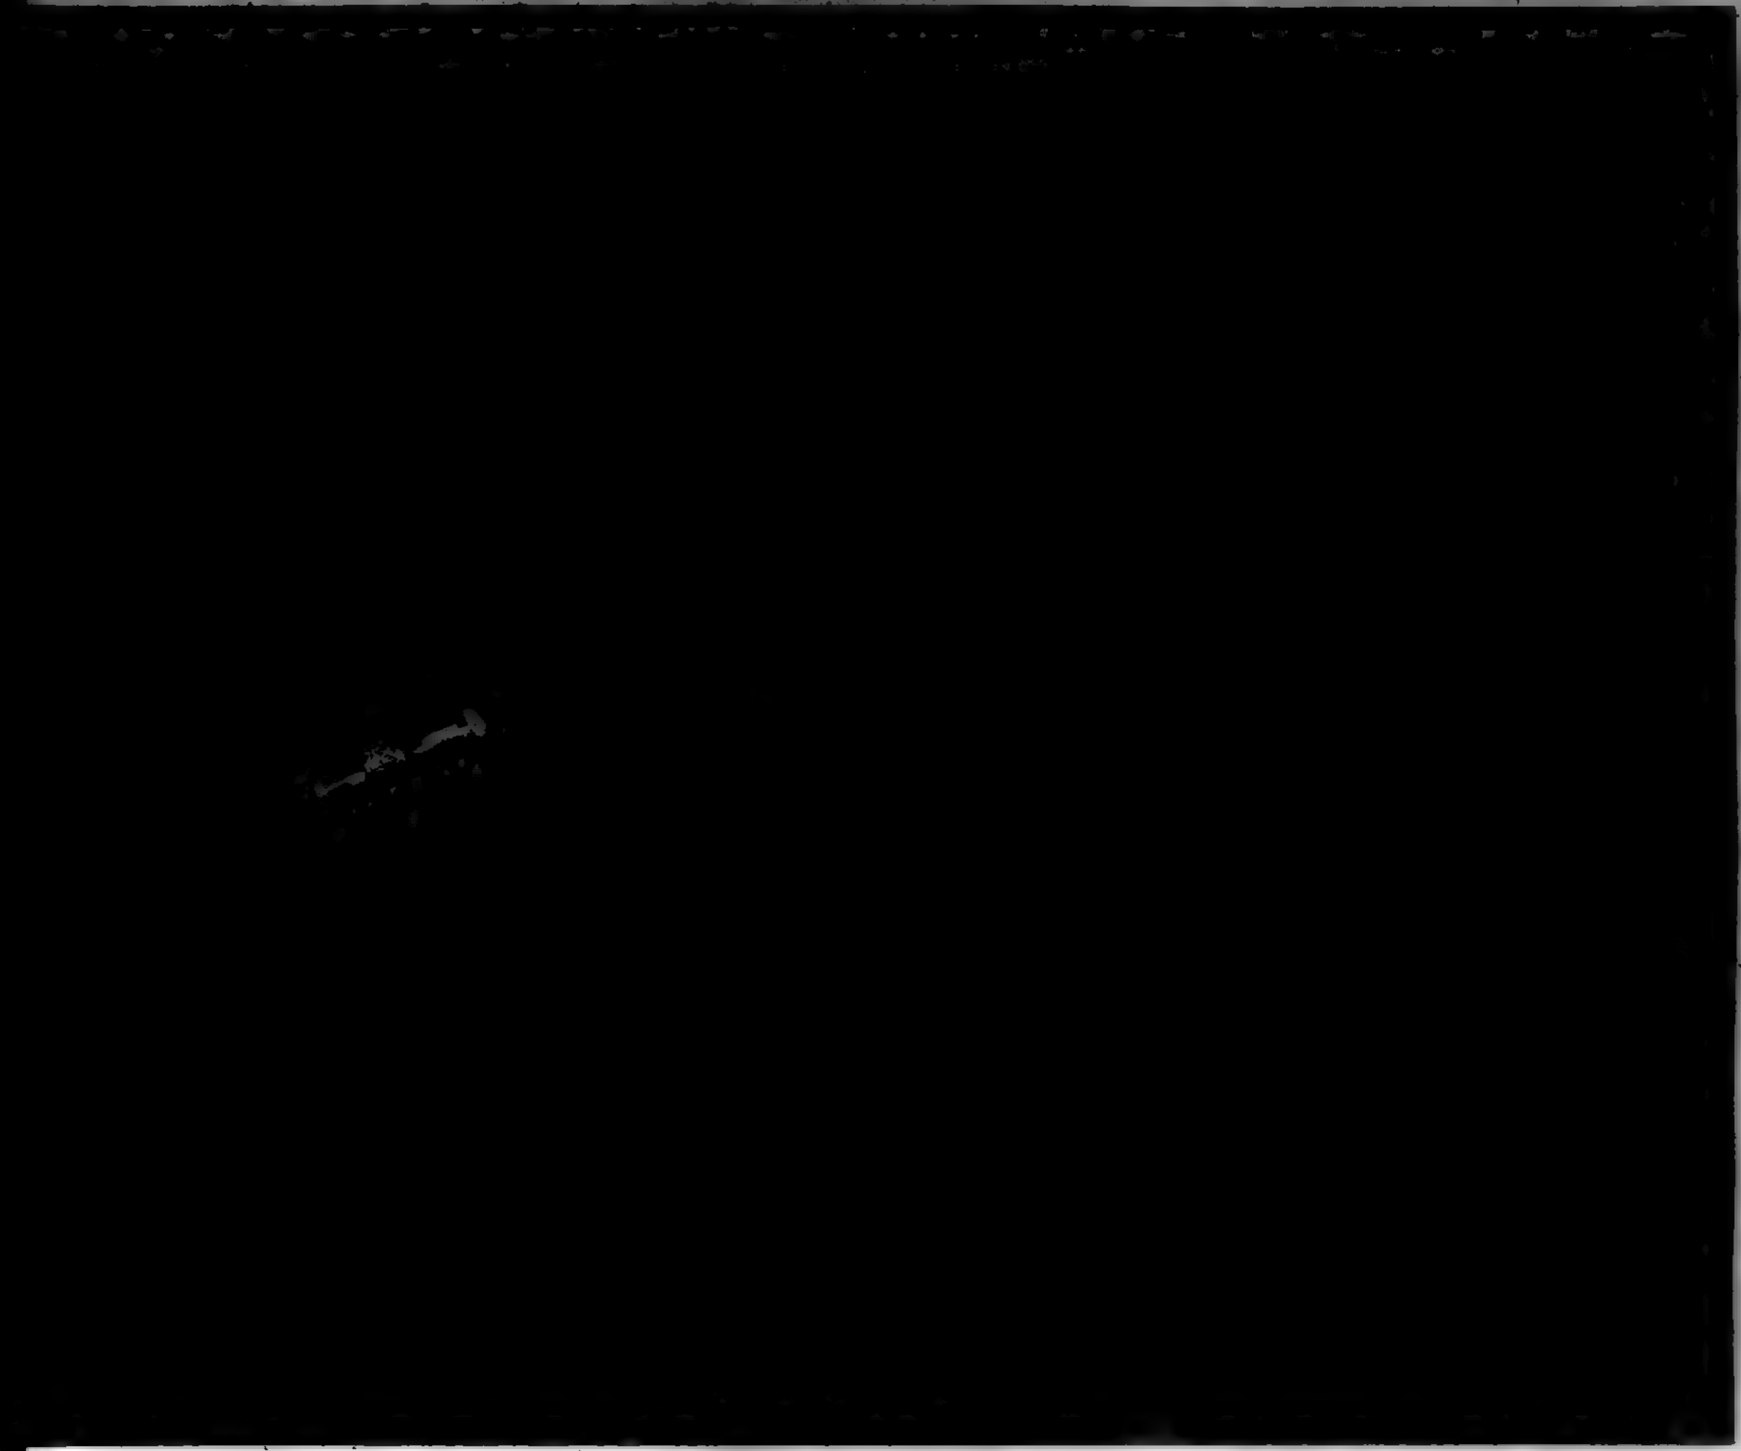
The 6000 Series is the one-system solution that connects end-users, MIS and the mainframe data base.

We call our solution "connectivity." Through our sophisticated IBM communications software, the multi-user, multi-tasking 6000 Series computer system acts as a node. It connects your end-users, your MIS department and the mainframe data base.

Leading edge systems from leading edge silicon. The 6000 Series gives you several big advantages. First, we make the MC68000 microprocessor family—the best UNIX* engine around. Then we vertically integrate the 68000 family into the system. But we don't box you in. The architecture is open, so you can add capability as you need it. And, since the 6000



you make contact.



Series is UNIX-based, you have access to hundreds of software applications.

Software that end-users want and developers need. The 6000 Series comes standard with all the software necessary to get started—spreadsheet, word processor, DBMS, data entry and communications. There's even software for information interchange.

And, to create your own software solutions, we can provide the development tools you need.

Finally, we provide the kind of full service and support that only a Fortune 100 company can offer. Our Customer Support Operation is staffed with more than 1,400 specialists in 175 cities across the country. We're ready 24-hours a day, seven days a week.

We're the contact you need. Prove it to yourself. For a limited time, we'll loan you a 6000 so you can make the contacts *you* need. Call us at 1-800-528-6050, ext. 1599, to see if you qualify. Or write us at Four Phase Systems, 10700 North De Anza Blvd., M/S 51-3E7, Dept. T, Cupertino, CA 95014.

From silicon to systems, we're the one solution.

How to find a new world.

INQUIRE®/Text:

Helps you find what's buried in your database.

No matter what new worlds you're trying to discover, you'll get there more easily if your software includes text management as well as the ability to combine numeric and textual data. Because as often as not, the information you need consists not of numbers, but of a few key phrases buried inside a mountain of written documents.

Until recently, accessing this information was a nightmarish task, largely dependent on paper filing systems and relatively fallible human memory.

But with INQUIRE/Text, the solution is easy. Powerful search commands zip through everything from research reports to correspondence—extracting vital information faster and more accurately than ever before.

The result is a major discovery for most users—and a significant breakthrough in decision support. For the first time, textual information can be retrieved and manipulated as easily as numeric data, then output into up-to-date, integrated management reports.

No wonder INQUIRE/Text users include people on the frontiers of scientific exploration—not to mention lawyers, records managers, engineers, and librarians.

And no wonder more and more organizations are seeing text management as an indispensable element in information systems design, especially considering IBM's directions regarding DISOSS and PROFS.

INQUIRE/Text. It'll broaden your horizons. And just possibly help you conquer a new world.

Early disaster plan pays off

When is the most appropriate time in the applications development process to address the subject of disaster recovery? Ideally, it would be in the early stages of design. But pressure from users for an urgently needed system often causes considerations of system security and recovery to be left until implementation time or later.

It would be wise to raise certain issues in the design stage or even earlier, perhaps during the feasibility study. For instance, if a given system is developed, will the company's business operation depend upon the availability of that system? If so, how long will the business be able to operate without it? Designers and users alike concentrate so intently on the functional design and implementation of the

Firms' software testing practices found lacking

By John Desmond
CW Staff

ORLANDO, Fla. — A majority of companies do not assign staff members to software testing, do not train their staff in testing procedures, do not measure the effectiveness of testing and do not issue reports on test results.

Those were the findings of a 72-company survey on software testing practices conducted by the Quality Assurance Institute at the First National Conference on Software Testing held in Washington, D.C., in November. The institute offers seminars on software maintenance and quality assurance.

William Perry, executive director of the institute, said that "the two most logical steps toward more effective testing are to assign responsibility for testing to one person and to record defects by type and frequency to prevent the recurrence of high-frequency defects."

Respondents to the survey said most programmers have no previous training in testing, that testing needs more management support and that more testing tools are needed to reduce costs and improve quality. Most respondents indicated that no one in their organization was responsible for developing and monitoring the testing process, and few companies devote much development cycle time to testing.

Nearly half the respondents said programs had to meet certain basic requirements before being placed into production. Some requirements were to have users or maintenance personnel approve the programs, review the job control language to ensure it follows standards, present a clean compile of the program, have customers accept the programs or verify the software independently.

Few DP departments formally train their programmers in test methods. But most firms do require applications programmers to develop test plans for systems under development. For the DP departments that measure the effectiveness of testing, testing methods included basic statistics, test review, requirements match, production feedback, regression test streams and discrepancy reporting.

Many organizations perform testing in

IBM unwraps enhanced AS

Features allow facility to run under VM, MVS

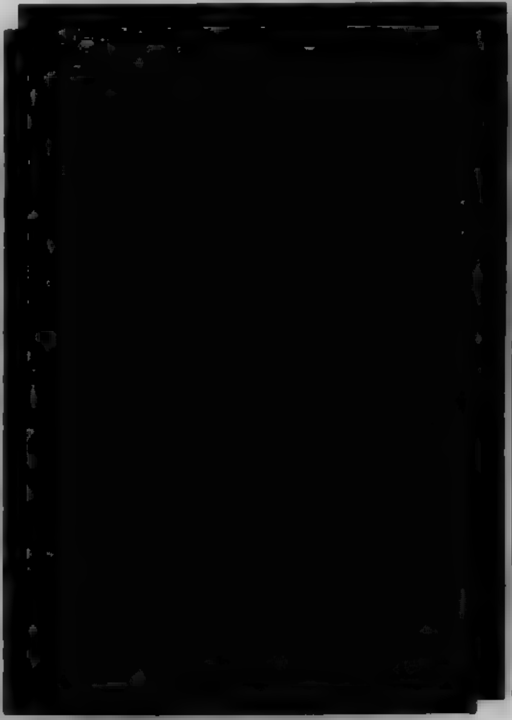
TAMPA, Fla. — IBM has announced an enhanced version of its Application System (AS) interactive applications development facility with features that allow the product to run under IBM's VM and MVS. IBM also introduced a version of AS available through its Information Network remote computing service.

According to a spokesman, AS provides non-DP professionals with commands, conversational facilities and option windows for use in developing decision-support-oriented and other interactive applications. AS Release 3.0, which was formerly called the VM/Application System, can be run under either VM or MVS/TSO, where it co-resides with other TSO applications. It can be called from an IBM ISPF dialog or by another TSO application.

In addition, IBM SQL/DS data bases may be accessed by AS Release 3.0 in VM/SP environments, extending the range of data available to users. Also, the graphics facilities of AS have been extended to allow users to take advantage of functions embodied in IBM's Graphic Data Display Manager (GDDM) Release 4. An added DRAW command allows the user to create and display graphics without knowing the syntax or commands of the AS Graph language.

In conjunction with Release 4 of GDDM, AS Release 3.0 provides support for the IBM 3270 Personal Computer/G and 3270 Personal Computer/GX. Release 3.0 also provides extended project control and language editing facilities, enhanced statistical capabilities, larger file structures and additional language support.

See AS page 50



otlight

Remote Printing at Low Cost!!!

BIMSPOOL retrieves print output from the DOS/VSE POWER spooling queue and prints it on a local or remote 3270 terminal printer via CICS. This provides RJE printing without its expensive equipment cost. (Often the 3270 printers are already in place, and lightly used.)

CRT functions are provided to display queues, manage print tasks, and to view output listings instead of or prior to printing.

Hundreds of users worldwide, since 1979. BIM 'wrote the book' on spooling to terminal printers from POWER queues.

Call for full documentation or free 30 day trial.

Price: $4000, $2000/yr, or $200/mo. BIMSPOOL is also included in several BIM product group offerings.

BIM has 15 system software products for improving productivity and use of DOS/VSE, CS, and CICS, and also performs systems programming consulting. Marketing agents in most countries.

DBC/1012 tool upgraded

LOS ANGELES — Teradata Corp. has announced enhancements to the software for its DBC/1012 Data Base Computer system. Release 3.0 of the software reportedly facilitates data sharing between IBM's MVS and VM operating systems.

Enhancements include interface facilities for IBM VM/SP, a PL/I Preprocessor and DBC/SQL, a relational syntax compatible with IBM's SQL data manipulation language. The DBC/1012 is a special-purpose data base computer that attaches to one or more IBM mainframes and plug-compatible equivalents.

The VM host software facilities allow users of one or more VM mainframes to access relational data bases stored on the DBC/1012. The features of the VM interface are virtually identical to those supported for MVS, so that DBC/1012 users under MVS or VM need no retraining, the vendor said.

The PL/I preprocessor permits high-level, set-oriented relational data base requests to be embedded within PL/I source programs without the need for calls or special linkages.

The price for a complete host software for the DBC/1012, including Release 3.0, the PL/I and Cobol preprocessors, batch report writer and the MVS/CICS interface, is $60,000.

Teradata is located at 12945 Jefferson Blvd., Los Angeles, Calif. 90066.

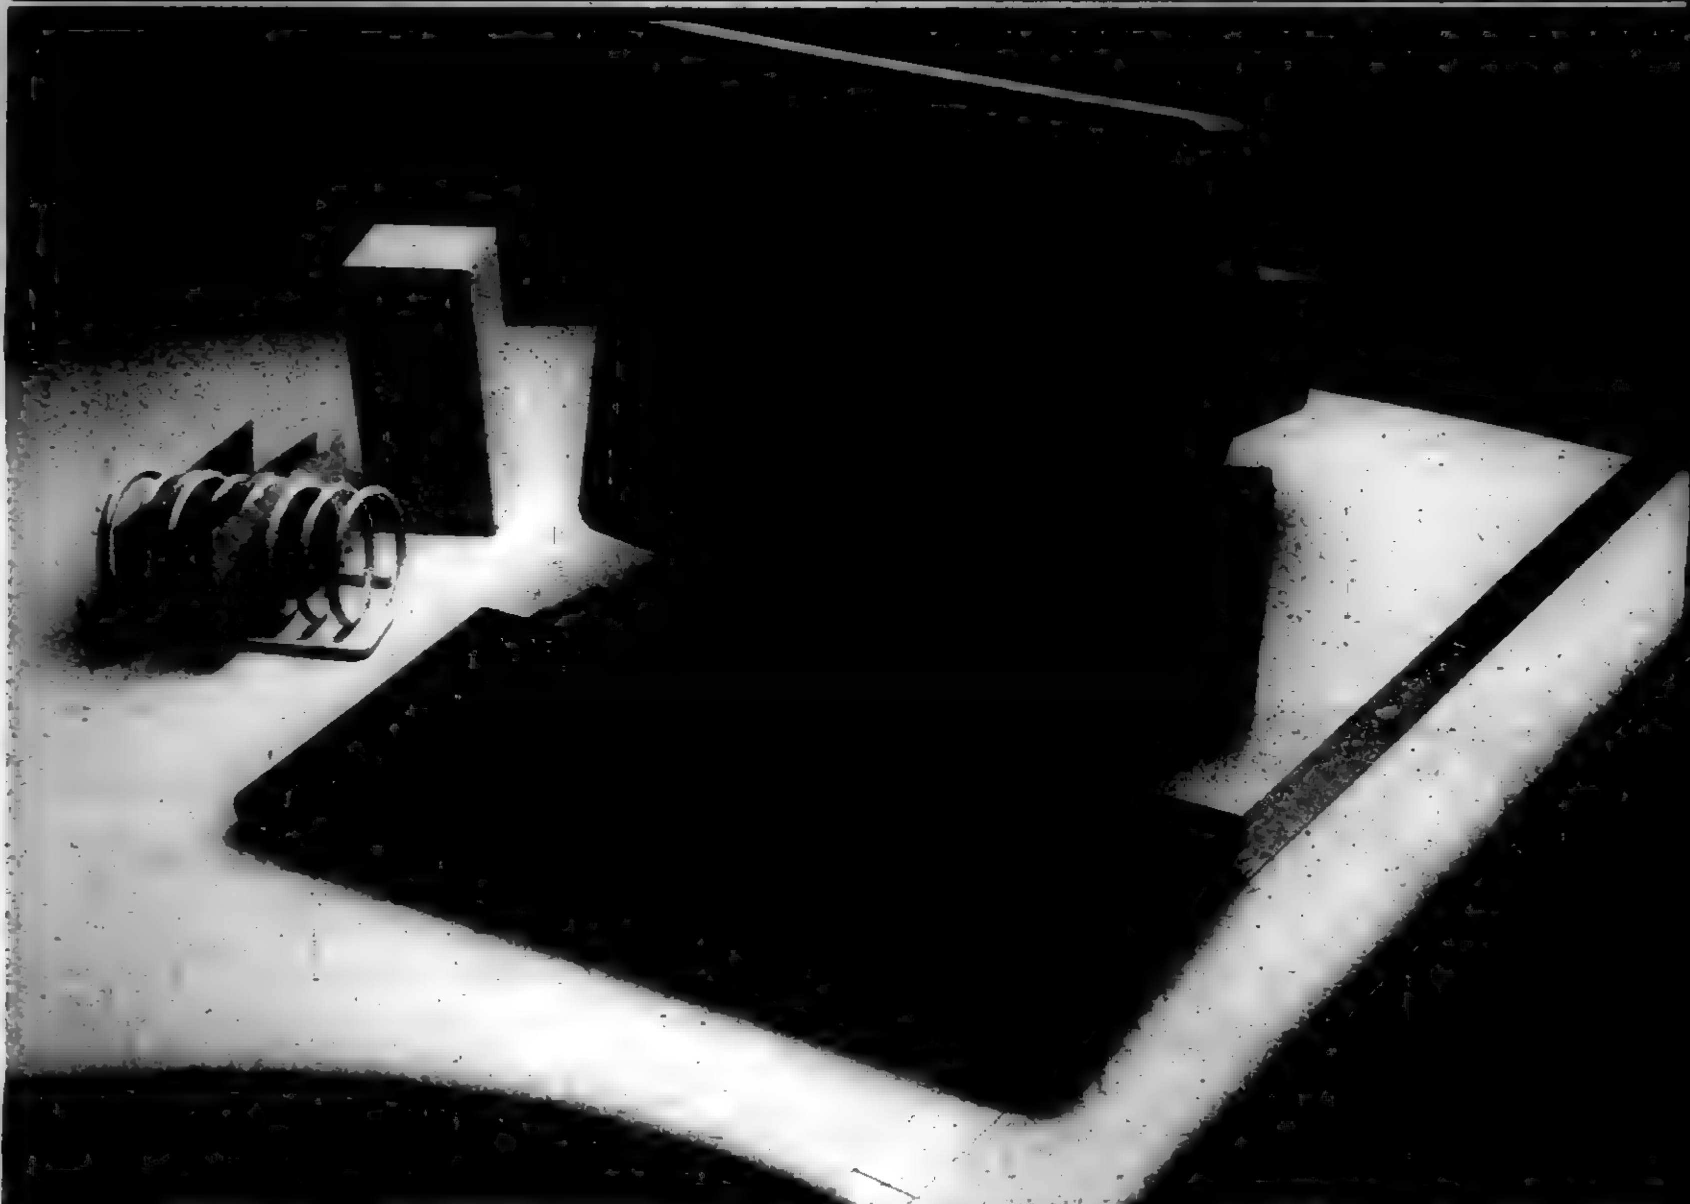
Pick release out for XA units

ROSEMONT, Ill. — Systems Management, Inc. has announced Pick/XA, a version of Pick Systems' Pick operating system that runs in IBM Extended Architecture (XA) environments.

Pick/XA is said to allow IBM mainframes to use up to 2G bytes of virtual and real storage and an increased number of I/O channels.

Pick/XA runs as a guest operating system under IBM's VM/XA or on any XA computer, including the 4381, 3080 and the recently introduced 3090 series. Pick/XA will support all peripheral devices supported by VM/XA. Pick/XA is compatible with Systems Management's existing Pick/370 operating system product. Pick/XA is now undergoing alpha testing and is scheduled for release in the third quarter of 1985. Prices have yet to be announced.

Systems Management is located at 6900 N. River Road, Rosemont, Ill. 60018.



Joiner enhances Jnet for DEC VAX/VMS

MADISON, Wis. — Joiner Associates, Inc. has announced Version 2.0 of its Jnet networking software for Digital Equipment Corp. VAX/VMS systems. Version 2.0 links DEC's All-in-One Office Menu and IBM's Professional Office System (Profs) to provide electronic messaging.

Version 2.0 succeeds Version 1.2, which allows transfer between VAX/VMS and IBM/VM systems. According to a spokesman, Version 2.0 allows bidirectional mail exchange between VMSmail or All-In-One users on the VAX and Profs or CMS Note users on the IBM. The translation between the different mail types is automatic and hidden from the user. IBM and VAX users do not need to know if the addressee's computer is an IBM or VAX system.

Version 2.0 of Jnet features a synchronous device driver for DEC's DMF32 interface, increasing the line speed to 19.2K bit/sec. The direct memory access feature of the DMF32 reduces CPU use to one-quarter that of DEC's DUP11 interface card, supported in an earlier version.

Version 2.0 also includes a Receive command to process incoming files. Receive provides a self-contained interface for automatic recognition and translation of binary or text files in IBM's Disk Dump and Netdata formats.

Jnet employs the protocols used by IBM RSCS Networking Program Product, giving VAX system users the same network communications capabilities as VM/CMS users. Electronic mail, file transfer, batch job submission, remote printing and management of RSCS networks are supported.

No special training is required to use Jnet to originate file transfers, mail and messages. Prices for Version 2.0 of Jnet range from $1,200 for the Microvax I to $14,500 for the VAX 8600.

Joiner Associates can be reached through P.O. Box 5445, 732 N. Midvale Blvd., Madison, Wis. 53705.

SYSTEMS SOFTWARE

■ **Software Corp. of America has announced Fastdasd Interactive Interface, the latest version of its Dasd performance and monitoring system. The package runs in IBM MVS environments.**

Fastdasd reportedly reduces Dasd contention by analyzing seek activity and recommending optimal data set placement to improve on-line and batch turnaround time. The product features an Interactive Interface option for IBM's ISPF, said to enhance that product's capabilities.

The Interactive Interface employs a series of panels that prompt the user for parameters necessary to create a collection and analysis job stream. Fastdasd allows users to modify reorganization recommendations on-line and see a simulation of resulting improvements. All Fastdasd reports can be reviewed on-line.

Pricing for Fastdasd Interactive Interface begins at $8,650 for a single-CPU permanent license.

Software Corp. of America, 960 Herndon Pkwy., Herndon, Va. 22070.

■ **VM Software, Inc. has announced Version 1.1 of its VMcenter software, which provides a single source of control for maximizing IBM VM efficiency.**

Version 1.1 features a minidisk utilization analysis utility for IBM mainframes running VM/CMS. The utility reportedly provides users with reporting capabilities that specify actions for recovering unused minidisk space. The utility also enables users to ensure optimal disk use by analyzing and reporting on selected volumes.

The VMcenter product issues 23 separate reports on a range of minidisk use information. The amount of space to be reclaimed is prescribed. A bar graph shows the number of minidisks at various use levels, giving a snapshot of Dasd utilization.

The price for VMcenter Release 1.1 is $33,000.

VM Software, Suite 355, 2070 Chain Bridge Road, Vienna, Va. 22180.

Enhanced ADR/Vollie introduced

PRINCETON, N.J. — Applied Data Research, Inc. (ADR) has introduced Release 3.4 of ADR/Vollie, its program development system for IBM's DOS/VSE operating system. The product now includes support for IBM's VSE/SP 2, a Virtual Machine Interface and batch utility enhancements.

According to ADR, the Virtual Machine Interface allows ADR/Vollie users to query IBM VM operating system queues and pass Control Program commands directly to the operating system. Query responses are returned to the Vollie user at the terminal.

ADR/Vollie's Batch Utility for its on-line library now allows the Vollie Table to be reloaded into the shared virtual area without an initial program load. The batch utility can now print member content directly from a backup file, rename a group of members or change a member control index in one step, according to the vendor.

Vollie, Release 3.4, is priced at $20,600.

Applied Data Research is located at Route 206 & Orchard Road, CN-8, Princeton, N.J. 08540.

SOFTWARE & SERVICES

■ Software Concepts, Inc. has announced Quick-Tran, a data compression program for IBM OS, DOS and CMS users.

Using Quick-Tran, users can increase data transmission speeds from four to 20 times without equipment upgrades, according to the vendor. Execution parameters can be adjusted to either maximize compression efficiency or minimize CPU time needed to compress data.

A batch utility is run to compress or decompress the data. Data security is ensured by having Quick-Tran on the receiving end decompressing data. A spokesman said files are reduced from 5% to 25% of original size with the compression algorithm.

Compressing data before transmission cuts communications costs, and compressing data on infrequently used files saves disk space, the vendor said.

Quick-Tran is priced at $3,500, the vendor said.

Software Concepts, Suite 1450, 250 Piedmont Ave., N.E., Atlanta, Ga. 30308.

PRODUCTIVITY AIDS

■ Database Technology Corp. has announced the Fast Reorganization Utility (FRU) for its Com-Pres/IMS data compression software for management of IBM's IMS data base management system.

FRU offers users of compressed data bases the ability to unload and reload their compressed data bypassing the normal expansion and recompression process, a spokesman said. In beta tests, users saved up to 70% of normal execution time and up to 50% of CPU time, the vendor said.

FRU is an optional component of Com-Pres/IMS, which is licensed for $3,000 per CPU processing unit.

Database Technology, Suite G-6, 21 N. Skokie Highway, Lake Bluff, Ill. 60044.

■ Spectrum International, Inc. has announced a manual and two software packages for integrating project management with fourth-generation language tools in system development. The products are intended to increase system development productivity and reduce applications backlogs.

The products are Spectrum/Productivity, a manual with a project management methodology; Spectrum/Estimator; and Spectrum/Documentor.

Spectrum/Estimator is an on-line interactive tool intended for developing estimates and plans for systems development projects. Spectrum/Documentor is an online tool for executing project task deliverables and creating system documentation.

The Spectrum/Productivity manual contains procedures for the use of fourth-generation language tools such as screen developers, report generators, graphics and design aids. It contains guidelines for project planning and estimating and descriptions of how to perform each development task.

Spectrum/Documentor runs in IBM TSO/CMS environments; Spectrum/Estimator, written in Martin Marietta Data Systems' Ramis II fourth-generation language, also runs in IBM TSO/CMS environments.

Prices for Spectrum/Productivity range from $15,000 to $30,000; the price for Spectrum/Estimator is $23,000; and the price for Spectrum/Documentation is $4,000.

Spectrum International, Suite 150, 6101 W. Centinela Ave., Culver City, Calif. 90230.

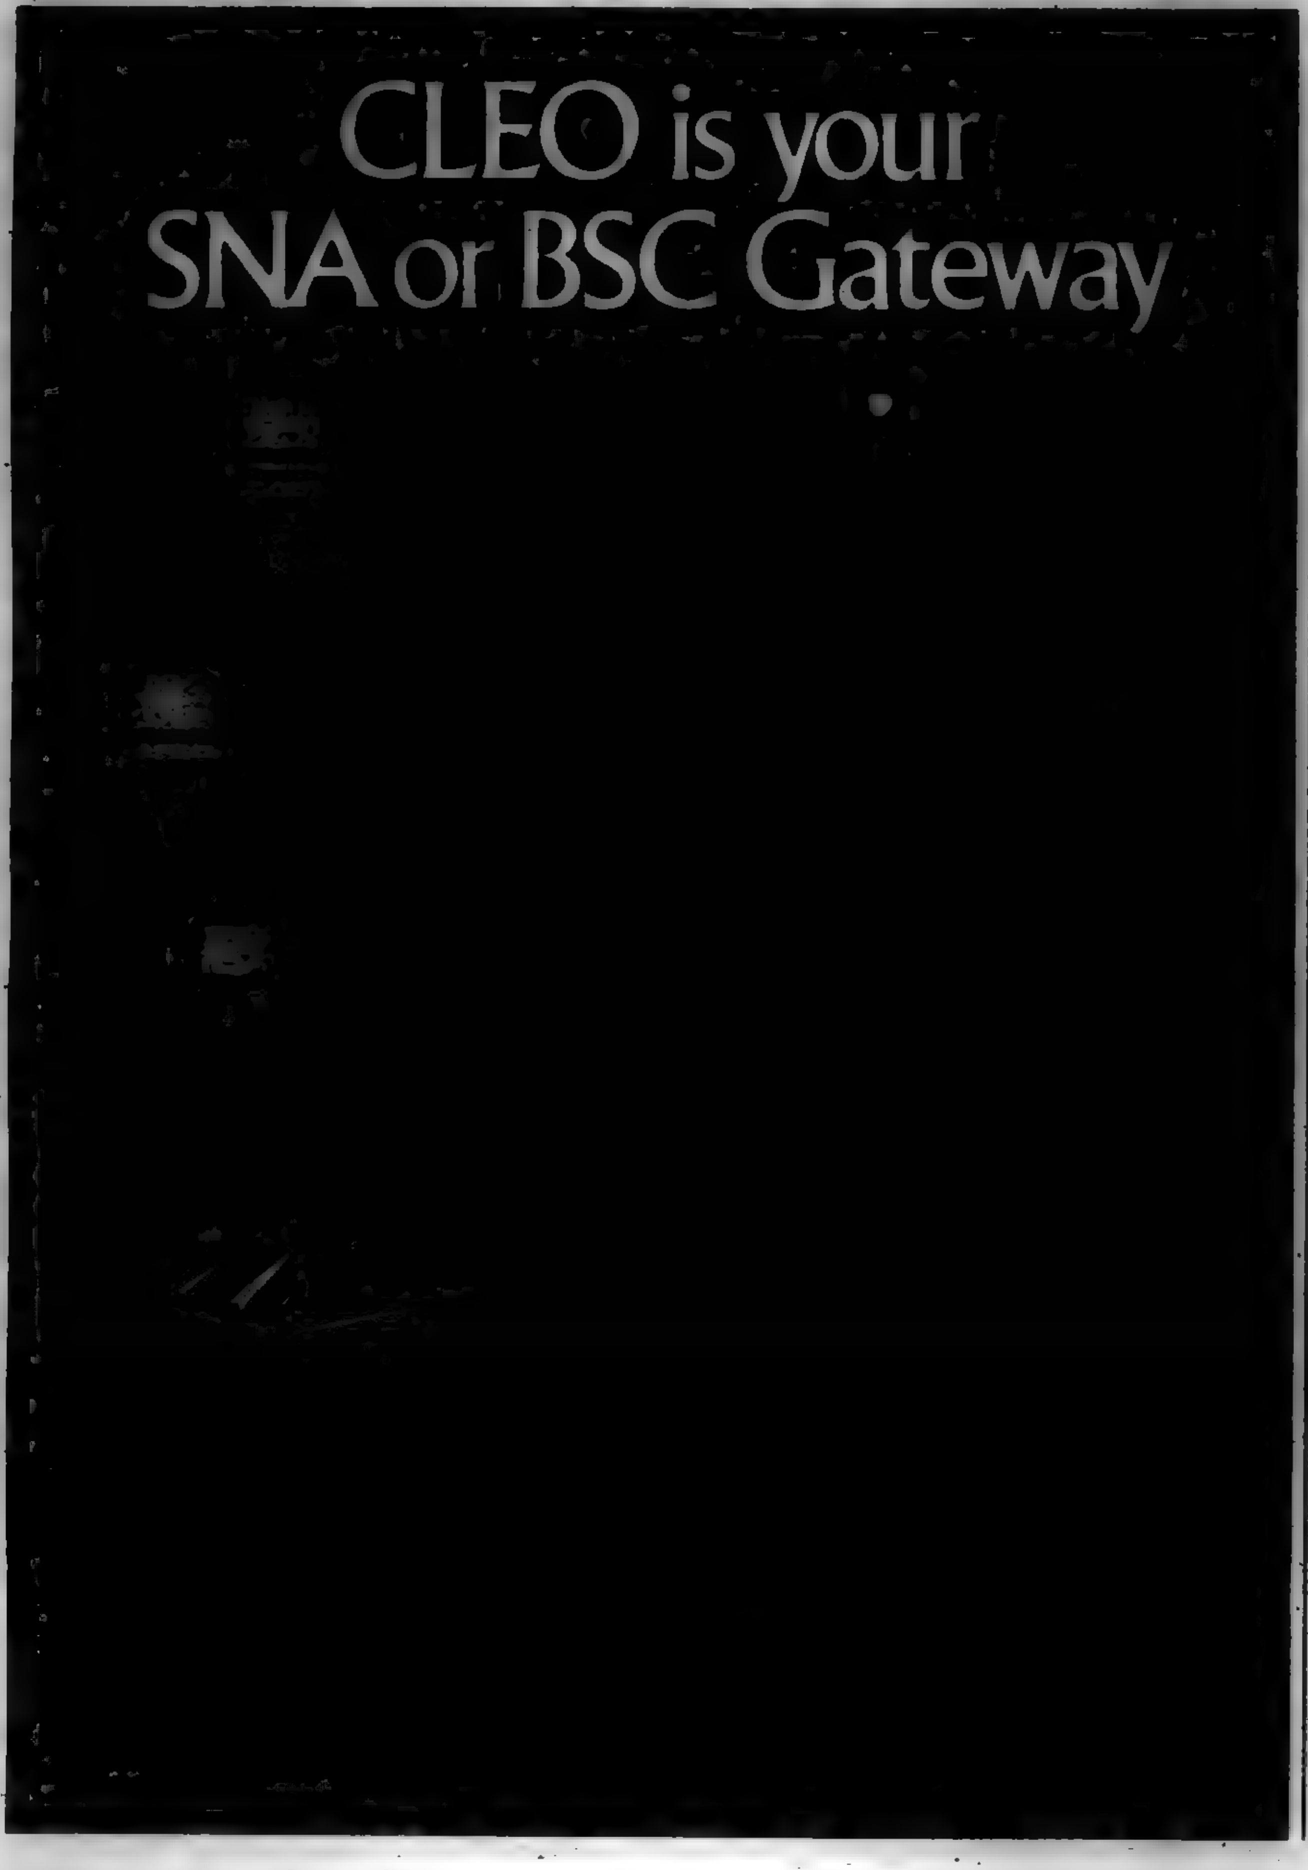
APPLICATION PACKAGES

McDonnell Douglas Automation Co. has announced that its Unigraphics II and Robotics software is available for Digital Equipment Corp.'s Microvax II.

Unigraphics is for computer-aided engineering, design and manufacturing. Unigrapics II features three-dimensional capabilities and an integrated data base, a spokesman said. Robotics software, which operates with Unigraphics, is used to simulate as well as program robots.

The price for the Microvax II with Unigraphics II software is approximately $65,000, according to the vendor.

McDonnell Douglas, 325 McDonnell Blvd., Hazelwood, Mo. 63042.



■ Marcam Data Systems Corp. has announced the Pivot RPGIII order processing, invoicing and sales analysis system for the IBM System/38.

Intended as an enhancement module for IBM's Mapics, Pivot can also be used as a stand-alone package, the vendor said.

Pivot provides on-line control of order processing from initial inquiry and order entry to final tracking of an order after shipment. The product also generates sales and commission analysis reports and updates general ledger and accounts receivable systems. The package can automatically print packing lists, bills of lading, shipping labels and invoices.

Pivot costs $4,200.

Marcam, 19 Crawford St., Needham, Mass. 02192.

■ Perkin-Elmer Corp. has announced that the SPM portfolio management system developed by TNL Data Services, Inc. of New York is now available for PE Series 3200 superminicomputers.

SPM can be used on Series 3200 superminis with the company's OS/32 operating system in Reliance environments. Reliance is PE's transaction processing and data base management system.

SPM provides tools for financial institutions, brokerage houses, family offices, private investment analysts and pension and profit planning departments. The system facilitates portfolio analysis and evaluation, stock and bond trade control, retirement plan control, trust management, foreign exchange trades and control, and dividends and split control.

The base price for SPM is $25,000, excluding customization.

PE, Data Systems Group, 2 Crescent Place, Oceanport, N.J. 07757.

■ Lasine Financial Solutions, Inc. has introduced a time management application for IBM's System/34 and 36.

The Employee Time Clock is a time management system designed to replace employee time card systems and perform cost analysis by job function, the vendor said.

To operate, employees enter their employee number at a terminal to clock in or out. The system generates a time card that incorporates time rounding, holiday considerations, job costing and other functions.

It costs $390.

Lasine Financial Solutions, 5224 Goddard Ave., Orlando, Fla. 32810.

LANGUAGES

■ Verdix Corp. has announced U.S. Department of Defense validation of its Ada compiler for Digital Equipment Corp.'s Ultrix operating system on DEC's VAX computers.

The Verdix Ada Development System (Vads) was validated for the Unix 4.2 BSD operating system in December 1984. The Ada compiler is included in the Vads system and can translate Ada language programs into instructions that can be understood by the computer.

Prices for the compiler range from $7,500 for DEC's Microvax to $30,000 for the VAX-11/785.

Verdix, 7655 Old Springhouse Road, McLean, Va. 22102.

REMOTE COMPUTING SERVICES

■ Aggressive Concepts has announced a data transfer service available for 200 different microcomputers and minicomputers, including the IBM System/34, 36 and 38 and the Hewlett-Packard Co. Series 125 and 9120.

The service reportedly provides data transfers between incompatible systems and data transfers to tape for microfiche production, long-term data storage and migration to new hardware or software.

Price for the service ranges between $8 and $20 per megabyte of data.

Aggressive Concepts, Empire Park, Suite B-210, 1325 S. Colorado Blvd., Denver, Colo. 80222.

■ General Electric Information Services Co. (Geisco) has announced that its Mark 3000 remote computing service now offers IBM's VM/CMS operating system.

According to a spokesman, the Mark 3000 Service VM provides users with development languages, data base and prototyping tools, full screen editors and utilities. Information management tools enables users to perform data entry, organization retrieval and reporting, create electronic spreadsheets and graphics. Users can also perform decision support, document preparation and electronic mail functions.

Ascii CRTs and IBM Personal Computers can access the Mark 3000 Service VM through Geisco's IBM 3270 simulation mode over dial-up lines, the vendor said.

Mark 3000 Service VM includes a communications register unit (CRU) processing algorithm with a billing rate of 65 cents/CRU during peak hours and $1.05/megabyte/day for on-line storage.

Geisco, 401 N. Washington St., Rockville, Md. 20850.

■ McDonnell Douglas Remote Computing Services Co. has announced an interface that links its Multiple Report Creation System (MRCS) with Information Builders, Inc.'s Focus fourth-generation language. MRCS is for use with IBM operating systems.

According to a spokesman, with the added interface MRCS users are no longer restricted to separate passes of the Focus data bases each time individual queries and reports

OLÉ™ On-Line Encyclopedia for DOS Users

OLÉ is the complete On-Line Encyclopedia that makes understanding DOS quick and simple. In fact, with OLÉ you can even operate in DOS without a manual!

On-line DOS help is just a keystroke away. OLÉ is organized both by subjects and alphabetically by key words. Beginners will love it for learning broad DOS areas; experienced users will want it for quick-referencing complex commands. It's the one program no DOS user can afford to be without! And OLÉ is pure pleasure to use, with its colorful graphics, simple annotations and eye-catching animation.

OLÉ will eliminate or greatly reduce your users' education and support time. It will free your company's "resident DOS authority" to spend time on more important things. And of course, make ALL your DOS users more productive — for a better return on your company's MIS investment.

So get OLÉ ... the complete DOS reference system no user should be without.

Cuts through all the confusion in the DOS User's Manual.

OLÉ

are needed. MRCS reportedly handles multiple requests and can produce any combination of files, data bases and reports in one pass of Focus data bases.

The price for MRCS ranges from $2,500 for users with IBM's VM/CMS operating systems to $4,000 for users with IBM's MVS/XA.

McDonnell Douglas Information Systems Group, 325 McDonnell Blvd., Hazelwood, Mo. 63042.

■ Litton Computer Services has released an option for its Excecutation micro-to-mainframe communications software that reportedly allows users to transfer only the updated portions of files rather than retransferring entire files to record changes.

Called Version Control Facility (VCF), the software compares two versions of a microcomputer program, creates a file containing the updates, transmits the update file to any IBM Personal Computer, Personal Computer XT or AT with access to Litton's remote computing services and combines the update file with the previous version.

A site licensing agreement for VCF costs $5,000.

Litton Computer Services, 6 Kingsbridge Road, Fairfield, N.J. 07006.

ON-LINE DATA BASES

■ Informatics General Corp. has announced Release 2.1 of its Distributed Data Processing System (DDPS) for distributors and wholesalers that use the company's Distribution IV on-line subscription service.

The enhanced DDPS features expanded order processing and scheduling capabilities using an interactive reserved order system, local pricing and invoicing capabilities, an optional report retrieval system and a buyer's workstation.

Distribution IV is a management and control system for medium to large distributors accessed by customers through on-site computer terminals.

The price for DDPS ranges from $20,000 to $50,000, based on the number of modules purchased. Distribution IV ranges in price from $2,500 to $3,000 per month.

Informatics General, 21031 Ventura Blvd., Woodland Hills, Calif. 91364.

So you've been put in charge of making sure data flows smoothly to and from your company's remote offices.

You could continue the expensive practice of transmitting strictly by modem. (The phone company would like that very much.)

Or you can cut costs by cutting phone lines.

With Codex's complete line of statistical multiplexers.

You see, what a Codex mux does is take data that used to be transmitted over two, three, even sixteen lines and transmit it over just one. Doing this not only decreases phone line costs, but increases operating efficiency as well.

In fact, a Codex mux can save your company considerable time and money. Even if you're only networking as few as two terminals.

Later, when your needs expand, so can your network. Codex has muxes that can support anywhere from just a few terminals to several hundred. Whether they're graphics terminals, printers, pc's or CRT's.

A Codex applications expert will gladly tell you more about the advantages of taking away your computer's phones.

Get us on the line. For more information, Dial 800-426-1212. **Extension 240.** Or write Codex Corporation,

GILLIAM

from page 41

system that they ignore the consequences of system outages. If company operations will be severely impaired or curtailed when the system is unavailable, then a disaster recovery plan is necessary.

In the early days of computing, most applications operated in batch mode. Thus, the process of backup and recovery was fairly straightforward. Outages of a short duration, from a few minutes to a few hours, usually resulted in data center personnel just waiting until the completion of diagnoses and repairs and the restoration of the system. Recovery usually called for rewinding the tapes and restarting the job.

The disaster recovery plan for batch systems relied on off-site backup copies of the operating system, applications program libraries and data files plus a plan for off-site operation at another nearby data center. The backup data center was often another company with similar hardware, with which a mutual assistance agreement had been arranged.

Alternately, batch recovery plans involved a contract for a shell site, that is, an empty computer room where emergency hardware could be installed for interim use until permanent data center operations were restored.

Today, most companies have moved into the world of on-line systems and users are often absolutely dependent on the availability of an application to perform required tasks. This is especially true when the system serves the customer directly or controls some physical process.

Choices for on-line systems recovery

What are the alternatives available for on-line systems recovery? The first consideration in many cases is how well and for how long the business can survive with manual handling of the system services. For example, could customers be served using manual forms and handwritten receipts for some period of time, with master files updated at night or at a later date? Could physical processes be controlled by humans for an interim period until the system is restored?

Second, some companies have multiple data centers with similar or compatible computer systems. In this case, intracompany backup is possible with appropriate telecommunications arrangements and off-site backup of programs and files.

There now exist several companies that offer, for a fee, the opportunity to move your processing to one of their data centers if disaster strikes. The data center would have a computer similar or compatible with yours sitting in a ready state, which is why the facilities are called hot sites. But even this alternative requires that some special arrangements be made ahead of time, such as installing switchable telecommunications lines, and users must allow for a time delay from the outage point until the backup system is operational.

For at least one major line of medium-capacity systems there exists a mobile hot site, an operational system in a van, which can be moved to the customer site on short notice. Of course, as in the case of shell sites and hot sites, a prior agreement is required to use these facilities.

Once you have determined that a backup and recovery plan is needed and that at least one of the alternatives is feasible, the detailed disaster recovery plan can be prepared. Of course, having access to a hot site or any other alternative is useless unless you have backup copies of the programs and data files.

The failure of on-line systems while in operation presents a difficult situation in that you have to recover from the point of failure without losing data. Many of the larger and more advanced data base management systems offer transaction logging to a disk or tape to allow real-time recovery from system failures. But should a disaster strike and destroy the data center, the logging data tape would also be lost and only the information stored off-site would be available.

The disaster recovery planning process should include the identification of applications that are vital to the company's ability to continue in business. From there, the plan will explain the steps to recovery and the responsibilities of all the people involved. Usually, a number of recovery teams are formed to provide an orderly and systematic recovery; first to the interim site and then to the rebuilt, permanent site.

Keep in mind that if the data center is destroyed, there is also the possibility that terminals, documentation, user files and the workplace will also be wiped out. An alternate work site for both the user and the information systems group should be identified along with a plan for needed facilities and resources.

A well-prepared disaster recovery plan in an attractive notebook sitting on a shelf, and contracts to provide backup processing do not constitute a complete plan. If at all possible, the disaster recovery plan should be tested by switching processing to the hot site computer and proving to management that recovery can be achieved within the desired time frame.

Also, as systems, staff and facilities change, the recovery plan must be kept up to date if is to meet the objectives set forth by management.

Sterling Software produces the best DASD Management System in the world

. . . and we can prove it.

DMS/OS™ the DASD Management System from Sterling Software Marketing, has consistently been rated highest for overall user satisfaction in leading independent surveys. DMS/OS users— worldwide— trust our product to manage approximately 489,935 volumes of data a day.

15,309,000,000,000 bytes of data daily . . .
That's a lot of user confidence, and here is why.

DMS/OS — The First $25 Million Seller
In DASD Management
In 1984, DMS/OS became the first system software package for data management to top a total $25 million in sales.

1,000 users give their reasons for choosing DMS/OS

- Easy to install — Easy to use
- Keep more data on-line, using less space
- On-line reporting for fast decisions
- Dramatically reduces backup and recovery time
- Supports all standard data set organizations
- Fast data accessibility, regardless of medium
- Adaptability to new hardware/software systems
- Automates migration to 3380's
- Reduces personnel costs

We Listen To Our Users
When DMS/OS users tell us about their data management needs, we listen — and respond with enhancements that fit those requirements. When you call for technical assistance, implementation advice — or any question at all — you are talking to a key member of the DMS/OS development team.

No matter what hardware or software changes occur in your operating environment, DMS/OS keeps pace . . . continuing to evolve . . . always state of the art.

Let Us Prove It To You . . .
With A FREE 30-Day Evaluation
Sterling Software Marketing offers a free DMS/OS evaluation. We'll show you why we are the proven leader . . . You have nothing to lose, and everything to gain in DASD space.

For your FREE DMS/OS evaluation call today 800-824-8512. In California, Alaska, Hawaii, and Canada call collect 916-635-5535.

TEST from page 41

more than one phase of the development life cycle. Most testing was done in the acceptance phase, followed by the programming phase, the conversion/installation phase, the design phase and the requirements phase.

Formal testing procedures

Most data processing departments have a formal procedure for testing changes made during maintenance of programs. Users were most often responsible for testing the functions of applications once in production. Others responsible were independent test groups, data processing quality assurance, electronic data processing auditors and systems analysts/programmers.

While most companies kept no record of the defects uncovered in testing, a majority did have a formal system for correcting the defects. In order of priority, errors corrected were fatal errors that stopped the system, nonfatal errors and faults that affected a capability but could be tolerated.

Test strategies for on-line data base systems differed from those employed for batch systems. Some users commented that on-line system testing was more sophisticated and more critically reviewed, that on-line systems were tested with an interactive test tool and that users were more involved in testing on-line systems.

A variety of testing documents were prepared by the companies. The documents prepared in order of frequency were system test plans, a list of test cases, a report on testing and a program test plan. In half the companies, test documentation was carried into the maintenance phase for use in testing program changes.

Users listed several ways in which testing could be improved in their organizations. These ways included planning for testing, adhering to test standards, improving requirements testing, incorporating test procedures throughout the system life cycle and winning more management support for testing.

The survey results cost $5 and are available from the Quality Assurance Institute, which is located at 9222 Bay Point Drive, Orlando, Fla. 32819.

AS from page 41

AS can be licensed for an initial charge, monthly charges or for a one-time charge. The initial charge is $53,000, and the monthly charge is based on the number of concurrently signed on terminal users (CSTU). The monthly charge ranges from $1,700 for 15 CSTUs to $8,025 for 120 CSTUs. A one-time charge is also based on the number of CSTUs. It ranges from $101,500 for 15 CSTUs to $292,500 for 120 CSTUs, the vendor said.

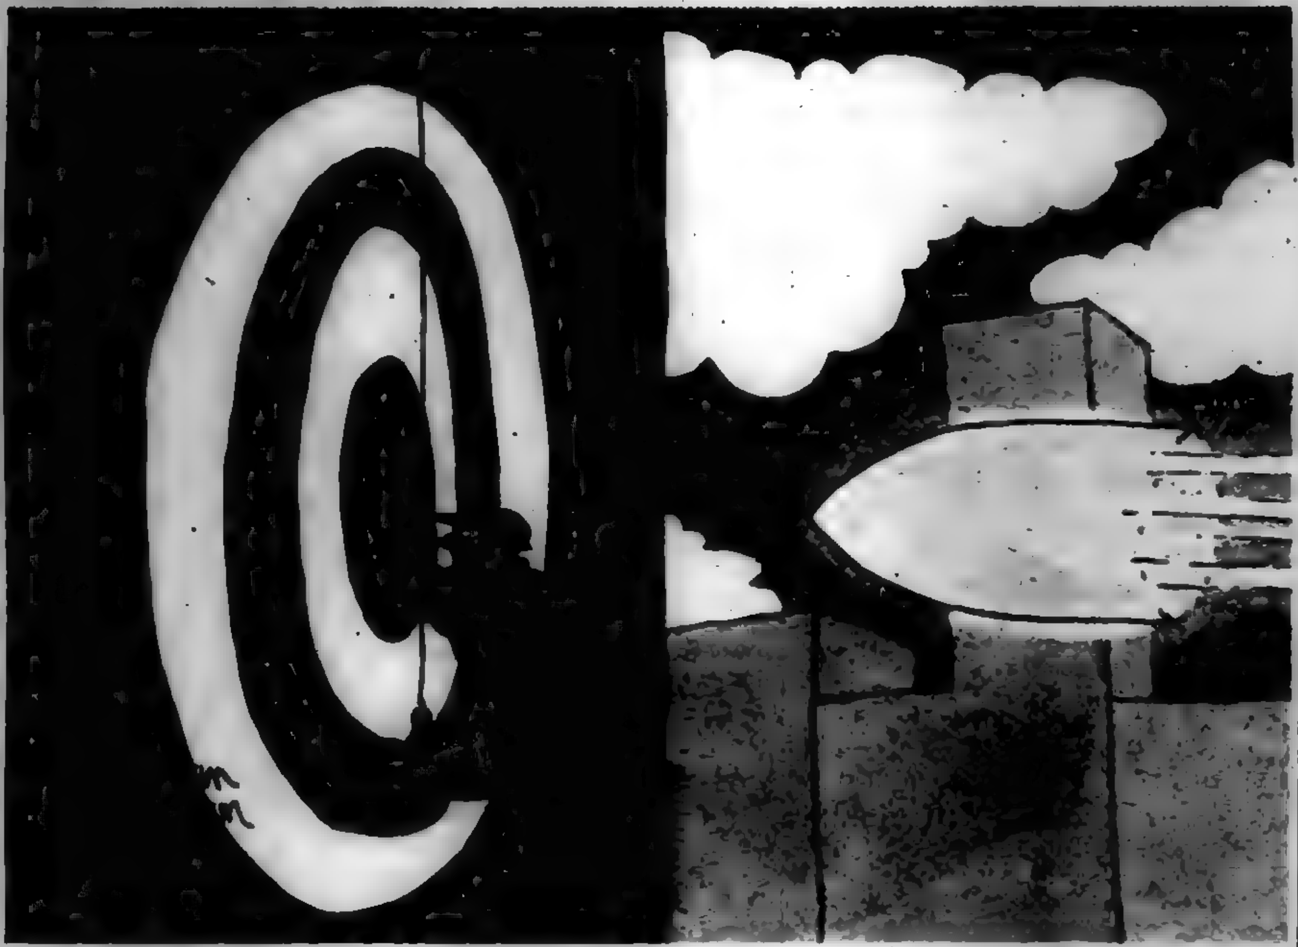
IBM's Information Network group also announced AS Release 7.0, which can be accessed via that remote computing service beginning in mid-November.

Release 7.0 includes licensed and proprietary programs developed to execute on the Information Network, the spokesman said. It can reportedly be accessed via terminals through either leased or dial-up communications lines.

Release 7.0 reportedly features extended high-resolution graphics and statistical capabilities, improved project control and language editing facilities, larger file structures and wider language support. AS Release 7.0 charges are based on use, the vendor said.

For further information, IBM can be reached through P.O. Box 30021, 3405 W. Buffalo Ave., Tampa, Fla. 33630.

"Do you have a generic model?"



Some people just ask for trouble.

Isn't it amazing just how many people go around looking for trouble?

Why, we're willing to bet there are people in your DP department this very minute flirting with disaster.

They're running the risk of a JCL error, a network breakdown, or some other equally unpleasant catastrophe bringing the whole kit and caboodle to a screeching halt.

When all they have to do to keep things running smoothly is use one of our incredibly efficient software programs.

JCLCHECK™ software catches all JCL errors. And gives you complete, on-line validation and concise diagnostics. Plus full documentation on a job stream or entire production system, suitable for insertion in the run book.

The ProDict™ program puts time on your side. It's an automatic, on-line dictionary of all your production jobs, data sets and programs, that can save you the hours, days, even weeks now spent manually searching listings.

NetCheck™ software takes the stress out of taking control of your CICS network. It lets you organize your network into manageable groups with easy-to-remember names. It also lets you bring up the network in just minutes. And troubleshoot problems in seconds. So things get done faster, with you in control of your network—instead of the other way around.

All in all, our software programs offer a reliable, long-term solution for making life in the DP department a lot less troublesome.

Still, some people are destined to find these things out the hard way.

To that we can only add, better them than you.

Yes, I want to stop living dangerously. Send me details on:
☐ The JCLCHECK program.
☐ The ProDict program.
☐ The NetCheck program.
☐ Have a representative call me.

WHEN THE COMPANY PICKS A CIO, WILL YOU BE IT?

There's a shortage of qualified candidates to become chief information officer. When corporate management looks for an internal candidate, MIS executives should be ready.

By Roger Sobkowiak

As corporations create a chief information officer position, the predictable scramble begins. Companies comb their ranks for qualified internal employees while executive search firms recruit outside candidates. Typically, both efforts fail.

A shortfall of able candidates exists and will continue to because the most likely candidates for the new post — current MIS directors — have not been groomed for corporate positions. It will be perhaps two to seven years before a new cadre of information systems executives will emerge. The development process will be traumatic and costly. Companies will painfully begin to realize both the individual and corporate changes necessary to manage the computer and information revolution.

The shortfall exists because MIS directors have been trained to be providers of corporate services, not corporate executives. The duties of the CIO are not those of simply managing bigger projects, but include strategically integrating information and knowledge. The CIO reports directly to the president and assumes

IN DEPTH/CHOOSING A CIO

equal status with similar high-level officers in marketing, engineering, manufacturing and finance.

In order to be effective, the CIO must have a deep appreciation for the perspectives and goals of these other functions. And more important, the CIO must be able to merge these perspectives and goals into an overall MIS strategy. If the CIO is an alumnus of one or more of these functions, this integration will be easier than it would be for the nonalumnus. Whoever the CIO is, however, he must perform integrative thinking to be successful.

The CIO will shape his position within the company. It is his prime responsibility to effect a new way of thinking about how work gets done. Therefore, the person seeking to become a CIO must be an agent of change. The irony is that those who understand the implications of creating a chief information officer position and the skills required to do the job are often the people who are the most logical internal candidates. But they hesitate to step forward as candidates because at some fundamental level, they know they are inadequately prepared to tackle this emerging and critical job.

This dilemma leads to the increased possibility that the CIO, if chosen from within the company at all, will be chosen on the basis of his executive skills and general managerial performance — from a business unit or function rather than MIS. When this happens, in-depth understanding of the technology takes a backseat to executive acumen. Aspirants to the CIO job from within MIS then receive an even stronger confirmation of their unpreparedness to assume the key leadership role.

• Managing the applications portfolio as an asset	• Setting a direction for information usage and control
• Managing diversified computer applications	• Managing diversity and functional applications of computer technologies
• Developing organization structures	• Creating a strategic information plan
• Planning	• Making corporate decisions
	• Developing managers

Two forces

In our efforts with four major corporations, we have worked with many MIS directors and software managers. We have observed the collision of two forces, one dynamic and the other static, that explain why MIS directors are so often poor candidates for the CIO position.

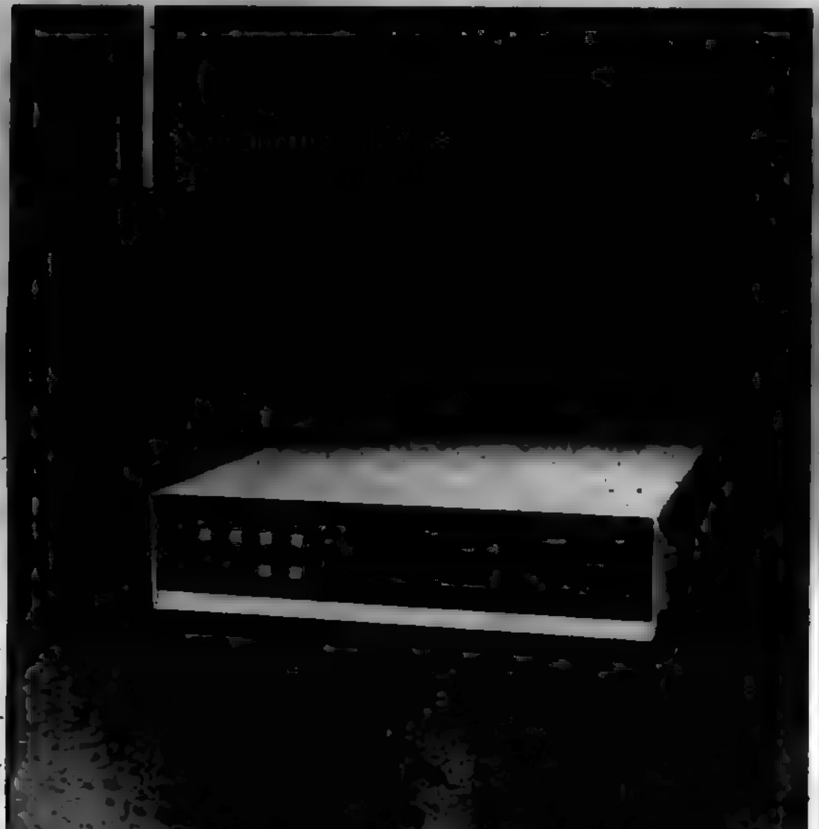
The first factor, the dynamic one, is that companies move through clearly defined stages of computer usage, but each company moves at its own pace. Nolan and Gibson, in their article published in the *Harvard Business Review* (Jan./Feb. 1974), discussed four stages of computer usage. Their work provides insights into the changing roles within MIS. In each stage, the MIS function assumes greater levels of responsibility, fresh relationships to the corporation and new and demanding mandates.

To be successful in each stage, the MIS manager must acquire significantly different knowledge and diverse skills. The most dramatic shift occurs when the company enters what Nolan and Gibson call Stage IV and creates the position of the chief information officer.

The second factor is the generally uninspected and therefore static notion of a development path consisting of a stationary hierarchy of positions that emphasize technical know-how and through which an employee unswervingly passes in progressing to the top MIS slot. A key objective of any career planning process is to guide the individual to increasingly responsible positions requiring the accumulation of advanced knowledge and highly refined skills.

A typical sequence for MIS jobs would be programmer, systems analyst, team leader, first-line manager and, finally, department manager. Such a sequential path can play an extremely useful role, but its strongest requirement is a stable environment where job predictability approaches certainty. The MIS and software arena is anything but such a stable environment. The consequence is that MIS managers who have followed that path have not been really helped.

In Stage IV, the adaptation of computer technology by corporations is happening so quickly, pervasively and totally that the structural foundation of the MIS function is crumbling. Technology is reshaping the development paths, but most corporations have not been able to take the time to stand back to understand and leverage this dramatic process.



Mainframe Downloading with Maximum Security.

Emerald's 1/2" 9 track tape subsystem downloads EBCDIC datasets to IBM PCs, ATs and compatibles quickly, conveniently and off-line.

- Best possible security—the receiving micro is off-line.
- *FAST*—10 MBytes/min.
- High capacity—up to 10½" reel size (up to 69 MBytes).
- Conversion to DIF, CSV, Lotus 123, and dBase III.
- DOS 2.X and 3.X.
- Desk top or rack mountable.
- Manual or auto tape loading.
- Complete with tape controller card, cables, software and documentation.

Count the number of software organizations that exist outside the traditional MIS organization — in engineering, manufacturing and marketing. Observe the allocation of hardware resources and discover who is making decisions about hardware and software purchases. List the functions that are supported by the central MIS organization. What is happening is that computer technology is not the private domain of the MIS organization, and managing the technology requires extensive knowledge of other business functions as well as collaborative skills.

Successful managers in Stage IV are those that can cope with issues such as technology transfer, user relations, decision systems and new ways to disseminate computer power.

Focus for a moment on two positions: the MIS director in Stage III and the CIO in Stage IV, and think about the responsibilities and the knowledge, skill and behaviors required to excel.

Note that the difference between the two columns (see chart) is the shift from operational to strategic and from technical to overall business considerations.

The implication drawn here is that for corporations concluding that they must develop their candidates internally, the task is formidable. The emphasis is on behavioral change, which is never easy. Simply sending MIS directors to a crash course at a high-quality business school will not achieve the goal.

The differences between being an MIS director and a CIO are principally not of knowledge but in the skills necessary to apply the appropriate knowledge in broader and more complex circumstances. It's a bit like the difference between a child who has been taught to walk and one who has been taught to negotiate a street crossing.

For MIS directors (Stage III) to prepare themselves to be CIOs (Stage IV), they must obtain first-hand, officer-level experiences. The problem is made especially difficult in two ways. First, other functions, such as engineering and manufacturing, are often unwilling to accept the MIS function as an equal; second, the MIS professionals themselves do not yet accept the new role as attainable.

The message for smart corporations is that they must capitalize on current trends, including end-user computing, expert systems, information centers, office technology, computer-aided design and manufacturing and teleconferencing. The proliferation of personal computers is drawing the MIS person out of traditional functional patterns. Technical gurus are and always will be important, but they won't be helping the corporation unless they can be helpful to users.

These trends are causing the MIS function to interact on a daily basis with other business functions, thus broadening its scope, areas of influence and overall business acumen. The leader companies will take advantage of these trends by rewarding managers who can step into the new roles and, at the same time, consciously use these jobs as a training ground to create the new breed of information systems executive. These companies will continually challenge MIS managers to rethink their roles.

The message for the few MIS professionals within the ranks who truly aspire to officer levels is simple: Aspirations can be achieved by leveraging technology trends to broaden management skills, while continuing to work toward technical mastery.

For example, MIS people must seek out and create, if necessary, temporary one- and two-year assignments in other business units or functions that are critically dependent upon computer technology as the basis for products and services. They must doggedly pursue opportunities for highly visible projects that contribute directly to the bottom line. They must demonstrate an eagerness to participate in management development, to chair cross-functional task forces and seek opportunities to contribute to key corporate decisions such as those required in an acquisition, divestiture, merger or start-up. In all possible cases, the aspirant must position his technical knowledge and business insights to form the right combination for making difficult business decisions.

The shortage of CIO candidates from MIS ranks will continue for some time, but not indefinitely. Companies should develop a qualified manpower pool similar to a good major league farm club. They need to strategically place talented technical people who have the necessary interpersonal skills and business perspective in new user-oriented jobs. They need to move computer experts between functions and create new measurement systems to reward technology managers. Other companies will follow as they understand and face the problem and see it as one that doesn't go away simply by recruiting a candidate from another company.

MIS directors should understand what they need and demand to move ahead. Company chief executives who are about to select a CIO should look long and hard at the MIS talent base that they already have. If they need to go outside the company or outside the MIS function for a CIO, then appointing the person is just the prelude to the management work required to build an MIS organization that is something more than a utility function.

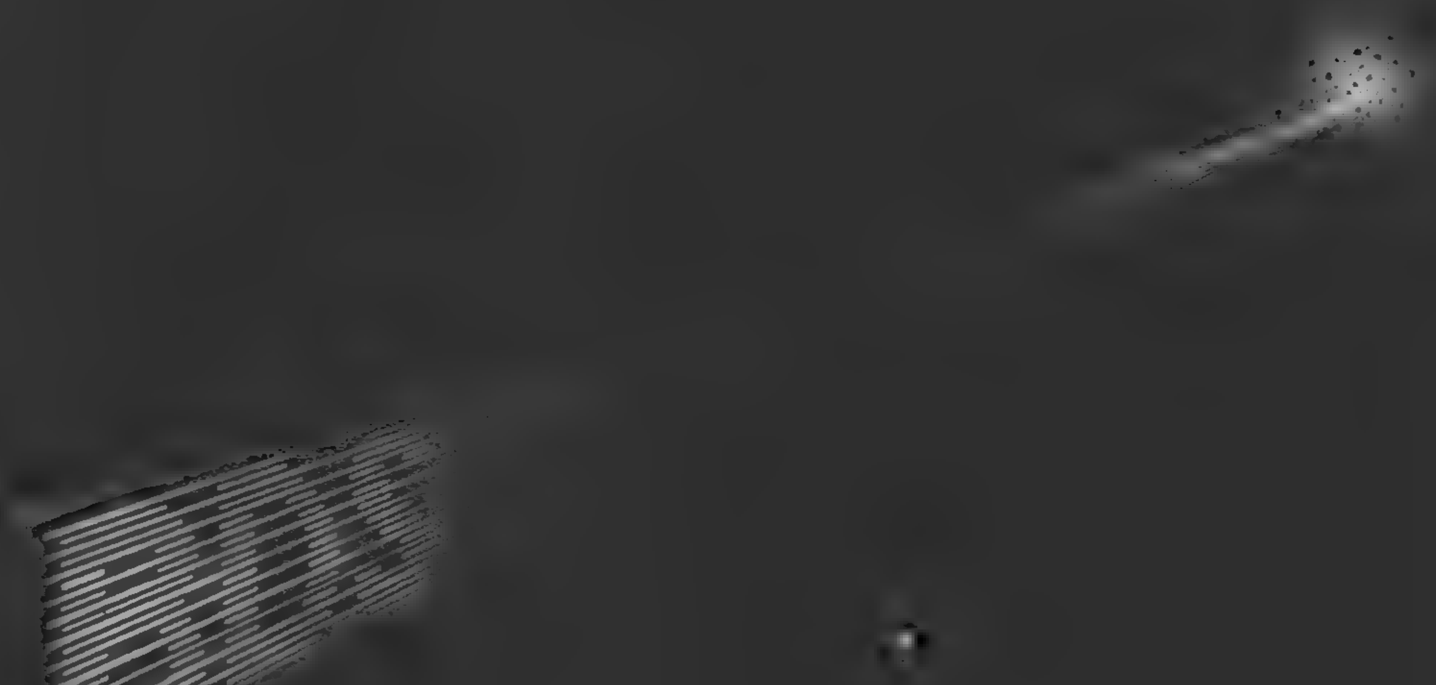
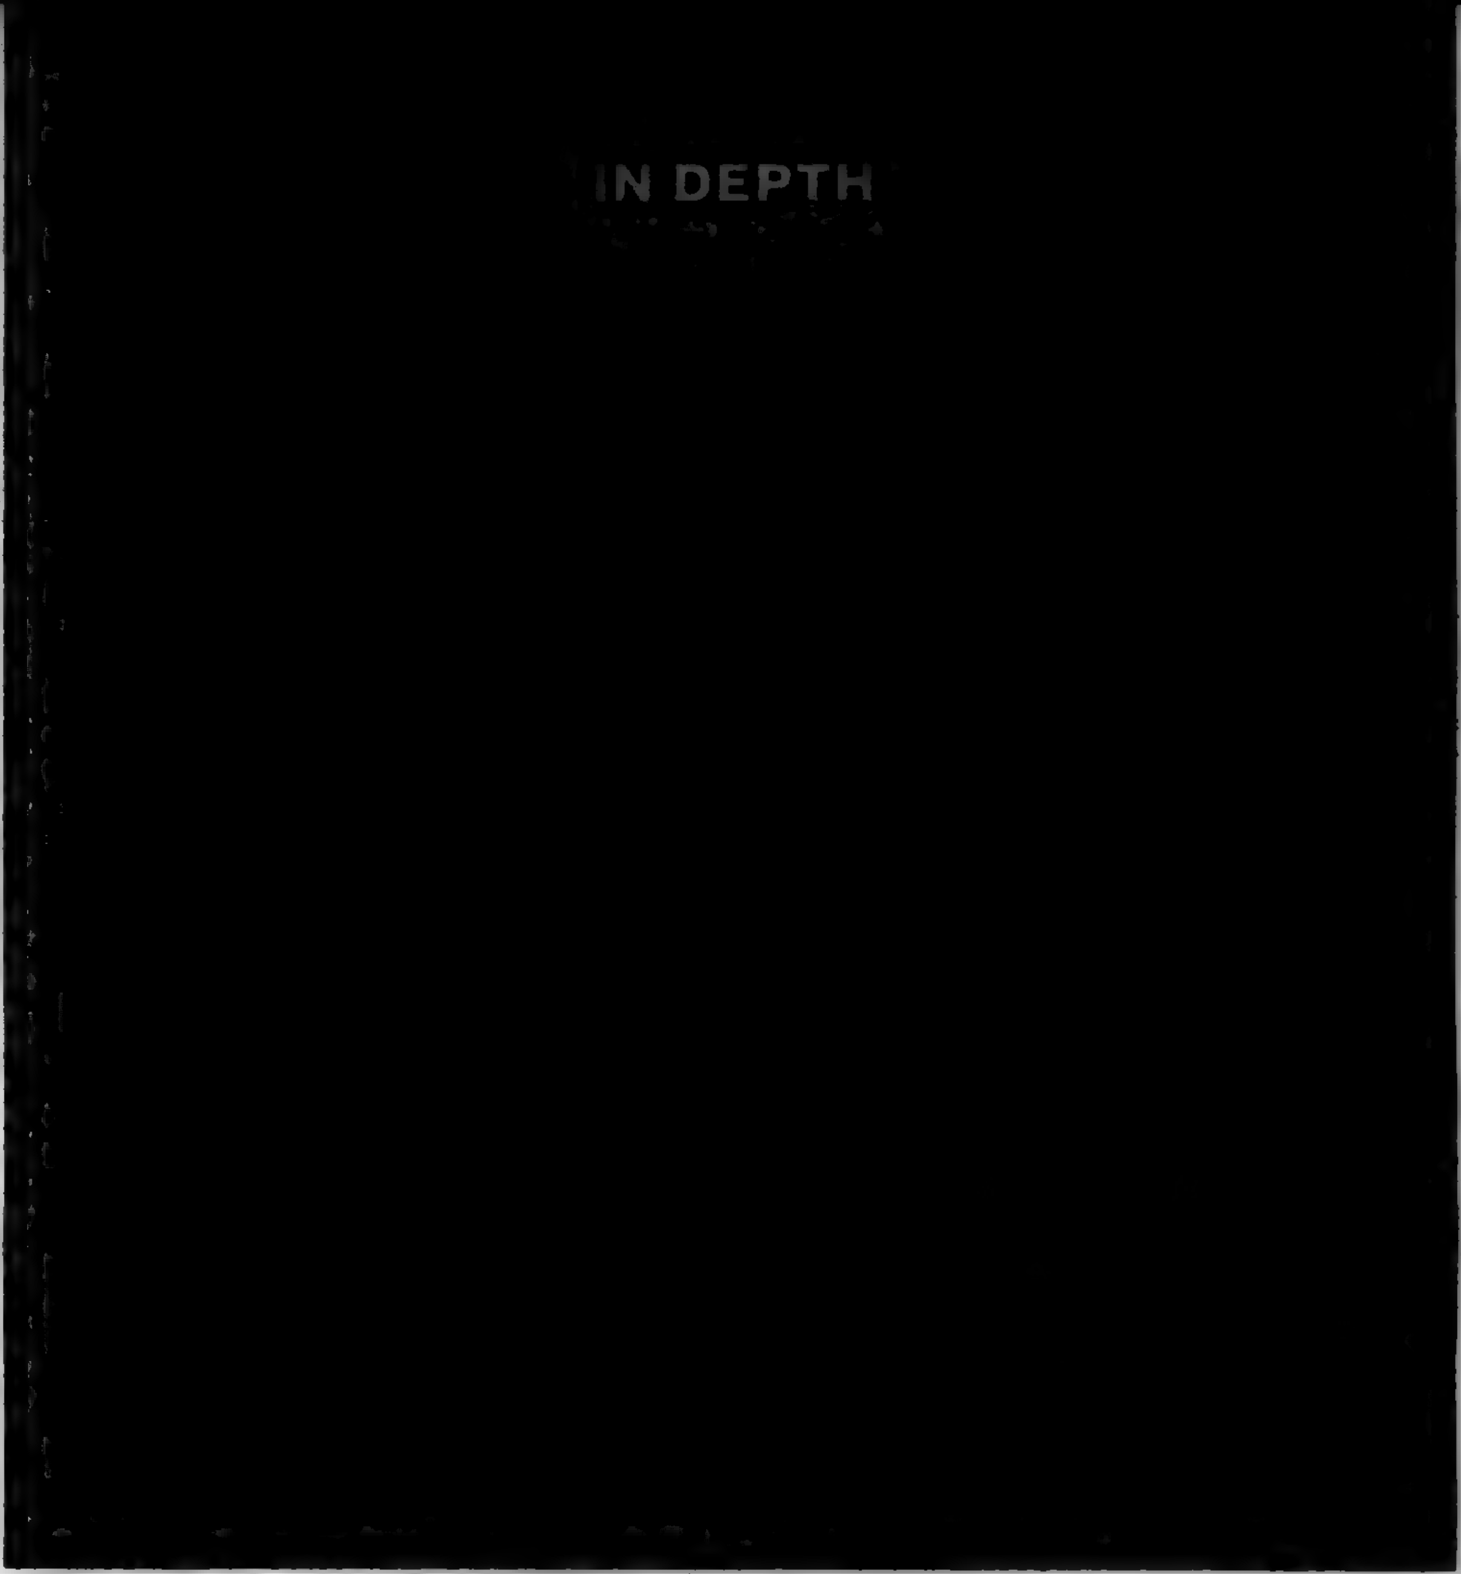
LASER
WARS





The long-term use of the personal computer is as an interactive workstation connected to corporate data bases. The role of DP is to make this goal reachable in the shortest time and at least cost possible to the organization.

By William Perry

Many years ago, a corporate controller wrote an article in a magazine about the computer titled "I hate you, computer — You ruined my nice, happy, quiet life." The controller felt in charge of his manual environment, but when the computer intruded, life was never the same again. Now, many data processing professionals feel the same way about the personal computer. There is no doubt it will change the lifestyles of data processing professionals in their organizations.

To many, the personal computer is viewed as a threat. One data processing professional stated that helping the personal computer user was like training your competitor to take your customers away from

Excerpted from The Micro-Mainframe Link: The Corporate Guide to Productive Use of the Microcomputer, *by William E. Perry. Copyright © 1985 John Wiley & Sons, Inc. Reprinted by permission of the publisher.*

you. There is no doubt that the computer is a threat to the way business is now conducted, but it is by no means a threat to information processing. The role of computers in an organization will accelerate rapidly because of the introduction of the personal computer.

Economists refer to a market as "elastic" when it can absorb all of the product that is placed in the marketplace. For the foreseeable future, the information processing market is elastic. There is a huge pent-up demand for processing, some of which is currently being satisfied by the personal computer.

When we consider that the personal computer is another information processing tool, then the role of the professional data processor is to provide leadership and direction in the effective use of personal computers in the organization.

The leadership role requires the data processing function to undertake those strategies and tasks needed to introduce and oversee the use of personal computers in the organization. As such, DP professionals should not wait until the situation is out of hand before acting, but rather should grab the bull by the horns and provide those services and facilities that will encourage potential users to follow those paths shown to be correct through many years of experience.

The direction will be provided in terms of selecting hardware, establishing training programs, developing programs and developing user groups.

The data processing function that provides the leadership and direction will be stronger 10 years from today than it is today. The function that avoids this leadership role may find that the information processing leadership has shifted to the users.

The data processing leadership role begins by developing a long-range information processing plan for the organization. It is difficult to provide leadership if one doesn't know where one is going. The long-range information processing plan becomes the blueprint for integrating personal computers into the business and then providing the needed direction to ensure that the personal computers, as well as all other aspects of the plan, work effectively.

Long-range plan

In the beginning, there was no centralized data processing. Each operational unit that needed data processed did it internally. Staffs of clerks in each operational area of an organization performed whatever paperwork was necessary to assist that unit in fulfilling its responsibilities.

When automated equipment came into existence, the time, effort and cost required to utilize effectively that equipment surpassed the capabilities of many departments. For this reason, organizations began to establish central data processing functions. The primary objective of this function was to provide the leadership, direction and expertise needed to process the organization's data on sophisticated equipment.

Recently, this centralization of data processing has begun to break down. The cost of computers has dropped significantly. Therefore, the cost issue for centralization is no longer pertinent for many uses. Computers have been made easier to use, and the skill levels of users have increased. Therefore, the technological barrier, which was a major reason for centralization, is beginning to break down.

One could hypothesize from the current trend that processing is decentralizing and that users will revert to their original role of processing the data they need to fulfill their mission. There is little doubt that some functions will remain centralized, such as payroll, but many could be decentralized and probably should be. After all, the users know more about their business than is known by the central data processing staff.

What's effective

The central data processing function needs to rethink its primary mission within the organization. The mission of doing all of the computer processing is no longer valid. The central function must rethink what aspects of information processing are most effectively done centrally and what are most effectively done decentrally.

The pattern that is emerging is a four-phase personal computer evolution process. If we study this process and then incorporate it into a plan, it shows a very clear mission for the centralized data processing function.

Listed below are the four personal computer phases restated as a long-range plan for the organization:

Experimentation phase — the decentralization of some processing applications. The long-range plan begins with a decentralization of selected data processing applications. The objective of this part of the plan is twofold. First, those functions that can best be done by the users should be done by users. This phase will introduce computing capacity to users, enabling them to identify which functions are best done in a decentralized manner.

Second, the use of the personal computer by users will increase their computer literacy. This long-term goal of the data processing function may finally be achievable through the use of the personal computer.

Stand-alone phase — selection of user-developed, maintained and operated applications. The long-range plan continues by redefining the processing location for application systems. This reallocation of application processing should be mutually developed by the users and the central data processing function. The central function can participate in application selection, provide

When the worst happens...
You can get the best of it!

Your on-line processing begins at 8:00 a.m. At 4:00 p.m. there's a crash! Three vital files are gone — wiped out!

Now you're on the phone with the payroll supervisor. You think he's shouting something about printing checks, but you can't hear very well with the controller pounding on your desk. He's yelling in your face about billing and collections. And now, you see the inventory control supervisor heading for your office. He's waving the inventory printout over his head like a banner, and his face is lobster red!

Someone will be held accountable for this lost time and money... Will it be you?

DATA RECOVERY SYSTEM

Ensure Data Integrity

The Data Recovery System (DRS), from Sterling Software Marketing *ensures data integrity and minimizes the problems associated with lost or corrupted data*. Once you invoke DRS, the system automatically reconstructs data without the need for source documents.

Restores Data Without Data Re-entry

Through journal processing, DRS provides *forward data recovery to the point of failure*. Now you can recover data without time-consuming manual file recovery and data reconstruction. You won't have to spend frustrating hours explaining or apologizing for disruptions or backtracking to locate lost entries. Using records which are journalled on an ongoing basis, DRS provides rapid data recovery, with *minimum disruption to your critical online environment*.

DRS also provides historical tracking and complete audit trail information. This enables you to analyze what went wrong, and helps you to prevent another emergency. In addition, DRS allows you to *back out* bad changes in files. And, with DRS's *simulate* mode you can see the effects of a recovery or reconstruction before you carry it out.

**Data Recovery System
Ends The Data Loss Nightmare**

For more information about Data Recovery System, call TOLL FREE 800-824-8512 or 916-635-5535 collect, in California, Hawaii, Alaska and Canada.

guidance and training and lead users through the takeover of certain computer processing applications.

During this long-range plan phase, users will begin to realize their processing limitations. These limitations will come from three sources:

1. Technological limitations — The users will not want to invest the time and effort to master fully the technology in order to do all types of applications.

2. Hardware/software limitations — The capabilities available on the personal computer do not equal those on the central computer. It is reasonable to expect in the foreseeable future that certain functions that can be readily performed on the central computer will not be possible on the personal computers. While it is expected that personal computers will grow in capacity, they will not rival the capacity of the large central computer in the foreseeable future.

3. Data limitations — Many processes will require large corporate data bases. Users will not want to enter or maintain those large volumes of data. Even if they did, it would create multiple redundant data bases in the organization, which is an ineffective use of organizational resources.

Network terminal phase — eliminate the data limitation. The third phase of the long-range plan should be the elimination of limitations because of data. This can be accomplished by giving personal computers access to the organization's data bases. This access capability will probably be introduced in phases as controls are developed to protect the integrity and security of the centralized data bases. The phase will begin by downloading data and end when data can be uploaded from the personal computers.

Workstation phase — elimination of processing limitations (hardware/software limitations). This phase of the plan will put the processing capabilities of large computers in the hands of users through the introduction of workstations. The workstation will be able to utilize the processing capabilities of the large computer, as well as the data managed by the large computer.

At the end of the fourth phase, the cycle will have gone from decentralization back to centralization. The workstation phase is one of centralized control of processing, but in a manner and form different from that now performed. Currently, users have only minimal control over centralized processing. When the four-phase, long-range plan has been completed, users will have a more active role in the development and use of processing capabilities.

Backbone in future

The technological skill impediment is one that will not be solved by the user in the foreseeable future. It is the knowledge of technology, the selection of technology, the assistance and use of technology and the support of user applications that will be the backbone of data processing in the future. Much of the application development and associated support systems can be developed and implemented by users. What users cannot do effectively is devote full time to understanding and optimizing the use of information technology for the business.

> ”
>
> ***What users cannot do effectively is devote full time to understanding and optimizing the use of information technology for the business.***

The evolutionary period from centralized data processing to decentralized data processing to distributed processing will be many years in duration. The introduction of the personal computer is merely a step in the evolutionary process of opening computer processing to the information needs of the organization. The speed at which this transition occurs will be heavily dependent upon the role and support provided by the centralized data processing function. Individual users can develop the facilities necessary for their own personal use, but can do little to coordinate an overall corporate effort to expand data processing horizons.

Organizations that lack central direction and the support of data processing professionals may flounder for years in a battle for information supremacy. On the other hand, organizations with strong central leadership will achieve information processing benefits unparalleled in the industry.

The central data processing group must do the following in order to realize the full benefits of information processing in their organization:

Action 1 — preparation for decentralized information processing. Major transitions do not occur without detailed planning and preparation. Decentralized information processing is a new concept with no precedents to use for guidelines. The leaders will have to be innovative to be successful.

This corporatewide approach to information processing requires the development of a master plan showing the transitional steps leading from large-scale mainframe centralized processing to a system where the hardware, processing capabilities and information are distributed to the operational areas of the organization.

Action 2 — develop an effective working relationship with personal computer users. The initiative for

YES! 415-841-9594

For OEM/distributor information, call 415-841-9595.

With The BRIDGE,™ you can run virtually *any* MS-DOS® or CP/M® program from *any* terminal on just about *any* minicomputer!

Benefits: The micro software users want. Instant network (with stand alone micros, too). No compatibility problems. Total control. More cost effective.

Proven in hundreds of installations. It can work for you, too. Call for more information.

Virtual Microsystems, 2150 Shattuck Avenue, Suite 300, Berkeley, CA 94704

Trademarks: The BRIDGE—Virtual Microsystems, VAX—Digital Equipment Corporation, Lotus—Lotus Development Corporation.
Registered Trademarks: MS-DOS—Microsoft Corporation, CP/M—Digital Research, Inc. Everything else is also a trademark/registered trademark of someone.

WITH THE

Is it possible for a [illegible] future built in?

As long as it's a com[illegible], like the AT&T PC 63[illegible] story, read on.

SEE HOW IT G[illegible]S.

When we say the computers with the future built in, we're talking about two things: AT&T offers you high-performance computers today, and a commitment to flexibility for future growth.

Let's take a look at the AT&T PC. Driven by the 8 megaHertz 8086 chip, it has a built-in socket for the addition of the powerful 8087-2 co-processor. The 8087 increases the speed of certain applications—up to 100 times faster on time-consuming mathematical programs and business projects. What's more, you can install the 8087 in a matter of minutes.

But what good is more power if you don't have more memory? Bearing that in mind, the AT&T PC can be upgraded from 128 or 256K RAM to 640K. So you can significantly increase the original memory for extra text, data and soft-

[illegible]

We [illegible] how easy it is [illegible] to AT&T's PC.

Do you want more than the PC 6300's built-in [illegible] and superior high-resolution [illegible]? Then take just five minutes and install the display enhancement board which produces up to 16,000 on-screen color variations. All smooth enough for souped-up charts and graphs, and fast enough for animation.

Whether you want to add more power, speed or storage, you can do it in a snap. And that goes for any of the AT&T PC enhancements.

THE PC FOR THE LONG RUN.

By now, you know the AT&T PC is designed to take on tomorrow's high-performance technology.

But that's only half the "future built in" story. The other half begins with options and enhancements that ensure your future with integrated voice and data communications.

[illegible]

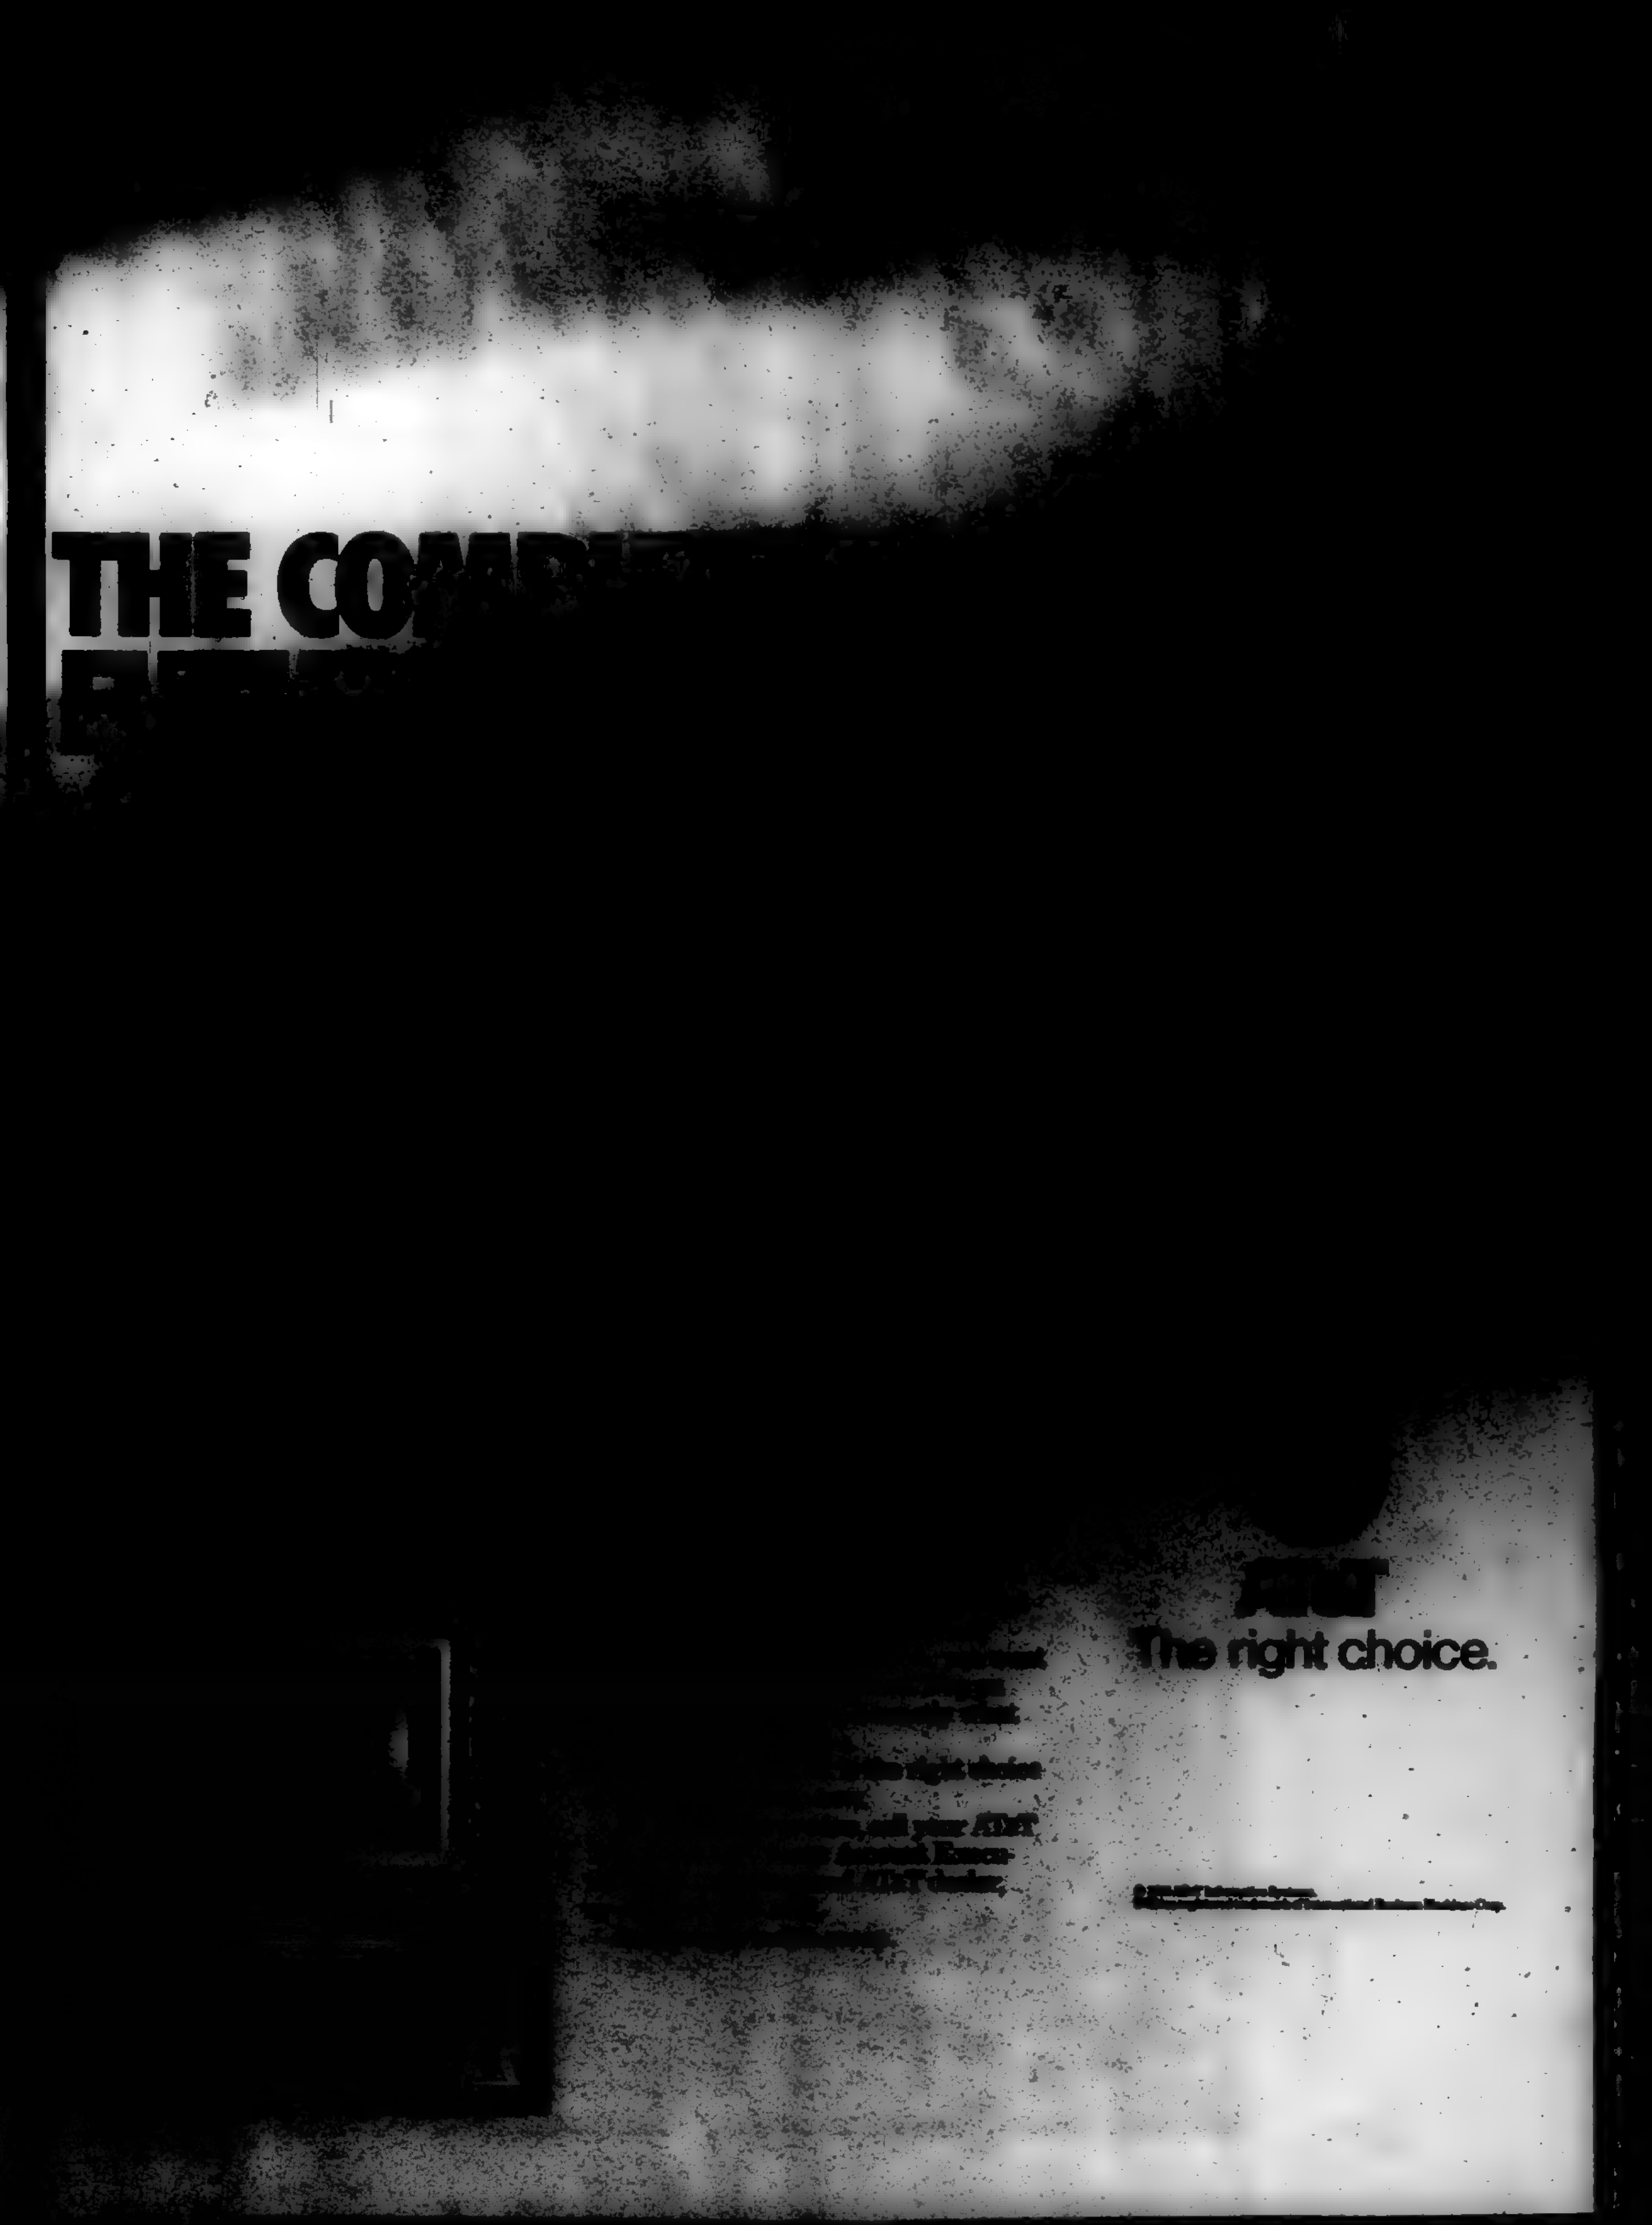
For [illegible] Communications [illegible] internal mod[illegible] you can transmit [illegible] line while talking on the other.

The Communications Manager also has concurrent context switching that lets you switch with a simple keystroke between the Communications Manager and your software application.

As time goes by, you can continue to look forward to the most advanced integrated voice and data technology on the market.

A STARLAN IS BORN.

AT&T also has the unique ability to put vast telecommunications expertise to work on computer networks. Thus was born STARLAN, a compact, high-speed local area network designed to use ordinary telephone wires to connect



THE COM

AT&T

The right choice.

an interaction between the central data processing function and personal computer users should come from the central group. In most organizations, the personal computer users will not know what they need, what questions to ask or what type of working relationship will provide maximum benefit to the organization. This guidance must come from the central function.

Action 2 — gain technical expertise in personal computer technology. Mainframe technology is different from personal computer technology. The capabilities, operating characteristics, uses, controls and other procedures that are effective on mainframe computers may not be effective on the personal computer.

An old adage states, "You will not know what it's like to be someone until you have walked in his shoes." The same adage holds true for an understanding of personal computer technology. Many data processing professionals have changed their attitudes and concepts about the personal computer once they have delved into and learned this new technology.

Action 4 — devote resources and support to the implementation of the long-range computing plan. The plan is only the beginning of the transition to distributed information processing. The plan does not become a reality until action occurs. Many plans are started in organizations, but few are finished. It takes strong support from centralized data processing management and a commitment of its resources to make the plan work.

The plan is the tool and the technique is the method for using the tool. For example, to drive a nail into a piece of wood, we use a hammer as a tool. The technique for using that hammer is as important as the tool, because without the appropriate swing and pressure behind the swing, the nail will not be driven into the wood.

The techniques that should be considered for the four data processing actions give organizations options in executing the plan. For example, a nail can be driven into wood by many small swings or a few very large swings. It may be the individual swinging the hammer who is best equipped to make the decision on technique. For that reason, a variety of techniques are described below for implementing a personal computer plan.

Action 1

The first few personal computers introduced into a business were viewed as toys in the hands of users. While the microcomputers were as powerful as some of the mainframes 20 years earlier, they were viewed by many as toys whose main purpose was for playing games. This misconception quickly vanished, and the power of the personal computer, as implemented through spreadsheet software, plus a rapidly growing library of other microcomputer software, turned the toy into a valuable decision support tool for the user.

The preparation that the central data processing function must do as a prerequisite to optimizing the equipment includes:

- Mental preparation — the data processing professional must view the personal computer in the proper information processing perspective.
- Planning preparation — a long-range information system plan needs to be developed.
- Organizational preparation — the information processing organizational structure needs to be reevaluated and reorganized to complement the characteristics of the personal computer.

In the performance of this preparatory work, the following techniques can be used by data processing professionals.

Technique 1. Develop personal computer programs. This technique breaks the plan into smaller controllable units. A program is an independent and controllable activity whose objectives can be defined and measured. Each program should involve establishing requirements, designing the procedures by which the program will be implemented and then implementing and evaluating the effectiveness of the program.

Unless the plan can be divided into controllable and measurable programs, it may flounder because of lack of direction and defined accomplishments. For example, the establishment of a computer store would be a program.

Data processing professionals learned the same lesson in the systems development process. Prior to phased development with specified deliverables, management could never determine an accurate status of development. This led to extensive overruns and delays. Personal computer implementation can fall into the same traps without an equivalent phased or programmed approach to incorporating the personal computers into a long-range information processing plan.

Technique 2. Provide personal computers with quality control tools. A quality control tool is a vehicle for use by personal computer users to assess the effectiveness of their work. These tools can be used to evaluate acquired capabilities, as well as to evaluate in-house-developed software and procedures. Examples of these quality control tools include:

- Software installation tool — provides a series of steps that should be undertaken to implement software.
- Software documentation checklist — contains a list of the preferred types of documentation included in an acquired or developed software package.
- File creation checklist — indicates all of the steps that should be followed to ensure the integrity of a created file.

Technique 3. Create a professional image for personal computer users. Many articles describe the inability of the personal computer user to do the job right. These attitudes were adopted years earlier to describe the inability of the user to define adequately requirements for application systems.

When these attitudes carry over into day-to-day relationships, it comes across as a superior/subordinate relationship. If personal computer users are looked down on as second-class citizens or given other attributes of incompetence, it will be but another example of the centralized data processing group "attempting to run the organization."

The attitudinal change techniques are the following:

- Management support of the personal computer program — senior management and data processing management making known that the positive impact of these programs on the business can change attitudes.
- Evaluation of personal computer capabilities — recognizing what these computers can do creates an awareness of the power of the equipment.
- Cross-fertilization techniques — providing data processing personnel with personal computers to use for their own decision support processes can show them the uses of these machines.

Technique 4. Budgeting and accounting for time expended on personal computers by DP professionals. The expended time should be recorded by job function and by user. Each personal computer user should be assigned an account number (if there are many personal computers in one department, a user departmental number may be used).

The type of functions that need to be accounted for include hardware/software selection, counseling, implementing and/or debugging software and discovering problems. While it is not necessary to charge back this time to users, it is important to understand where the time is being expended so that the benefits from the use of those resources can be determined.

Technique 5. — Focus on a single information system technology. Data processing professionals must look at information processing as a single program within their organization. To consider personal computers one type of technology, office equipment another technology, centralized data processing another and so on, defeats any cohesiveness of direction. Once all information processing is viewed as a single technology, it can then be planned, managed and controlled.

Action 2

Programs and actions occur by and through people. The more effective the working relationship, the greater the probability that the program will be successful. A good working relationship implies a commonality of purpose that helps ensure the success of a program.

Working relationships are built slowly and on a base of mutual trust. The more effective the working relationship is between the data

IT TOOK A FEDERAL RULING TO START A NEW ERA IN OFFICE INTEGRATION. NOW ALL IT TAKES IS A PHONE CALL.

Recent federal rulings are having a profound effect on the way America does business.

These rulings not only broke up the Bell System. They also allowed the newly created regional telephone companies to compete in areas that extend far beyond local telephone service.

As a result of these rulings, NYNEX Business Information Systems was born.

And right now, we're prepared to give you something that no one has ever been able to give you before: an office where networking, data and voice communications, data processing, word processing, and office automation are integrated.

FREEDOM OF CHOICE.

To understand how NYNEX Business Information Systems can revolutionize your business, you first must understand how revolutionary we are.

The fact is, we're unlike any other communications company you've ever done business with.

We sell and lease all kinds of communications systems. But we manufacture no equipment. Which means we're free to recommend the best equipment made by the best suppliers—names like Data General, GTE, Wang, General DataComm, TIE and InteCom.

And after we recommend a system, we'll be there to install it, show you how to use it, and back it with all the resources of NYNEX Business Information Systems.

Which means you can count on us to be there every step of the way.

WE'VE GOT THE CONNECTIONS.

Providing the best equipment from the best manufacturers is one way we can help your business become more productive.

But integrating that equipment—bringing it all together in one, easily accessible network—is an even more important way.

How do we do it? By utilizing the most sophisticated networking technologies available. Technologies that include the latest in microwave and fiber optics. Technologies that bring your office systems together.

Of course, once these systems are integrated, your entire company will be more productive. That's because more of your people will have access to more information.

HOLD THE PHONE. CALL 1-800-535-1535.

We'll put you in touch with your NYNEX Advisor, a business information professional who's backed by an entire team of professionals from the fields of networking, voice and data communications, office automation, technical support, training, service and maintenance.

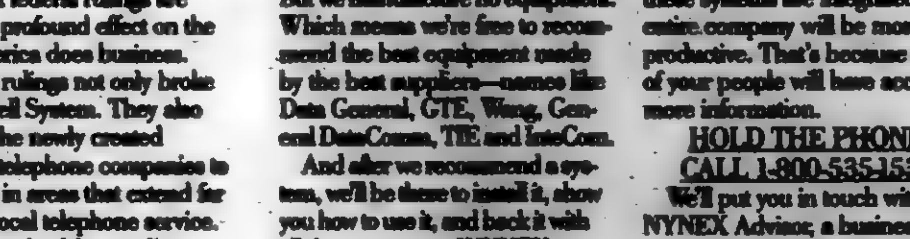
Together, we'll put together a system for you that meets all your company's communications needs.

From now on, the integrated office isn't an impossible dream.

It's a right that every American business deserves.

NYNEX
Business Information Systems ®

THE ONE FOR ALL.™



™Service mark of NYNEX Corporation. ©NYNEX Corporation, 1985.

processing group and its users, the easier it will be to build an effective personal computer relationship.

As with all other relationships, this is a two-way street. Both parties must want to develop the relationship. The catalyst for this desire to build a good working relationship can be the long-range information processing plan of the organization.

The following techniques can be used in building this centralized data processing-user relationship.

Technique 1. Provide the assistance requested. There is a tendency for data processing professionals to want to do what is needed, as opposed to what is asked. While the needed guidance may be given in good faith, it may not be welcome. It may be viewed as meddling and attempting to run the personal computer program in the same way the central group runs the mainframe computers.

Individuals working with personal computer users, particularly in the early days, should be strongly cautioned to provide the type of advice and tools requested and to delay the introduction of good practices and standards until a solid working base between the groups has been developed.

Technique 2. Hold a personal computer open house. The kickoff for creating a good working relationship between the central function and the users can be important to building a good working foundation. An open house showing both the central function and the personal computer's capabilities is an effective way to kick off a new relationship. The open house can be during or after working hours or even on a weekend. It should be widely promoted as an opportunity for those interested in personal computers to gather an understanding of how they work, observe and participate in demonstrations and meet the organization's experienced data processors in order to build a future working relationship.

Technique 3. Take a personal computer user to lunch. It is important to get to know personal computer users as people. This involves whatever methods work best for getting to know them. The open house is one technique — taking a personal computer user to lunch is another technique. Some data processing functions have set up personal computer tables in the company cafeteria and staffed them with data processing professionals. Those who want to learn about personal computers can then have lunch with that individual and discuss how to get involved in personal computer processing.

In addition, data processing professionals could go out and visit the major areas of the company to discuss the organization's personal computer program and how it might be enhanced and improved.

Technique 4. Issue a personal computer newsletter. An in-house personal computer newsletter can promote what is going on in the organization with personal computers. The newsletter can indicate who recently acquired personal computers, what they are doing with them, programs that the organization is putting in place to help personal computer users, tips and techniques on using personal computers more effectively, new hardware and software announcements and so on. These do not have to be very formal or expensive, but they should collect information from and about the personal computer users in the organization.

The concept can be started by asking for a volunteer in the data processing department who has some literary talent and interest in the personal computer program.

Technique 5. Hold midday matinees. There are a lot of good programs and films on the personal computer. These are available from vendors, from video educational services and from computer stores. These programs can be video, films, slides or speakers. The programs should be put on at lunch in a common area in the organization. Announcements about the availability, the topics and when these programs will be given should be widely distributed.

Action 3

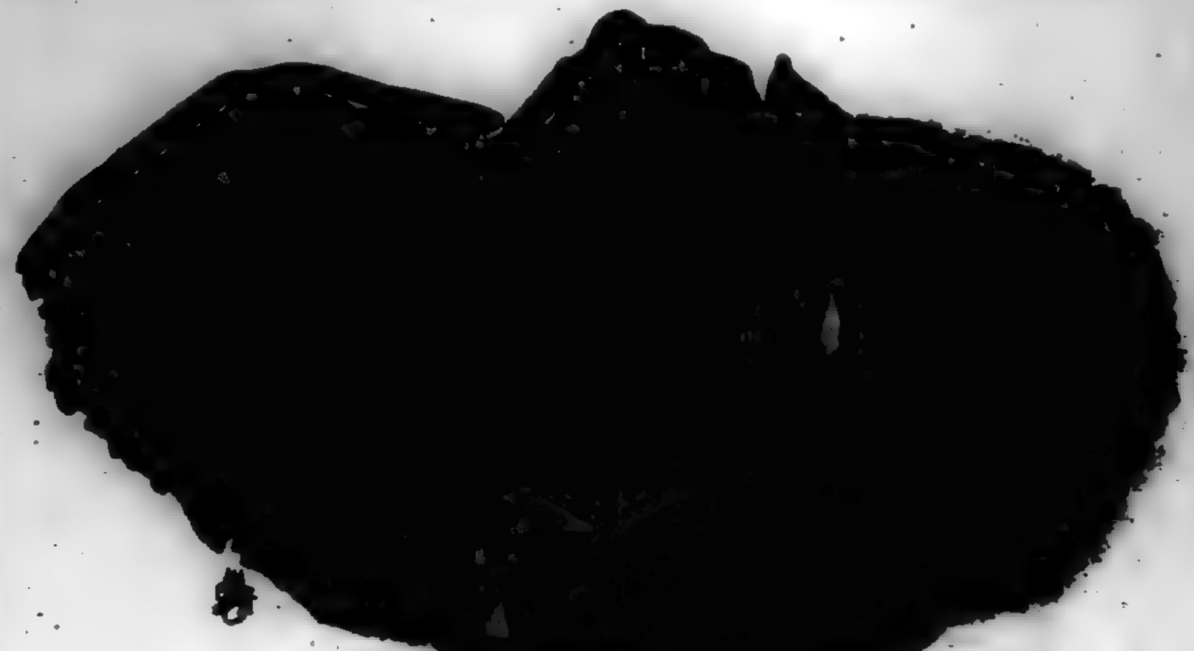
A major contribution that can be made by the data processing professional is improving the productivity of personal computer technology. From the user perspective, this may not be an overriding issue, but from the magnitude of the program and the potential performance improvement, it is a program that needs to be undertaken. The central data processing function, or a function established for personal computers such as an information center, is best equipped to fulfill this role.

The technological issues that need to be addressed include: hardware and software selection, standards, training programs, good programming practices and interconnecting of hardware.

Data processing professionals can use the following techniques to address the personal computer technological issues:

Technique 1. Create awareness of processing options. A user's first involvement with a personal computer may be his only involvement with computing. He may not recognize the options available to him personally and through his organization. For these reasons, work may be done on a personal computer that could best be done on a central computer or word processing equipment. In other instances, the incorrect software or hardware is selected for personal processing, when another significantly more effective capability is available.

Developing a program that identifies the options available and then creates an awareness among existing



The first DBMS conceived for online systems, remembers more.

You can fill your VM, OS or DOS environment with a lot more information with MODEL 204 software from Computer Corporation of America.

And, you won't have to add hardware to your IBM mainframe to support MODEL 204.

Because, while our MODEL 204 DBMS lets you create up to 533 billion records of any length, it is so incredibly efficient that it requires less CPU memory than other systems to do it.

Plus, you can transport files and applications between operating environments (VM, OS, DOS) without conversion.

And, with its fourth generation tools, tough applications are easy to create, test or change without affecting the database. Conversely, unlike any other DBMS, as your business data tracking requirements change, you can add or change new or existing fields without unloading, recompiling and reloading the database. Saving you time and manpower.

And it's fast. Faster than any other DBMS. Even as you add more users it's faster. Amazingly, MODEL 204 can support any size network from 30 to 30,000 terminals.

MODEL 204 is the first commercial DBMS designed right from the start for online systems. You'll find most other DBMS's have been converted from batch. There is a difference.

We invite you to compare the capacity, performance and productivity of our MODEL 204 with any other DBMS. Write, or call 1-800-258-4100.

Send more MODEL 204 information fast.
Mail to: Four Cambridge Center, Cambridge, MA 02142

A Crowntek Company

Software innovators creating better ways to manage business.

and potential personal computer users of these options can provide a very valuable service to the organization.

Technique 2. Develop the relationship on a business orientation. The personal computer was designed to assist users in fulfilling their day-to-day job responsibilities. In general, these users are unconcerned with the technology associated with accomplishing the job mission. The fact that the technology is not fully understood, may be used ineffectively or in many cases misused may be of little importance to the user. If some desired piece of business information can be obtained through using a personal computer, information that could not be readily obtained otherwise, the misuse of technology may seem relatively unimportant. The data processing professional must recognize this business orientation toward personal computers, as opposed to the technical orientation for which the professional is trained.

Technique 3. Learn the personal computer as a user. The understanding that is needed to gain technical proficiency must be learned by actually using the machines. Whatever personal computers are selected for the organization should be disseminated within the data processing function.

The individuals assigned to oversee the personal computer program should utilize those machines in the performance of their day-to-day functions. In conjunction with any personal productivity gains, there will be a technological comprehension of the intricacies of processing. This experience can then be used to develop more effective standards and practices for utilizing the equipment.

Technique 4. Develop personal computer practices. The data processing professional will develop a set of practices for use of the personal computer through experience. If several data processing professionals are using the equipment, the totality of knowledge of the group will produce better practices than any individual user. These practices should be codified and distributed to the users of personal computers in the organization. While the use of these practices is optional, many will welcome the opportunity to benefit from the experiences of another user with proven success.

Technique 5. Develop personal computer standards. The best practices should be incorporated into standards for the use of personal computers. If the standards are developed out of good practices, which in turn are developed by users, then the standards become the best of the practices. The development and use of standards is a prerequisite to control, which in turn is a prerequisite to placing full reliance on the results of personal computer processing.

Action 4

The objective of the first three actions is to establish an environment in which the long-range plan can be implemented. The preparatory action has created a plan and an atmosphere for implementation. The second action built a working relationship of mutual trust on which the plan could be built. The third action provided the necessary technical know-how to perform those tasks necessary to make the plan work. The final action relates to the actual implementation of the plan.

> ”
>
> *The fact that the technology is not fully understood, may be used ineffectively or in many cases misused may be of little importance to the user.*

The personal computer plan requires the same type of support necessary to implement any type of plan. If there is a difference, it is in the magnitude of the plan and number of organizational units involved in accomplishing the plan's objectives. Because of this, senior management support and involvement are essential to the success of the plan.

The techniques that data processing professionals can use to help implement the plan include the following:

Technique 1. Educate mainframe users about personal computers. The long-term success of information processing will be partially dependent upon the skill level of users. As data processing becomes more integrated into the day-to-day work of users, their knowledge of systems and systems architecture will assist in the effective use of those systems. Experience has shown that the more users know about data processing, the greater the probability of successful use of that technology. The personal computer provides these users a first-hand experience of how applications are constructed, implemented, operated and controlled. The personal computer should be used as a positive learning experience for users. This requires some central direction, oversight and counseling.

Technique 2. Measure personal computer limits and prepare for alternate processing. The personal computer will not have the power or capacity of the large-scale computer. The types of tasks assigned the personal computer by first-time users will be well suited for these machines.

However, over time the data bases, processes and needs will

XPEDITER™
Can Reduce IBM COBOL Testing and Debugging By 30-50% Or More... Improve Schedules... Boost Programmer Morale!

COMPARE BENEFITS

XPEDITER offers more integration, convenience and proven performance than XPF/COBOL.

- **Maximum Productivity** - XPEDITER runs in MVS, VM/CMS, and online with IMS for both your COBOL and Assembler programs...
- **Maximum Compatibility** - XPEDITER supports popular software such as CA-OPTIMIZER™, PANEXEC™, The LIBRARIAN™, ISPF™, BTS™, and HOGAN™...
- **Minimize Your Compile** - No changes to your COBOL source, object, or load modules...
- **Minimize Your Overhead** - XPEDITER requires less interactive overhead. There is also an option for batch mode...compressed symbolics and no required retention of compile listings.

expand as they do in any other automated system. Within time, the processing limitations of the personal computer will be reached. These limitations may be disk storage, file access mechanisms, operator time or ability, processing constraints of software or the need for data that is not readily available to the personal computer user.

At this point, personal computer users will need processing capacity not readily available. The type of capacity needed will be associated with central systems and/or central data bases. The central group should define and measure these limitations so that they can anticipate the point at which the personal computer user will need central processing assistance. This technique provides a timetable for establishing a personal computer communications network, providing access to centralized data bases and creation of personal computer workstations.

Technique 3. Promote personal computer standards. The key to a quality data processing environment is the establishment and use of standards. This lesson was learned years ago in the central computer sites. The lack of life-cycle methodologies, standard data definitions and so on significantly increased the cost of data processing and undermined the credibility of completing projects on time, within budget and in accordance with user specifications.

On the other hand, the introduction of standards is a later step in the maturity of any technology. The centralized data processing function should be promoting the concepts early, and when acceptance is timely, be prepared to provide assistance in the development, implementation and training of users in personal computer standards. However, it is recommended that the standards be developed by the users and not by the centralized function.

Technique 4. Business systems planning. Business systems planning is a method of integrating MIS processing into the planning procedures of the organization. The objective is to focus high-level managerial attention on the priorities and problems of information systems. Many organizations currently do this with their centralized data processing. Those organizations need to integrate personal computers into their centralized information systems — business systems planning procedures. Those organizations currently not using business systems planning need to consider the development of committees made up of high-level executives to determine the priorities, directions and planning for using personal computers within the organization.

Technique 5. Checkpoint reviews. The quality of application systems has been significantly improved in the centralized area with checkpoint reviews. The objective is to conduct evaluations periodically throughout the development of an application to ensure that it is being properly implemented. The same concept should be used for the personal computer program in the organization. The program should be established as a long-range program with predetermined objectives and goals. Checkpoints can then be established throughout the implementation process.

Review groups

At these checkpoints, review groups should be formed. Review groups should be made up of the individuals having a vested interest in the success of the personal computer program — for example, users, executive management, auditors and centralized data processing management. The review groups should evaluate progress in implementing the personal computer program, challenge the long-range goals based on current business objectives and then provide assessments on the success and/or problems in implementing the personal computer program.

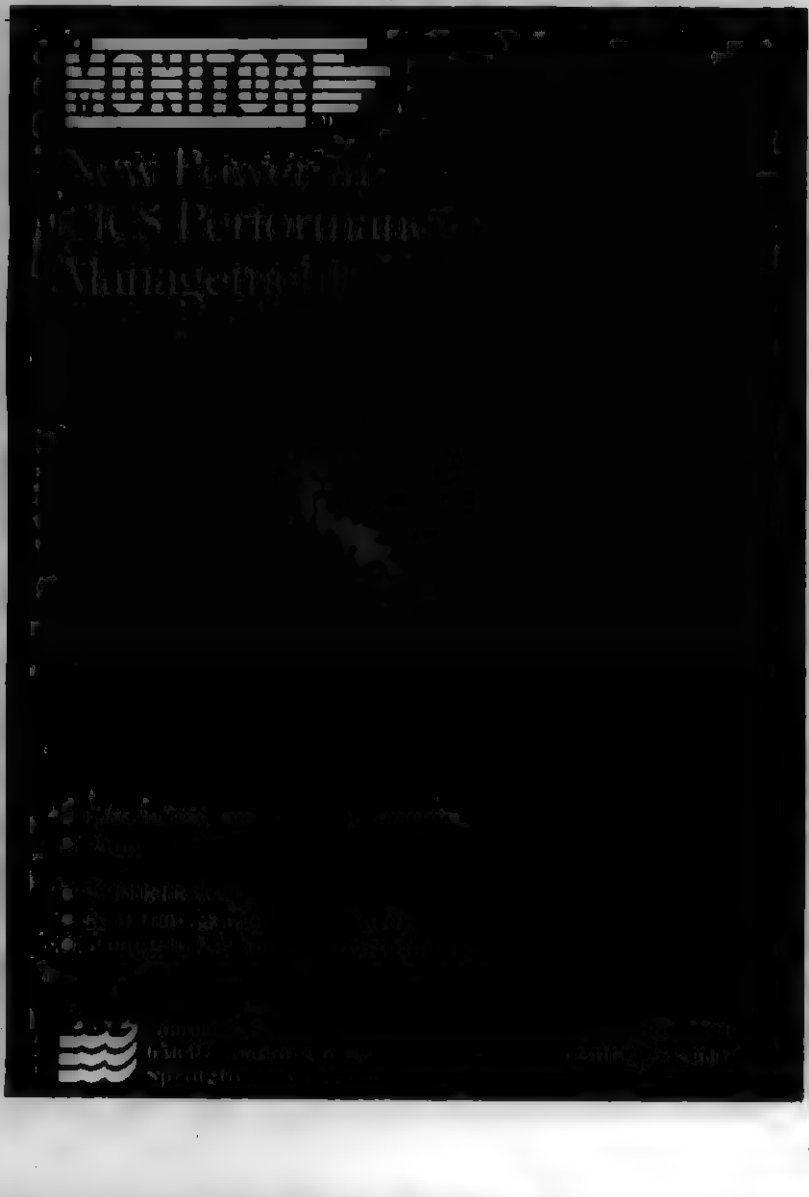
> ***Many users install personal computers, but the abandonment rate is high. Only a few will make truly effective use of those computers without central direction.***

The concept of personal computers is to extend the capabilities of the computer to any individual in the organization needing that resource. Introducing the concept is easy. Personal computers are placed in the hands of those individuals needing them: Ensuring the effective, efficient and economical use of those personal computers is an organizational challenge.

Going from a reality to an implementation requires planning and then the implementation of those plans. Sustained action and direction are required. Many users install personal computers, but the abandonment rate is high, and only a few will make truly effective use of those computers without central direction.

Successful use of the personal computer should be based on the following three foundations:

- Personal computer planning — well-developed plans that are fully supported by senior management need to be created.
- Action through centralized direction — plans only become reality when a catalytic function ensures sustained action. This is best accomplished through centralized direction.
- Evaluation — projects only work when there is good feedback regarding the results of the personal computer program. This necessitates the establishment of yardsticks by which to judge the success of the personal computer program, measuring performance against those yardsticks and making any necessary adjustments based on failure to achieve desired levels of performance.



Reach over 35,000 computer professionals in The Netherlands.

Advertise in CW Communications' publications in The Netherlands and sell your products directly to the fifth largest market in Western Europe for installed general purpose computers and ninth world-wide. According to figures from International Data Corporation (IDC), the world's leading information industry market research firm, total DP expenditures in 1984 were at $3.3 billion. IDC forecasts that by 1989 total DP expenditures will exceed $7.1 billion. CW Communications covers The Netherlands and Benelux countries market with two publications; *Computerworld Benelux* and *PC World Benelux*.

20,000 MIS/DP executives read *Computerworld Benelux* each week. *Computerworld Benelux* is modeled after its sister publication in the U.S., *Computerworld*. The editorial covers new products and services, current applications and industry trends.

PC World Benelux is published six times per year and is modeled after *PC World*, its sister publication in the U.S. *PC World Benelux* is read by more than 15,000 commercial users and prospective buyers of IBM and compatible computer equipment, and the key decision makers of small, medium, and large companies.

CW International Marketing Services makes advertising your products in The Netherlands, and around the world, easy. We have over 50 publications in more than 25 countries. For more information on our wide range of services, complete the coupon below and mail today.

Will data base machines replace

Independent units offer relief to resource

By John Gallant
CW Staff

Some years ago, mainframes were relieved of the complex, repetitive processing involved in terminal communications. Rather than bog the host system down, designers reasoned, it was more efficient to off-load communications tasks to a front-end processor, such as a terminal control unit.

Today, corporate data bases hungrily devour megabyte after megabyte of storage capacity, and more users and applications vie for access to the shared data resource, straining the data management capabilities of the mainframe. In addition, end users and DP professionals demand the increased productivity promised by relational data base management systems. But the relational systems exact a toll in processing power.

Enter the data base machine, a specialized combination of hardware and relational DBMS software dedicated to performing efficiently and rapidly data management functions once available only in sophisticated DBMS software.

Proponents of the data base machine concept argue that, as with terminal communications, it is only logical to shift resource-intensive DBMS tasks from the host to such a back-end processor. Relieved of the data manipulation work load, the host — which serves as gatekeeper to the data base machine — is able to accommodate more users and applications. The data base machine becomes the independent data server, tying together a variety of machines and applications.

"One of the first steps in computer architecture was to take communications and put it outboard," said William Inmon, a director at Coopers & Lybrand in Denver and a noted author on the topic of data bases. "At one time, we had a machine that did everything. But we realised it was very complex doing terminal communications, so we off-loaded all of that to a front-end processor. The data base machine is the equivalent concept for data base processing."

The concept is one that fledgling data base machine vendors are hoping users will embrace but one that analysts are uncertain users will. In fact, the data base machine market is so young that most industry research firms do not maintain statistics on its size, nor do they make predictions as to its future growth. Indeed, individual analysts spar over current user interest in data base machines.

"Right now there is no significant user interest. [Data base machines] are just not being widely used," said Michael Geran, vice-president of research for the New York-based investment firm of E. F. Hutton & Co. "[Data base machines] look good in theory, but they are very application dependent. It is even too early to formulate any numbers because the market is so young."

Coopers & Lybrand's Inmon agreed. "I think it is a safe bet to say there are some people out there who are looking for interesting solutions like the data base machine. But the majority of users are looking for the cheapest, quickest solution they can find, and that generally means they are not looking for a data base machine."

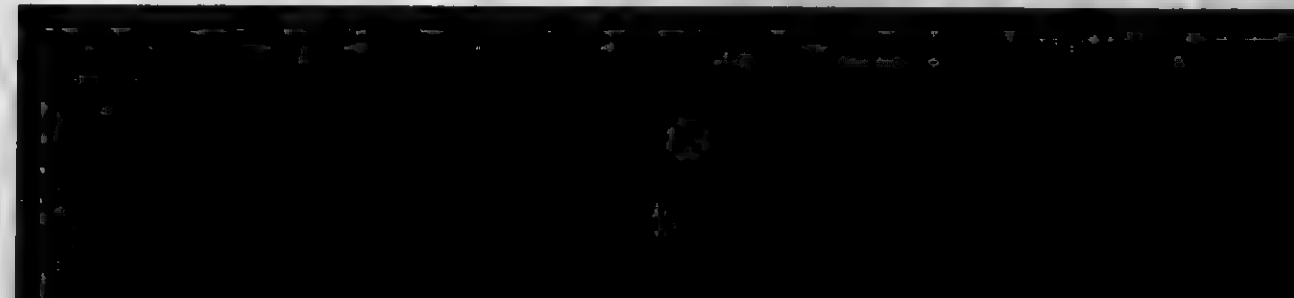
But, said Scott Smith, vice-president of the Stamford, Conn.-based Gartner Group, Inc. market research firm, the success of data base machine vendor Britton-Lee, Inc. has caused him to reevaluate his earlier assessment of the technology's market potential.

"We do not have any hard numbers on the market, but I think it is in a nascent stage, and it could be a big one," Smith said. "The market has already done better than I expected."

To get a sense of direction, Smith and other analysts said the market must be considered on a vendor-by-vendor basis. Los Gatos, Calif.-based Britton-Lee and Los Angeles-based Teradata Corp. are the acknowledged market leaders. Indeed, the two companies are perhaps the only vendors to have shipped production models of their data base machines.

According to President David Britton, Britton-Lee currently has close to 500 data base machines installed in some 150 different user sites. The company offers several models of its Intelligent Database Machine, which is targeted primarily at minicomputer sites including Digital Equipment Corp.'s VAX line. Britton-Lee intends to widen its market with upcoming product introductions, including a microcomputer network data base server slated for July release.

Despite their leadership status, Britton-Lee and Teradata have not clashed. Teradata's DBC/1012 is aimed at the high-end IBM mainframe environment, an environment one market analyst said is extremely difficult to penetrate. The DBC/1012 features a parallel processor architecture that can be configured with between six and 1,024 processors. The full-blown configuration, according to David Clements, Teradata's director of marketing, boasts a storage capacity of one terabyte, a trillion bytes of data. To date, he said, the company has installed about a dozen machines.



software?
demand

Clements said Teradata hopes to ship more than twice that many machines in its upcoming fiscal year, which begins July 1. A Britton-Lee spokesman would not reveal internal shipment projections but said the company expects 1985 revenue to be between $36 and $40 million, a growth of roughly 65% over 1984 revenue of nearly $22 million.

The current target audience for both vendors' products seems to be a narrow group of users with massive raw data manipulation applications, such as seismic research and computer-aided design and manufacturing. But both Teradata and Britton-Lee are gambling that certain pressures facing all users will spur an increasing need for data base machines.

According to Britton, the most important of those pressures is the demand for relational data management capabilities.

Productivity, performance provided

"The relational data model is very powerful, and it provides a very concise way of talking to data," he said. "But it consumes a great deal of the overhead of a general-purpose computer. You are getting a 10:1 increase in productivity, but you are eating up 50% of the resources of the computer. With the data base machine, you get the productivity, but you also get the performance, which is relatively low cost because hardware is cheap these days."

Another vital asset, Britton said, is that the data base machine can serve as a black box connection between a variety of processors in a heterogeneous computer environment.

Teradata's Clements highlighted two other forces prompting users to consider data base machines. First, research indicates more than half of large IBM sites are multiple-mainframe shops. Software DBMS, according to Clements, are not designed to serve more than one processor efficiently, unlike the data base machine.

In addition, Clements claimed, users are spending more on storage subsystems than on computer power for the first time. Thus, the costs of data storage are driving large shops to the massive storage capabilities of the data base machine.

Ample growth seen for mini DBMS market

By Ann L. [illegible]
Special to CW

The promise of data base technology has seduced industry professionals as the amount of information stored electronically has skyrocketed. To the great relief of users, data base management systems have undergone immense change since their commercial introduction in the 1960s.

Like most developments in the software industry, the evolution of DBMS has involved a process of absorbing advances in on-line programming, control and security, data relationships, program generation, screen mapping, end-user access tools and the like. Today, debates on the future of data base products hinge upon research conducted in distributing system resources and networking, high-level user-friendly languages, the improved performance of relational systems, hard-wired approaches, content addressable memory, parallel processing and other areas.

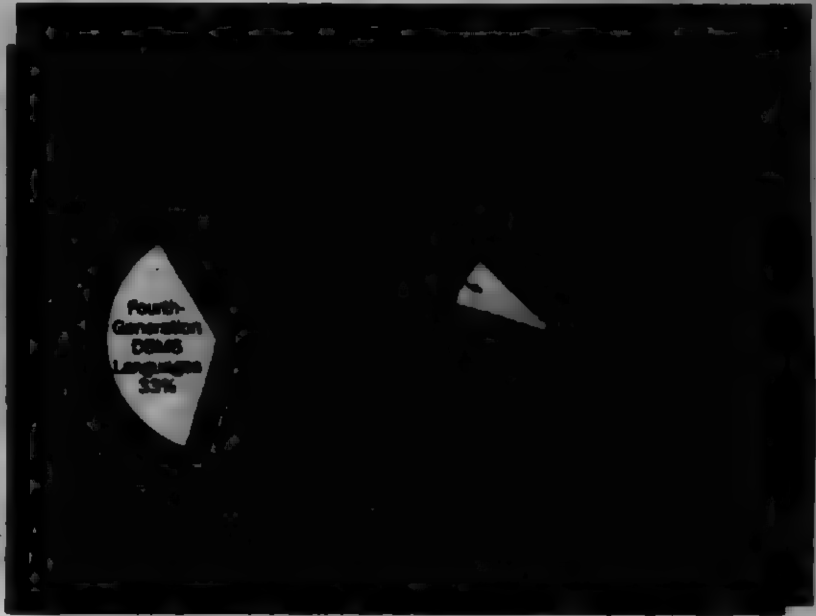
Until now, DBMS technology has been embraced largely by users of mainframe computers for central administrative applications managing large data bases. According to International Data Corp. (IDC), a Framingham, Mass.-based market research firm, 90% of the U.S. installed base of 3084 machines are running at least one of the commercially available systems; moreover, almost 70% of the 4381 population has implemented at least one.

Markets for DBMS software have been contested hotly since the early 1970s when independent suppliers like Cincom Systems, Inc., Software AG and Cullinane Database Systems, Inc. decided to tackle IBM on its own turf with products arguably superior to IBM's own. Notwithstanding the deep penetration made by these vendors into the IBM-compatible installed base, there is ample opportunity for them there for the next several years. However, there is movement afoot elsewhere:

- Software House, Inc., of Cambridge, Mass., recently announced that their System 1032 DBMS fully supports Vaxcluster — everything from VAX 8600 clusters to the new Microvax II.
- Information Builders, Inc., in New York, unveiled a DEC VAX version of Focus, its highly regarded fourth-generation DBMS-based language.
- Hewlett-Packard Co., based in Palo Alto, Calif., has announced the availability of Turboimage, an enhancement of the firm's proprietary DBMS, for HP 3000 customers.
- Relational Technology, Inc., located in Alameda, Calif., has announced a personal computer link for users of its DEC VAX Ingres data base system.

Moreover, DEC and Data General Corp. have both introduced relational data base management systems to shore up their positions among customers of their manufacturing and engineering products. Prime Computer, Inc. has introduced a popular fourth-generation DBMS-based language called Information, and *Per-*

See CHANGES SR/12



Symposium panel fields DBMS questions

By George Schussel
Special to CW

A regular feature of the National Data Base and 4th Generation Language Symposium (DB + 4GL) is a panel discussion featuring six or seven representatives from leading software firms and independent consultants. Questions are submitted by the symposium audience. Some of the more interesting questions that have been submitted recently for discussion are presented here.

Q **Will decisions to purchase applications software be affected by the improvement in productivity possible from the use of data base management systems and fourth-generation languages (DBMS) to generate custom systems?**

Current DBMS/fourth-generation language techniques are going to have an important impact on the applications software business. The fact that less time is required to generate a custom application means that many more organizations can now develop their own applications. DBMS/fourth-generation language code reduces, by a factor of from five to 10, the lines that have to be written for an application compared with Cobol.

Another impact of fourth-generation techniques is the narrowing of the distinction between the previously separate markets for applications software and systems software. Major applications houses, like McCormack & Dodge Corp., Walker Interactive Products, Inc. and Management Science America, Inc. either have or will be announcing fourth-generation tools. At the same time, DBMS and productivity tool vendors, such as Cullinet Software, Inc. and Cincom Systems, Inc. are now selling applications software products.

Q **How important is it to have the experience of a proficient data base practitioner when starting out using fourth-generation languages built on top of DBMS?**

The idea of total applications development without programmers has been discredited in most organizations that have tried it. Certainly it is possible for business analysts or other nonprogramming personnel to build applications featuring reporting or decision support as long as these applications do not support large numbers of transactions or contain complex procedural logic. Such applications are an important part of the new computing environment, and they can be built without the experience of professional programmers or data base administrators.

Most medium or large organizations, however, have found they need complex transaction processing applications. Professional data base administration and programming skills are needed in these environments, even with relational DBMS and fourth-generation languages.

Q **What are the differences between inverted-list data bases such as Computer Corp. of America's Model 204 and Software AG's Adabas and relational DBMS such as Oracle Corp.'s Oracle and Relational Technology, Inc.'s Ingres?**

Both inverted and relational DBMS support data models consisting of flat, two-dimensional tables. In the inverted model the user sees not only the tables but also the indexes that have been built as a retrieval mechanism on

Schussel is president of Digital Consulting Associates, Inc. of Andover, Mass., and chairman of the National Data Base and Fourth-Generation Language Symposium.

The coffee is fresh.

And so is the news, delivered electronically by CASE data communications equipment to the Jupiter branch office.

It's business as usual, fifty years from now, using CASE products available *today.*

And it illustrates the most important fact about CASE products.

They're *future-proof.*

They actually welcome change. They resist obsolescence.

It's not just that every CASE product sold today is made to work with other CASE products sold tomorrow, although that's true.

Rather, it's that every CASE data communications product is open-ended by design, to accommodate the inevitable

USA CASE RIXON Communications, Inc., Columbia, MD., *Telephone:* (301) 381-2300, *TLX:* 89-8347
UK & Europe World Headquarters: CASE, England, *Telephone:* 0923-33500, *TLX:* 923325

PROOF

changes the future always brings.

It's why CASE future-proof products are welcome at every growing business that needs to move information from here to there. Even when "there" is *way out there.*

And CASE networks are already established in more than 60 different countries, right here on Earth.

So call CASE toll-free at 800-422-2724.

Because it's never too late to start the right future.

from SR/3

top of those tables. Many questions in the inverted environment can be answered by working with the indexes without accessing the data base at all. For example, the question of how many records meet criteria A and B but not C can be answered just from the indexes if indexes exist on the selection criteria.

In the relational model, all of the operators are set oriented. A single relational operator such as a SELECT will produce a set of records, which may consist of as few as zero or one record.

In inverted DBMS, the basic data manipulation language is usually record oriented, and set-oriented processes are handled through a query language.

Q What can be done about the performance problems of fourth-generation languages and relational DBMS?

In a broad sense, there are two different types of DBMS/fourth-generation language combinations:

- Relational DBMS and user-oriented fourth-generation languages such as D&B Computer, Inc.'s Nomad2; Information Builders, Inc.'s Focus; and Ramis II, developed by Mathematica Products Group, Inc., are frequently single threaded with English-like user languages.
- Other DBMS/fourth-generation language combinations, such as Cullinet Software, Inc.'s IDMS/R and ADS/O, Software AG's Adabas and Natural and Cincom Systems, Inc.'s TIS and Mantis have more programmer-oriented fourth-generation languages and more of a performance orientation, with multithreading access for building transaction processing systems.

This latter category of products does a better job of solving performance-oriented applications needs but is typically not available to end users. Since relational DBMS and fourth-generation languages are relatively new, such products are still early in their development. It is reasonable to expect enhancements of these products. Today, however, Cobol code with a structured low-level DBMS is going to offer more performance potential than higher level, easier to use software.

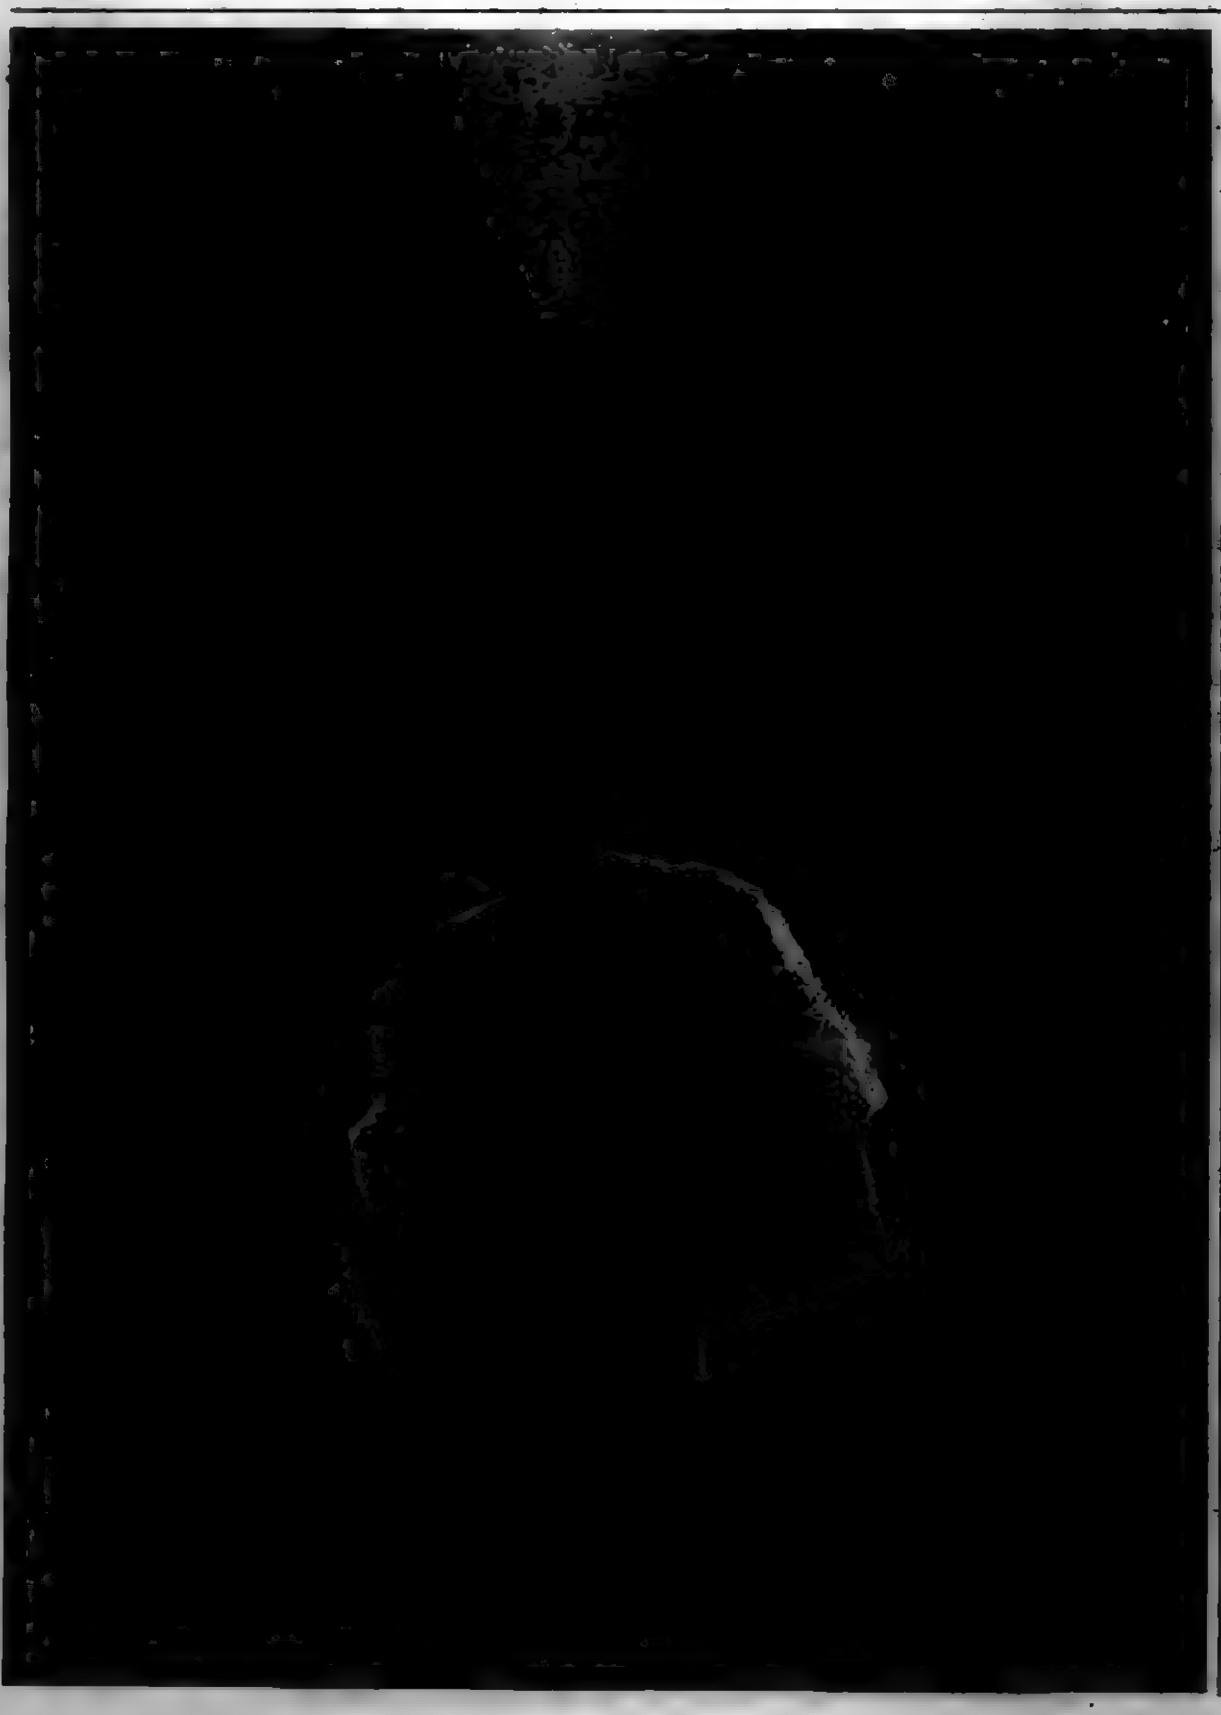
Q Several vendors describe their DBMS as relational when in reality they are hierarchical with certain user-friendly attributes or extensions. Do you have any comments?

The battle lines are drawn, and there is sharp disagreement on this issue. The relational pundits, led by Edgar Codd, the originator of relational DBMS theory, argue that "born-again" implementations such as IDMS/R, Datacom DB and TIS are not truly relational and are inferior. This group's arguments include the following:

- Sophisticated optimization techniques require detailed statistical analysis of a data base. Such components may be missing from the relational processing mode in a "born-again" system. As a result, performance-oriented applications require lower level, older approaches.
- "Born-again" systems provide a JOIN operator, which is less functional than true relational systems. Examples differ by product, but tables may not be joinable to themselves, or support may only exist for an EQUIJOIN, or the JOIN function may be only implementable through a looping verb.
- In a relational data language, the ability to create new views of data should be unlimited. "Born-again" systems with CREATEVIEW verbs are typically restricted in capability or available only to the data base administrator.

The vendors of the "born-again" relational systems argue that many of these points are of academic interest only. Their arguments take the tack that, in addition to supporting relational-like tabular views and verbs, their systems allow lower level, record-oriented processing. As a result of the performance potential of these lower level, less friendly processing modes, a system from a vendor like Cullinet or Cincom can be used for both information center and production center applications.

The proponents of these views argue that, if the user acquires a true relational system, such as IBM's DB2 or Digital Equipment Corp.'s RDB, then the vendor will sell the user two different data base systems, a hierarchical or network system (IMS for IBM and DBMS-32 for DEC) and a relational system for information center applications.



Q Within the next five years, will fourth-generation languages be significantly enhanced by artificial intelligence?

AI languages are starting to generate quite a bit of interest from DBMS users. The vendors of these tools now provide interfaces to a number of DBMS including Ramis II, DB2, IMS and Vsam.

There is a moderate amount of work in generating an AI language environment before it can be used. The lexicon, or data dictionary, of the product must be built. Such an effort has to be weighed against using fourth-generation languages for comparable queries. Fourth-generation languages seem to require more end-user training but currently have the potential for being implemented more quickly than AI languages. Fourth-generation languages can also have broader functionality.

The National Data Base and Fourth-Generation Language Symposium is scheduled for three upcoming cities and dates: Dallas — November 5-8; Boston — December 3-6; Sydney, Australia — February 24-27, 1986.

CONTRARY TO ALL OF IBM'S ARGUMENTS, TWO DATA BASES ARE NOT BETTER THAN ONE.

"I see fourth quarter profits up 27%. But on the other hand . . ."

According to IBM, the best system for delivering flexibility and performance is two systems, a relational system for the information center and a hierarchical system for the production center.

To some, this proposition may seem like the logical way to get the best of both worlds. But consider the superior logic of a single system that does both. ADR/DATACOM/DB®, our high performance relational data base management system (DBMS).

ADR/DATACOM/DB delivers the flexibility end-users need as well as the performance high volume production demands. So it eliminates the need for a redundant DBMS.

ADR/DATACOM/DB allows you to consolidate all your company's information into a single pool the entire company shares. So everyone, from PC user to programmer, uses the same exact data base to get the same exact information.

And with a single data base with only one set of data there can be no overlapping or conflicting data. So, the information everyone uses is consistent, up to date and, most important of all, accurate. Which, unfortunately, is something no redundant system can promise.

And should you need summaries of data, ADR/DATACOM/DB can produce and maintain them. Easily. Directly from the information in the corporate data base. And using the same exact DBMS. So ADR/DATACOM/DB uses fewer computer resources, human resources and, in turn, less of a resource management is very interested in — money.

Practically everyone in the software industry acknowledges that a single data base system is better. So the only question that remains is why some software companies continue to embrace the dual data base system. And the answer to that is simple. They just don't have a single system that can do it all.

For a multitude of other reasons why the single data base design of ADR/DATACOM/DB is superior, mail us the coupon. Or call 1-800-ADR-WARE.

Machine helps cigarette maker manage lab data

Coordinates collection of test information, serves as gatekeeper to mass storage devices

RICHMOND, Va. — At a laboratory here where thousands of cigarettes get smoked, weighed and otherwise analyzed each year, a data base machine helps researchers manage the millions of data manipulations that accompany their work.

Scientists at the Philip Morris Research Center test samples of Marlboro, Merit and other brands produced by Philip Morris USA, the nation's leader in cigarette sales. To keep tabs on competitors' brands, the center analyzes these too. Cigarette sales in the U.S. totaled $16 billion in 1983, with Philip Morris capturing more than one-third of the market.

In the lab, researchers check nicotine levels, tar values, paper porosity and other factors that will help the company find the best method of treating and curing tobacco and the ideal formula for blending different tobaccos to get a desired flavor. Hundreds of machines from a number of vendors — intelligent laboratory instruments, micros, CRT terminals, a minicomputer and a mainframe — capture and transmit information from the tests. The machines are linked on a network that Philip Morris calls its Laboratory Automation System (LAS).

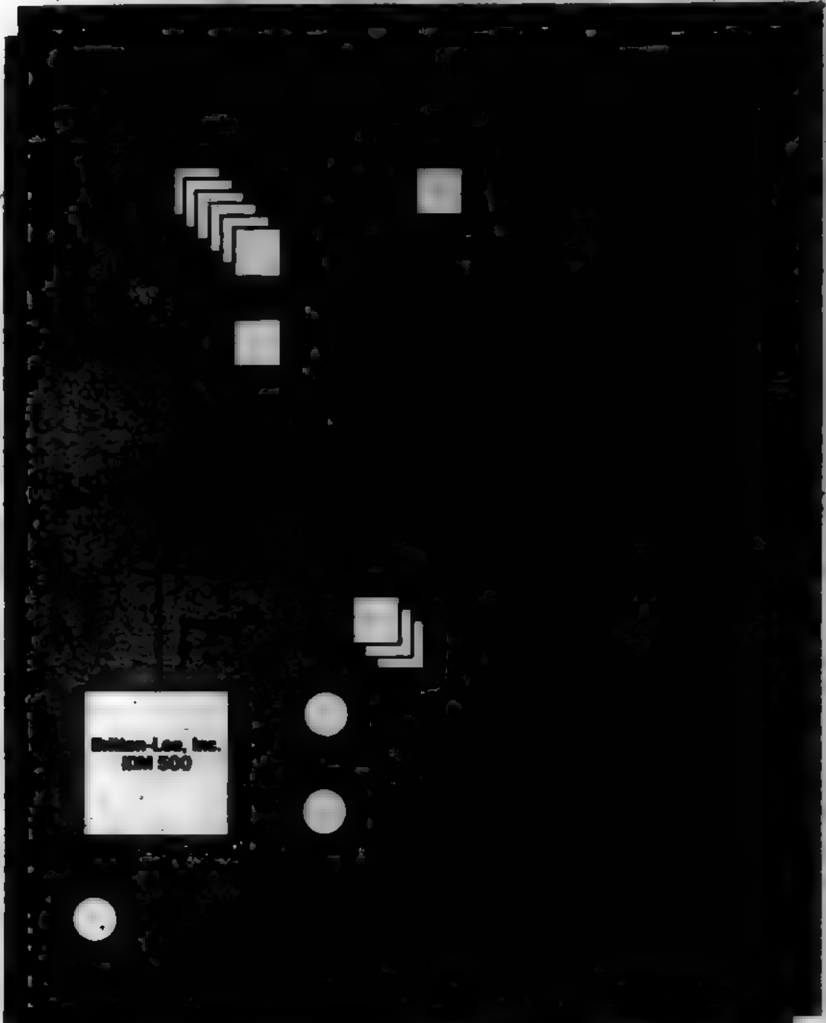
In 1984, the research work at Philip Morris accounted for 1.6 million data manipulations. The firm defines a manipulation as any point at which data surfaces, either for transmission from one piece of equipment to the next or for review by a scientist or other worker. It does not release other measures of research activity.

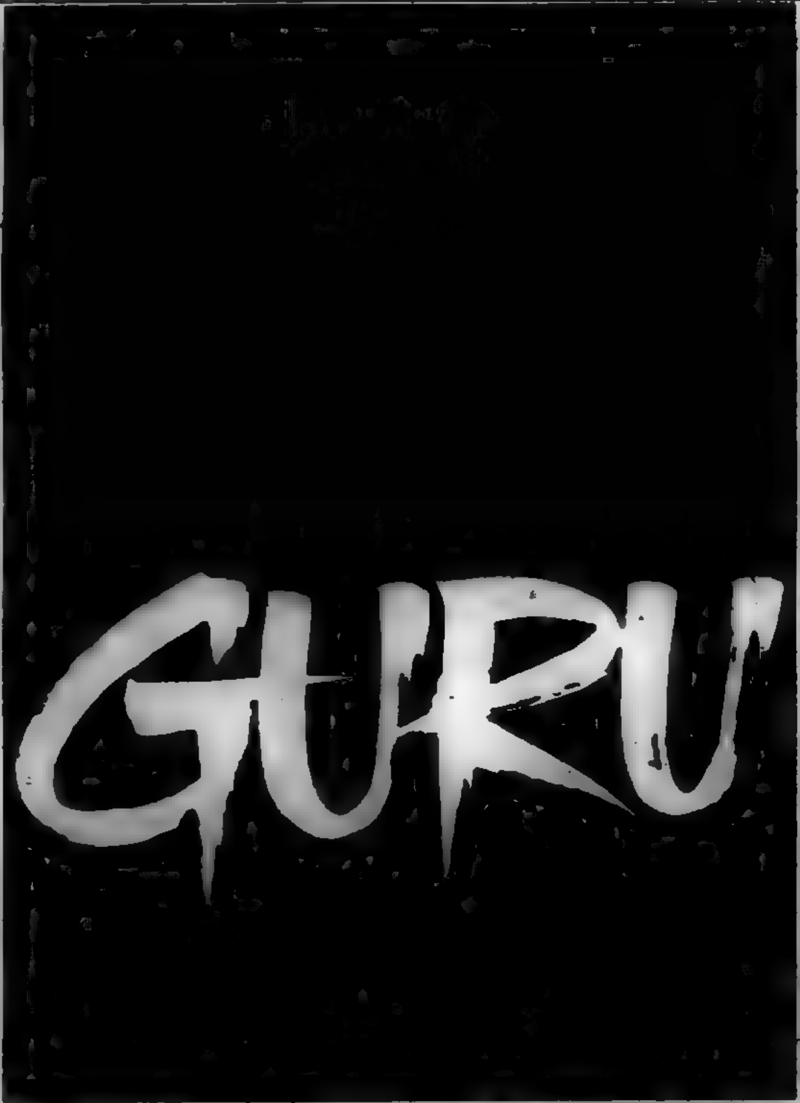
A Britton-Lee, Inc. Intelligent Database Machine (IDM) 500 coordinates data storage and exchange among machines. The IDM serves as a gatekeeper between the laboratory's machines and its stored data, which resides in two Control Data Corp. hard disk drives — one with 160M bytes of storage and the other with 675M bytes.

Philip Morris brought up the IDM in 1983 as part of its solution to a large data coordination problem. The lab's computer applications division, a data management group that produces reports and provides other DP support for many of the center's 500 scientists, technicians, applications personnel and managers, had trouble tying together data gathered during researchers' numerous analyses.

Computer printouts, hand-written notes and other forms of information arrived at the applications division after a cycle of reviews and compila-

See CIGARETTE SR/9





CIGARETTE

from SR/6

tions in the lab. Some of the information came in on printouts generated by the laboratory instruments. Some was on paper — scientists in the lab had jotted down data that had been displayed on lab instruments' CRT screens. Other reports were compilations; they had been drawn together by senior scientists and generated on the firm's host computer, a Scientific Data Systems, Inc. Sigma IX.

In the applications division, workers collated the information and passed it on to top scientists, who identified key data. Employees entered this data into the Sigma IX, and the applications division staff generated reports.

The cycle entailed about seven transfers of information from one piece of paper to another, according to Lucy Waller, the center's data administrator. At each transfer, people could misread data or make mistakes copying it. In addition, the process contained some duplication of effort: Some of the data entered into the Sigma IX at the end of the cycle had been generated earlier.

'I was somewhere up the creek'

"I felt, quite frankly, that I was somewhere up the creek," Waller said. "I needed the ability to pull this data together. . . . The data was coming in from different laboratories and different instruments. And yet the data had a common denominator of having come from the same sample — the same pack of cigarettes."

Waller began looking for a solution; at the same time, she had to find a replacement for the Sigma IX, for which support had been discontinued. The center bought a Digital Equipment Corp. System 2060 as its host; it then brought in the IDM to manage data base functions for the LAS, which would have overburdened the 2060. After a number of upgrades, the 2060 currently has 8M bytes of memory; besides supporting the LAS, it runs other business applications.

According to Waller, the data base machine approach had some potential pitfalls: The technology was new, it would represent a major change from the center's old operations, and Britton-Lee had not yet established a completely solid standing. "It was considered by us to be very high risk," she said. But the center's management, a group oriented toward research, decided to take the chance.

The center tied its lab instruments and data processing machines into the IDM with a Sytek, Inc. broadband cable. Software on each processor calls subroutines in the IDM's data base software, Britton-Lee's SQL-based Intelligent Database Language (IDL). The subroutines transform data from the different machines to a common format. Most of the machines use Fortran programs to call the IDM subroutines, but IBM Personal Computers on the network use Freeform, a software package from Dimension/IDM Partnership Ltd.

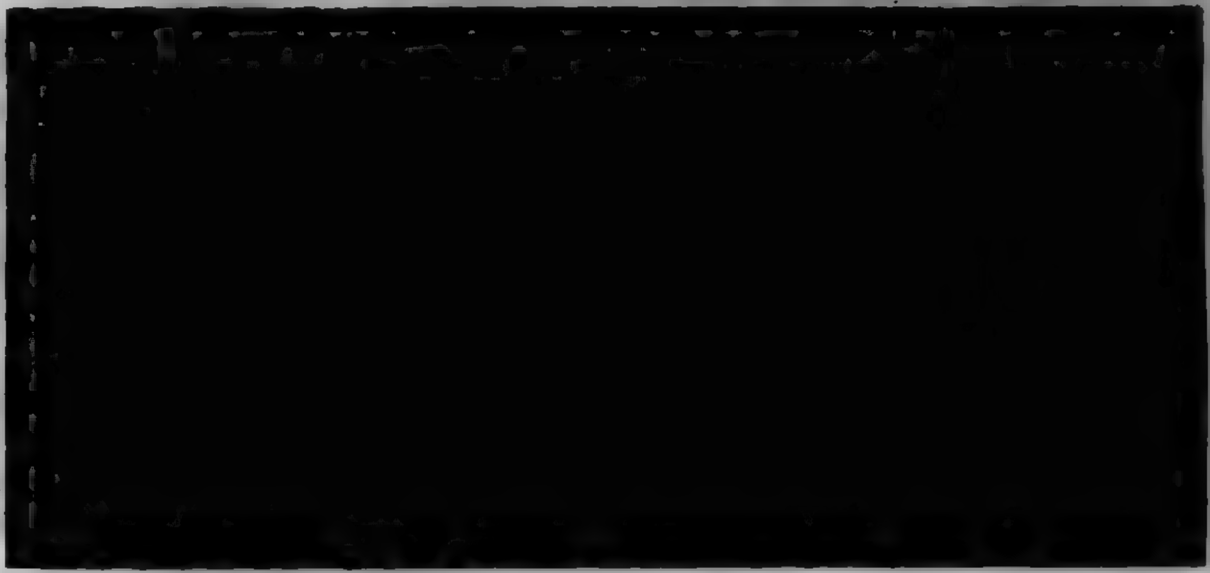
With the network and the data base machine, the center has solved its problems of duplications and manual information transfers. Information follows a pipeline from the original data collection machine to the data base. At the data base, it is accessible to anyone along the line.

Waller said analyses on cigarette samples still take about as long as they did with the old setup — an average of two weeks. But they are more detailed because scientists can spend more time interpreting data and less time transcribing it.

"We've reduced the number of people performing the tasks, and we're doing things we've never done before, especially in the reporting area," she said. "We're able to prepare views of data that previously just weren't done. We're able to add more statistical perspective."

The IDM's data base language has also helped the firm. Waller said that although IDL falls short of being a fourth-generation language, it does have some tools that help programmers develop applications. Development jobs that would have taken her staff about 2½ years to complete now take about nine months, she said.

Philip Morris chemist analyzes samples. Research work at the cigarette manufacturer accounted for 1.6 million data manipulations in 1984.



How to survive in times of abundance

It used to be that companies could go under if they didn't have enough management information. Now it's happening to companies that have more than they can handle.

Therein lies the problem. Data processing departments are swamped with work. Backlogs are swelling. Management expectations and end-user demands are not being met. In other words, your information system is out of control.

If you run an IBM OS or DOS operation, we can help you.

MANAGER SOFTWARE PRODUCTS INC has developed the first dictionary-driven family of tools designed specifically to help develop, manage and control an organization's entire data and information systems resource.

Right now, we offer four such tools: DATAMANAGER®, DESIGNMANAGER™, SOURCEMANAGER™ and CONTROLMANAGER™. They can be combined into a unique, fully integrated system. A system that will give you complete control of your IS operations today, and help you accommodate tomorrow's changing systems environment and end-user involvement.

msp

MANAGER SOFTWARE PRODUCTS INC

Offices worldwide: Australasia, Benelux, Canada, Italy, Japan, Scandinavia, Spain, Switzerland/Austria; U.K./Eire, U.S.A., West Germany.

MSP's MANAGER Family helps you model and document data structures and programs, and helps you design data base and file systems. Its powerful interrogation facilities enable you to produce accurate and timely reports.

And it provides your end-users with a plain English command language, on-line help and a sophisticated full screen interactive environment that can be tailored for each and every user.

MSP even has an application development system that actively generates programs from the dictionary — and guides your programmers to increased productivity through the re-use of existing source code.

And this is only the beginning.

MSP's information resource management tools truly are business survival tools. Find out more about them. Send the coupon today. Or call (617)863-5800.

Send me more information about MANAGER SOFTWARE PRODUCTS' family of integrated, dictionary-driven products:

The New Cincom: experience for integrated

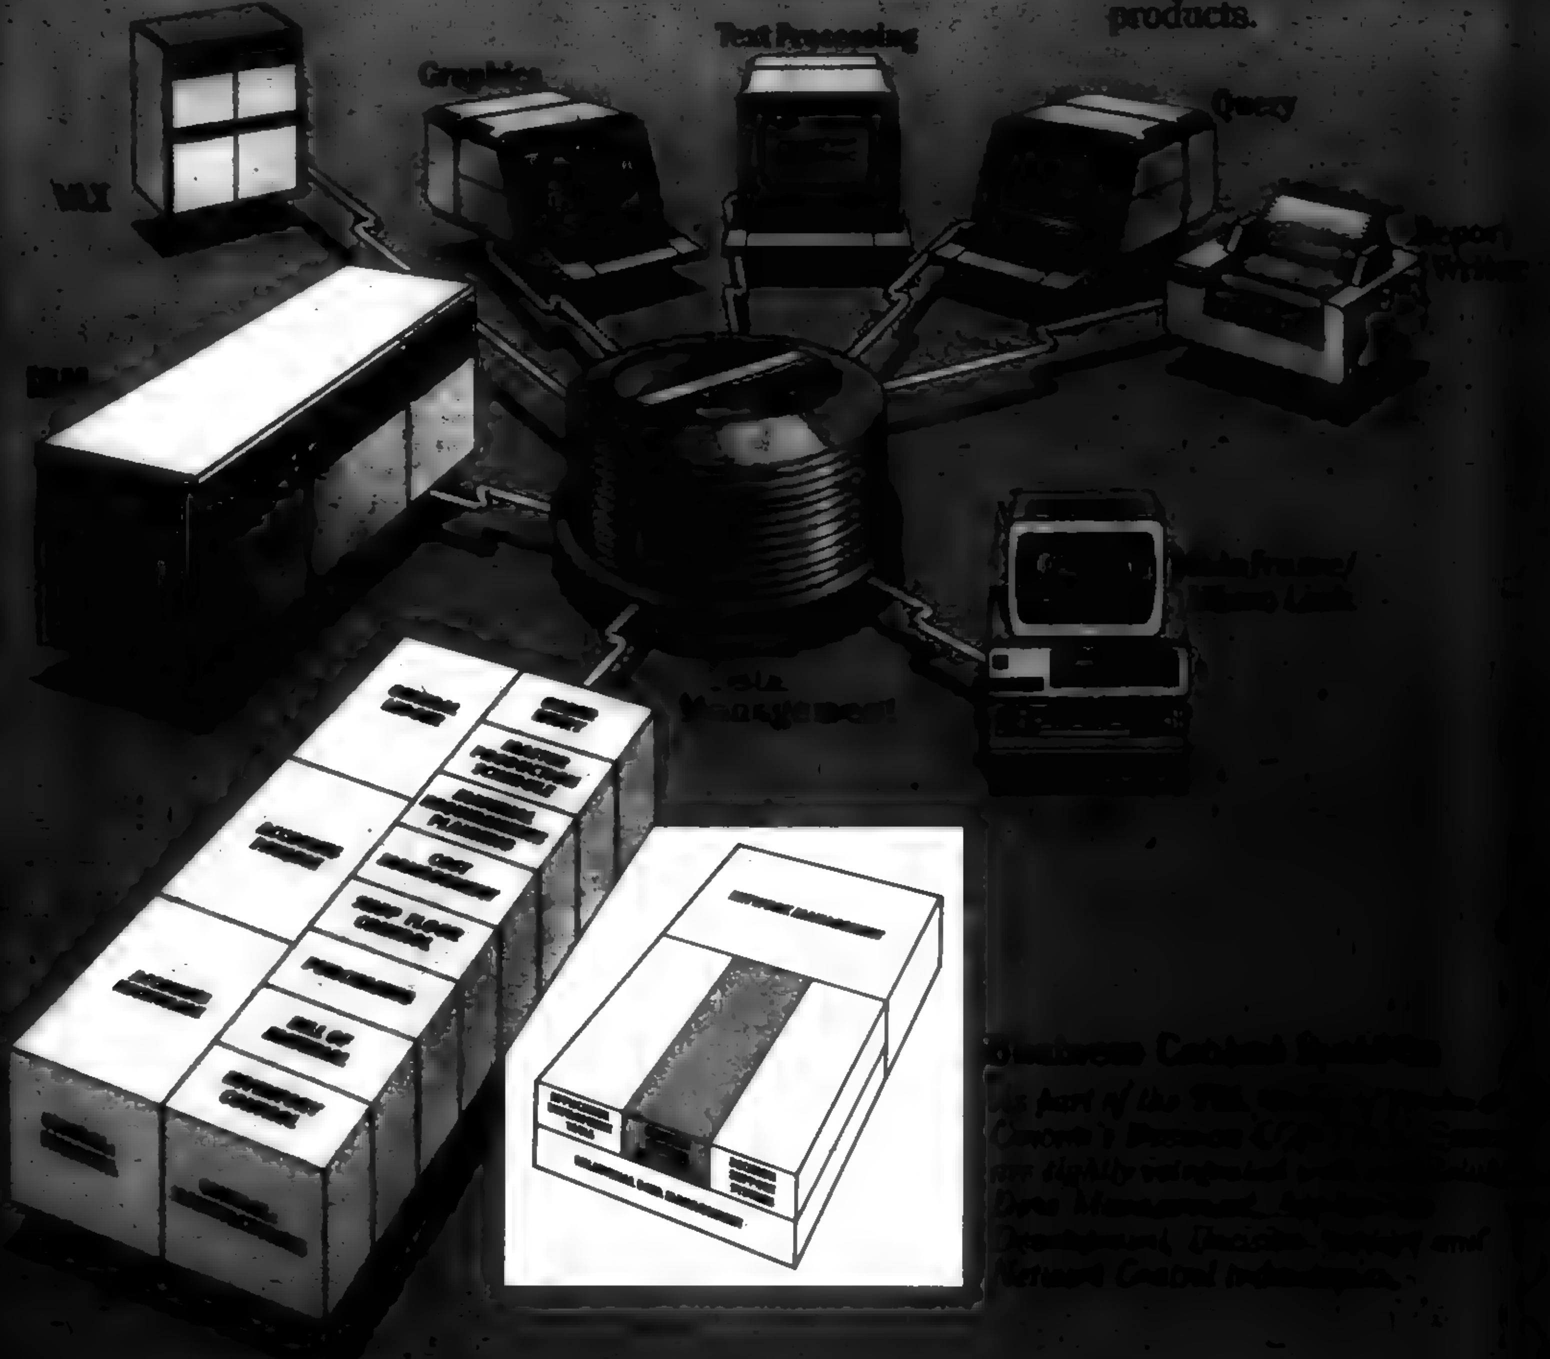
The New Cincom's Business CONTROL™ Systems are appropriately named. That's because they deliver the *control* you need to optimize production, reduce costs, and improve profits.

The New Cincom is uniquely qualified to deliver powerful integrated control in these vital areas. Here are three important reasons why:

#1 A Broad Scope of Proven Applications

The New Cincom Business CONTROL System applications help you perform all of the *predictable* functions common to the manufacturing environment. They also provide the capabilities you need—planning, execution and financial tracking—to improve dramatically your company's profit picture.

Our CONTROL™: Manufacturing system (MRPS) is the perfect example. It satisfies the needs of a wide variety of manufacturing environments including discrete, repetitive, and batch/process. CONTROL: Manufacturing systems are in use today by food and drug manufacturers, automotive suppliers, government contractors and manufacturers of a wide range of industrial and consumer products.



Business Control [illegible]

As part of the [illegible] Cincom's Business CONTROL [illegible] are highly integrated [illegible] Data Management, [illegible] Development, Decision [illegible] and Network Control [illegible].

[illegible] y a [illegible] manufacturingCONTROL.

[illegible] everything you [illegible] control your manufacturing world is available [illegible] Cincom's CONTROL: Manufacturing:

- [illegible] Materials and [illegible]
- [illegible]
- [illegible]
- [illegible]

For *unpredictable*, ad hoc information needs, Cincom offers decision support and data retrieval systems. Our network management software and the availability of our IBM or DEC™ VAX™ modules allow you to establish multi-plant and/or single plant integration. In short, you can create a truly "borderless" system that will serve your entire organization for years to come.

So take control. Call or write us today and we'll rush you a more detailed look at our integrated Business CONTROL Systems. We'll even arrange for a personal demonstration. When you see for yourself how powerful [illegible] these systems really are, you'll understand why [illegible] "Excellence in software technology" [illegible] to you.

Find out more about our Business CONTROL Systems by requesting our brochure "THE NEW CINCOM: WHAT EVERY INFORMED SOFTWARE BUYER SHOULD KNOW."

Cincom Systems

Excellence in software technology.

CHANGE

from SR/3

kin-Elmer Corp. and Tandem Computers, Inc. have continued to invest in and enhance their own proprietary systems.

Vendors — to date, DG, DEC, Wang Laboratories, Inc. and HP — looking to give their customers a tie-in to Big Blue have taken a hike to Westwood, Mass. and talked to Cullinet Software, Inc. about links to the Information Center Management System.

The independents are typically writing code for the machines that sell best. Hence, there are a number of familiar powerhouses looking to DEC's commercial installed base to pad the bottom line.

Cincom Systems, Inc. and Software AG of Reston, Va., contenders in the IBM mainframe sweepstakes, have joined the ranks of Relational Technology, Oracle Corp. based in Menlo Park, Calif., Software House and Britton-Lee of Los Gatos, Calif., each of which has staked out territory there.

Henco Software, Inc. of Waltham, Mass., has done well selling to the Prime installed base, although it is still licking wounds inflicted in Honeywell, Inc.'s ballpark.

Supermini market opens up

The market for data base technology is finally opening up among the installed base of superminicomputer users.

IDC has long predicted that this would happen in the middle of the decade and that it would offer both the independent software vendor and the hardware manufacturer significant new opportunities.

There are a number of reasons for all of this frantic activity happening now:

- Supermini users are beginning to support larger and larger data bases with the advent of more powerful machines like DG's MV/10000 and DEC's VAX 8600.
- Advances in data base technology, particularly the commercial introduction of viable relational DBMS, have paved the way for users to embrace the technology without a tremendous — although still significant — increase in overhead costs.
- The distribution of computing resources coincident with the introduction of new tools for end-user access and applications development are inspiring new organizational response to data management.

And the evidence is overwhelming; despite all the headlines, Ethernet, Systems Network Architecture (SNA) and AT&T's Unix are not key user concerns.

When asked to rate the importance of an assortment of hardware and software products to the supermini environment in which they operated, respondents to a recent IDC survey revealed their priorities in the following descending order:

- DBMS
- Real-time operating systems
- Floating-point performance
- Third-party software
- Multiprocessor configurations
- Support of standard buses
- Fourth-generation languages
- Integrated office software
- Third-party peripherals
- Ethernet, SNA and Unix.

Considering the overwhelming number of respondents — some 34% of the IDC sample who indicated that data base management was most critical to their operating environment — there were not many supporting a DBMS. Approximately 50% of them did indicate that they were running a data management tool of one kind or another, but only 70% of this sampled group had actually installed a DBMS.

Overall, only 36% of the sites sampled by IDC had installed a DBMS by year-end 1984.

This percentage is deceptively high because HP bundles Image, its DBMS entry, as part of the fundamental operating software offered to its clientel. If the Image sites are removed from the count, the number of sites running DBMS software last year plunges to a mere 18% of the entire supermini sample.

System supplier looked to for software

Supermini users typically buy their data management software from their hardware manufacturer. IDC data indicates that about 70% of them, in fact, looked to their system supplier for programming support.

The independent software houses have not made the kind of impact among these users that they have in IBM-compatible markets largely because they are small — but fast growing — and because minicomputer users are accustomed to investing in bundled system solutions.

As most everyone is aware, IBM has lost market share to the independents in the DBMS marketplace; at year-end 1984, IDC estimated that they had installed just about half of the DBMS software licenses for mainframe computers.

Because it is a marketplace far from maturity, IDC expects the DBMS marketplace for minicomputers to grow at much healthier rates than its mainframe counterpart. Users will spend approximately $150 million in 1985, which represents growth of some 35% to 40% over total spending last year.

Packaged software sales to superminicomputer sites are not just a matter of rumor anymore. Software houses nationwide are taking a second look.

Morley is editor of "Software Watch," a newsletter on software industry issues and trends that is published monthly by International Data Corp., a market research firm based in Framingham, Mass.

Spot can be your best friend...
...and SEARCH will be your business' best friend

If the system you use makes it difficult to find information, you need SEARCH.

SEARCH is the information retrieval software that provides fast, comprehensive searching and display of all types of textual documents — letters, memos, reports, contracts, proposals — from one page to hundreds of pages.

SEARCH is the only program that lets you store and retrieve information in its natural state — original text. It's easy to use because it stores and retrieves the way you write and think. Your word processing output can be the input to SEARCH, eliminating the need to index or tag specific parts of your text for retrieval. Every word is stored for searching, even the full text of long, multipage documents.

SEARCH was developed by BRS, one of the largest online systems in the world. Its design reflects the experience of thousands of information professionals performing millions of online searches.

Power...
Flexibility...
Ease of Use.

SEARCH is the ultimate retriever for all your information management needs!

For mainframe, mini and microcomputer systems.

See us at Booth

Switch to in-house data base musters interest in DSS

NEW YORK — When the publisher of a 19,000-page industry directory needed a way to analyze its massive data base — a repository for information about 127,000 manufacturers and their 60,000 different products — it switched from a service bureau to an in-house data base system.

Thomas Publishing Co. here, publisher of the annual "Thomas Directory of American Manufacturers," made the move last year after it recognized its need for on-demand decision support system (DSS) services and the service bureau's inability to provide them.

"The [bureau's] system was fine for updating and storing information," according to Al Klein, Thomas' special projects consultant. "But essentially it was a canned operation. Every time we needed to manipulate the data differently, it was a huge undertaking."

The firm had kept its data on a Data General Corp. minicomputer in the service bureau's data center. Whenever Thomas needed an ad hoc report, it had to arrange for the service bureau to format the report, schedule time on an IBM 4300 mainframe, dump data from the mini, load it onto the mainframe and run the program.

Weeks or months would pass before the entire process, including proposal preparation and other administrative tasks at the publishing house, was complete. "Sometimes it would never get done; people just wouldn't bother to ask for the information because it wasn't worth the trouble," Klein said.

He decided the key to generating enthusiasm for decision support was to bring up an in-house system that allowed users to do their own work. Under Klein's direction, the firm installed a 6M-byte Digital Equipment Corp. VAX-11/750 and Oracle Corp.'s Oracle data base management system, a relational DBMS based on SQL. The company's directory data takes up about 350M bytes of storage on one 470M-byte Fujitsu Ltd. Eagle disk drive.

Users enter and retrieve information with Televideo Systems, Inc. 970 and Lear-Siegler, Inc. ADM 2A terminals, with IBM Personal Computers and through terminals on a multiuser Dynabyte, Inc. Monarch microcomputer. The Monarch is hard-wired to the VAX, and the other machines have dial-up access.

For Thomas' first data base project, an application for the firm's editorial department, Klein set up a series of 12 tables: seven for different categories of information about companies listed in the directory and five for product headings. The largest table, one that lists companies' product offerings (ranging from "abacus" to "zirconium"), is 1.1 million rows long.

When users want to do ad hoc DSS reporting, they can implement SQL to access, search and join tables. If they want to find out, for example, the names and directory product headings for all the products a manufacturer makes, they can join a table that contains company names with the product table and the heading tables.

Klein said users can learn the basics of SQL and generate reports without much training, an important consideration in getting people to use DSS tools. "Most people are not interested in becoming computer experts," he said. "They want to put a little energy into learning and then get a lot out of it. With SQL, they can start out with just a few commands and get results."

Users' early data base queries usually generate information too broad to be of much use, he said, but the positive reinforcement pos-

Special Report

Normalization facilitates data design process

By Robert M. Curtice
Special to CW

Although many organizations are applying data management in an effective and modern manner, there still seems to be a lag between advanced ideas and actual practice in the area of data design.

One topic in current data design practice that remains somewhat misunderstood by the average user is normalization.

Normalization is the foremost buzzword in modern data design methodologies. Any data base designer of merit knows the three basic normal forms by heart, and the topic has been the subject of countless master's degree and doctoral dissertations that explore the world of fourth and fifth normal forms and beyond.

Although the definition of normal forms began with Edgar Codd's relational data base concepts, many people have commented, and rightly so, that the fundamental principles have been applied by good designers ever since computerized files became a subject of study. The principles of normalization are sound and apply to nonrelational structures just as they do to relational data bases.

There are two points that should be addressed with respect to normalization: one deals with how it is achieved, and the other deals with the first normal form in particular. Many methodologies introduce normalization as a separate process. That is, some sort of unnormalized design is derived, and then this design is normalized. A preferable approach is to include the considerations for normalization in the basic design process itself, so that a separate step is not required. In other words, normalized data structures should be designed from the start.

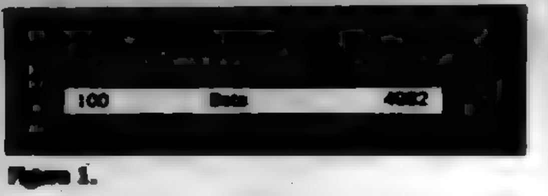

Figure 1.

Both second and third normal forms depend on the concept of functional dependency — the dependency of the value of one data element (column of a relation) on another data element. To ascertain functional dependency, the criteria by which the value of an element of data varies — for example, what it depends on must be determined. Thus at any point in time, a license plate number will vary by vehicle and not, for example, by the owner or operator. A different operator does not imply a different plate number. But a different vehicle does. So a good data structure will have the license plate number closely related and dependent on the vehicle; it is not a property or function of the operator.

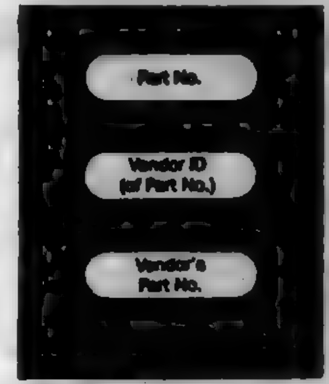

Figure 2.

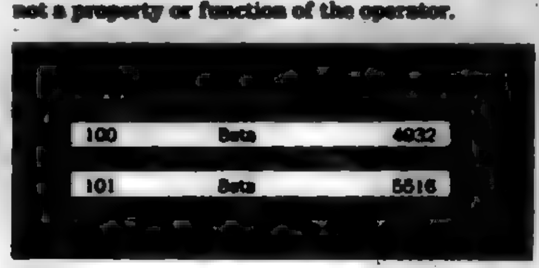

Figure 3.

Notice that we make these decisions by examining the real world. We observe the way the world works: A car has a license plate attached; different drivers come and go, but the plate stays. It is not difficult to imagine a world where the operator takes the plate with him and attaches it to each vehicle he operates. The functional dependencies are different, and the data structure must be too.

From the above scenario, it is difficult to see why normalization is routinely carried out as a separate step after an initial design has been formulated. Getting the functional dependencies right is fundamental to the process; it is not an adjunct process.

In addition, the answers to the questions that determine functional dependency are empirical — they come from observations about the real world or discussions with users. Bill Kent, a member of IBM's Data Base Research Center in San Jose, Calif., suggested that bad data designs can be normalized into bad normalized data designs. He said he prefers to design for normalized structures directly.

Peter Chen of the Graduate School of Management at the University of Louisiana, whose Entity-Relationship Model has proven popular in some circles, described normalization as "following the top-down Entity-Relationship Model approach. . . . You can get there quicker and easier than is possible through normalization."

It is a disservice to the important concepts behind normalization to regard it as a separable pro-

Clear goals pave road to central data base

Develop Business Model
Define Subject Data Bases and Project Modules
Select First Module
Determine Data Elements Through User Views
Select Next Module
Establish and Normalize Data Relations
Make Implementation Decision
Develop Prototype
Enhance and Revise Prototype

Many organizations that intend to convert a patchwork of applications-based systems to a corporate data base begin without fully defining either the destination or the road to get there. Most of them never arrive.

Instead, they wander for months or years in a maze of minor projects, hoping to somehow tie them together at the end. The result is a collection of applications systems that makes use of data base technology but ignores data base concepts.

The first step toward successfully implementing a corporate data base is to define the destination. Organizations should strive to put together a single pool of information, out of which different individuals can use different combinations of data elements. The data base system that provides the combinations may relate to applications, but the information resource must be viewed as an all-encompassing, nonredundant entity.

This concept forces the resolution of inconsistent definitions and the relinquishing of redundant data luxuries. The data element "department," for example, can no longer have one meaning for payroll purposes and another for general ledger.

Whether the data base is physically implemented as a single entity or as several is not important; it is important to break the rigid concept of applications-defined data and replace it with a concept that views all information as supporting the business functions that constitute the organization.

Once an organization defines its exact destination and its managers agree on it, a project leader can construct a plan to get there. The successful route will include the following important landmarks:

Development of a business model. A business model is a graphic representation of the major areas of a business and the functions within those areas. Definition of these functions is essential, as is agreement on the definitions.

Through interviews with management, the project leader and project team members should first identify major business areas — management, production, sales and the like — then isolate the various functions within each area. Budgeting, personnel and acquisitions, for example, are usually functions of the management area.

Each of these functions uses information centered around various entities — employees, plants and so on. The project team should identify the entities then combine them into logical groups, or subject data bases.

The cross section of business functions and subject data bases forms the basis of the corporate data base. The project team can document the relationship between the business functions and the subject data bases by placing the functions horizontally by area across a page then listing the subject data bases vertically, down the left or right margin. To indicate the use of each subject data base by a particular business function, team members should make a mark in the appropriate row and column.

This seemingly academic exercise can have surprising results. Top-level managers may have completely different views of their areas and of the entire business. The graphic model facilitates resolution of these differences and will provide, in the end, the business context needed for the project team's in-depth data analysis.

Identification of data base modules. Through the business model, the project leader can determine the logical boundaries of the business function — subject data base relationships. These boundaries indicate the individual modules that will make up the data base.

A module may contain an application, such as payroll or accounts payable, or it may contain only a portion of an application. In either case, these modules will be the individual projects, whose successive development will lead to the completed data base.

The module containing the core data (the information that is needed by the greatest number of other modules) should be developed first.

Modular development. The development of a data

cess. (Some data design aids claim to automate the normalization process. Perhaps they operate on a different concept of normalization.) The foundation of normalization — functional dependency — should be used to design normalized data structures directly.

The rule for the first normal form states that each cell in a relational table must be an atomic data value — in particular, repeating groups or structures is not permitted. Observe that this rule is quite different from those covering second and third normal forms that involve functional dependency. The rule for first normal form is structural, not empirical. What, then, is the basis for disallowing substructures within relational tables?

> ***The principles of normalization are sound and apply to nonrelational structures just as they do to relational data bases.***

The answer has to do with the fact that relational algebra does not provide for concepts such as relations that are composed of other relations. Other theories and their associated mathematical apparatuses do. The point is this: The ideas behind second and third normal forms are not tied to relational data structure — they apply to any approach. But the idea behind first normal form is only meaningful in a strictly relational system that adheres to relational algebra.

There is nothing wrong with repeating groups. Consider this example: For each account, a manager wishes to record the balance in the account at the end of each month for a period of one year. He could establish 12 distinct elements of data, such as January account balance, February account balance and so on. Clearly such an approach satisfies all three normal forms:

- Each element is atomic.
- Each element is functionally dependent on the key: the account number, for example.
- No nonkey element is dependent on any other nonkey element; February's balance is unrelated to January's.

But what if, instead, the 12 elements are established as follows: Account balance occurs 12 times.

This is merely shorthand for naming the 12 entries in each cell rather than forcing a separate element name in each cell. The differences between these two descriptions of data are miniscule at most.

Consider the relationship in Figure 1.

We know from the formulation of relational tables that there is a functional dependency between the vendor's part number and the part number plus vendor ID. Quite independent of the relationship between the vendor's part number and the key is another relationship between vendor ID and part number. In fact, there is a multivalued dependency. This dependency would like to argue that we have substructures of a kind within relationships; that we are, in reality, dealing with at least a hierarchy (Figure 2).

In others words, the above relational table implies a hierarchical relationship: Each part number can be associated with more than one vendor ID (a one-to-many relationship). But this implication is hidden in the table. Thus, for example, there is no way to actually specify that the relationship is many-to-many, as would be the case if the Figure 3 relationship were encountered.

With first normal form restrictions, the substructures within a relation must remain hidden. Again, we are dealing with form and not substance in first normal form. This form is a simplification that is fine in some cases but not helpful in others. It really does not add to the understanding of good data design. Yet, many people think normalization is equivalent to having no repeating groups in their records.

Evaluation process yields standard system for retail chain

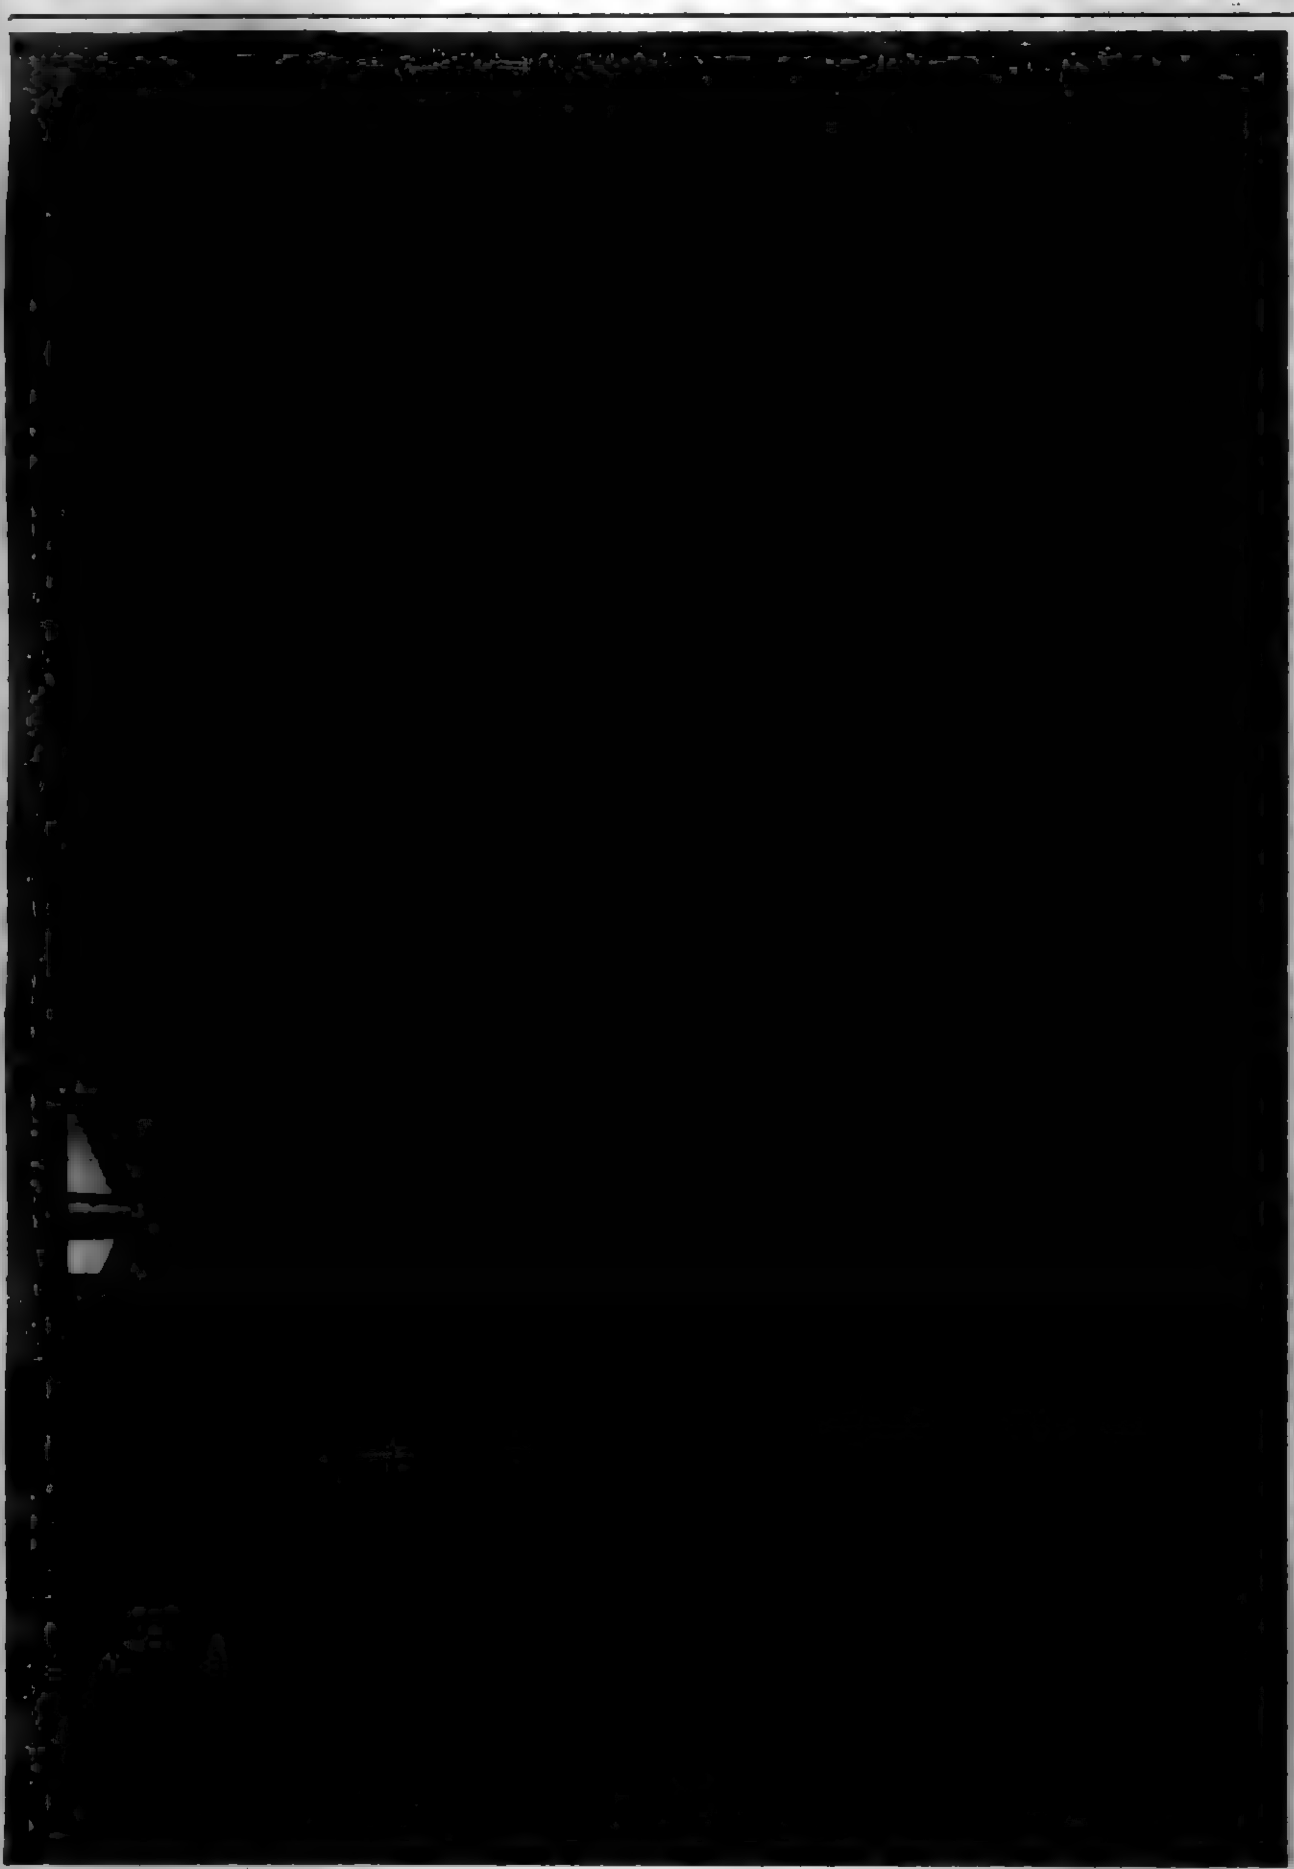
NASHVILLE — After a retail chain based here evaluated more than 200 microcomputer data base management systems during a search for a standard package, it learned that its two main requirements — flexibility and ease of use — were almost mutually exclusive.

"We needed a system flexible enough to accommodate multiple corporate applications at the single-user level," said Richard Taylor, a senior MIS staff analyst at Service Merchandise, Inc. "And it had to be user-friendly because many of the DBMS users also would be first-time users."

Service Merchandise, which operates a chain of 280 catalog showroom outlets, made trade-offs between the two criteria when it chose DBMS software for more than 100 micros. In its final choice, the firm sacrificed some desired simplicity to get the capabilities it needed, he said.

Taylor organized a three-month evaluation of DBMS software that began last July. Service Merchandise wanted a package that could support stand-alone applications on more than 100 IBM Personal Computer XTs at its corporate headquarters and other administrative offices. The firm was evaluating mainframe packages at the time but needed a micro DBMS to handle immediate user needs.

Users wanted to perform a variety of functions, including personnel management, finance, records management, loss prevention and internal auditing. Their jobs, and the job of the two-person information staff that trains Service Merchandise's end users, would be made easier if the firm standardized around one DBMS, Taylor said.



> *'Had we simply gone out and purchased the most popular package or purchased the one that looked the best . . . we would have made a half-million dollar mistake.'*
>
> **— Richard Taylor**
> **Service Merchandise, Inc.**

Specifically, standardization would provide three benefits:

- It would streamline user training, easing the burden on the small information center staff.
- It would give all users the same software so that people who switched from one department to the other would not have to learn to use different programs.
- A standard DBMS would ensure data interchangeability, which would help the firm with a future goal: the implementation of a standard link between the Personal Computer XTs and the firm's mainframes. Service Merchandise runs an IBM 4381 and two Honeywell, Inc. machines, a DPS 88/82 and a dual-processor DPS 8/70. The firm is installing an IBM 3083 next month.

Taylor set up a detailed list of criteria (see chart SR/33) and matched potential packages against it. After he eliminated software that lacked the features the firm needed, he ran benchmark tests on the packages that remained. During the benchmarks, he checked whether the different DBMS could operate under the Personal Computer XT's 256K-byte memory and whether they provided adequate response times.

With the evaluation procedure, the firm aimed to meet

INTRODUCING
THE MOST RADICAL
ALGORITHM
IN DATABASE HISTORY.

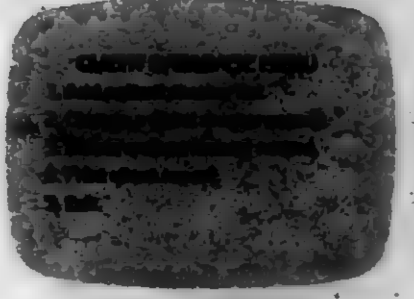
COMMON SENSE.

[illegible]

IT'S NOT HOW HARD YOU WORK. IT'S HOW MUCH YOU GET DONE.

There's an odd contradiction built into most database software. Most of the features that make it powerful enough to do the job make it a real struggle to use.

But at Microrim,® we've never thought it makes sense to do things the hard way. That's why we're introducing R:base™ 5000. With a brand new feature that makes life a lot easier for everyone in your company. From beginning PC users to your most experienced programmers.



PRODUCTIVITY:
R:base 5000 vs. dBASE III

Using R:base 5000 and dBASE III,™ we built this menu and linked it to its subroutines. The resulting applications were equivalent. The effort required wasn't.

	R:base 5000	dBASE III
Keystrokes	434	6988
Command Lines	47	244
Automated steps	37	0
Time*	9 minutes	2 hours

*Actual time may vary depending on skill level

THE APPLICATION EXPRESS.™ WHAT A DIFFERENCE.

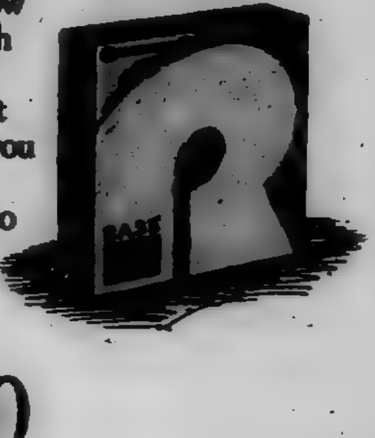
Since the Application Express automatically generates programming code, it can give you the tremendous advantage we've documented in the attached chart. For people who've never programmed before, these automated steps can make all the difference between getting the job done and giving up completely. And for your experienced programmers, the Application Express can give you ten to one productivity gains. Of course, R:base 5000 also has the powerful procedural language and report writer it takes to create highly customized applications.

SEE FOR YOURSELF: 1-800-547-4000.

If you believe in common sense as much as we do, you won't take our word for it; you'll get your hands on a copy and make up your own mind. And that's just what we'd like you to do. For only $9.95 (plus shipping) we'll send you a mini-version of the product that lets you build real-life applications.

Just call 1-800-547-4000 and ask for Dept. 995 . From Oregon, or outside the U.S., call 1-503-684-3000, Dept. 995 . We'll send your copy right out. If you'd like to see R:base 5000 today, head straight for a leading software store or computer dealer. If you own R:base 4000, ask your dealer for a trade-up kit.

We'll show you how much more your people can get done. When you give them a smarter way to handle their workload.



R:BASE 5000
FROM MICRORIM
IT ALL COMES DOWN TO COMMON SENSE.

dBASE III is a trademark of Ashton-Tate.

Data base development project explores China's past

Promotes videodisk as medium for information storage, retrieval

XIAN, China — Two thousand years after the end of his reign, China's first emperor is still at the center of potentially great change both for the nation he helped create and for students, researchers and data base administrators worldwide.

Information about Emperor Qin Shi Huang Di, including video and still pictures of artifacts unearthed near his tomb outside this ancient capital city, is being compiled and entered into an integrated visual, audio and textual data base. Researchers will use the data base both to develop courseware for use in the U.S., China and other countries and to promote the videodisk as a medium for intensive data storage and retrieval.

When it is completed next year, "Project Emperor-I: China's Treasure Revealed Via Videodisk Technology," will allow researchers and students to tap into a data base containing about 4,000 still images, 200 segments of motion video and more than 4,200 related records of text.

Users will be able to call up Ascii files and Chinese calligraphic text, as well as still and motion pictures from the archaeological excavation and a number of museums. In addition, they will be able to see and hear a series of oral histories — taped interviews with a number of experts from different Chinese cities.

"Information science is moving into a multimedia age right now. We are no longer satisfied with [3- by 5-in.] cards, books and periodicals alone," according to Ching-chih Chen, principal investigator and project director of Emperor-I. "We want to have the printed format, but we also want to see with our own eyes, hear the sound, see the motion."

The project's multimedia data base, which is about to go into production, will allow researchers to do just that, according to Ben Gant, a research fellow at MIT's Center for Advanced Visual Studies. Gant is in charge of the data base construction.

He plans to use an applications generator — most likely the Microcomputer Picture Archive and Communications System (Mpacs) from Artum Ltd., an Israeli firm — to design a data base management system that is part rela-

More than 6,000 life-size statues have been unearthed near Xian, China.

CHINA

from SR/22

tional and part hierarchical.

The project team has not yet made a commitment to the Mpacs system, but it has set up data relationships that will depend on flexible data base development and data retrieval capabilities. Data collected at the archaeological site and at other locations has been coded to fit within hierarchical data structures that are relationally cross-referenced.

Researchers have recorded detailed information, for example, about more than 6,000 life-size terracotta statues of soldiers and horses that archaeologists have unearthed here, according to Robert D. Stueart, research director of the project. For each statue, they have identified facts such as whether or not the statue is painted, what parts of it are painted and what the positions are of its arms.

These discrete facts will reside within specific fields (paint on arms, for example), the fields within screens (paint, for example) and the screens within sub-data bases (warriors, for example). The sub-data bases, in turn, will reside within a comprehensive data base for statues. Inverted keyword searches will allow users to branch through this information hierarchically.

The statue data base — like other data bases the project team creates — will also have sub-data bases for text, photos and video. Information in these sub-data bases will have a variety of cross-references to other information, and users will rely on relational capabilities to bring all the data together.

Emperor-I project team members will store still and motion pictures as well as text and sound on videodisks. They will store additional text on magnetic microcomputer disks. To retrieve data, they will use Digital Equipment Corp. Interactive Video Information System (Ivis) hardware.

The Ivis configuration for the project consists of a DEC 350 personal computer, a 10M-byte mass storage subsystem, a 13-in. color monitor, a videodisk player and a central Ivis unit, which provides an interface between the micro and the videodisk player.

With the hardware and DEC's Producer courseware authoring software, project workers will develop as many as seven interactive courses for different levels of users. Course developers will design branching routines that help general users, such as undergraduate students, navigate through data bases. They will also design programs that enable advanced users, such as research archaeologists, to pull information from different data bases into notebooks, or personal data bases.

Portability central to success

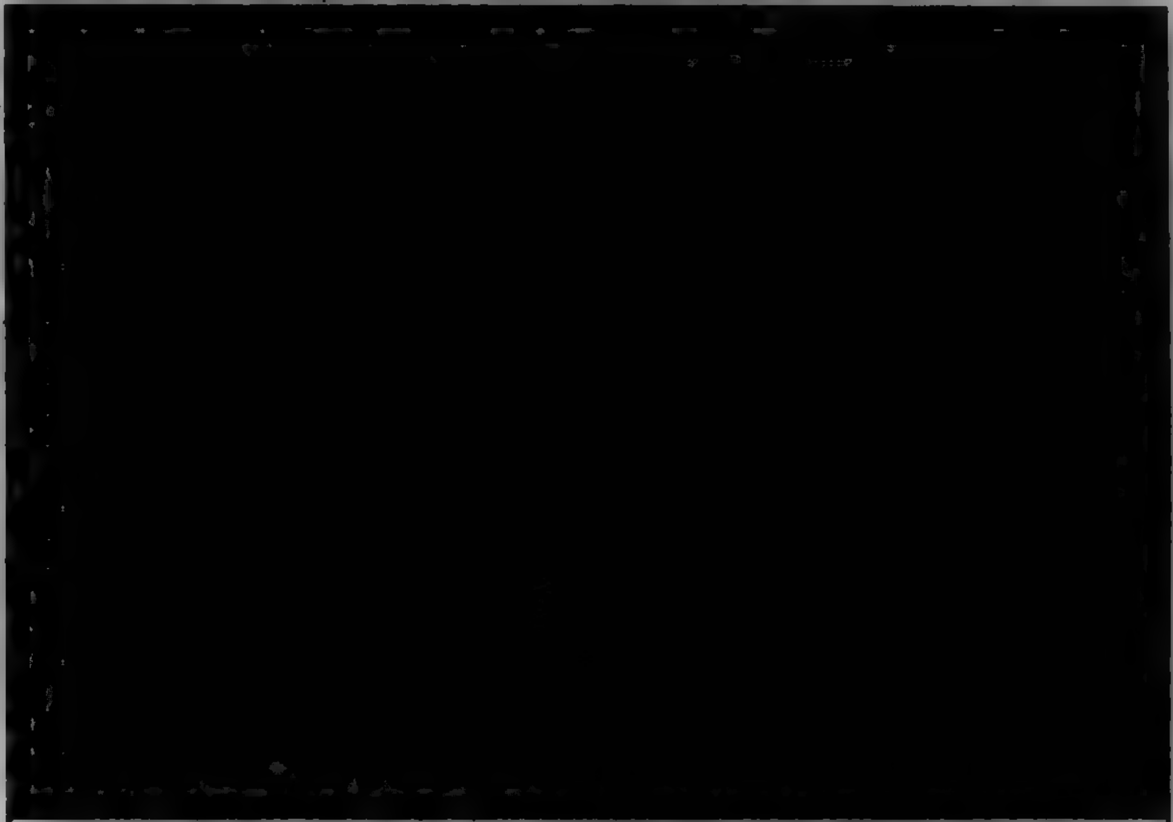
Project members also hope to develop courses with a system similar to Ivis that uses IBM hardware and software. Portability across different kinds of equipment, different subject areas and even different nationalities is central to Emperor-I's success, according to Gant.

"It is very important that the project not result in a one-of-a-kind system." Rather, he said, the project should serve as a general prototype "for how you gather information, store it and write instructional materials from it."

Chen said she hopes, in addition, that the project will raise the videodisk above its current status as a recreational tool and position it as a serious medium for information storage, processing and retrieval — for educators and information scientists alike.

"If all the project does is to help reveal something of China's history and culture to the western world, that would be enough," she said. "But we also have an opportunity to demonstrate how to use technologies that are practical and available today in bringing information to people throughout the world."

By September, the project team hopes to have some courses ready for user testing, and the courseware is scheduled to be completed by the end of next May, Gant said.



In an industry of "firsts," Oracle is proud to announce a "last." ORACLE is the last DBMS you'll need. Of course, we're proud of our "firsts," too. Like introducing the first relational DBMS and the first implementation of SQL back in 1979. Today, eight of the ten largest U.S. companies use ORACLE. In fact, INC MAGAZINE ranks Oracle as the fastest-growing software company in the USA. Surprised? Don't be. ORACLE is the number one relational DBMS, with thousands of installations on IBM mainframes, DEC, DG, HP and most other vendors' minis and micros, including the IBM PC.

Why not IDMS/R, FOCUS or DATACOM/DB?

Compatibility. There is a clearly defined standard for relational database systems. It's called SQL, and it's from IBM. IDMS/R and the others aren't compatible with SQL. These non-standard DBMSs lock you into one vendor, one technology. Only ORACLE gives you total IBM SQL compatibility.

Portability. Few organizations today use only IBM mainframes. So why buy a DBMS that runs only on IBM mainframes?

Applications written with ORACLE run identically on IBM mainframes, DEC, DG, HP, AT&T, Stratus, Honeywell, Sperry and most other vendors' minis and micros, including the IBM PC.

Why not just go with DB2 or SQL/DS?

Capability. DB2 and SQL/DS are relational DBMSs. Period. ORACLE is a relational DBMS plus an integrated set of 4th generation tools for application generation, report writing, graphics and networking. Together, ORACLE's relational DBMS and tools reduce and often eliminate traditional programming.

Portability. DB2 and SQL/DS run only on IBM mainframes. Period. ORACLE runs on all your computers and operating systems, from MVS and VM, to VMS, UNIX and PC/DOS. But if your organization is committed to IBM's DBMS products, ORACLE on minis and PCs is a unique complement to either DB2 or SQL/DS.

What about Goldengate, dBASE III and pfs:File?

Connectability. The problem with Goldengate and the other PC packages is that they are completely incompatible with the software on your minis and mainframes. This incompatibility makes it difficult to share data, impossible to share programs, and forces users to learn multiple interfaces: One for the PC and another for the mini or mainframe. ORACLE is your standard software solution. All your machines - PC, mini and mainframe - run the same software and have the same user interface. And ORACLE's communications software lets you connect those machines in a network to easily share data and distribute the processing load.

ORACLE

Make your next DBMS inquiry your last. To attend the next free, half-day seminar in your area or receive additional information, write Oracle Corp., Dept. C3, 2710 Sand Hill Rd., Menlo Park, CA 94025, or call 415/854-7350 ext. 1060.

ORACLE® is a registered trademark of Oracle Corporation. Our use of Cullinet, Information Builders, etc. [illegible]

[illegible] grows with you [illegible] without [illegible]

[illegible] hardware. [illegible] You can [illegible] your [illegible] IBM PC? [illegible] or PC to a [illegible] compatible computer. No other DBMS offers you such a wide range of hardware compatibility. SEED Software allows you to do applications on your mini with the same results of your mainframe and do applications on your mainframe for the same cost of developing them on a mini.

Performance you won't outgrow—SEED provides optimized use of your hardware for exceptional application performance. With SEED, DBMS designers now have the ability to quickly control and fine tune the physical data base design and memory utilization to optimize data storage and retrieval speed. The application programmer is provided with an entity/relationship model of the data base, while the end-user's view of the same data base is relational.

[illegible]

- query language
- report writer

Increased productivity
With SEED Software, you can increase productivity and response time, reduce errors and save precious programming time. Its English-like commands make it easy to learn and use.

SEED's comprehensive data base design facilities eliminate the need to define or manipulate inter-record relationships for each application or end-user; once a DB designer has described the data base, that definition works for everybody. End-users do not need to know how to "JOIN" records to pose a query or write a report. DP and project managers in business, government, military, research and academia are using SEED to get the maximum productivity from both their hardware and human resources.

The complete SEED system is now available for Perkin-Elmer users under OS/32. Call us for more details.

[illegible] get your system on-line quickly and easily. The full resources of SEED Software are available to quickly answer your questions through our toll-free Technical Service Hot Line. We also offer top quality, cost-effective data base consulting and application development services.

SEED Software is backed by MiniTech International Corporation, a multi-million dollar engineering, consulting and management organization. With twenty-six offices in the U.S. and many European, Asian and Middle Eastern cities, the MiniTech family of companies is dedicated to providing comprehensive high technology services to its customers.

FUTURE from SR/2

Michael Geran, vice-president of research at E. F. Hutton & Co. in New York, also cited preparation as an obstacle. "Operating systems have specialized routines for data base processing, and existing applications are tied to these operating systems. To pull these applications out from the operating system [for use directly with a data base machine] would require a lot of up-front work. Users would rather devote that effort to new projects."

The investment in existing applications was also cited by William Inmon, a director at Denver-based Coopers & Lybrand. "One of the big barriers to success for the data base machine is that investment. The data base machine may be a wonderful idea, but if the vendors tell users 'throw away your existing systems and build them my way' they are going to fall flat on their faces."

According to Ronald Ross, editor of the "Data Base Newsletter," published by Boston-based Data Base Research Group, the primary concern among users is productivity. Users are not certain, he said, that the data base machine is the solution to increased productivity.

"Right now, users' attention is focused on one issue — productivity. From that stems the interest in relational DBMS, fourth-generation languages and so forth," Ross said. "Productivity is the problem people are trying to solve, not the problem of large-capacity data bases and tying together heterogeneous processors. Companies will need a lot of experience with relational data bases of the size that cause performance problems before they look to data base machines."

But in the future, Ross said, a ground swell of interest in data base machines may arise when users migrate existing production applications to a relational DBMS. "That shift might point the way to a better relational engine. But it is at least three years away. Most companies have not gone relational yet, and they clearly have not built up relational data bases to the size that performance is a problem. Neither have they switched transaction applications to relational."

But Ross and others agreed that the appeal of hardware specifically designed for data management will grow, albeit slowly. "There is no doubt that in the future hardware will be radically different in its [data management] capabilities. Whether the current experiments with data base machines will be the shape of things to come is still up in the air."

Change is coming, James agreed. "The future? Yes, I believe it lies with the data base machine. Not everyone will adopt the technology. . . . But a change is coming in DBMS, and as the data base machine technology moves along, it will drag people in."

Achieve a 10 to 1 improvement in software productivity!

GUIDE TO SOFTWARE PRODUCTIVITY AIDS

You can do it by subscribing to the Guide to Software Productivity Aids. Structured programming, top-down design, and all the new programming technologies are great, but if you need to achieve more than a 2 to 1 improvement, you've got to use software tools.

And the Guide to Software Productivity Aids is the only publication dealing exclusively in tools to speed system development. For only $95 a year, you'll receive two semi-annual issues providing the latest comprehensive reporting on productivity aids.

But the Guide is much more than a directory. It also contains valuable "How To's" for maximum productivity improvement:
- ► How to analyze your workload.
- ► How to calculate your productivity potential.
- ► How to implement a program to achieve your productivity potential.
- ► How to integrate software tools into your program.
- ► How to establish an Information Center.

MODULE

from SR/14

base in modules offers three important advantages over the all-or-nothing approach:

■ First, it provides deliverable data base functions in less time than a nonmodular approach does. Management and users will be understandably skeptical if they are told that a project will take years to complete; during that time, business needs will change, expertise will be lost to employee turnover, and interest in the project may disappear. By undertaking the project as a series of modules, the project team can deliver a portion of the data base quickly. In addition, user interaction with a finished product early in the project can enhance the remaining development.

■ The second advantage modular development offers is the opportunity to revise subsequent estimates and schedules and make design changes before beginning the remaining modules. An organization that attempts to convert completely to a data base has little historical data to use in making estimates or projecting schedules. Each module offers a new opportunity for the project team to review and revise.

■ Finally, modular development allows the time needed to absorb the dramatic changes that accompany implementation of a data base. Applications that traditionally have been batch oriented may become on-line, interactive systems. This will change or even eliminate job functions. Management and users need time to understand and acclimate to the new environment. If sufficient time and communications are available, the changes will not be threatening. Modular development and implementation will provide this time.

> ”
>
> ***Modular development allows time to absorb the dramatic changes that accompany implementation of a data base.***

Individual development life cycles. Each module should have a separate development life cycle (see chart SR/14). The project team should begin by determining the individual data elements used in the module and their relationships as seen by the user. It should then normalize the relationships for maximum clarity and efficiency.

At this stage, a fourth-generation language will provide more benefits than a traditional one because of the increase in productivity and ease of revision it provides. With a high-level language, the project team can construct a working prototype in a minimal amount of time, allowing the user to interact with the development process early. This allows the remainder of the development to be an evolution between the user and the system.

Coordinated implementation. When a module is complete, the project manager must consider the best time to implement it. If immediate implementation would require the project team to develop many interface and conversion programs, the manager may find it beneficial to wait for the completion of a subsequent module and implement the modules together.

The nature of the data can also affect the timing of the implementation. A module that supports strictly annual data, for example, may be better implemented in January than in October. Management and users must be involved with the project team in each implementation decision.

Organizations converting from applications-based systems to a corporate data base are in for a long and difficult journey. The improvement in quality of the information resource and the organization's use of it will be worth the effort. Agreement on the destination will ensure that the project arrives.

"In one day, we'll show you how to manage your company's information needs for years to come."

James Martin
Author, Lecturer and
Chairman, JMA, Inc.

A one-day consultation with James Martin Associates can offset years of information programs. It can help your people develop the information they need. So they can make important decisions correctly. It can be the first step toward improving response time, making data bases flexible and integrating personal computers.

It's the first step that can help you develop a comprehensive information strategy that reaches into every aspect of your organization. We can provide a total overall insight that unites the functions of data processing departments and the business needs of end-users.

The Information Engineering solution.

We have learned that information management is essentially an engineering problem. The proper methodology and framework ensure a system that works for all who depend upon information. For this reason, we carefully examine the requirements of everyone from top management to mid-level supervisors to programmers. We then place powerful, easy-to-use software tools in the hands of those who need to transform data into useful information.

And, most significantly, you don't have to wait. Instead of platforms and proposals, we give you tools that are available . . . now.

Information Engineering also links and centralizes data bases for optimal efficiency so that you derive maximum potential from your current technology.

In fact, our whole approach makes the most of the systems you currently have. You don't have to start from scratch.

The information strategy approach: All the information you need when you need it.

Information Engineering involves clear-headed logistics so that information moves precisely where it should. Rather than having rooms of programmers, writing in cumbersome languages like COBOL or Fortran, you can have end-users creating their own applications with new fourth-generation software tools. Your hardware assumes the burdensome task of generating code. And your users obtain information in a fraction of the previous time.

Our one-day seminar shows you how.

Information Engineering can revolutionize the way your company processes and distributes information. We'll demonstrate this approach to you at a one-day seminar, conducted at your location for up to fifty people. If you decide to proceed with a consulting agreement, there is no cost or obligation. Just an opportunity to learn from our experts.

For more information, call us at (703) 435-7292. Or write us at the address below. One day could be crucial in managing information for years to come.

Gary Slack, Exec. V.P. (l), Jason Martin (r), Bob Miles (c), and their associates can help you put information engineering tools to work in your company today.

Technology, intelligent software guide market growth

By Shaku Atre
Special to CW

In the past five years data base technology has been maturing and taking a catalyst position in automated data processing. In some installations the data base management system is used not only as a fancy access method for one application system but is shared by a number of application systems.

The DBMS is also extending beyond the terrain of the mainframes and progressing aggressively in the micro-and supermicro areas in the information center setup. End-user computing is claiming about 20% of the current millions of instructions per second (Mips) today, and it is predicted to reach 60% to 75% of Mips usage by 1990. A major part of the Mips usage could be by data-based applications. As a result, the prediction of $5 billion of revenue intake by the DBMS and ancillary products' vendors by 1990 seems to be easily achievable.

In what areas would data base technology need to make its mark in order to ring in $5 billion in the not-too-distant future? The following sectors are advanced enough, as far as technology is concerned, to move into a production environment from the esoteric research and development environment of the vendors' camps. Software-oriented products will provide:

- Vertical integration of application software with DBMS as the driving force.
- Distributed data bases together with intelligent directory or data dictionary systems and mainframe-to-micro connections.
- The means for cooperative coexistence of the development, production, information and automated office centers with the DBMS as a common denominator.

All of these sectors will be using the conventional general-purpose data base management system.

A data base environment is I/O intensive, however. The three areas listed above are software oriented, and software alone is not known for relieving I/O-intensive work. Isn't I/O really hardware oriented? Wouldn't it then be appropriate to look for a hardware solution geared toward I/O-intensive data base work? Precisely. For this reason two areas that will advance rapidly in the coming years may be data base machines and intelligent data bases.

A data base machine consists of data base system software, hardware or firmware that is dedicated and tailored to perform some or all of the data base functions. It must use some hardware that is specially designed for data base management.

Two types of machines

There are two types of data base machines. One type still performs number crunching, in a linear processing mode using von Neumann architecture, and is used as a back-end processor. The other type performs parallel processing, which is a departure from von Neumann architecture, but also is used as a back-end processor. A data base machine may or may not use content-addressable memory. A data base machine may coexist with a host or may exist by itself as a minicomputer.

Looking back thirty years, most DP professionals would agree that software was invented to simulate what hardware was supposed to do in the first place. There were so many varied and intriguing uses of software that software itself established a self-perpetuating life. But software is limited by whatever hardware can or cannot do. Software is restricted to Add, Subtract and Shift. By comparison, the basic data manipulations in a data base environment are Search, Retrieve, Update, Insert, Delete and Move, rather than Add, Subtract and Shift. The mismatch of the von Neumann design to nonnumeric applications is the main cause of the complexity and inefficiencies of the present systems.

If technology can be matched more closely to data base applications, then perhaps the following technologies will be more practical: high-level query languages; access of data base records using natural languages, speech and pictures; and problem solving using inference systems, with the help of expert systems utilizing intelligent data bases rooted in a knowledge-based management system. Inference drawing requires parallel processing. The relational data model with high-level data languages, exhibiting a high degree of data independence and ease of use, are requirements for improving human productivity in today's and tomorrow's offices.

Two bottlenecks affect performance

In conventional data base environments there are two major culprits affecting performance: the staging bottleneck and the communications bottleneck. To stage data into main memory from auxiliary storage is time consuming. Since data transfer from geographically dispersed areas is time consuming as well as expensive, data redundancy is introduced.

But these techniques introduce new problems in the areas of data updating, recovery, integrity and security. Special-purpose hardware, tailored toward distributed data base management and supporting data communications, would help alleviate these problems.

The technology is here, as can be seen from implementations by a number of data base machine manufacturers such as Britton-Lee, Inc., Teradata Corp., Intel Corp., Amperif Co., HDR Systems, Inc., Corem International and Mega/Net Corp., to name a few. But why isn't this field taking off faster? One reason is that one of the major players, IBM, hasn't shown its cards as of yet, and new ideas in this industry require a blue stamp in order to be considered as viable solutions for the marketplace.

Atre is president of Rye, N.Y.-based Atre International Consultants, Inc.

DB2, SQL/DS will fail if firms ignore training

By Joseph E. Weir Jr.
Special to CW

Almost every major IBM installation will at some time in the near future implement, or at least seriously consider implementing, IBM's DB2 or SQL/DS relational data base management system. As with any implementation, training will be a major factor in the system's success or failure.

That the two DBMS will gain wide acceptance should come as no surprise: Relational technology offers great flexibility, high-level query languages and other features that users find attractive. In addition, IBM's two relational systems — DB2 for MVS shops and SQL/DS for DOS/VM and VM environments — are the first major DBMS the firm has released since the late 1960s, when IMS came out.

That proper training is crucial to successful use of a DBMS is no surprise at all: Nearly everyone remembers the horror stories associated with the early days of IMS. Certainly, IMS had some inherent bugs that needed fixing, but the vast majority of disastrous implementations came about because of a lack of proper training.

IMS implementations brought forward the idea that incorrect use of data retrieval and updating commands can dramatically increase demands on hardware and decrease processing efficiency. If users are not adequately trained in DB2 and SQL/DS, history may repeat itself.

Relational features like flexibility and ease of use should not lull management into complacence. Training requirements for DB2 and SQL/DS are somewhat different from those for IMS, but training should be no less stringent or extensive.

Most of the audiences that require training for DB2 and SQL/DS are no different from those that needed help with IMS. The following groups of people must all have some instruction:

- Managers.

Software AG Users
spell it out...Datapro™ survey
rates ADABAS

E-X-C-E-L-L

E-N-T!

ADABAS does it again—and we're not surprised!

The results are in! Datapro Research Corporation asked systems software users to rate their data base management systems. And, Software AG users rated ADABAS "Excellent!"

Exactly the same thing happened in an earlier survey when Data Decisions asked users what they thought. For the third year in a row, ADABAS went right to the top of the list as the highest ranked DBMS for the IBM mainframe. And NATURAL was a top contender for best fourth-generation language.

Together, ADABAS and NATURAL make an unbeatable team!

At Software AG we don't believe in surprises. We believe in providing our users with the most powerful software tools available anywhere. And that's the proper plan for the world leader in advanced systems software.

So, if you want the facts about systems software, just ask our users. For starters, send us the coupon below and we'll rush you the official Datapro DBMS report. Or call us at 1-800-336-3761. (In Virginia and Canada, call 1-703-860-5050.)

Special Report

Selecting a DBMS: Match every application's demands

By Eugene W. Oson
Special to CW

All commercial data base management systems have their strengths and weaknesses, which prospective users must consider carefully. Identifying a package's inherent value, however, is not sufficient: Organizations looking for a DBMS must also identify their applications requirements and match them with different products' capabilities.

To select the best DBMS for a particular set of applications, an organization must set up — and follow — the following six-step evaluation:

- Establish an evaluation and selection team.
- Describe applications requirements.
- Identify evaluation criteria.
- Assign weights to the criteria.
- Rate each DBMS' capabilities against the criteria.
- Calculate overall DBMS ratings.

Naturally, the staff time devoted to each of these steps and the level of complexity required will depend on the scope of the project. Small, micro-based projects require less formal and less complex analyses than larger projects do, but they require analyses nonetheless.

Establish an evaluation team. The team must include both knowledgeable user representatives and people with technical DBMS expertise. Including both groups should eliminate the possibility of a technocratic slant or of user disappointment with the final choice.

A team leader should take responsibility for assuring an impartial and expeditious evaluation. The leader will be the focal point for all team activities and will be responsible for an open line of communication with other managers.

Describe applications requirements. To select the proper criteria for judging the DBMS, team members must understand system requirements. They also must have a thorough knowledge of the applications requirements to assign proper "weights" to the various selection criteria.

The idea of using a DBMS usually arises from a desire to use one or more of the following general DBMS capabilities:

- Variety of access methods.
- Flexible user interfaces.
- Data integrity.
- Data independence.
- Central control over physical storage.
- Hierarchical storage device support.
- Data concurrency.

The team should examine these capabilities and determine which ones best serve the organization's applications and to what extent. Team members must also pinpoint the specific demands that the organization's applications will make on a DBMS (see story SR/31). Once the team determines these demands, it must establish their fulfillment as a necessity.

DBMS packages that do not meet the special requirements of an organization's applications must be eliminated from consideration: No one would buy an otherwise perfect package that did not run on his organization's computer. Likewise, no one should consider a DBMS that does not support his firm's applications.

Identify evaluation and selection criteria. Before the team can make an evaluation, it must develop a comprehensive list of criteria. The list should be derived from a combination of user requirements and available data base technology.

The following list is a sample of what an organization might identify as desirable DBMS features:

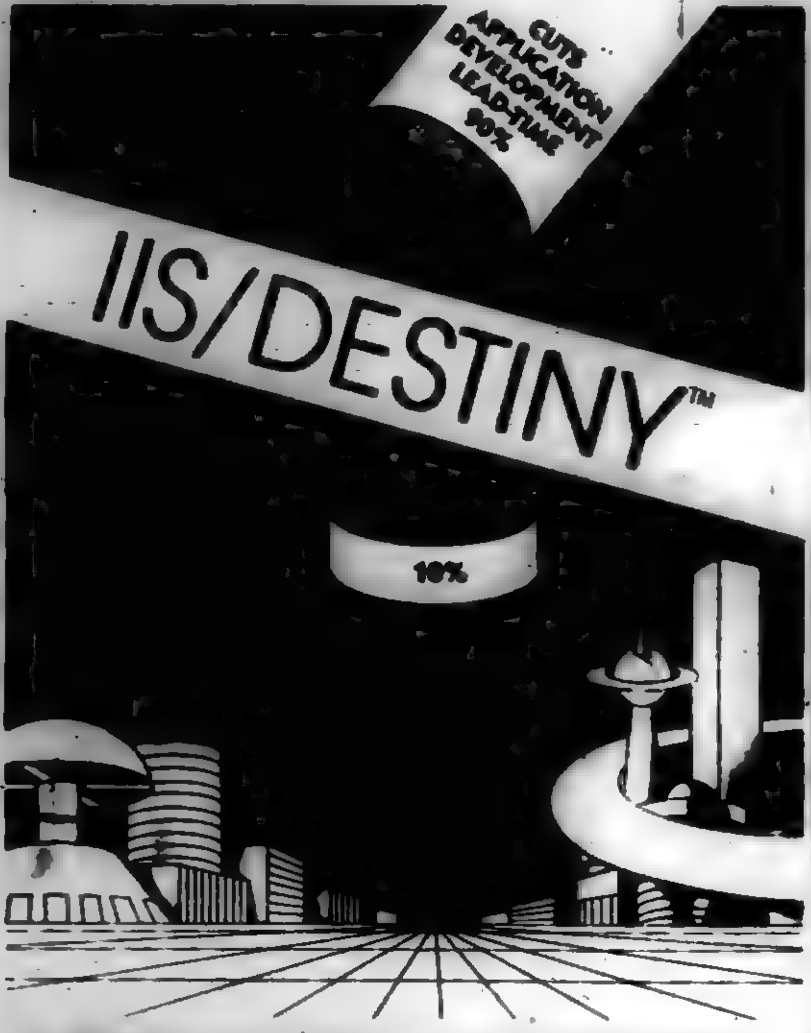
- Data definition and representation capabilities.
- Support for different data structures.
- A variety of access methods and retrieval capabilities.
- A specific host language interface.
- Ease of installation, use and/or change.
- A convenient interface with an operating environment.
- Flexible and powerful query processing and report generation.
- Backup and recovery capabilities.
- Security and privacy.
- Realistic peformance overhead.
- Efficient management of physical storage.

Assign weights to criteria. Based on the previous identification of system requirements, user requirements and selection criteria, the team should assign each criterion a number that represents its relative importance, such as a value system from 1 to 10, with 10 the highest value.

Rate different DBMS packages. Several techniques are available to produce a common rating scale for fairly objective criteria — such as whether or not a DBMS supports a given data structure — and more subjective criteria — such as how good a package's documentation is.

A common technique is to measure how well — on a scale of 0 to 9 — a DBMS meets a certain criterion. A

Oson is a computer specialist for the data base technology and control section of the Internal Revenue Service's Standards Branch in Washington, D.C.



INTELLIGENT INFORMATION SYSTEMS, INC.
90 West Street · New York, NY · 10006

Reach one of the largest computer markets in the world — Canada.

Canada is a lucrative market for U.S. manufacturers of computers and related products. According to the latest figures from the U.S. Department of Commerce, the U.S. sold $1.6 billion in computers and peripheral equipment to Canada in 1983, accounting for 92% of the total import market. You can promote your products in Canada, the 6th largest computer market in the world, just by advertising in *Computerworld Canada* and *PC World Canada*.

Computerworld Canada is a tabloid newspaper published on alternate Fridays. The circulation is comprised of 23,000 users and suppliers of information technology. The editorial focuses on the latest in new product development and changes in technology.

PC World Canada will be published nine times in 1985. The editorial focuses on applications for small business users of personal computers and offers detailed technical articles for experienced users. 25,000 readers turn to *PC World Canada* for the information they need on new developments in hardware and software and reviews of new products.

CW International Marketing Services makes advertising your products in Canada, and around the world, easy. *Computerworld Canada* and *PC World Canada* are part of our network of over 50 publications in more than 25 countries. For more information on our wide range of services, call Diana La Muraglia, General Manager, CW International Marketing Services, at (800) 343-6474. On the West Coast, call Isabella Barbagallo at (415) 328-4602 or (800) 277-8365. Or fill out the coupon below and mail today.

to product's capabilities

"0" indicates the DBMS does not meet the criterion at all; a "9" indicates that it meets the criterion completely. On such a scale, "yes" and "no" answers to objective questions such as "Does the DBMS support a given data structure?" are rated as "9" and "0," respectively. Answers to subjective questions such as "How good is the documentation?" can fall anywhere within the scale's range.

Naturally, a package that would receive a "0" rating for a capability the organization has deemed critical should have been eliminated from consideration by this time.

Team members can tap in to a variety of resources that will help them evaluate the level of a DBMS' compliance to selection criteria. Some of these follow:

- Vendor documentation and presentations.
- Articles, trade sources and reports from research firms.
- Evaluations made by government agencies and private industry.
- Hands-on experience.
- Consultants.
- Interviews with current users.

Calculate the score for each DBMS package. For every package under consideration, the team will now multiply a rating by a weight for each criterion. The sum of all the results is the score for any given package.

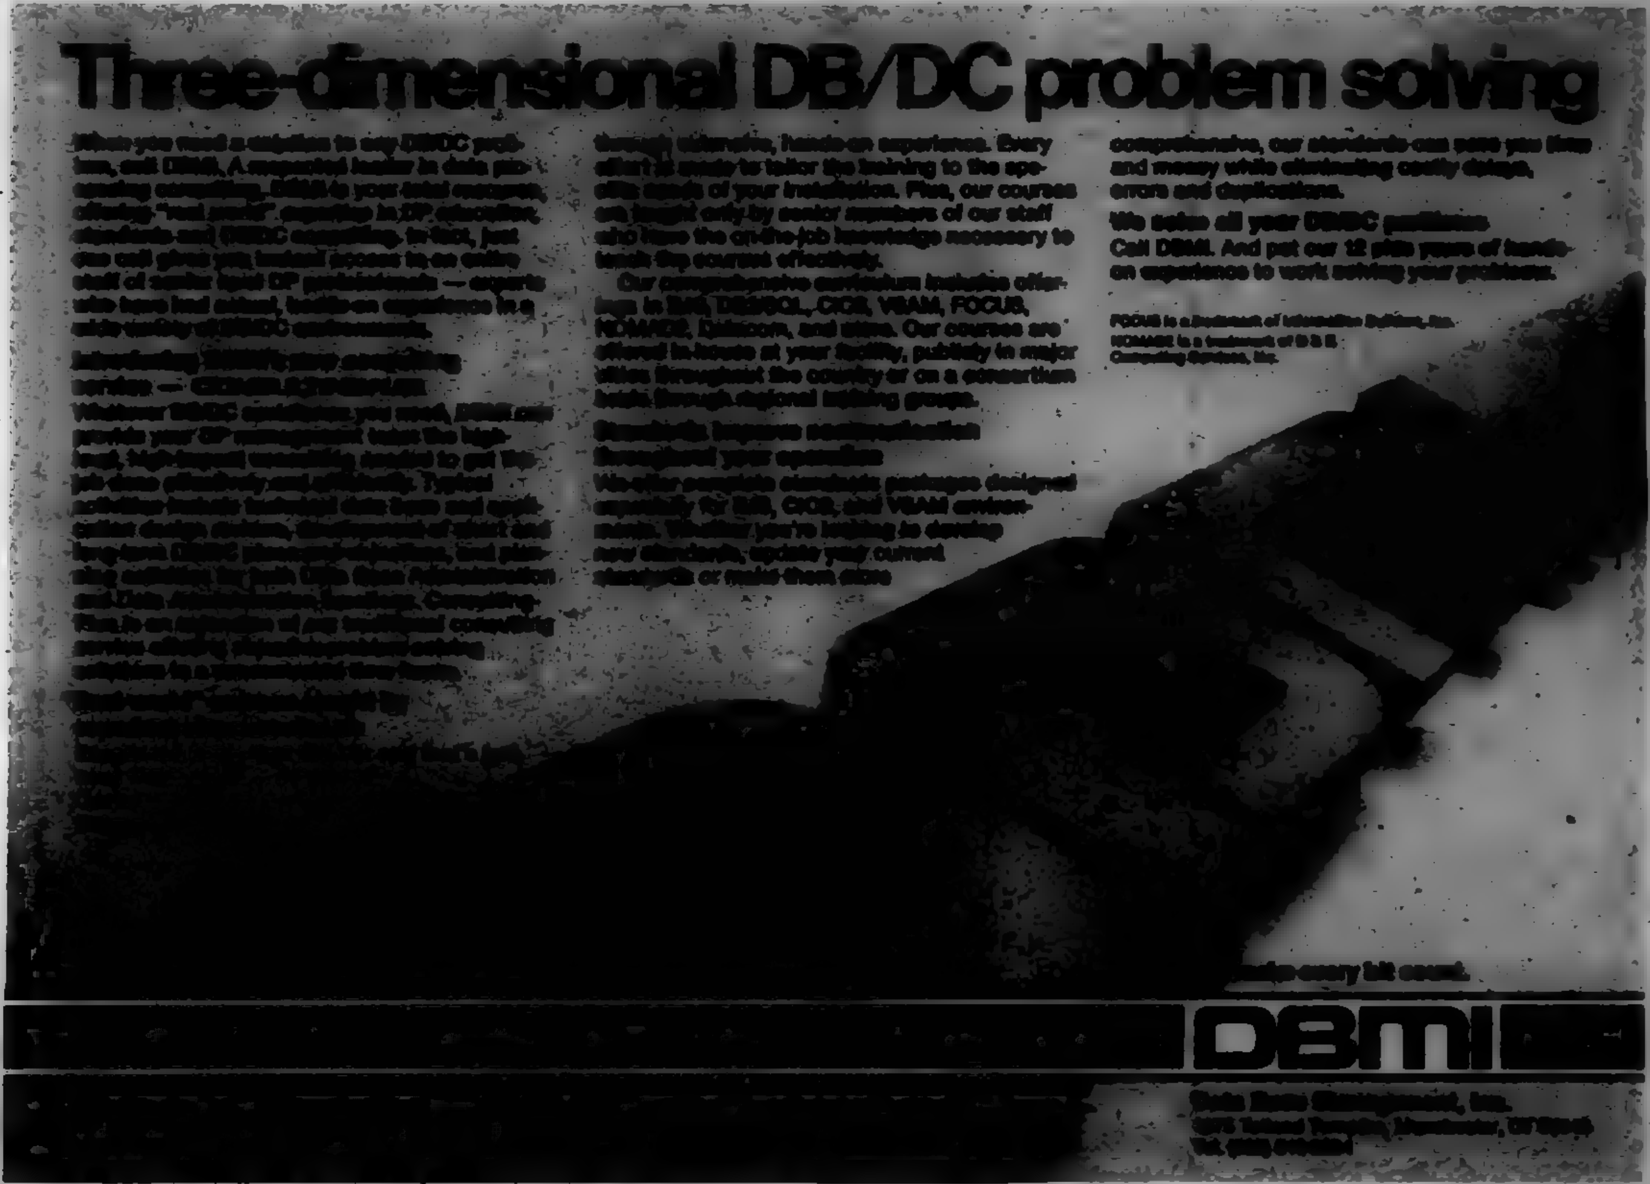
Now the team should present its organization's management with a report for review and/or approval. The report should include the names of the packages that earn the highest scores, copies of the team's evaluation, a narrative account that justifies any recommendation the team decides to make and any hard-copy source material that has been collected during the evaluation.

An organization that follows this six-step methodology should meet with general success in its DBMS selection. To do so, however, the organization must go beyond the letter of the evaluation structure and keep two overriding ideas in mind.

First, this methodology for DBMS selection requires extensive preparation — not only prior to DBMS selection, but also prior to the selection of selection criteria. This is deliberate and very important.

Second, the methodology involves the user at all levels. Only through heavy user involvement throughout the selection process can a DBMS meet with success and acceptance once it is implemented.

This article is a condensation of a larger document, "Evaluation and Selection of Data Base Management System Packages," copies of which are available free from the IRS, D:C:H:S, Suite 1410 — BXR, 1111 Constitution Ave. N.W., Washington, D.C. 20224.



Three-dimensional DB/DC problem solving

When you need a solution to any DB/DC problem, call DBMI. A respected leader in data processing consulting, DBMI is your total resource, offering "real world" expertise in DP education, standards and DB/DC consulting. In fact, just one call gives you instant access to an entire staff of senior level DP professionals — experts who have had actual, hands-on experience in a wide variety of DB/DC environments.

Introducing DBMI's new consulting service — [illegible]

Whatever DB/DC assistance you need, DBMI can provide your DP management with the high-level, high-impact consulting needed to get the job done effectively and efficiently. Typical activities include [illegible] data base and application design reviews, development of short and long-term DB/DC [illegible], and planning activities for both the Data Base Administration and Data Administration functions. Consulting-Plus is an extension of our traditional consulting service offering [illegible] solutions in a [illegible] time frame.

[illegible]

through extensive, hands-on experience. Every effort is made to tailor the training to the specific needs of your installation. Plus, our courses are taught only by senior members of our staff who have the on-the-job knowledge necessary to teach the courses effectively.

Our comprehensive curriculum includes offerings in IMS, DB2/SQL, CICS, VSAM, FOCUS, NOMAD2, Datacom, and others. Our courses are offered in-house at your facility, publicly in major cities throughout the country or on a consortium basis through regional training groups.

Standards improve standardization throughout your operation

We offer complete standards packages designed especially for IMS, CICS, and VSAM environments. Whether you're looking to develop new standards, update your current standards or make them more comprehensive, our standards can save you time and money while eliminating costly delays, errors and duplications.

We solve all your DB/DC problems.
Call DBMI. And put our 12 plus years of hands-on experience to work solving your problems.

FOCUS is a trademark of Information Builders, Inc.
NOMAD2 is a trademark of D & B Computing Services, Inc.

[illegible] make every bit count.

TRAINING

from SR/27

- Technical support staff members.
- Data and data base administrators.
- Applications developers.

The type of training that each group must receive, however, has changed. DB2 and SQL/DS entail fewer technical considerations than earlier DBMS, so training for technical support staff members will be reduced somewhat. Training for data and data base administrators will emphasize on data administration.

But one additional audience — that composed of end users — must receive training. This is an audience for which IMS training was not provided at all. End users will want to take advantage of the fourth-generation language capabilities of DB2 and SQL/DS.

Figure 1 (see SR/27) indicates the paths that different audiences should follow to mastery of DB2 and SQL/DS. Each path contains one or more of the following segments of an overall, six-course curriculum:

- Overview.
- Data base design and administration.
- Applications design.
- Applications programming.
- Information center considerations.
- Query Management Facility (QMF) use.

Overview. This should be aimed primarily at managers, who need a brief, practical introduction to DB2 and SQL/DS. The overview will enable managers to understand the intent of DB2 and SQL/DS; the DBMS' relationship to existing IBM software such as CICS, IMS and TSO; and the concepts and terminology associated with DB2 and SQL/DS data bases. With this knowledge, managers can install, administer and manage functions affected by DB2 and SQL/DS with awareness of how the DBMS will affect user communities.

Data base design and administration. This should be oriented mainly toward technical support staff members, such as data base administrators and senior applications personnel. The course will provide these employees with an in-depth understanding of the more technical capabilities of DB2 and SQL/DS. It should concentrate on logical data base design and administration.

Applications design. This course should be oriented mainly toward systems analysts and senior programmers, who will be involved in designing applications that use DB2 and SQL/DS data bases. Applications design training will provide students with an understanding of a DBMS' intent and with knowledge of the system's concepts and terminology. The course should also identify the advantages and disadvantages of DB2 and SQL/DS, compared with IMS, Vsam and other access methods.

The students in this course should be provided with tools they can use to select the best access method for a specific application. After they have the necessary tools, they can design DB2 and SQL/DS tables to allow for flexible and efficient processing.

Applications programming. This course should be aimed primarily toward applications programmers, who need to code SQL statements to access DB2 and SQL/DS data bases. The main purpose of applications programming training is to provide information on how to retrieve, insert, update and delete information from DB2 and SQL/DS tables.

> ”
>
> *End users received no instruction in IMS, but they will need DB2 and SQL training.*

Information center considerations. Many end users become aware of high-level tools and learn how to use them through information centers, which have become popular in large organizations. This course addresses the training requirements of information center staff members, who will be charged with helping end users learn DB2, SQL/DS and the language to access the data bases.

The course's primary purpose is to provide a basic knowledge of the DBMS' capabilities — specifically as these relate to end-user needs — so information center staff members can support end users and their business requirements.

QMF use. This course, aimed primarily at end users, should provide training in QMF, the fourth-generation language that accesses DB2 and SQL/DS data bases to create reports and maintain information. A major topic in the course should be how to perform query by example.

These six courses fully address the range of training required in an organization. Courses may be combined, expanded or segmented differently to lead to a different structure of offerings. Regardless of the number and structure of course offerings, however, the above topics and audiences must be addressed by any comprehensive DB2 and SQL/DS curriculum.

Wehr is vice-president of Data Base Management, Inc., a Manchester, Conn.-based firm that provides data base and data communications consulting and educational services to Fortune 1,000 companies.

INTECH '85. THE ONE CONFERENCE CORPORATE AMERICA IS COMING TO!

The focus of INTECH is information:
How to use it, move it, manage it, and protect it.

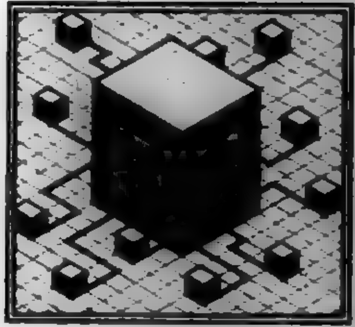
INTECH '85 is the only conference and exposition in the information industry to offer the unique "SOLUTIONS APPROACH." Five in-depth conferences in one national forum—

Address the critical issues:
- Integrating Personal Computers
- Networks
- Information Security
- Managing the Technology
- Integrated Voice and Data

Solve your specific problems through:
- User Case Studies
- Problem-Solving Workshops
- Hands-On Demonstrations on the Exhibit Floor
- Informal Discussion Groups
- Exhibitor Product Briefings

ONLY AT INTECH— THE INTECH APPLICATIONS CENTER

Actual solutions and applications will be demonstrated on the exhibit floor by major industry vendors, corporate users, and user groups. PCs will be networked with LANs. Voice will be integrated with data. Micros will be linked to mainframes. And more!



If you have an innovative business application you would like to demonstrate, check the appropriate box on the coupon.

NETWORK USERS ASSOCIATION CO-SPONSORS INTECH '85

NUA, the powerful and influential users' organization, supports and endorses INTECH, the forum for its annual international meeting.

THE INFORMATION TECHNOLOGY CONFERENCE FOR CORPORATE AMERICA

YOU SHOULD ATTEND INTECH '85!

Directors of MIS, DP, OA, and telecommunications . . . vice presidents of operations, finance, and communications . . . professionals, executives, managers, and department heads . . . INTECH is tailored for you.

INTECH is held annually in San Francisco. For more information call 800-638-8510. In Metropolitan Washington, D.C., 703-683-8500.

Or return the coupon to:

INTECH '85,
National Trade Productions, Inc.,
2111 Eisenhower Avenue, Suite 400,
Alexandria, Virginia, 22314

Please rush me more information on INTECH '85:

☐ Conference ☐ Exposition
☐ Exhibiting ☐ Demonstrating in Applications Center

CONFERENCE: AUGUST 26-29 • EXPOSITION: AUGUST 27-29

THE NATIONAL DATABASE & 4TH GENERATION LANGUAGE SYMPOSIUM

DALLAS
November 5-8, 1985

BOSTON
December 3-6, 1985

SYDNEY AUSTRALIA
February 24-27, 1986

SYMPOSIUM CHAIRMAN
Dr. George Schussel
President
Digital Consulting Associates, Inc.

THE NATIONAL DATABASE & 4TH GENERATION LANGUAGE SYMPOSIUM provides you with up-to-date information on 4th Generation Languages, DBMS, software productivity tools, Information Centers, Decision Support Systems, Micro/Mainframe Links, and Prototyping. It will show you how the new generation of software can be profitably used to build systems both for the DP Department and the end user in the Information Center through an intensive product-oriented discussion and seminar program.

INTENSIVE SEMINARS
Two intensive seminars covering important concepts of data management technology are featured to meet the different needs of management, the experienced DBMS practitioner, DP professional and the end user.

PRODUCT PRESENTATIONS
Three days consisting of 60 individual one hour product presentations provide you with first hand information on key DBMS and 4GL products. Many of these products will be featured in hands-on demonstrations.

IMPORTANT GUEST SPEAKERS
Six guest speaker presentations on topics of current interest by software industry leaders provide you with valuable industry insight.

FOR MORE INFORMATION CALL OR WRITE:

SEARCH

from SR/18

its needs exactly in order to avoid the pitfalls of a poor DBMS choice. Taylor said any critical applications the software could not handle would translate to thousands of dollars worth of lost potential, as the potential would be lost for more than 100 users. "Had we simply gone out and purchased the most popular package or purchased the one that looked the best in the advertisements, we would have made a half-million dollar mistake," he said.

Based on its evaluation results, Service Merchandise decided to standardize around Innovative Software, Inc.'s Smart Data Manager. Taylor said the package fell short of the firm's requirement for ease of use because its documentation was not as precise as the firm had hoped. The documentation was poorly indexed, he said, and it lacked specific examples that could help users understand some advanced features.

But Smart Data Manager met more of Service Merchandise's critical requirements better than other packages did, according to Taylor. In general, he said, DBMS packages that offered sufficient flexibility were too difficult for nontechnical employees to learn and use, and software that users could learn easily did not offer enough capabilities.

The firm began installing the DBMS on its micros last fall. Since then, the information center staff has trained about 75 users. Employees have set up applications to track the whereabouts of financial records that circulate among employees, to run statistical analyses of showroom operation factors and to generate a number of management reports.

Most of the applications have been helpful in reducing the number of man-hours required to analyze data and produce reports, which employees had done manually. Taylor said the firm also gained the ability to run cross-tabulations on data, which had been virtually impossible to do by hand.

Service Merchandise, Inc. micro data base management system criteria

[illegible]

- Supports 30,000 records per file and 30 fields per record
- Performs relational analyses
- Supports printed forms output design and data base field addition and deletion
- Accommodates diverse corporate applications at end-user level

[illegible]

- Offers on-line Help information
- Has clear documentation
- Can learn basic system in less than three days
- After training, first-time users can operate system without assistance

[illegible]

- Receives and transmits Ascii and Data Interchange Format data files

[illegible]

- Basic DBMS structure and design allow for easy upgrades
- Vendor has track record for enhancing product and spending funds for R&D
- Vendor financially stable

[illegible]

- Easily transfers information to graphics displays or WP documents

[illegible]

- Includes passwords at data entry and file levels
- Backs up and saves data files at convenient points during operation

[illegible]

- Runs on 256K bytes of memory or less
- Runs efficiently on IBM Personal Computer XT, with adequate response time and efficient use of hard disk
- Supports standard printers and plotters

Source: Service Merchandise, Inc.

Service Merchandise, Inc. matched vendors' micro DBMS offerings against this detailed list of criteria to find a standard package for the more than 100 microcomputers at its corporate headquarters and other administrative sites.

THOMAS

from SR/13

ple get from producing actual results can interest them in more advanced work. Since Thomas brought up its data base, about 10 managers have become relatively proficient users.

"What has happened . . . has surpassed my expectations," Klein said. "People got so good at Oracle in a short period of time that they began to go into other departments and teach each other what they knew."

Two of the applications that users have designed are the following:

- An advertising system that tracks information on the more than 60,000 ads that run in the directory. A supervisor in the firm's production department put the application together. "By trade, he's a master printer," Klein said, "and he'd never laid eyes on a computer before." The only help the man required was with a program to integrate a bar-code reader into the system.
- A telecommunications application to track bills, equipment requests, change requests and facilities such as Wats lines. Thomas' telecommunications analyst designed the system. "[She] would never have called up our old data center and requested the application," Klein said. "Users don't know what's possible, or what's necessary, until they dig in and create something for themselves."

Users' familiarity with decision support systems will play an important role in the company's future, as decision support tools will allow managers to identify opportunities in emerging fields like electronic publishing, according to Klein. "When employees can make data work for them . . . they begin to look at the information with new eyes," he said.

Data independence, integrity key to relational DBMS

By Kenneth Sweeney
and David Ditmars
Special to CW

Data base management system design experts have long been discussing what is essential in a relational data base management system. The two most important and most overlooked features in these discussions are that a complete relational DBMS must have enforceable data independence and referential integrity constraints. If a system lacks either of these key features, it is not a complete system and will not provide the control of data processing it should.

A relational DBMS employs the relational method to store, manipulate and retrieve information. For data to be processed using relational operations, it must be organized in independent constructs, referred to as two-dimensional tables or relations. Various types of data, for example, numeric and textual information, reside in these tables so that they are logically independent of the information in other data base tables.

The relational operations are exercised upon the data in the relations using their values to create tables. The user specifies what tables and values are involved using English-like commands. This dynamic extraction and combination of data from the tables is what gives the relational DBMS its flexibility and power.

The principal relational operations are projections, restrictions and joins. Figuratively, the projection makes a vertical slice through a relation, selecting columns by name and extracting the values contained in those columns.

A restriction makes a horizontal slice through a relation, selecting record values as specified. And the join creates a relation from two or more existing relations by associating common column names, referred to in relational vocabulary as "attributes from a common domain."

All this manipulation is based on the element values in the relations, which is why relational DBMS are called value-based systems.

Conceptually, extracting information from tables using an English-like command language is relatively simple. Novice users can quickly grasp how to be productive, since they are performing tasks in much the same way they have performed them manually. Most everyone agrees that this simplicity and ease of use are the key benefits of relational systems.

The complexity lies in the design underlying the easy-to-understand relational data base organization, data query and manipulation. Establishing and maintaining data independence and integrity within a relational data base is the challenge. To be truly independent, not only must data be organized in tabular relations, but it must also be independent of its conceptual representation in the data base's logical description and from users' individual representations or views of the data base.

This data independence needs to be enforced at three levels using the three following discrete models:

- The structural (physical).
- The logical (conceptual).
- The local (user).

Few systems have such multilevel data independence. And those that do support one or two data models do not necessarily enforce data independence.

The three-tiered approach enables changes to be made to the way the data is physically stored without necessarily affecting how the data base is defined to the users. Similarly, changes may be made to the data base as defined at the logical level, where element and record names are specified, without necessarily affecting the way the data is viewed by individual users.

Finally, the users' views of the data base may be altered without affecting its physical or logical organization. The three models enable data base modification without having to dump or reload data or recode their relationships. And when the three levels of data independence are enforced, users cannot inadvertently corrupt the data when making modifications.

Enforcing data integrity

Enforcement of data integrity is achieved by various mechanisms, especially validation techniques and constraints. Of the latter, referential integrity constraints are particularly helpful and valuable. Referential constraints are rules specified in the data base's central data dictionary that establish relationships among tables and elements within them.

The system enforces the constraints so any attempt to enter data that violates them is rejected, thus maintaining data base integrity.

The referential integrity rules enable the data base administrator who designs the configuration of specific applications to specify hierarchical and network relationships among the data base record types or tables.

Sweeney is the chief designer of DM, a relational DBMS from Battelle Software Products Center, and Ditmars is a product manager for that firm, located in Columbus, Ohio.

Thin-film head assembly no.

100,001

An event that confirms our commitment to advanced disk technologies.

Once upon a time, disk ferrite heads were standard issue. So were disk drive products that couldn't be upgraded. What you had was what you had—forever. Ferrite head technology is still around but it's limiting. Using ferrite heads, the way to increase disk capacity is to add more heads and more platters. Adding more heads and platters also means more things to go wrong and costs will go up.

Advances in disk technology are contingent upon getting the bits closer together on the same platter so available space on the disk is more fully utilized. At Storage Technology we anticipated the future. Three years ago we moved up to thin-film head technology, and established a base from which we could expand our family of 8380 disk drive products. With four heads in each assembly, our base now includes more than 400,000 individual thin-film heads. No other independent supplier can make this claim.

It takes good technology to make good products.

Thin-film head assemblies allow us to increase track density beyond the 1000-tracks-per-inch barrier. We put the tracks closer together to increase data capacity and reduce the cost per megabyte of data storage. Thin-film heads are standard issue at Storage Technology. This technology is the foundation of our 8380 family of disk drives.

If you already have our 8380s, you made a better investment than you thought because our 8380s have used thin-film heads from the beginning. And, our 8380s are field upgradeable to the latest family enhancement, the dual-capacity 8380E.

We're manufacturing head disk assemblies; we're using them in our products; we're committed to disk technology—yesterday, today and tomorrow.

MICRO BITS

Will Jazz start business singing Mac's song?

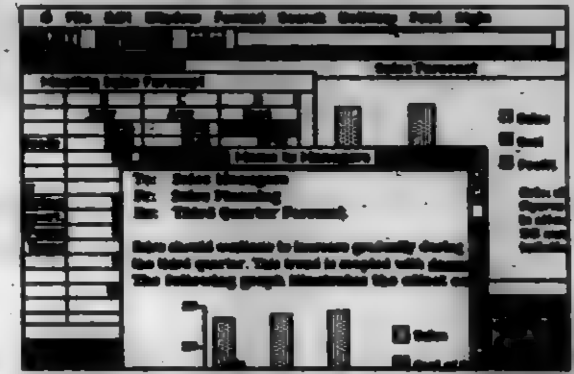
By Rick LePage
Special to CW

After more than a year of hype and speculation, Lotus Development Corp. has finally placed Jazz in the stores. The five-function integrated package for the Apple Computer, Inc. Macintosh offers spreadsheet, graphics, word processing, data base and communications modules. It sells for $595 and has been billed as the software cornerstone to Apple's Macintosh Office plans.

Whether Lotus' package will live up to all the expectations will not be known until at least the end of the year, but initial reports indicate that Jazz is being taken very seriously by the end user.

Jazz does perform the tasks that Lotus claims it does. Whether it will do them efficiently and completely enough for constant use is a question users will have to answer. If Jazz could run on a Macintosh with 1M byte of random-access memory (RAM) and a 20M-byte hard disk drive, it would approach the ideal business software.

LePage is industry editor of "Macintouch," a Framingham, Mass.-based newsletter for Apple Computer, Inc. Macintosh users.



To: Sales Managers
Fr: Sales Planning
Re: Third Quarter Forecast

Lotus Development Corp.'s Jazz permits Macintosh users to view several open documents simultaneously and to move between documents easily.

The first impression a Jazz user gets is one of opulence. Before Jazz is even running on the Mac, it is obvious that Lotus put quite a bit of time and thought into its design. The package weighs at least five pounds and comes with three manuals, four disks, a portfolio that holds the manual and disks, a disk wallet and a number of pamphlets. The manuals are spiral-bound on thick, shiny paper; the ribbed, black rubber portfolio could be mistaken for a car mat when it is folded out; and the disk wallet holds six disks and folds up easily enough to be slipped into a briefcase.

Lotus makes it very easy to get Jazz started. One pamphlet gives step-by-step instructions on how to get Jazz up and running. Once it is loaded, a Jazz primer lets computer novices learn the basic ins and outs of the program. The primer is well organized and the examples are very good. Provided that a user is comfortable with the Macintosh, it should be no problem learning to maneuver around the separate parts of Jazz.

Jazz is a true integrated package — a user can have a number of different files open on the screen at one time, depending on the amount of memory that each file requires.

At one point, I had six different file types averaging 20K bytes open on the screen and had no problems working in each one. However, when I opened a seventh file, I received two error messages: one stating that there was not enough memory to perform a search, another stating the same problem with regard to a cut-and-paste operation. My best advice would be to close any unnecessary files when you are done working on them.

Jazz's Hotview feature allows users to link data across file types. The user can set up a "what-if" situation in a spread-

Users praise Gold Hill's micro-based Common Lisp

Called low-cost tool for AI development

By Eric Bender
CW Staff

Golden Common Lisp, a Common Lisp subset offered by Gold Hill Computers, Inc. of Cambridge, Mass., is finding many roles in artificial intelligence software development, applications delivery and training on IBM Personal Computers, according to early users.

Tailoring the Common Lisp standard to fit within the microcomputer's tight hardware constraints, Gold Hill made reasonable trade-offs, users said, and they generally gave Golden Common Lisp high marks. Their most frequent request was for a compiler.

"Before we bought Golden Common Lisp, the only real alternative in terms of a development environment was a $100,000 Lisp machine," said William Brodie, president of Brodie Associates in Boston, a consulting firm specializing in AI software.

Starting work on a programmer's tool kit for natural-language interfaces, Brodie evaluated several microcomputer Lisp packages. Golden Common Lisp offered the richest development environment, he said. Additionally, at the time it was the only personal computer Common Lisp, "which was important in terms of portability."

William Brodie of Brodie Associates has developed natural-language software with Golden Common Lisp.

Another Golden Common Lisp customer, a large scientific instrumentation supplier, delivered an experiment-planning expert system on a personal computer. The expert system, which includes roughly 1,000 production rules, was developed with Xerox Corp.'s Interlisp on a Xerox 1108 and then ported over to Golden Common Lisp.

"It was hard porting down, but that was not necessarily Gold Hill's fault," said a senior AI engineer at the instrumentation firm. "They were excellent to work with." His complaint, instead, centered on Com-

See LISP page 58

AI on micros stirs debate

SMALL TALK
Eric Bender
CW Senior Editor

Are artificial intelligence and personal computers still mutually exclusive?

Opinions varied wildly, but many attendees at a Future Computing, Inc. forum on that topic held in Dallas two weeks ago maintained that today's personal computers cannot handle genuine AI applications, however AI may be defined. Following are other snapshots from the conference:

■ AI is now an ideal "dilettante's marketplace," commented Ann Winblad, a San Francisco-based consultant. As AI hardware and software improve and prices drop, MIS personnel can learn about technologies much more inexpensively than in previous years, she pointed out.

■ "There's more to AI than expert systems and natural language," according to Larry Tesler, Apple Computer, Inc.'s manager of new architectures. AI-based software could identify users for security purposes, perhaps by examining typing patterns, Tesler suggested. Or, the software might take note of tasks and infer user preferences or extrapolate sequences of actions.

Software packages could act in the way some describe as "intelligent agents," Tesler noted. "The idea is that they're an entity representing you in the computer." Among the roles software could play, he suggested, would be to "represent the client." As one example, users could build their preferences into a scheduling program that "goes out and negotiates with other people's agents."

■ No one should expect an AI equivalent of Lotus Development Corp.'s 1-2-3 package, said Beau Shiel, manager of product development at Xerox Artificial Intelligence Systems. "The leverage of AI programs is in the specific knowledge, and the more specific the knowledge, the narrower the program," Shiel said. "Information management is going to be the hot area for AI on personal computers, more than expert systems," predicted Paul Weiss, vice-president for research and development at Arity Corp. "Expert systems tend to be vertical."

■ Artelligence President Paul Robertson gave a wry description of an optimistic scenario for acquiring knowledge bases: "The expert sits in front of system for a day and spits forward his life's knowledge onto a floppy disk for future gener-

IDC survey: Maintenance ranks high in system selection

By [illegible]
CW Staff

FRAMINGHAM, Mass. — Not unlike their large-systems colleagues, buyers of microcomputers and workstations consider maintenance services to be an integral factor in the purchasing decision, a study here has found.

International Data Corp.'s (IDC) "Customer Satisfaction Survey: Maintenance for Workstations and Micros" reports that more than 85% of surveyed microcomputer and workstation buyers consider service when buying a particular system. Among these buyers, response time and the availability of on-site services are two critical factors. Least important maintenance factors cited were the ability to service multivendor systems and optional service methods, the survey said.

Although maintenance was an important factor in the decision to buy a particular system, users are spending little on micro and workstation maintenance, the survey said. Approximately 60% of the respondents said their annual service costs fell between 1% and 10% of the price that they paid for the equipment, while another third said service costs ranged from 10% to 20%.

System manufacturers are netting the majority of the service contracts, according to IDC. Of the 192 responses from microcomputer and workstation users throughout the country, 66% relied on vendors for workstation maintenance, 15% selected third-party maintenance organizations, and only 6% selected dealer maintenance services.

Approximately 9% of the users said they did not care who maintained their systems, and 4% said they preferred to maintain their own equipment, IDC noted.

No organizations are providing fast enough service, according to the IDC study. Approximately 85% of the users said they have needed emergency services in four hours or less, and 75% wanted services within four hours for nonemergency situations. However, only 47% of the users got this type of response during emergency situations and only 44% received it in nonemergency situations.

According to IDC, third-party organizations responded to emergency service calls in an average of 12.4 hours, compared with 8.6 hours for those using the manufacturer's service organization.

On-site maintenance was preferred by three-quarters of the workstation and microcomputer users, while 12% preferred carry-in services. According to IDC, 6.5% of the respondents requested service on a time-and-materials basis. Mail-in services, extended warranty and courier services accounted for less than 7% of the service options chosen by respondents, IDC noted.

Customer satisfaction with vendor maintenance services varied depending on the vendor. For example, the IDC survey noted that one-third of the users of Wang Laboratories, Inc. microcomputers and workstations who also used the company for maintenance services said they were getting less than their money's worth in services, compared with 20% for Hewlett-Packard Co. microcomputer and workstation users and 8% for IBM equipment users.

Nevertheless, users said they were "reasonably satisfied" with service organizations, the study said. "About two-thirds of the sample said they get value equal to or greater than what they paid for the service, and 91% of the respondents said they would renew their existing service arrangements."

The report costs $2,500 and is available from IDC, 5 Speen St., Framingham, Mass. 01701.

Kaypro unveils hard-disk release of IBM micro-compatible machine

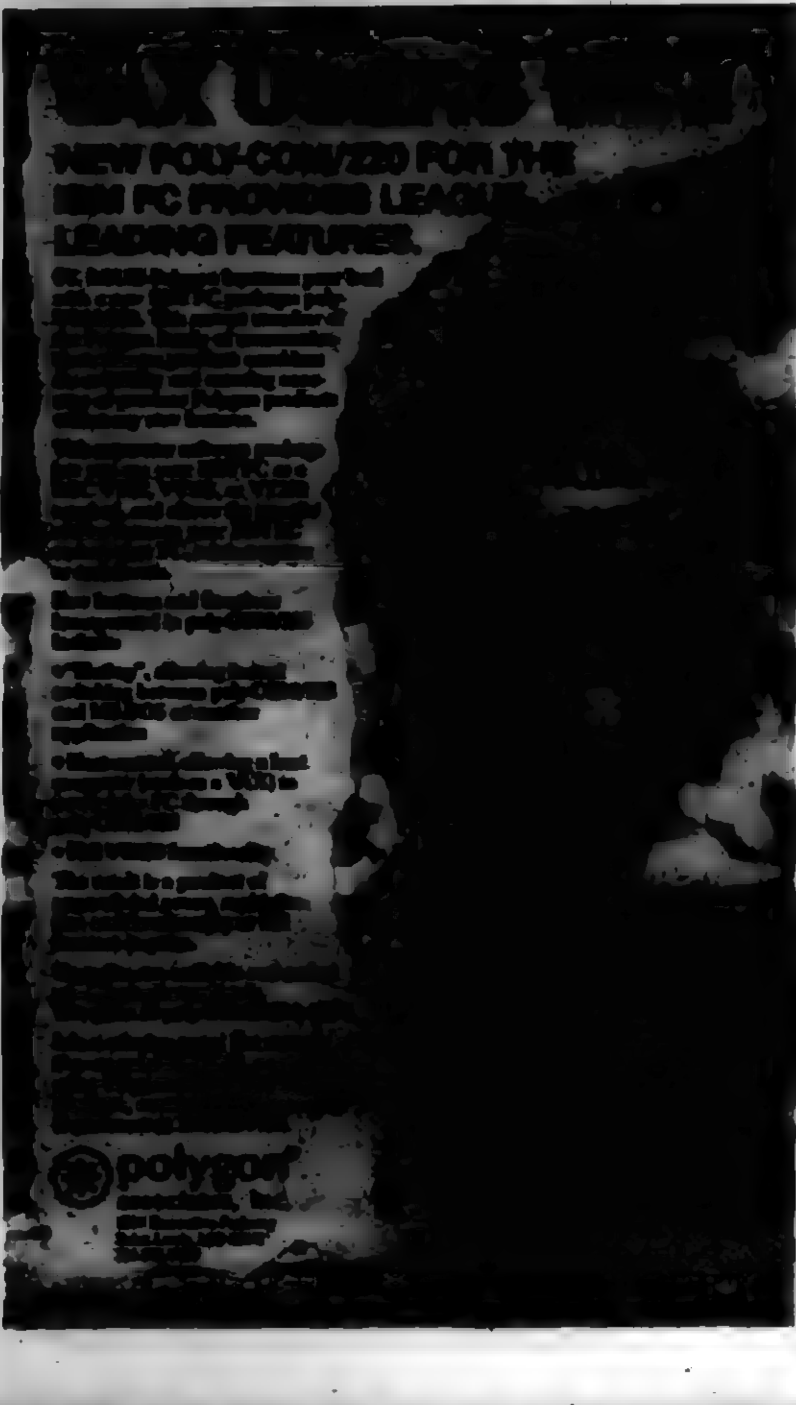
SOLANA BEACH, Calif. — Kaypro Corp. has announced a hard-disk version of its 286I, a machine said to be compatible with the IBM Personal Computer AT.

The 286I Model C, priced at $4,795, reportedly offers 20M bytes of formatted hard-disk storage. It also includes 640K bytes of random-access memory and Microsoft Corp.'s GW-Basic programming language, the vendor said.

Also included are a 1.2M-byte diskette drive and seven open expansion slots. According to Kaypro, the machine offers parallel and serial ports and support for up to eight additional users.

The unit is currently available, the vendor said.

Kaypro is located at 533 Stevens Ave., Solana Beach, Calif. 92075.



The Asian Computerworld reaches the fastest growing computer market in the world.

Introducing
The Asian Computerworld

The Asian Computerworld is *Computerworld's* sister publication covering the South East Asian marketplace. The English fortnightly tabloid keeps company executives, computer users, potential users and people in the computer industry up-to-date.

South East Asia is considered the fastest growing computer market in the world with a total value of $1.8 billion and annual growth rates for small business systems and micros over 50%. The average annual growth rate is approximately 30%.

The Asian Computerworld, with a total circulation of 10,000, is published in Singapore and printed every alternate Monday. Distribution of the newspaper covers Brunei, Hong Kong, Singapore, the Philippines, Malaysia, Indonesia and Thailand.

CW International Marketing Services makes it easy for you to advertise in countries all around the computer world. For more information on *The Asian Computerworld*, just fill out and return the coupon below.

MICROCOMPUTERS

Polygon Associates unveils terminal emulation package

ST. LOUIS — Polygon Associates, Inc. has introduced its Poly-Com/220 terminal emulation and file transfer software, an addition to the company's family of terminal emulation and file transfer programs.

The Poly-Com/220 package reportedly allows the IBM Personal Computer to be used as a Digital Equipment Corp. VT52, VT102 and VT220 terminal and allows file transfers between the IBM Personal Computer and another IBM Personal Computer or a DEC minicomputer.

Poly-Com/220 resides in the microcomputer's memory and can be accessed by a hot key.

All VT100 and VT200 keys are implemented, as are DEC's international 8-bit character set and the Compose key, according to Polygon Associates.

The system is backward compatible with previous Poly-Com packages. Users of previous versions can upgrade to the Poly-Com/220 version for $52.

The package costs $200, the vendor said.

Polygon Associates is located at 1024 Executive Pkwy., St. Louis, Mo. 63141.

TI dot matrix printer out for IBM micros

AUSTIN, Texas — Texas Instruments, Inc. has introduced the Omni 800 Model 880 AT dot matrix printer for use with the IBM Personal Computer XT and AT, TI Business-Pro and Professional personal computers and the Apple Computer, Inc. Macintosh.

The Model 880 AT reportedly was designed for shared-resource environments and offers printing at 300 char./sec. draft mode and 75 char./sec. correspondence printing mode.

It also includes four read-only memory sockets for optional fonts and character sets, according to the vendor.

The Model 880 AT, available this month, is priced at $2,195.

TI's Data Systems Group can be reached through P.O. Box 809063, Dallas, Texas 75380.

SOFTWARE

■ Group L Corp. has introduced Textbank/PC software for managing textual information on the IBM Personal Computer XT and AT.

Textbank/PC reportedly allows users to build and search an information base, which, unlike a data base, can accommodate unstructured information. It is said to handle such textual materials as reports, correspondence and contracts.

Using Textbank/PC, a search reportedly can be made of the information base for any word, part of any word, word combination or word proximity.

Textbank/PC is priced at $995.

Group L, 481 Carlisle Drive, Herndon, Va. 22070.

■ Sentry Software has introduced Disksafe security software for hard disk drives in use with the IBM Personal Computer XT and AT and 3270 Personal Computer.

Disksafe reportedly protects a user's hard disk from unauthorized copying, viewing or manipulation. To operate, authorized users insert a

How to advertise in every major computer market in the world as easily as you advertise in the U.S.

CW INTERNATIONAL Marketing Services will help you penetrate the most profitable computer markets worldwide — easily, effectively, and economically.

Your ads will receive the attention they deserve. Our network of more than 55 computer publications in over 25 countries is the largest in existence. Over 9,000,000 computer-involved people around the world rely on our publications for the information they need to stay ahead.

With more than 10 years experience in international marketing, we're the only service of our kind. We can help you make your ads more effective. Our local offices can translate your ads for a 15% surcharge on the space you purchase.

We'll help you increase your market penetration. We're also available to advise you on your campaign strategy — such as when to advertise in order to coincide with special-focus issues and trade shows. And you'll be able to advertise in even more markets when you take advantage of our corporate discounts.

All you need to do is send us your advertising materials. We'll handle all the transactions. And we'll bill you in U.S. dollars so you won't have to worry about exchange rates.

Call Diana La Muraglia today if you want to reach the computer buyers in any of the following countries: Argentina, Australia, Brazil, Canada, Chile, Denmark, Finland, France, Greece, India, Israel, Italy, Japan, Korea, Mexico, Norway, People's Republic of China, Saudi Arabia, South Africa, Southeast Asia, Spain, Sweden, The Netherlands, United Kingdom, Venezuela and West Germany.

You can reach her toll-free at (800) 343-6474. In Massachusetts call (617) 879-0700. Or you can reach her through Telex, at number 95-1153. Or, if you prefer, fill out the coupon below and return it today. Do it now. The sooner we hear from you, the sooner you'll hear from our readers.

"softkey" diskette into the A drive and enter their password. Disksafe then automatically locks or unlocks the disk. If the softkey is not inserted in the A drive, use of the appropriate password will not provide access.

The software, which requires IBM's PC-DOS 2.0 or later, costs $40.

Sentry Software, P.O. Box AL, Los Gatos, Calif. 95031.

■ Structured Software Systems, Inc. has announced HPL-Plus, an enhanced version of Hewlett-Packard Co.'s HP Language (HPL) operating system for HP's Series 200 desktop computers.

HPL-Plus includes the features of HPL Version 2.1 and also supports the HP 9133 Winchester disk drives running the double-sided, 3½-in. microfloppy disk.

HPL-Plus costs $600.

Structured Software Systems, 1072 Irick Road, Mount Holly, N.J. 08060.

■ Polytel Computer Products Corp. has announced Version 1.6 of its Keyport 300 system and development software for the IBM Personal Computer and Personal Computer XT and AT.

Keyport 300 is a touch pad with 300 programmable keys that are used to display a program's command functions with labeled or illustrated overlays. Version 1.6 includes conditional execution, which reportedly is the ability to program a key to execute only if a condition is true or false. Conditions can be set to include finding which key was previously pressed and certain clock times or dates. The version includes numeric and string variables, which can be assigned, passed, mathematically manipulated and tested.

Also featured is the ability to load and save a Key Definition Table (KDT), a file of previously defined Keyport keys, by pressing one key, the vendor said. Subdirectory path names can be used by an application developer to load or save a KDT for a novice end user.

Current Keyport 300 users will receive Verson 1.6 for a $10 handling fee. The price for new users is $195. Predesigned overlays and commands for programs such as Micropro International Corp.'s Wordstar and Lotus Development Corp.'s 1-2-3 cost $79 each.

Polytel, Suite 310, 1250 Oakmead Pkwy., Sunnyvale, Calif. 94086.

■ Dinan, Inc. has introduced insurance applications software for the IBM Personal Computer and Personal Computer XT and AT.

Compare allows insurance agents to identify small-group health plans and provides agents with a benefit comparison of plans that meet the clients' benefits requirements, the vendor said.

The product can outline the 60 most competitive medical plans in the marketplace, ranking from least to most expensive, the vendor said.

Rates and benefits information reportedly is provided to the vendor by the plan's home office and is updated monthly. Compare costs $1,295.

Dinan, 6455 Almaden Expwy., San Jose, Calif. 95160.

■ Provue Development Corp. has announced enhancement of its Provue data base management package for the Apple Computer, Inc. Macintosh.

Provue is now said to include charts, macros, relational joining of data bases and the ability to zoom between single- and multiple-record layouts. It reportedly can produce bar, column, line, area and pie charts directly from data without cut-and-paste operations.

The package will still cost $295.

Provue Development, 222 22nd St., Huntington Beach, Calif. 92648.

See SOFTWARE page 62

AI from page 53

ations to enjoy."

But Robertson advised against expecting software "that will automate the building of expert systems, except for very standard, stereotyped systems."

■ "The marketplace is bottlenecked by support and training issues," which personal computers will help to address, said Stan Curtis, president of Gold Hill Computers, Inc.

Maintenance issues may also favor microcomputers, according to Curtis. "Walk around an AI show, and you see Lisp machines go up and down in the course of a week."

■ New applications tend to see "slow, gradual adoption," remarked Lightyear, Inc. President Terence Garnett.

"Look at spreadsheets — it's taken five years to get where we are, and that's merely an information grid that people put numbers into," Garnett said.

■ Natural-language techniques need to be more robust, give better detection of ambiguities, provide the ability to show why, and offer automatic learning capabilities, said Microrim, Inc. Chairman Wayne Erickson.

However, "if you customize natural language too much, expertise may be hidden," Erickson warned. "The need for some sort of standardization is still there."

■ Speaking of natural language, the number of AI definitions floating around more than matched the number of attendees. Among them were "anything impossible," "anything interesting" and "whatever hasn't been done yet."

"AI is not something that a program either has or doesn't have," according to Arity's Weiss. "Symbolic processing fills the gap between conventional programming and [AI]."

Standalones are done for.

JIM PITRE • PRESIDENT

Dead as dodos. You know it. And I know it. If a PC can't communicate to another PC or mainframe, it doesn't have much of a future, right?

Well, to tell the truth, some can communicate. But *very* limited. Because their communication options are rigid and narrow. Worse, hooks and handles are lacking for customized use. And that's where we are today *except for Linkup System One:*

A communications system which allows IBM PCs to communicate with each other and to mainframes with great flexibility.

That being said, here's the good stuff:

Linkup System One: more than a single solution for mainframe terminal emulation. An intelligent PC Comm system, Linkup System One handles both synchronous and asynchronous emulations.

That's a big claim, so let's get into details: On the synchronous side, 3270 SNA, 3270 BSC, 3770 SNA, 3780 BSC. Asynchronous: ATERM (Async Terminal), ABLOCK (Async Block Transmission) and VT 52/100.

So?

So multiple network access, menu-driven job scheduling, and the support of multiple unattended modes.

Now look at support for your particular job. Say you want to hold a mainframe session while executing DOS programs or multi-job transmissions. Well, you can. With unattended and automatic dial-up log-on answer. For example, with our 3780 you can transmit large blocks of data, error-free, with off-hours scheduling.

Suppose your problem requires hooks and handles for an application program. You'll find our interfaces simple to use, flexible, and in most popular languages. In a nutshell, they can take the communications grunt work away from the operator.

By this time we hope you are interested in us. Next step is to call us. Talk to us. The real question is *can we help you?* Truth is, in lots of other areas we can't. We specialize in just one small fraction of the area you work: PC communications. But in that area, we are the very best.

I guarantee it.

Why the time has never been better to get your own subscription to Computerworld.

FREE CLOCK WITH YOUR SUBSCRIPTION.

Subscribe to *Computerworld* now, and we'll send you this miniature, personal computer clock. Free. The clock displays the date, the hour, minute and second, and makes a handsome desktop piece for your office. And as we said, it's a gift from us to thank you for becoming a new subscriber to *Computerworld.*

51 ISSUES OF *COMPUTERWORLD*

In addition to the free clock, of course, you'll receive 51 issues of *Computerworld.* So you won't have to wait for a co-worker's copy to keep up-to-date on what's taking place in the computer field.

YOU'LL ALSO RECEIVE SPECIAL FOCUS ISSUES

As a *Computerworld* subscriber, you'll also receive our highly-acclaimed COMPUTERWORLD FOCUS issues — at no extra charge. Published once a month (except July and December), these bonus issues focus on a single topic. Here is a sampling: UNIX™, Office Automation, Microcomputer Software, Business Graphics, Applications Software, Manufacturing, Networks, Systems Software, Microcomputer Hardware. COMPUTERWORLD FOCUS helps you plan, purchase, and save money. And these bonus issues are sent only to *Computerworld* subscribers — it's like getting a subscription to a second magazine FREE!

As you can see, there are plenty of reasons to subscribe to *Computerworld.* So don't rely on someone else to lend you theirs. Be well-informed — with 51 issues of *Computerworld* plus the COMPUTERWORLD FOCUS issues — without having to wait.

Now you know why the time has never been better to subscribe to *Computerworld.*

UNIX is a trademark of AT & T Bell Laboratories.

☐ **Yes!** Please enter my subscription for one full year (51 issues) of *Computerworld* at $44. Plus all 10 COMPUTERWORLD FOCUS issues at no extra charge . . . plus my FREE gift with my paid subscription. (Please allow 6-8 weeks for shipment of your free gift.)

LISP

from page 53

mon Lisp. "There are features in just about every other Lisp that aren't in Common Lisp," he said.

Like other users, the engineer is looking forward to a Golden Common Lisp compiler. In the worst case tested so far, the experiment planning system took five minutes to run, he said.

"Lisp is rather enormous in its memory requirements," commented Greg Kearsley, chief scientist with Courseware in San Diego, which creates customized training courses and is looking at ways to add "intelligent tutors" to its software offerings. Courseware is likely to end up developing programs in Lisp and then rewriting them in Pascal for runtime versions on personal computers, Kearsley said.

Work so far has concentrated on studying expert systems written for larger machines and then moving the software to micros, using a variety of tools. Among the AI languages used, "Golden Common Lisp was the best implemented and the best supported," he said. "It had the best code, ran the fastest and had the most complete functions."

David Touretzky, a research associate in the Computer Science department at Carnegie-Mellon University in Pittsburgh and author of a popular Lisp textbook, emphasized training rather than development. Gold Hill "probably has [created] the best introductory programming environment that I've ever seen," he said.

Ideal for teaching languages

"Lisp is the ideal language for teaching languages to humanities students," Touretzky maintained. Beginning this September, Golden Common Lisp will be doing exactly that, running on classroom micros at the university as part of an introductory computer science course.

Although the software "is not a full Common Lisp implementation," it is the closest microcomputer equivalent, Touretzky said. "It has a nice programming editor," he added. "The windowing is fairly crude, but it is there — they made a reasonable trade-off." He also praised the ability to call up on-line documentation while continuing to type in functions.

Touretzky did criticize Gold Hill for bundling a Lisp tutorial with the program, saying that many users might prefer to buy the program alone.

However, Bruce Johnson, partner in charge of AI worldwide at Arthur Andersen and Co. in Chicago, gave the tutorial good marks. Arthur Andersen uses the program primarily as a teaching aid, he said. "We're a large, distributed organization, and it's important to have people get some training before they come to our AI centers."

First shipped in November 1984, Golden Common Lisp costs $495 and includes an interpreter, editor, tutorial, on-line Help, a Lisp textbook and a Common Lisp reference manual. It requires 512K bytes of random-access memory and IBM's PC-DOS 2.0.

Eugene Wang, Gold Hill marketing vice-president, said the firm will deliver a second release of Golden Common Lisp, with a lexically scoped interpreter, in November. A compiler, priced at $495, is also scheduled for November shipment.

Additionally, a $695 native-mode version for Personal Computer AT-class machines that can address up to 16M bytes of memory will be available in December, Wang said. Users agreed that the large-memory software could make the AT particularly attractive as a low-cost Lisp development machine.

SOFTWARE

from page 56

■ The Cadware Group, Ltd. has announced computer-aided design and engineering software that is said to allow users to create and manipulate icons for layouts and designs on the IBM Personal Computer, Personal Computer XT and AT.

The Design Graphics Software (DGS) system is said to track interactively and detect any design errors based on the design rules established by the engineer during the icon definition stage. The DGS user interface operates via a mouse-controlled cursor, the vendor said.

The DGS system requires 640K bytes of main memory, 10M bytes of hard-disk capacity and a high-resolution monochromatic bit-map graphics controller.

The single-unit cost for the software, including mouse and documentation, is $3,500.

The Cadware Group, 869 Whalley Ave., New Haven, Conn. 06515.

■ The MacNeal-Schwendler Corp. has released an interactive program that is said to automate the solution of equations used frequently in structural and mechanical engineering applications for use on the IBM Personal Computer and compatibles.

The MSC/Case program, developed by DVSE, Inc. of North Haledon, N.J., is said to have a data base that contains solutions to problems used in all phases of engineering analysis and design.

The program is said to contain the following five basic problem types: geometric and material properties; beams and columns; rings, cables, arches and frames; plates, shells and pressure vessels; and natural frequencies.

It also includes equation solutions for various stress problems. Users may append their own special-purpose programs to MSC/Case, the vendor said.

The software requires 192K bytes of random-access memory.

The package costs $895, with an introductory price of $595 available for the 90 days after first shipment, which should begin on July 1, the vendor said.

Smart enough to tame the toughest data network: NETCON-6.

If your communications network often seems like a three-ring circus, you can tame the wild beast with GDC's new NETCON-6 Network Management System. It's the only system on the market that provides complete support for any mix of analog modem circuits, digital data DDS circuits, multiplexers, and local area and distributed networks.

NETCON-6 is smart, so smart, it identifies and rectifies the source of all your communications failures. All within seconds. It cuts operating costs by improving your network's throughput. It generates MIS reports detailing what data has been transmitted, when it was transmitted, and where. It even includes an advanced software package and sophisticated terminals for color graphics.

Let NETCON-6 start cracking the whip for your data network. To find out more about this, or any of GDC's other networking acts, contact our Sales Department, General-DataComm, Inc., Middlebury, CT 06762-1299, (203) 574-1118.

JAZZ

from page 53

sheet, create a chart from that information and paste the chart into a word processing document. Then, if the user wants to change the numbers in the spreadsheet to reflect different conditions, they will be automatically updated in both the chart and the word processing files. This is a very slick utility, and it will be used often in businesses that have high-volume processing needs.

Jazz includes the following modules, which by themselves are fairly solid:

■ The spreadsheet is extremely powerful, offering more than 100 mathematical, financial and statistical functions, as well as a number of time and date stamps and calculations. The module is easy to use, and the user can perform tasks by pointing the mouse, using a menu or the keyboard. I created a 1,000-row by 20-col. work sheet and experienced no memory problems or lags in recalculation time.

> *The official Lotus position has been that macros are not necessary due to the ease of use the Jazz and Macintosh interfaces offer.*

The spreadsheet does not, however, offer any macro functions, which has caused much consternation. The official Lotus position has been that macros are not necessary due to the ease of use both the Jazz and the Macintosh interfaces offer, although company sources indicate that Jazz will have a macro capability in a future release.

Aside from the lack of macros, the 1-2-3 user would seem to feel at home here. One nice feature of Jazz is the ability to convert 1-2-3, Symphony and Microsoft Corp. Multiplan files to Jazz spreadsheet files. One hitch is that once they are in the Jazz format, files cannot be converted back. Lotus has promised this enhancement for Jazz.

■ The graphics module works hand in hand with the spreadsheet. To create a graph of data, one only has to define the range of cells desired, copy them to the Clipboard, open a new graphics file and "paste" them into that document. Once the values are in the chart, the user can choose from a variety of chart and plot types. Embellishing the chart with text, headers, footers and the like is very simple. A finished chart can be printed on its own or pasted into a text file and printed as part of a report.

■ The word processing module is vanilla — no indexing, special margin or multicolumn text options — but it should do the job for most average office uses. It is almost a carbon copy of Apple's Macwrite, though it does offer a few enhancements, such as Hotview, a backward search and time-, date- and page-stamping features.

Memory availability was a problem. I frequently was unable to perform a search or to cut and paste text due to insufficient memory. While I never lost any data, in order to continue I had to close all open files on my screen. One time I received the insufficient memory message when the document was the only open file.

■ The data base and forms generation module is also very basic and not at all

TMS-*one*: SIX WAYS TO CONTROL THE FUTURE

Take control of your future communications. Renex TMS-one Asynchronous Communications Controller allows you to select the equipment you want for your system. . . plus achieve greater security by maintaining authority over access.

TMS-one offers a choice of multiple control units for both interactive and batch operation. Now, communications can travel between small and large systems. And, between IBM and other manufacturers. You can also choose from over 150 async terminals and PC's to complete your system.

Renex's TMS-one helps pinpoint potential problems early with diagnostic capabilities that help control costs and prevent operation interruptions.

If you're ready to take control, call Bob Coorsen now at (703) 494-2200 or write:

A BETTER WAY

JAZZ

from page 93

suited to high-powered reporting. It offers sort and query facilities that are quick (a 2,000-record sorted on three categories in under 10 seconds) and you can use relational operators to find records. This module could be used effectively for a small (fewer than 4,000 records) data base, but any user who needs a data base that offers linked records and high storage capacity should look elsewhere.

The reporting facility is not as user-friendly as are the other modules. In creating a basic report, it took four tries before I got what I wanted.

■ The communications module again offers basic functions that the average user would need but that a more advanced user might feel stymied by. Users can send and receive files via another computer or an information service.

I was unable to hook into the Compuserve network. It seems that Jazz has a problem with control sequence characters, and Compuserve requires a Control-C to log on. Aside from that, almost all of the parameters are variable — bit/sec. rate, stop bits, terminal emulation and protocol, for example.

Some misgivings about Jazz include the following:

■ Any user who plans to use Jazz with frequency should get a hard disk drive. Jazz is billed as a program for a 512K Macintosh with an external floppy drive, though when I used Jazz with this configuration, I found access times and program response times very high. The program takes up huge amounts of space, both in the system and on a disk, and requires a fair amount of disk swapping when storing data files. When Jazz was installed on a hard disk, the speed picked up to the point where calculations and operations were extremely quick.

A related point is that the instructions for putting Jazz on a hard disk are confusing and very short.

While the documentation is generally excellent, the main handbook does not offer any real troubleshooting help. If you have a problem or get a cryptic error message, your only hope is a toll call to Lotus' Jazz support line. The support personnel have been courteous and helpful, but they will be very busy if any serious problems come up.

Jazz is copy protected and, while a backup disk is provided, a program disk must be kept in the disk drive. The possibility of a new user or a power glitch accidentally erasing the disk does not sit well with me. The only recourse in such a case is to send the disk back for a replacement, which is free during the 90-day warranty period and costs approximately $25 thereafter.

> 99
>
> *The support personnel have been courteous and helpful, but they will be very busy if any serious problems come up.*

Impressive software

Jazz is a very impressive piece of software. Almost all of the major bugs seem to be cleared out of the package, and I was able to crash Jazz only twice — both times when using the communications module and a hard disk.

Jazz's communications module defaults to the modem port, which some hard disks use as the connection to the Macintosh. Users can change a file so that it uses the printer port as the modem port, but they cannot change the default. This is more of a Macintosh problem than a Jazz problem.

In terms of integration, Lotus has done a very nice job. Hotview allows almost all data on open files to be updated, and the feature can be turned off as easily. Switching between files and modules also is simple. Lotus deserves praise for the simplicity of the interface — everything can be called up via menu choices regardless of the module being worked on. Going from one open file to another is not instantaneous, but it is generally quick.

Lotus claims to have conducted a great deal of research into integrated software and states that Jazz is its answer to the office worker's needs. This could very well be true. Time and sales will tell.

IMPORTANT ANNOUNCEMENT!

WE'RE LOOKING OUT FOR OUR BABY'S GOOD NAME

BABY/36™

BABY/36™ is a registered trademark of California Software Products, Inc. BABY/36 Software allows the complete use of IBM System/36 RPG II programs on IBM PC's, XT's and AT's. BABY/36 permits the user to download RPG source code, recompile it on the PC and begin working, off-line from the host System/36 computer.

You may or may not have seen BABY/36 (or similar derivation) used as a nickname for the IBM System/36 model 5362. In either case, we at California Software Products, Inc. want the unauthorized use of BABY/36 to stop. It is crucial that our registered product name retain the identity we have worked so hard to establish. Please assist us by resisting any temptation to use BABY/36 as a nickname yourself.

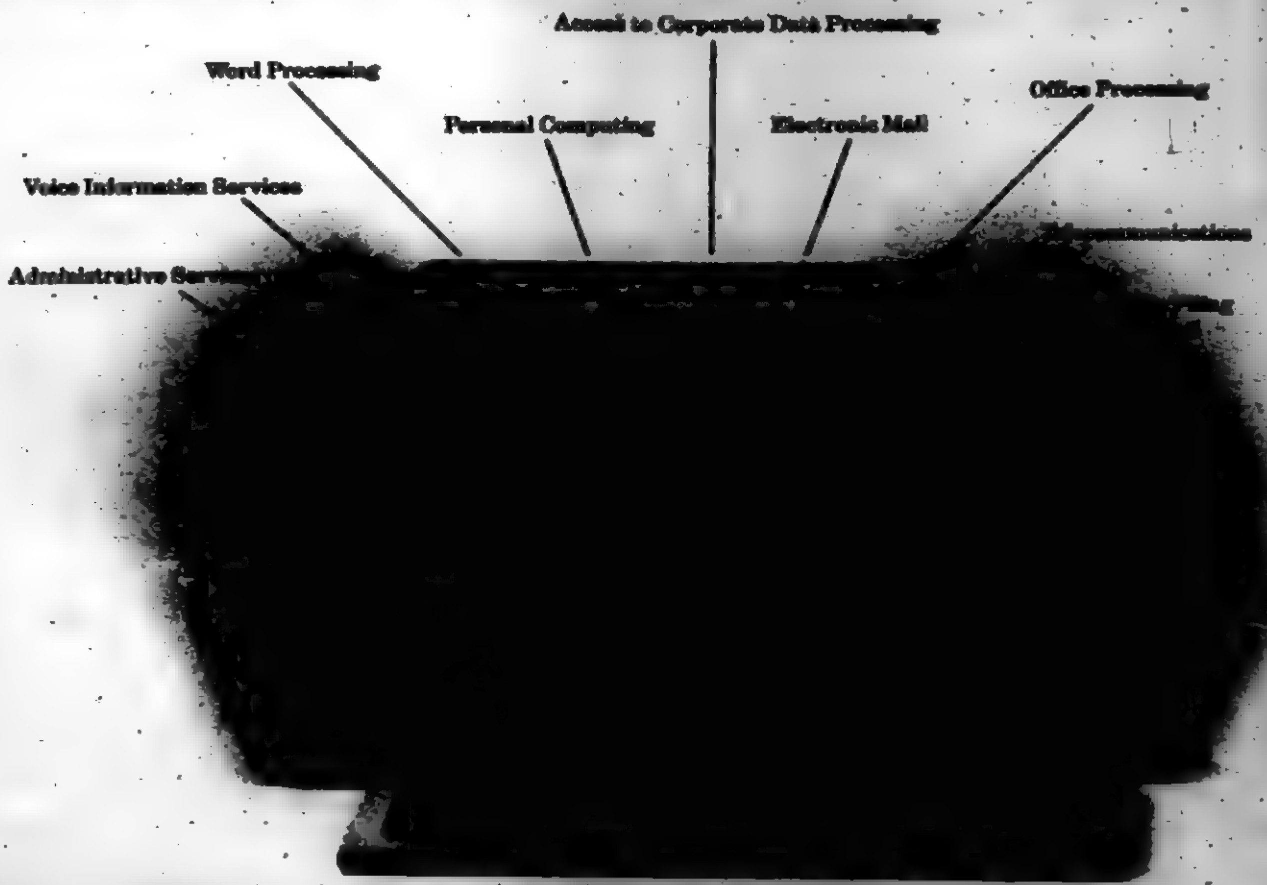
SPERRYLINK™
OFFICE SYSTEM



No job too big, no job too small.

SPERRYLINK: The one office automation system that can do just about everything around the office. For just about everyone, from top management on down.

It ties into a central computer for mainframe information and mainframe support.

It's a personal computer that does all of the things you'd expect of a personal computer. And a few that you wouldn't.

It's a telecommunications terminal for electronic mail and digitized voice messages.

It's a word processor and a data processor. Both at once, if need be.

It handles filing and retrieval with startling efficiency.

And, with access to outside data bases, it's your window to the world.

But most important, any desk station in the system can be any or all of these things. With the right amount of intelligence for whatever jobs it has to do.

No matter how big or how small.

SPERRYLINK.

For an Information Kit or a demonstration at the Sperry Productivity Center nearest you, call toll-free 800-547-8362.

COMMUNICATIONS

DATA STREAM
John Dix
CW Senior Editor

Will networks tell Big Brother all?

The Orwellian concept of Big Brother has been beaten to death, but developments in communications merit pulling the metaphor out of the attic for yet another flogging.

Over the last several years the general public has become more aware of privacy breaches that are being made possible through the common use of computers and communications.

For now, most people are indifferent to the information that, for example, large credit authorization companies can amass regarding personal data such as how much you spent where and on what. This is indicative of a blind — most would say necessary — trust we have in these institutions.

Credit authorization is only the most visible spot of vulnerability. Thankfully, in the documented cases of abuse the villain is not the network or service operator nor typically associated with government. But consider the growing number and type of networks and how vulnerability grows proportionally.

Financial institutions and their networks can provide a wealth of personal information. Beside tallying monthly transactions, the banks track movement with records of where, when and how much money customers remove from automatic teller machines. Their tentacles reach across the country as participants in credit card organizations, tirelessly tracking and logging data on where people stay, where they eat and what type of entertainment they prefer.

The advent of the smart card — credit cards outfitted with memory circuitry that can store whatever the issuer may wish — will exacerbate the situation, serving as color- and number-coded tags stapled to our ears like those used to study wild animals "for their own good."

The gaps in the reach of standard bank revolving credit card accounts are already

See BROTHER page 69

Racal-Vadic introduces statistical multiplexer

MILPITAS, Calif. — Racal-Vadic, Inc. has introduced a four- or eight-channel asynchronous statistical multiplexer that can reportedly be used with leased or dial-up lines.

The 7400 Series Statistical Multiplexer is available stand-alone or with an internal 4.8K bit/sec. or 9.6K bit/sec. leased-line modem or a 2,400 bit/sec. dial-up modem.

Both the four- and eight-channel device reportedly can support channel speeds of up to 9.6K bit/sec. over a 2,400 bit/sec. dial-up link when outfitted with that modem option. This is made possible with the use of buffers and because of the inherent idle time associated with asynchronous devices, according to Racal-Vadic product manager Ric Clania. "Data comes in at 9.6K [bit/sec.], is stored and [is] clocked out at 2,400 bit/sec.," Clania said.

The 2,400 bit/sec. modem autodials the line when a port user hits a return key and takes the link down after a predetermined amount of idle time.

Users with heavier demand can outfit the 7400 with an internal 4.8K bit/sec. or 9.6K bit/sec. leased-line modem. Both of these modems have a dual-dial back-up capability whereby both modems call each other if the leased circuit goes down. The devices automatically switch back to the leased link when it is restored.

Another 7400 option is the Help mo-

See RACAL page 69

INI announces VLSI chip set

SANTA CLARA, Calif. — Industrial Networking, Inc. (INI) has developed a very large-scale integration (VLSI) chip set that meets General Motors Corp.'s Manufacturing Automation Protocol (MAP) specifications for factory networks.

The two-chip set works with Cmos gate-array technology and is said to be compatible with Level 1 and Level 2 of the IEEE's 802.4 token-passing bus standard. These levels define standard physical and data link layers for a local-area network.

The chip set will be used by INI in its MAP products and will not be sold separately, the company reported. INI will supply Intel Corp., Motorola, Inc. and GM with MAP components and systems.

INI is a joint-venture company formed by Ungermann-Bass, Inc. and General Electric Co.

Ultimate's Ultinet out

EAST HANOVER, N.J. — Ultimate Corp. has announced Ultinet, a network system for its family of minicomputer systems for data base management.

Ultinet is said to enable Ultimate data base systems — which consist of a coprocessor, proprietary operating systems and either a Digital Equipment Corp. or Honeywell, Inc. computer — to be interconnected with local-area networks, wide-area networks or public data networks through gateways.

Based on the International Standards Organization's Open Systems Interconnect architecture, Ultinet is said to support communications through Ethernet-type local networks, the High-Level Data Link Control protocol and GTE Telenet Communications Corp. and Tymshare, Inc.'s Tymnet

Oracle announces portable version of IBM SQL/DS and DB2

Any application written for IBM's SQL/DS or DB2 relational database management systems will now run without modification on DEC, DG, AT&T, HP and several other manufacturers' minis, and a wide range of micros, including the IBM PC/XT and PC/AT.

Oracle Corporation introduced the first relational DBMS in 1979. Today ORACLE is the only relational database management system that is completely compatible with IBM's SQL/DS and DB2. Programs written for SQL/DS or DB2 will run unmodified on ORACLE.

Originally designed for IBM mainframes and DEC superminis, ORACLE is now available on a wide range of machines, from mainframes to PCs. And ORACLE includes an integrated set of 4th generation software tools not available with either SQL/DS or DB2.

■ Why not Cullinet, ADR or Focus? There is a clearly defined standard for relational database systems. It's called SQL, and it's from IBM. Both ANSI and the US Government are in the process of adopting SQL as *the* standard database language. The Cullinet, ADR and FOCUS software packages each implement their own unique database language - each one painting the user into its own corner. Since its inception, Oracle Corporation has provided total IBM SQL compatibility.

Few shops nowadays run only IBM mainframes. Why, then, even consider a database solution that runs *only on IBM mainframes?* Applications written with ORACLE run identically on mainframes, minis, and PCs. Because all versions of ORACLE *are* identical.

FOCUS, Cullinet and ADR offer either a limited subset, a completely different product or nothing at all (respectively) for the PC. And none have minicomputer products.

■ Why not just go with DB2 or SQL/DS? A relational DBMS simplifies but does not by itself eliminate application programming. Additional tools are necessary if users are to create and maintain their own applications.

DB2 and SQL/DS are relational systems, period. ORACLE is a relational DBMS plus integrated 4th generation software tools for application generation, report writing, color graphics and network communications.

Furthermore, SQL/DS and DB2 run only on IBM mainframes (and are somewhat unlikely ever to run on another vendor's system). ORACLE runs on more IBM hardware and operating systems than do IBM's relational products.

■ What about Goldengate, dBase III, Symphony or Framework? PCs need more than PC software if they are to be usefully integrated with corporate data processing. Incompatibility with SQL, while serious, is not the only major problem with these micro packages. None provides an acceptable level of data security, integrity or recovery facilities. And their PC-to-mainframe links are functionally primitive and difficult to use.

To effectively link computers, all machines in the network should run the same software. Only ORACLE provides standard software on mainframes, minis and micros. Data and programs can then be shared among users of different machines, distributing the workload.

ORACLE is currently installed on over 1000 mainframe and supermini systems around the world, as well as on thousands of PCs. Oracle's customers include 8 out of the 10 largest U.S. corporations, as well as major foreign companies and government agencies.

For further information, contact Oracle Corp., Dept. C2, 2710 Sand Hill Rd., Menlo Park, CA 94025, or call 415/854-7350 ext. 1060.

CONTROLLERS

■ MDB Systems, Inc. has announced a communications controller for Digital Equipment Corp. Unibus-based systems that is said to support up to 256 users and provide the asynchronous capacity of 16 DEC DHU11 controllers.

The MDB-DHU-A32 runs under DEC RSX11-M, RSX11-M Plus, RSTS/E and VMS operating systems. The controller is said to offer better performance than DEC DZ and DH11 controllers because of its capability to switch between direct memory access (DMA) and programmed I/O silo mode. Short messages are sent directly via programmed I/O mode, where there is no DMA setup time involved, while longer messages sent via DMA are not broken up, the company said.

The board supports slave boards through a parallel bus interface. This bus interface uses dual 34-conductor I/O cables to interconnect up to 16 slave boards that can be located at distances up to 1,000 ft, the vendor reported.

The MDB-DHU-A32 costs $3,200.

MDB Systems, Box 5508, 1995 N. Batavia St., Orange, Calif. 92667.

■ NCR Comten, Inc. has announced a version of its Comten X.25 Interface to Packet-Switched Data Networks, a software product that is said to provide features equivalent to IBM's NCP Packet-Switching Interface (NPSI) Releases 3.1 and 4.0.

The Comten NPSI module is said to offer an optional module that enables users to access applications programs designed for IBM's NPSI.

The product consists of a number of parts that carry yearly license fees: Basic X.25 Network Interface with a fee of $3,300, Network Administrative Profiles with a fee of $528, NPSI Packet Adapter with a fee of $1,045 and Extra Capability Modules with a fee from $1,650 to $3,520.

NCR Comten, 2700 Snelling Ave. N., St. Paul, Minn. 55113.

SOFTWARE

■ Western Union Corp. has introduced communications software that enables users of Digital Equipment Corp.'s VAX processors to access Western Union's Easylink electronic mail and telex network.

Developed by Alisa Systems, Inc., the Alisa Connection provides two-way communication between VAX electronic mail system and Easylink.

Message delivery options include an Easylink mailbox, Mailgram messages and Express Document.

The Alisa Connection costs $1,850 per Easylink account.

Western Union, One Lake St., Upper Saddle River, N.J. 07458.

MULTIPLEXERS/ MODEMS

■ American Photonics, Inc. has introduced a multiplexer that combines 24 RS-232 channels over a fiber-optic link at distances up to 10 km, or, with optional wire output, over T1 metallic circuits.

The APM2320 can be daisy-chained together to provide multidrop or modified drop-and-insert capabilities that enable intermediate nodes to be recognized or bypassed, the vendor said.

On the channel side, the device is said to accept up to three duplex data channels per conductor, or combinations of data and control channels such as one data channel and two control channels.

The product supports asynchronous data transmission at speeds up to 19.2K bit/sec.

The multiplexer costs $1,500, the vendor said.

American Photonics, P.O. Box 299, 71 Commerce Drive, Brookfield Center, Conn. 06805.

Multiplexer with built-in modem unveiled

RAD Computers, Inc. has announced a miniature two-channel time-division multiplexer with a built-in short-haul modem.

MMM is said to support either asynchronous or synchronous full-duplex transmission. Each channel operates at speeds up to 19.2K bit/sec. in synchronous mode or 9.6K bit/sec. in asychronous mode. Link speeds range up to 38.4K bit/sec. over four-wire cable at distances up to five miles.

The integral modem is synchronous and works with Eurocom D1 modulation. It features transformer isolation that provides lightning protection and blocks out noise.

The unit weighs 7 oz and costs $350.

RAD Computers is located at 40 N. Van Brunt St., Englewood, N.J. 07631.

NETWORK

from page 67

packet networks.

The gateways are said to support file transfer and terminal emulation capabilities.

A network management package enables a user to configure a system, perform network diagnostics and obtain performance statistics.

Ultinet costs approximately $38,000 per network CPU.

Ultimate is located at 717 Ridgedale Ave., East Hanover, N.J. 07936.

FINALLY. HELP FOR THE DATA CRAZED.

Introducing Cypress,® Cedar,™ and Juniper.™ Three fast, friendly, infinitely applicable desktop ideas from ROLM.

It comes as no surprise that people react to technology differently. Dyed-in-the-chip techies thrive on it. True nonbelievers avoid it instinctively.

Now you can please all of the people all of the time. Honest.

Say goodbye to complicated log-on codes. Just push a button and—whoosh!—travel all the way to a data base, talk to a mini or access your IBM mainframe.

Say hello to speakerphones, phone books, message takers and calculators. Built right in.

If you want to take snapshots of data in your mainframe, there's Cypress. It's as easy as Point & Shoot. It's a smart little ASCII terminal integrated with a fully-featured digital phone.

4900 Old Ironsides Drive, M/S 626 Santa Clara, CA 95054
[illegible]

LOCAL-AREA NETWORKS

■ Bridge Communications, Inc. has introduced a modem for broadband local networks that reportedly supports High Level Data Link Control (HDLC), Synchronous Data Link Control (SDLC) and bisynchronous protocols.

The synchronous Model 316 Broadband Modem supports point-to-point or multidropped connections on two-way coaxial cable nets at speeds up to 64K bit/sec. Up to 20 simplex or 10 duplex channels can be operated in each 6 MHz broadband channel, the vendor reported. The product's frequency-agile design enables the transmitter or receiver to operate at any of 20 300-KHz subchannels.

The modem's biphase data encoding provides protocol transparent transmission. An on-board micro enables link testing with remote loop-back in-band signaling and local loop-back. The product costs $1,795.

Bridge Communications, 1345 Shorebird Way, Mountain View, Calif. 94043.

■ Cabletron has introduced TDR 5000, a portable device that tests coaxial connections on a local-area network.

The product, a time-domain reflectometer, checks a network's coaxial cables, connections and taps. The product employs a negative pulse technique that tests faults on baseband or broadband networks. When testing with negative impulse, baseband networks can be tested while idle.

The product works with a number of networks including those from Applitek Corp.; Digital Equipment Corp.; Wang Laboratories, Inc.; Bridge Communications, Inc.; Corvus Systems, Inc.; Excelan; Interlan, Inc.; Sytek, Inc.; Ungermann-Bass, Inc.; Xerox Corp.; and 3Com Corp., the vendor reported.

TDR 5000 costs $4,500.

Cabletron, 196 Pleasant St., Ashland, Mass. 01720.

TEST EQUIPMENT

■ International Data Sciences, Inc. has introduced its 5000 series of network test equipment.

The series consists of the Model 5100 hand-held data communications test set, the Model 5200 multispeed data communications test set and the Model 5300 data network/protocol analyzer.

The products can be used separately or in concert, according to the vendor. For example, a Model 5300 can transmit software over an asynchronous link to a Model 5100 or a Model 5200. Test results can be sent back to a Model 5300 where they can be analyzed.

The test equipment is said to provide a number of functions including testing of low- and high-speed error rates, trap and monitor transmission and polling. Each product has an RS-232 remote control port that allows test software and results to be transmitted to various locations.

Product prices range from $895 to $3,995.

International Data Sciences, 7 Wellington Road, Lincoln, R.I. 02865.

RACAL

from page 67

dem, an AT&T 103-type diagnostic modem with autodial and answer capabilities. This modem reportedly calls a preset telephone number to report problems.

The 7400 reportedly enables all channels to be prioritized and provides both in- and out-band flow control. Configuration is said to be performed though software.

The basic four-channel 7400 costs $1,295. The 2,400 bit/sec. modem option costs $995, the 4.8K bit/sec., $1,100, and the 9.6K bit/sec., $1,550. The Help modem costs $165.

Racal-Vadic is located at 1525 McCarthy Blvd., Milpitas, Calif. 95035.

BROTHER

from page 67

filled in by such things as retail and gasoline company credit cards. Now some of the nation's largest retailers — many of which are conglomerates controlling such things as banks and real estate firms — offer transaction processing services to other companies. The retailer's power as information controller is further strengthened by the fact that many chains also accept payments for utilities.

Telephone companies also collect reams of data. Beside the monthly bills outlining places called, call holding times might indicate use of telecommunications facilities for computer use. Travel is documented through use of calling credit cards and records document use of mobile telephones. When you're not on your phone, Big Brother might be peering into your home by monitoring the use of cable TV.

All these points of vulnerability presume that a malicious entity is waiting to exploit them. Perhaps an even more ominous threat is the idea of that entity being a machine — a machine that gathers information and calls other machines to deposit the cache.

While nonthreatening, it may be telling that some soda machines are now equipped to call the distributor who services them and report when they need filling or when they are damaged. On a higher plateau, IBM's recently announced 3090 processor series is said to be capable of automatically calling IBM service representatives to report problems.

Couple this capability with the networks outlined above and you can come up with a rather chilling scenario.

Need a 512 KB, fully IBM-compatible PC that runs programs like pfs:graph,™ the IBM Assistant Series,™ 1-2-3,™ and lets you mini-network through your phone line? Cedar's the one.

Already in love with your IBM® PC or XT but crave the affections of Cypress? Ask for Juniper. Its one slot adaptor card lets your system keep growing. And growing.

Of course, only ROLM has Cypress, Cedar and Juniper. Because only ROLM has the system to run them on. At its heart is the ROLM® CBX II, a breakthrough communications controller that manages voice and data over standard telephone wire.

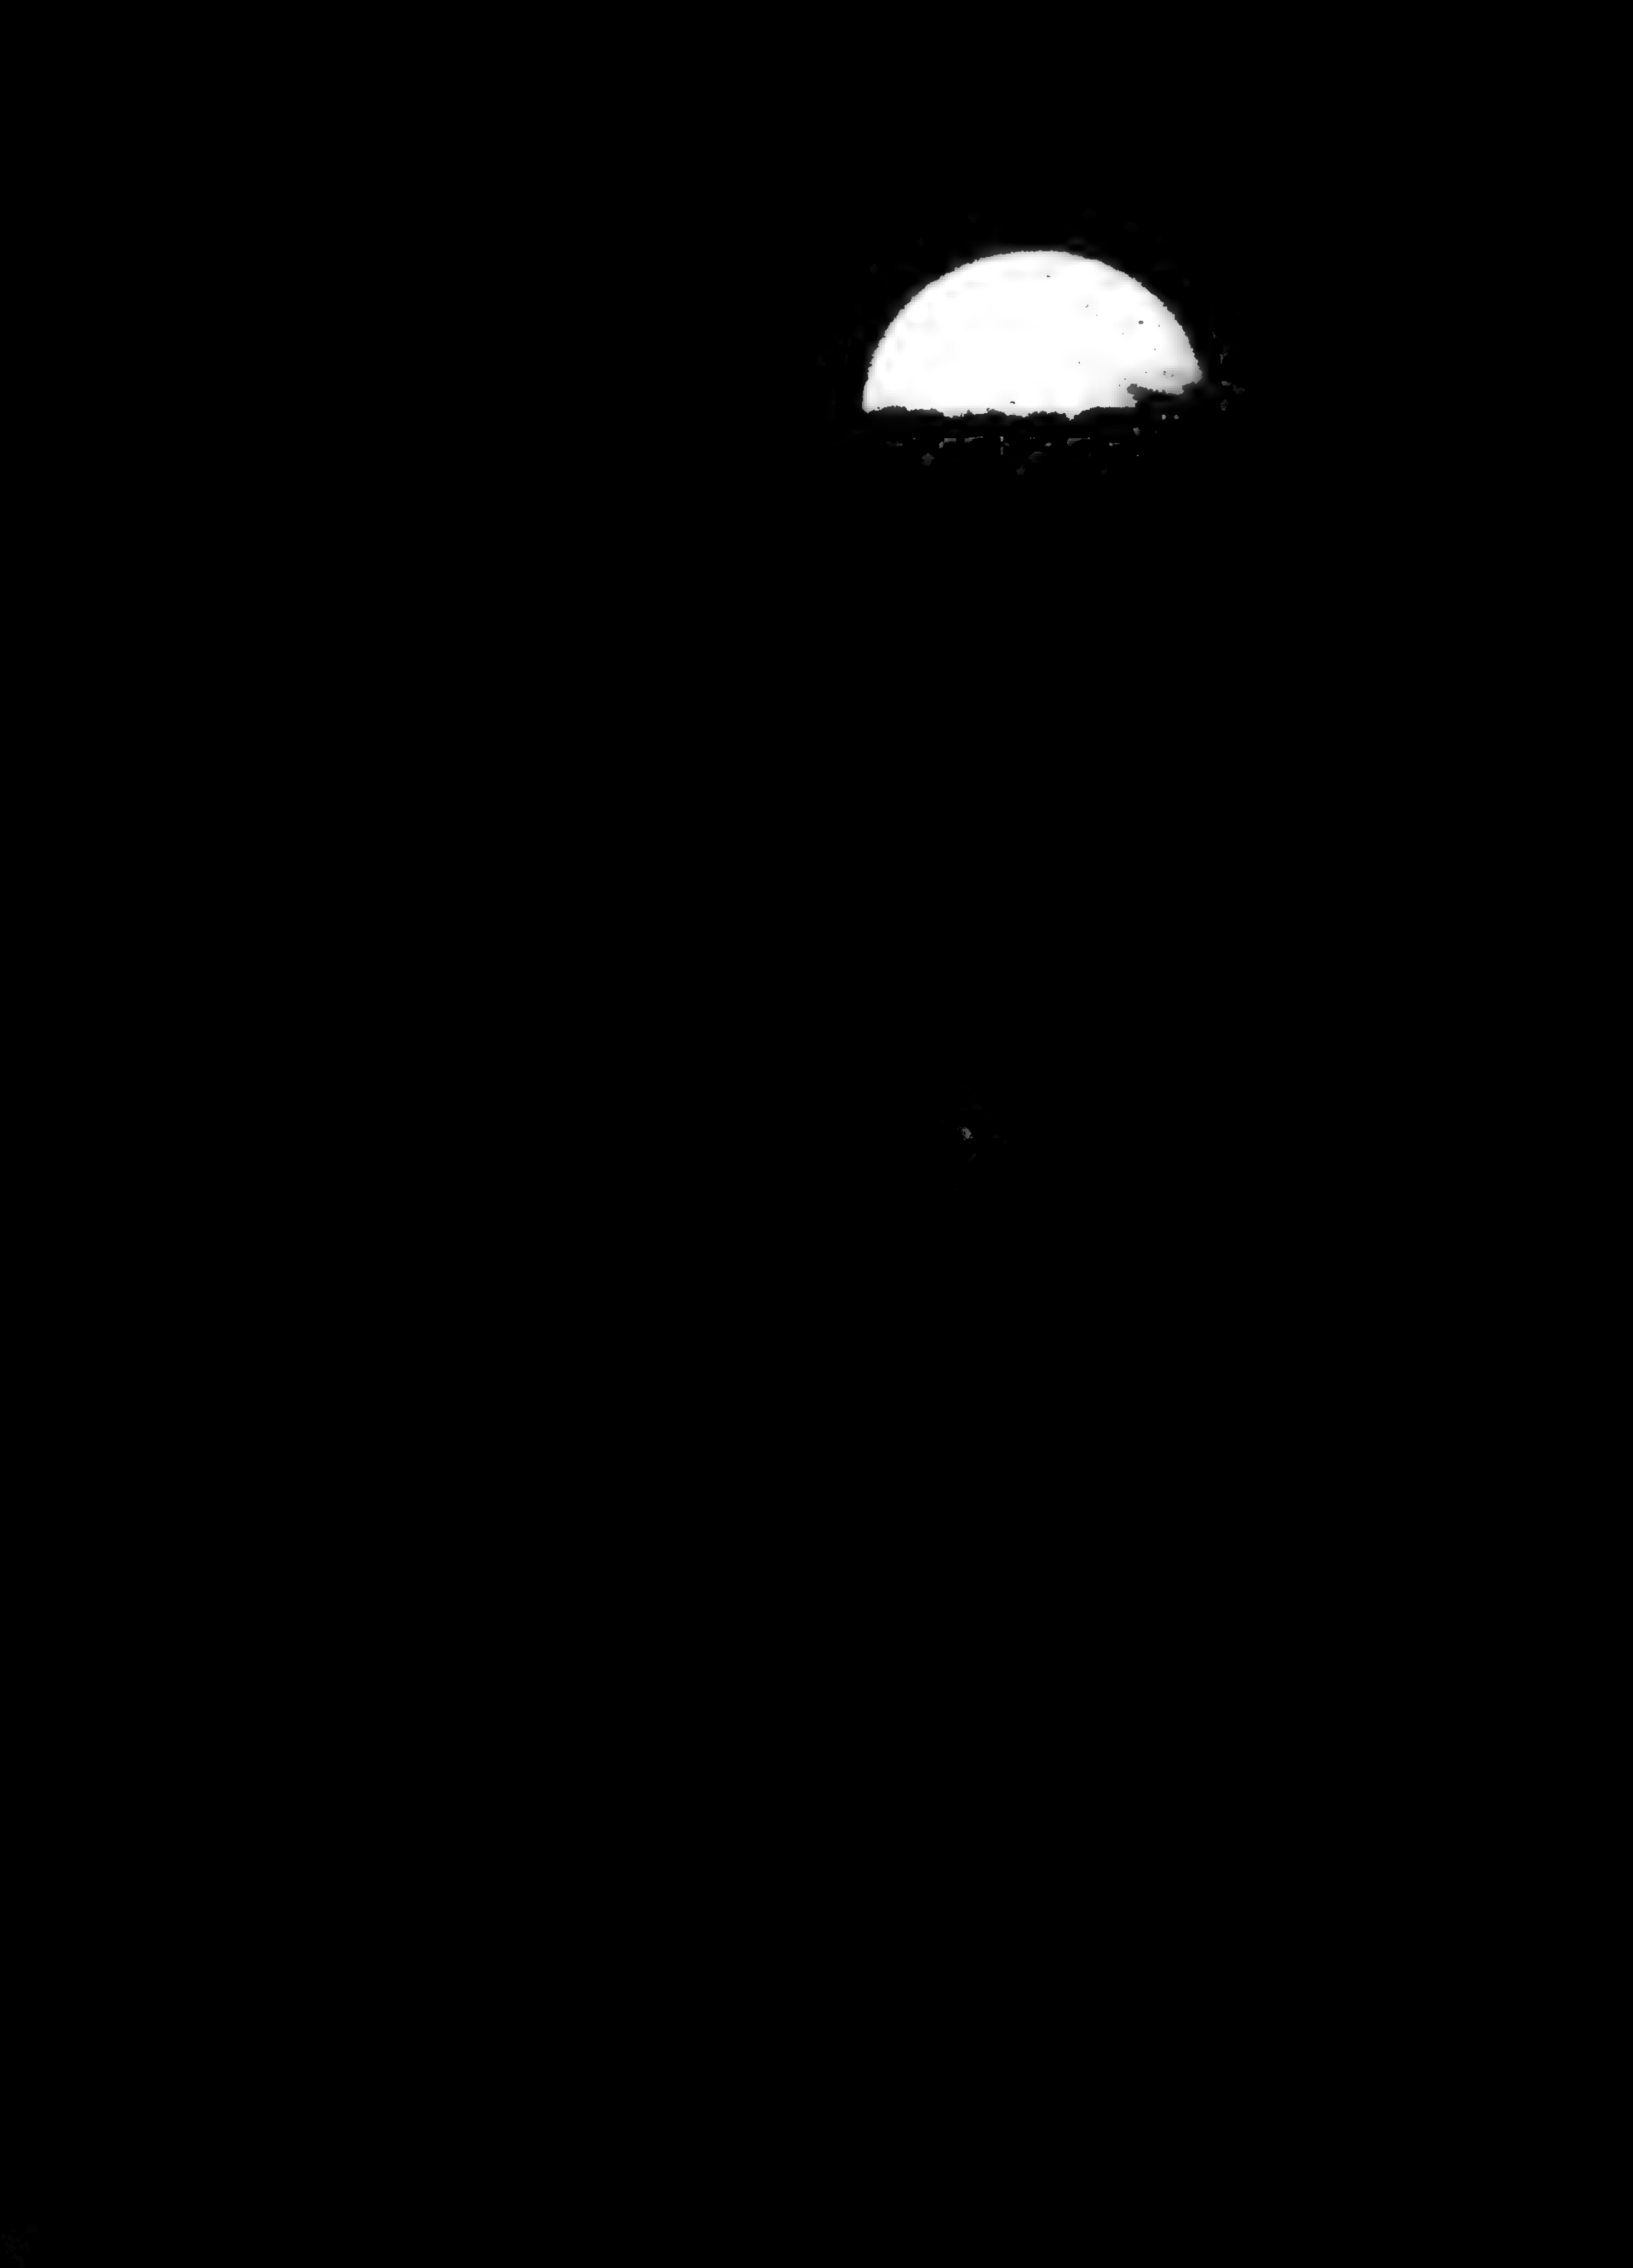
Simply, brilliantly and cost effectively.

And ROLM has the technical edge, the operational track record and the worldwide service and support organization to please even the toughest customer.

So phone ROLM. High tech. Not high anxiety.

ROLM
an IBM company

800-538-8154. (In Alaska, California and Hawaii, call 408-986-3025.)
International Business Machines Corp. 1-2-3—Lotus Development Corp.



In a Control Data Computer System, the architecture cultures freedom.

Take any computer in the Control Data CYBER 180 line and at its heart you'll find the most dynamic, most advanced architecture in the world.

Multi-state architecture. Today it runs two operating systems—NOS (6-bit/60-bit words) and NOS/VE (8-bit/64-bit words)—simultaneously in the same memory and CPU without penalty to the user.

It also lets you switch machine states for future capabilities like artificial intelligence.

This advanced architecture gives you all the freedom of a virtual environment without all its problems because now you can easily access the real memory to maintain critical performance response times.

This system will manage all your present applications, whether Control Data or not. And it'll grow with you, extend itself to support the applications of tomorrow, something you can't count on from lock-locked cluster systems.

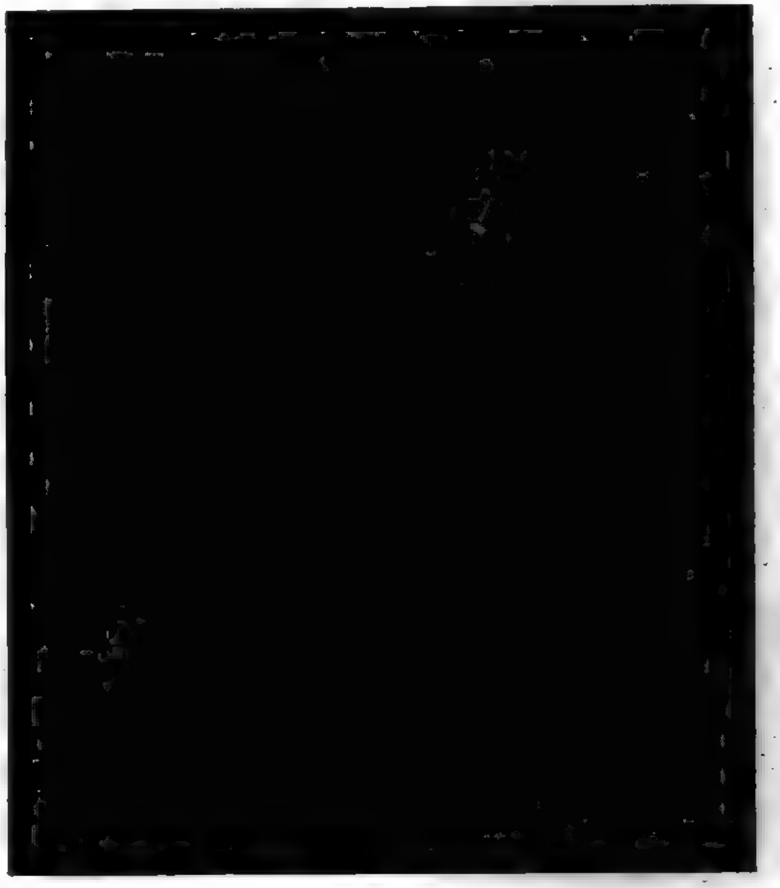
Add dynamic architecture to a 1 to 60 performance range, total binary compatibility and high levels of security, and with a CYBER 180 the world is your oyster.

Learn all about the freedom the proven technologies of Control Data can bring. Call your local Control Data sales office or **800-253-4004 Ext. 373** for complete information.

Then feel free to travel outward. Into the 1990s and beyond.

CONTROL DATA

To Be Successful In Information Management, You Need More Than Just The Right Connections.



Connectivity. The buzzword of the year. Everybody's talking compatibility, multi-user interfaces, and integrated applications.

Well, excuse us, but it's about time. Datapoint has been delivering integrated information processing and office automation systems for more than 15 years. You see, we discovered a long time ago that people really gain productivity when computing power is distributed. Because the real power of business computers is access to information—wherever it is, whenever you need it.

It's more than a matter of stringing cable. The goal is deceptively simple. You and your people need desktop access to the information and the software and hardware tools you use to do your job. Even more important than choosing the right connections is how you use those connections. Managing information flow. Controlling data access. Allocating shared resources. Integrating applications. These are the tasks that will determine the success of your information management system.

And here's where Datapoint comes in. Take our Resource Management System.® The heart of the Datapoint® ARC® local area network. In fact, the Resource Management System is the first operating system designed specifically to take advantage of the power of local area networking. And it's at least a generation ahead of all the others.

Powerful Resource Management. Powerful enough to integrate the most complicated data processing applications with the most commonly used office automation tools. Of course, all this sophistication is totally transparent to your users. From any desktop workstation, they simply select the tools they need to make them more productive. Even if that workstation happens to be an IBM®-PC.

Flexible Resource Management. You can add, shift or remove workstations, peripherals, and software applications without bringing the rest of the system down. Without reprogramming. And, most importantly, without affecting your users' productivity.

The right connections—and more. From our pioneering efforts in distributed data processing to the world's leading local area network, the secret to the Datapoint success story is this unique combination of technological innovation with a singular focus on business productivity. If you're looking for the right connections in information processing—and more—call us toll free at 1-800-334-1122.

SYSTEMS & PERIPHERALS

DEC unveils single-user workstation

Ada machine enhances program development

MAYNARD, Mass. — Digital Equipment Corp. has announced a single-user development workstation system for Ada language programmers.

The Ada Programmer's Vaxstation II, which runs under DEC's MicroVMS operating system's workstation version, allows users to develop programs with the government-validated VAX Ada compiler. The machine is a special configuration of the Vaxstation II workstation, the company said.

The workstation is said to operate as a stand-alone system or can be networked to other VAX-based computer systems. It features an editor, networking capabilities, windowing capabilities and a 1,024- by 864-pixel resolution monitor, the vendor said.

A configuration consisting of a Microvax II system with 3M bytes of memory, expandable to 9M bytes; a 71M-byte Winchester disk drive; a ¼-in. streaming tape cartridge; a 19-in. monochrome terminal with a three-button mouse; a keyboard; a Decnet/Ethernet interface; and associated network software costs $39,300. It includes licenses for the MicroVMS operating system's workstation version, the VAX Ada software, the VAX Graphic Kernel System package, the VAX Language-Sensitive Editor and the Decnet end-node software.

Additional information is available from DEC, which is located in Maynard, Mass. 01754.

Ridge Computers adds four Risc processors

SANTA CLARA, Calif. — Ridge Computers added four processors to its line of reduced instruction set computer (Risc) systems that are aimed at computationally intensive tasks.

Called the 32/110, 32/130, 32/310 and 32/330, the units differ in terms of size, the number of users supported, the number of peripherals that can be attached and the amount of main memory, the company said.

The 32/110 features the company's standard CPU, a 78M-byte disk drive, a 1M-byte floppy disk drive, 4M bytes of main memory and four expansion slots. It costs $39,000.

The 32/130 comes in the same basic cabinet as the 32/110 but includes a 150M-byte disk drive, a 1M-byte floppy disk drive, 4M bytes of main memory and four expansion slots. The unit also includes an enhanced CPU, which is said to improve execution of floating-point instructions by 100% to 300%. The system costs $47,000, the vendor said.

The 32/310 includes a 150M-byte hard disk drive, a 1M-byte floppy disk drive, a standard CPU, 4M bytes of main memory and nine expansion slots. It costs $56,000.

Ridge's top-of-the-line 32/330 includes 8M bytes of main memory, a 150M-byte hard disk drive, 1M-byte floppy disk drive, eight expansion slots and the CPU

See RIDGE page 75

Parallel Computers introduces two Unix-based mini models

SANTA CRUZ, Calif. — Parallel Computers has taken the wraps off a pair of minicomputers, based on redundant, self-checking architecture, that use the AT&T Unix operating system.

The 300 Extended Reliability (XR) series, composed of the Model 30 and Model 40 machines, has duplicate CPUs, memory, disk subsystems and power supplies so that if a component fails, its twin maintains operation, the vendor said. The computers are said to be safe from external power problems by uninterruptible power supply systems.

The Model 30 supports eight users and has 1M byte of main memory, an 84M-byte hard disk drive and a ¼-in. streaming tape drive. It costs $59,900.

The Model 40, which costs $74,900, supports 16 users and has 2M bytes of main memory, 168M bytes of hard-disk storage and the ¼-in. streaming tape drive.

Both machines can be expanded to support 32 users. A five-year warranty costs $9,000. The previously released 300 family can be field upgraded to the 300 XR series and is then eligible for the warranty.

Additional memory is available in increments of 1M byte, 2M bytes and 4M bytes per processor, as it is a dual-processor system, and the memory costs $8,600, $16,200 and $30,400, respectively.

Survey predicts IBM 3080 demise

FRAMINGHAM, Mass. — Despite its claims to the contrary, IBM may soon lay its 3080 line of mainframes to rest. According to a market research firm here, if IBM extends its midsize 4381 line upward to the 12 million instructions per second (Mips) range and announces a low-end version of its 3090 processor operating in the 14-Mips to 15-Mips range, the 3080 series machines could be squeezed from the market. (Last week, IBM announced a 6% price reduction on its 3080 base model and Model X machines.)

International Data Corp. (IDC), in its Quarterly Residual Value Memo for the second quarter of 1985, noted that at present, used 3080 machines are in short supply. Current fair market values for 3080 machines as of late March ranged from 60% of their list value for the 3081 Model D to 70% for the 3084 Model Q. Inexpensive imports of the 3080s that had been coming over from Europe have ceased, and user installation of additional 3080 machines to meet current performance requirements have caused the prices on used 3080s to rise somewhat, the report stated.

Users of 3084 Model QX machines seeking more power will either have to invest in the $5 million 3090 Model 200 or turn to the used 3081 Model K and 3084 Model Q market for their purchase or lease alternatives, the report said. The 3081 Model K user must weigh the cost advantage of a 3084 upgrade against how quickly his performance needs are growing.

There will also be a lot of activity in the market for used 4381 machines. IDC said that 30.6% of the superminicomputer users surveyed expect their processing power to grow from 26% and up through 1987. A secondary market for 4381s has developed, with machines coming over from Europe as a result of the exchange rate. With 4381 Model 3s due to ship this quarter, the 4381 will continue to be the mainstay of IBM's mid-range systems for some time, the report said.

Spark in 4341 mart

The higher end 4341 market continues to show some spark, the report said, because users realize the bargain prices these machines currently have. Any upturn in the 4341 marketplace will be short lived, as the machines are not upgradable. Demand for used 4331 and 4361 machines is sluggish.

In the used IBM disk product market, the older 3380s show a fair market value of 88% of their IBM list price. There is not an abundance of these units on the market, the report said. This disk drive is still a product worth considering, even though the old units are not upgradable to the 3380 AD4s, BD4s, AE4s and BE4s, IDC said. Current fair market value for the 3880 Model 1 controllers is in the low 70% range, while the Model 3s are around 80%, the report stated.

See 3080 page 74

Plexus announces supermicro system

SAN JOSE, Calif. — Plexus Computers, Inc. has released its Plexus P/20 supermicro that incorporates dual Motorola, Inc. 68010 microprocessors, a small computer systems interface (SCSI), an Intel Corp. Multibus interface and the AT&T Unix System V Release 2.0 operating system.

The machine, which costs $10,950 in single quantities, is part of the Plexus P/15 family and is said to be suited to office automation, transaction processing and industrial applications. The system's SCSI bus will accept up to seven storage devices, including 142M bytes of Winchester hard-disk storage. The Multibus permits addition of an eight-serial-port controller board to provide up to 16 serial ports, the vendor said. The board costs an additional $3,450 in single quantities and $2,070 in OEM quantities, a spokesman said.

The dual-processor architecture incorporates a job processor and a supplementary direct memory access controller for I/O, the vendor said. Both processors access the same block of memory.

The eight-user P/20 system, with a 24M-byte hard disk, 1M-byte unformatted floppy disk and 512K bytes of memory, costs $10,950 in single quantities and $6,025 in OEM quantities.

More information is available from Plexus Computers, 3833 N. First St., San Jose, Calif. 95134.

PROCESSORS

■ Competitive Computer Systems, Inc. has released two supermicrocomputers based on National Semiconductor Corp.'s 32016 chips, which provide a 32-bit environment with demand page virtual memory and a floating-point processor.

Both systems use an Intel Corp. Multibus interface and National Semi's Genix operating system. The Series I machine comes with 1M byte of random-access memory (RAM), a 40M-byte hard disk drive and a 1M-byte, 5¼-in. floppy disk drive for backup.

The Series II multiuser machine (for up to 12 users) features a 300M-byte hard disk drive and a Pertec Computer Corp. ½-in. streaming tape backup. It has 1M byte of RAM and a serial board hooked to 12 serial ports. It comes with Genix, C and Fortran compilers.

Options available include added tape backup, ports, terminals and hard-disk storage.

The Series I costs $17,995, and the Series II costs $39,500.

Competitive Computer Systems, Suite 211, P.O. Box 269, 48 W. Chestnut St., Lancaster, Pa. 17608.

GRAPHICS SYSTEMS

■ Perkin-Elmer Corp. has announced that the Tektronix Corp. family of computer graphics products is now available to users of its Series 3200 superminicomputer.

The Tektronix applications range from text editing to computer-aided design and manufacturing. The Tektronix 4100 and 4110 series display terminals feature high resolution, color and local graphics segment manipulation. Color graphics copiers are available for both terminals.

The 4695 copier functions as both a hard-copy device and dot matrix character printer, the vendor said. The 4691 copier, compatible with the 4113 and 4115 terminals, is said to produce copies for up to four terminals concurrently. The Tektronix Plot 10 software reportedly provides a set of tools for developing graphics applications on Tektronix terminals.

Prices for the Tektronix graphics packages range from $3,995 to $22,950, depending on module quantity. The color graphics copiers range in price from $1,595 to $12,950. The Plot 10 interactive graphics library costs $4,000 to $18,000, and the Plot 10 terminal control system costs $2,000.

PE, Data Systems Group, 2 Crescent Place, Oceanport, N.J. 07757.

3080

from page 73

The market for IBM 3350 disk drives may disappear within the year, the report said. There is an abundant supply of 3350s, and their fair market value is around 10% of retail.

The 3370 A1 and B1 information shows that the product is in demand. The A1s are at 55% of fair market value. The 3370 boom may be experiencing positive backlash from 4300 user demand, the report said. Values of the 3375 disks were up to approximately 70%, probably because of the lack of 3380s on the market.

IBM 3480 tape drives are starting to hit the street, creating a surplus and driving current fair market values down, the report said. The 3420 Model 4 is fading fast. It goes for about 35% of the list price for single-density machines and 40% for dual drives. Prices of the Model 6 have declined, but IDC expects DP shops to pick those up to replace Model 4s. Trades are reportedly at 56% for dual-density drives.

Perhaps the last viable 3420, the Model 8, has also shown a dip in residual value. The Model 8 drives, which, because of a shortage from IBM, had been selling on the used market for above IBM list prices, have begun to decline. IDC said single-density 3420s now sell for about 85% of list value and the double-density models sell for about 86% of list.

IBM's contention that the 3420 will not immediately vanish from most computer rooms — it said it expects the average future shop will consist of 30% 3420s and 70% 3480s — will continue to enhance the Model 8's longevity, the report added.

Because IBM can now meet user demand for 3803 Model 2 tape controllers, the price has fallen to 94% of list.

IDC, 5 Speen St., Framingham, Mass. 01701.

Our network can give your network the right connections.

Now there's an easy way to open your company's data network to new opportunities.

Connect your network to our network– the IBM Information Network. It's your connection to a number of computers—from small personal computers to large mainframes, both inside and outside your company.

And our network enables your company to do business in new ways, with new levels of sophistication.

Your Connection to Customers, Suppliers and Dealers

Through our network you can hook up to your customers, suppliers and dealers. And how will that benefit you?

One way might be a system of automatic reordering that could give all parties the advantages of leaner inventories and greatly reduced paperwork. You'll be able to coordinate on-demand delivery dates and production schedules. And to exchange drawings and technical specifications to speed the process.

Your Connection to Industry Networks

There are also cases where an industry benefits from the efficient exchange of information.

In the property and casualty insur-

DATA STORAGE

■ Digi-Data Corp. has announced a magnetic tape subsystem said to provide users with a serial communications link between an RS-232 port and an IBM-compatible tape drive.

The subsystem includes Digi-Data's Model 1000 controller, which accepts 7- or 8-bit data at asynchronous transfer rates from 110 to 19.2K bit/sec. It also includes Digi-Data's Model 2010 nine-track, 1,600 bit/in., ½-in. magnetic tape transport. The drive is said to accept any Ansi/IBM standard ½-in. tape on reels up to 10½-in. in diameter. All 1,600 bit/in. tapes produced by the drive are said to be interchangeable with those produced on any Ansi/IBM-compatible phase-encoding transport.

Prices for the single-density tape subsystems start at $4,850.

Digi-Data, 8580 Dorsey Run Road, Jessup, Md. 20794.

TERMINALS

■ Industrial Computer Technologies, Inc. has announced that it is distributing a Chinese-English display terminal manufactured by Asia Technology, Inc. of China.

The Panda-2000 is said to work with Alphamicro Systems, Inc. computers running under Alphamicro's proprietary operating system.

The Panda-2000 translates Chinese into English and vice versa, the vendor said.

The Panda terminal — including the monitor and Chinese character generator — costs $2,400 in single quantities.

Industrial Computer Technologies, Suite E, 369 Cliffwood Park St., Brea, Calif. 92621.

PRINTERS/ PLOTTERS

■ System Industries, Inc. has released a Digital Equipment Corp. LP-27-compatible band printer that can be used with DEC's PDP-11 and VAX machines.

The SI-1200 reportedly prints at 1,200 line/min. The basic unit costs $24,000.

System Industries, 1855 Barber Lane, Milpitas, Calif. 95035.

RIDGE

from page 73

with enhanced floating-point performance. It costs $69,000.

Current users of Ridge 32C or 32S systems can upgrade their systems. A CPU optimized for floating-point processing costs $11,500; 4M bytes of main memory consisting of a circuit board made up of 256K-bit memory chips costs $17,500; Risc-optimized C and Pascal compilers cost $1,500; an Ethernet connection costs $4,000 and a 19-in. monochrome display costs $9,900.

Ridge has also announced that it is offering three specialized configurations for specific applications that are targeted at electrical and mechanical applications.

Design and Analysis System 1 was based on the 32/110 and includes a 150M-byte hard disk drive, direct Ethernet local-area network connection and a Fortran compiler. It costs $34,000.

Design and Analysis System 2 features a 32/130 system with 2M bytes of main memory, Ethernet connection and Fortran compiler. It costs $45,000.

Design and Analysis System 3 uses the 32/330 system and includes a dot matrix printer, a 1,600/3.2K bit/in. tape drive for backup, a 445M-byte hard disk drive and a Fortran compiler. It costs $75,000.

All announced systems will be available in August, the vendor said.

Ridge Computers is located at 2451 Mission College Blvd., Santa Clara, Calif. 95054.

It's Easy With AST-5251/11:™ Fast Hookup, File Transfer And Extra Capabilities

Standard Twinax Cable Support Makes Installation A Snap. Now you can offer your customers an easy, cost effective direct cable attachment from PC to the IBM® System 34/36/38—no expensive communications adapter necessary. And it's as easy as plugging our AST-5251/11 emulation board into a PC/AT/XT, portable or compatible and connecting the twinax cable. With this complete solution that's all it takes to use a PC just like a standard IBM 5251/11 terminal.

File Transfer Is Only The Beginning. With AST-5251/11 the PC functions as always, and emulates a features-enhanced Model 11 terminal to access the host minicomputer. Now your customers can transfer files bi-directionally between their host and PC, in a ready-to-use format.

Lets Your Customers Use Their Favorite PC Software. AST's file transfer support not only eliminates the burden and the errors of re-keying, it adds the ability to manipulate transferred data using today's favorite PC software packages, like Lotus 1-2-3™ and WordStar.® And Hot-Key support allows concurrent DOS and host sessions, while our applications program interface (API) makes integrating PC and host applications simple.

Even Greater Efficiency. AST-5251/11 also provides host-addressable 5256 printer emulation for PC printers in a background mode.

To find out more, contact:
AST Research, Inc., 2121 Alton Avenue, Irvine, CA 92714
(714) 863-1333

KEY FEATURES

- *Plugs into PC/XT/AT and compatibles; connects to System 34/36/38 via twinax cable and supports cable thru.*
- *Emulates 5251-11, 5291, or 5292-1 display terminal.*
- *Provides host-addressable 5256 printer support (background mode) on PC-attached printer.*
- *Selectable DMA and I/O interrupt channels.*
- *Application program interface and bidirectional file transfer included.*
- *Complete package includes hardware, software, twinax cable assembly, and comprehensive user manuals.*
- *Supports fixed or hard disk.*
- *Hot-Key assist for concurrent host and PC sessions.*

Apple's cuts solve some of its problems

By Kathleen Burton
CW West Coast Bureau

CUPERTINO, Calif. — Apple Computer, Inc.'s sweeping cutbacks will make the company more competitive, but they alone will not reverse the company's sagging fortunes, according to analysts.

Apple recently announced that it will cut its work force by one-fifth, or 1,200 workers, and will close three of its six production plants.

Apple officials said costs associated with the plant closings and layoffs will result in a loss for the third quarter ending June 30, the first loss in the company's eight-year history. Analysts have estimated the loss could total $15 million after taxes.

The company's earlier reorganization merged the Apple II and Macintosh production divisions, removed Chairman Steven P. Jobs from operational control and divided the company into two units, marketing and manufacturing.

John Sculley, Apple's president, said, "We expect these steps to significantly reduce the break-even point of the company."

Sixty percent of the layoffs occurred in Apple's manufacturing divisions, according to a spokesman. The remainder spared only Apple's research and development group and impacted employees in the sales, marketing, finance and administration divisions.

About half of the marketing layoffs were in California's Silicon Valley, where Apple employs about 2,400 people, and the rest were in other parts of Apple's worldwide operations, the company said. After the layoffs, approximately 4,600 workers will remain at the company.

Over the next three months, Apple will close plants in Carrollton, Texas; Garden Grove, Calif.; and Millstreet, Ireland. Ap-

IDC: Global success, conservative approach

THIRD OF A FIVE-PART SERIES

By Maura McEnaney
CW Staff

FRAMINGHAM, Mass. — A data base of computer installations in the U.S. and the "Gray Sheet" newsletter were the first two products launched with the 1964 founding of International Data Corp. (IDC), the granddaddy of computer market research firms.

IDC has grown from a two-person staff working from a house in a Boston suburb to a $25 million company in 1984 with 300 employees in 13 international and seven domestic offices. Its holdings include Yates Ventures, Inc., a market research firm specializing in AT&T Unix based in San Francisco, and Link Resources, a market research firm based in New York.

IDC was founded by Patrick McGovern and is now one of the two main components of International Data Group, Inc. (IDG); the other component of IDG is a group of 57 computer-related publications, including *Computerworld*. McGovern launched IDC out of his basement after getting a hunch that computer companies such as Xerox Corp., Burroughs and what is now Sperry Corp. could use information about computer installations. With the help of local high school students, he began data collection for IDC's first data base.

IDC views itself as a conservative company. "We don't sit down and pontificate about what's going to happen or give blue sky opinions based on our gut feeling. We combine that with reality," said William Ford, vice-president and general manager of the firm.

Perhaps it is IDC's dominant position — claiming approximately 25% of the total of a U.S. market estimated at about $150 million — that prevents it from sticking its neck out as far as its competitors have, observers believe. The company emphasizes its 20-year-old reputation more than the press attention it receives. "We're the old-

See IDC page 83

Analyst sees rebound ahead

By Clinton Wilder
CW Staff

BOSTON — Despite its current moribund state, the U.S. computer industry will rebound strongly by the end of this year, according to Infocorp Executive Vice-President Grant S. Bushee.

Bushee, speaking at Infocorp's mid-year forum here earlier this month, based his optimism on significant products from major vendors scheduled to be shipped in volume later this year. He also cited the growth potential for networking products as the office automation market demands more and more communication among micros and large systems.

As products such as IBM's 3084 and 3090 Model 200 mainframes, Digital Equipment Corp.'s VAX 8600, Prime Computer, Inc.'s 9955 superminis and DEC's Microvax II supermicros begin to ship in volume toward the end of the year, the industry will pick up, Bushee said. "I think the current downturn will be very short-lived," he said. "With these new systems having been announced or shipped, I foresee a rebound by the fourth quarter at the latest."

But Bushee, a cofounder of Cupertino,

Start-up finance wide open

OUTSIDE LINES
Robert H. Stevens

Despite the tarnished image of initial public offerings, the entrepreneurial spirit remains alive and well with a healthy appetite for investment capital. Gone are the days of sublime infatuation between the stock market and high technology. Start-ups going public overnight are now the stuff of legends rather than common occurrences. Nevertheless, entrepreneurs today can choose from a host of creative approaches.

Within the venture capital community, there remains a staggering sum of capital available, though consolidated in fewer investments. Today, venture capitalists, overextended in time, are spurning marginal business plans in favor of fewer but higher quality opportunities. And they are increasingly interested in investing in second, third or even fourth rounds of financing due to the soft initial public offering market and the resulting shortage of mezzanine or bridge financing.

Much of the action taking place today is centered on corporate partnering, or investments that large corporations make in an existing company. Many large companies believe that the innovation and development they require can be accomplished best outside their own bureaucracy. As a result, enormous

Stevens is a partner at Coopers & Lybrand in San Jose, Calif.

Office information networks require management OK

By Clinton Wilder
CW Staff

BOSTON — The office automation market will not take off until corporate management sees office information networks as truly enhancing productivity, according to Bennett C. Wiseman, an Infocorp market research analyst who spoke here recently.

Wiseman said networking has so far failed to reach what he called "critical mass," or the point at which employees decide that such office information functions as electronic mail are indispensable. "Once they have it, they say they couldn't be without it, even though they don't remember why they wanted it in the first place," he said.

Addressing the third annual Infocorp mid-year forum, Wiseman said successful vendors in the growing office information network market will sell solutions rather than products. "People don't yet know what they need networks for, but they know they have information problems that need to be solved," he said. "Vague ideas about how people are going to work better or [more intelligently] won't get the purchase order signed."

Wiseman began his presentation by debunking what he called the myths of networking, such as the terms OA and "paperless office." "[OA] has confused rather than enlightened everyone because it means so many different things," he said. "The 'integrated office' is in reality a disintegrated tangle of different communications standards, and the 'paperless office' has about as much chance of becoming reality as the paperless bathroom."

See OA page 86

The chips are down: AMD, Siltec deal with cutting costs

Evidence of the continuing slump in the semiconductor industry surfaced again recently as a major chip maker, Advanced Micro Devices, Inc. (AMD), and a leading wafer and chip manufacturing equipment vendor, Siltec Corp., announced that they were taking significant cost-cutting measures.

AMD, one of the top five U.S. integrated circuit vendors, announced it will institute four-day workweeks in the quarter beginning July 8. AMD also cut its top 100 executives' salaries by 15% and froze raises for all of its employees.

The Sunnyvale, Calif.-based company said it instituted the measures to maintain its no-layoff policy and that the company policy will continue.

Short workweek affects 90%

The shortened workweek will affect about 90% of AMD's 8,000 U.S. employees. Members of AMD's field sales force, field applications engineers and selected sales support and production personnel will continue to work full-time.

AMD President and Chief Executive Officer W. J. Sanders III said the moves were designed to cut excess production capacity and bring production in line with the falling demand for chips.

Sanders said the company had been hurt by severe price cutting by Japanese competitors, which AMD has also cited in calling for trade barriers on Japanese imports [CW, June 17].

"Predatory pricing on [erasable programmable read-only memory chips], which are 20% of our business, has taken us from profitability in that product line to an expected level of losses such that . . . an overall operating loss for the current quarter seems unavoidable," Sanders said. The company said tax credits from capital investment in research and development, however, should allow AMD to post a modest net profit for the quarter ending June 30.

Sanders said "no upturn is currently in sight" in the hard-hit semiconductor business and that AMD's sales are not expected to improve in the next quarter.

Concurrently with the shortened workweek, AMD announced that some key engineering and production employees were asked to work a 5½-day week for their current salaries in order to spur development and introduction of products.

Siltec lays off 13%

Siltec announced it will lay off 13% of its work force, consolidate its Menlo Park, Calif., wafer fabrication facility into its plant in Salem, Ore., and restructure the management of its Silicon Business Unit.

Siltec said it will lose between $8 million and $11 million in the current quarter. The figures include approximately $7 million to cover the costs of the Oregon consolidation and the establishment of a $2 million reserve fund to reflect current inventory values as a result of slackened demand and falling prices.

The company, based in Menlo Park, said reducing its 750-member work force by 100 would "substantially reduce the company's break-even point" but that it does not expect to be profitable "until the health of the U.S. semiconductor industry improves."

Cullinet's yearly profits up 50%

WESTWOOD, Mass. — Cullinet Software, Inc. announced that fiscal-year profits were up 50% over the previous year, even though fourth-quarter profit growth dipped below the 50% mark for the first time in several quarters. The company said revenue for the year was $184.1 million, up 53% from $120 million a year earlier. Profits were $24.7 million, or 81 cents per share, up 50% from $16.9 million, or 54 cents per share.

In the fourth quarter, Cullinet said, revenue increased 50% to $52.7 million, from $35.1 million a year earlier. Profits of $6.8 million, or 22 cents per share, did not quite meet the 50% growth benchmark of the past several quarters, but was still up 42% from year-earlier profits of $4.8 million, or 16 cents per share.

Robert N. Goldman, president and chief operating officer, said, "Based on the excellent fourth-quarter and fiscal-1985 results, we are confident that in fiscal 1986 Cullinet will continue to exceed industry growth rates."

STC restores five-day week, lays off 500

LOUISVILLE, Colo. — Five hundred more employees of struggling Storage Technology Corp. (STC) received layoff notices last week, bringing the total number of layoffs at the debt-plagued disk drive manufacturer during the past 18 months to 6,500 and reducing STC's worldwide work force to 9,300.

Remaining STC employees received good news, however, as the company announced it would return to a five-day workweek. The layoffs will come primarily from the manufacturing and manufacturing support areas.

STC is currently under protection from its creditors under Chapter 11 of the Federal Bankruptcy Act. The company filed for protection Oct. 31, 1984.

STC Chairman Ryal R. Poppa said the company plans to submit its scheduled reorganization plan to its creditors this week. He said the work force reduction was caused by the industrywide downturn in computer peripherals and computers, rather than by a specific recent downturn at STC.

"While our disk order rate is up, our tape order rate is below expectations," Poppa said. "Therefore, we are reducing current manufacturing capacity to match this order rate."

Retail chain to cut staff

OAKLAND, Calif. — Computerland Corp. recently announced the first layoffs in its nine-year history, trimming its domestic corporate staff by 10%, or 128 employees.

The personal computer retail chain also said it will reduce nonpersonnel-related expenses. Computerland maintains 810 franchised retail stores and employs about 1,120 people worldwide, 80% of them in the San Francisco-Oakland, Calif., area.

"Based on the current flattening of the personal computer market, this is the responsible course to take in order to ensure that Computerland can continue to provide key services to our franchises," said Computerland President and Chief Operating Officer Barbara J. Millard.

OFFICE AUTOMATION.
IT ALL COMES
DOWN TO THE WIRE.

Without the right wiring system, well-planned office automation is nothing but a pipe dream. You'd have no way to integrate equipment. You'd be trapped in a maze of bulky incompatible wiring. Wiring that would restrict growth. And leave you tied in knots.

There's only one solution. The AT&T Premises Distribution System (PDS). Based on our Information Systems Architecture, PDS is an efficient, single-wiring distribution scheme. It gives you the foundation on which to connect all your workstations, LANs, PBXs, and hosts today. And lets you upgrade in the future.

PDS is the wiring system with the future built in.

A logical wire-once system

PDS is the only distribution system that ties together your voice, data processing and office equipment. PDS is based on a common distribution architecture, so it will support equipment from AT&T and other vendors, including IBM.

PDS is modular in configuration. So it can be installed in any building—one-story offices, multi-building campuses, or high-rise towers.

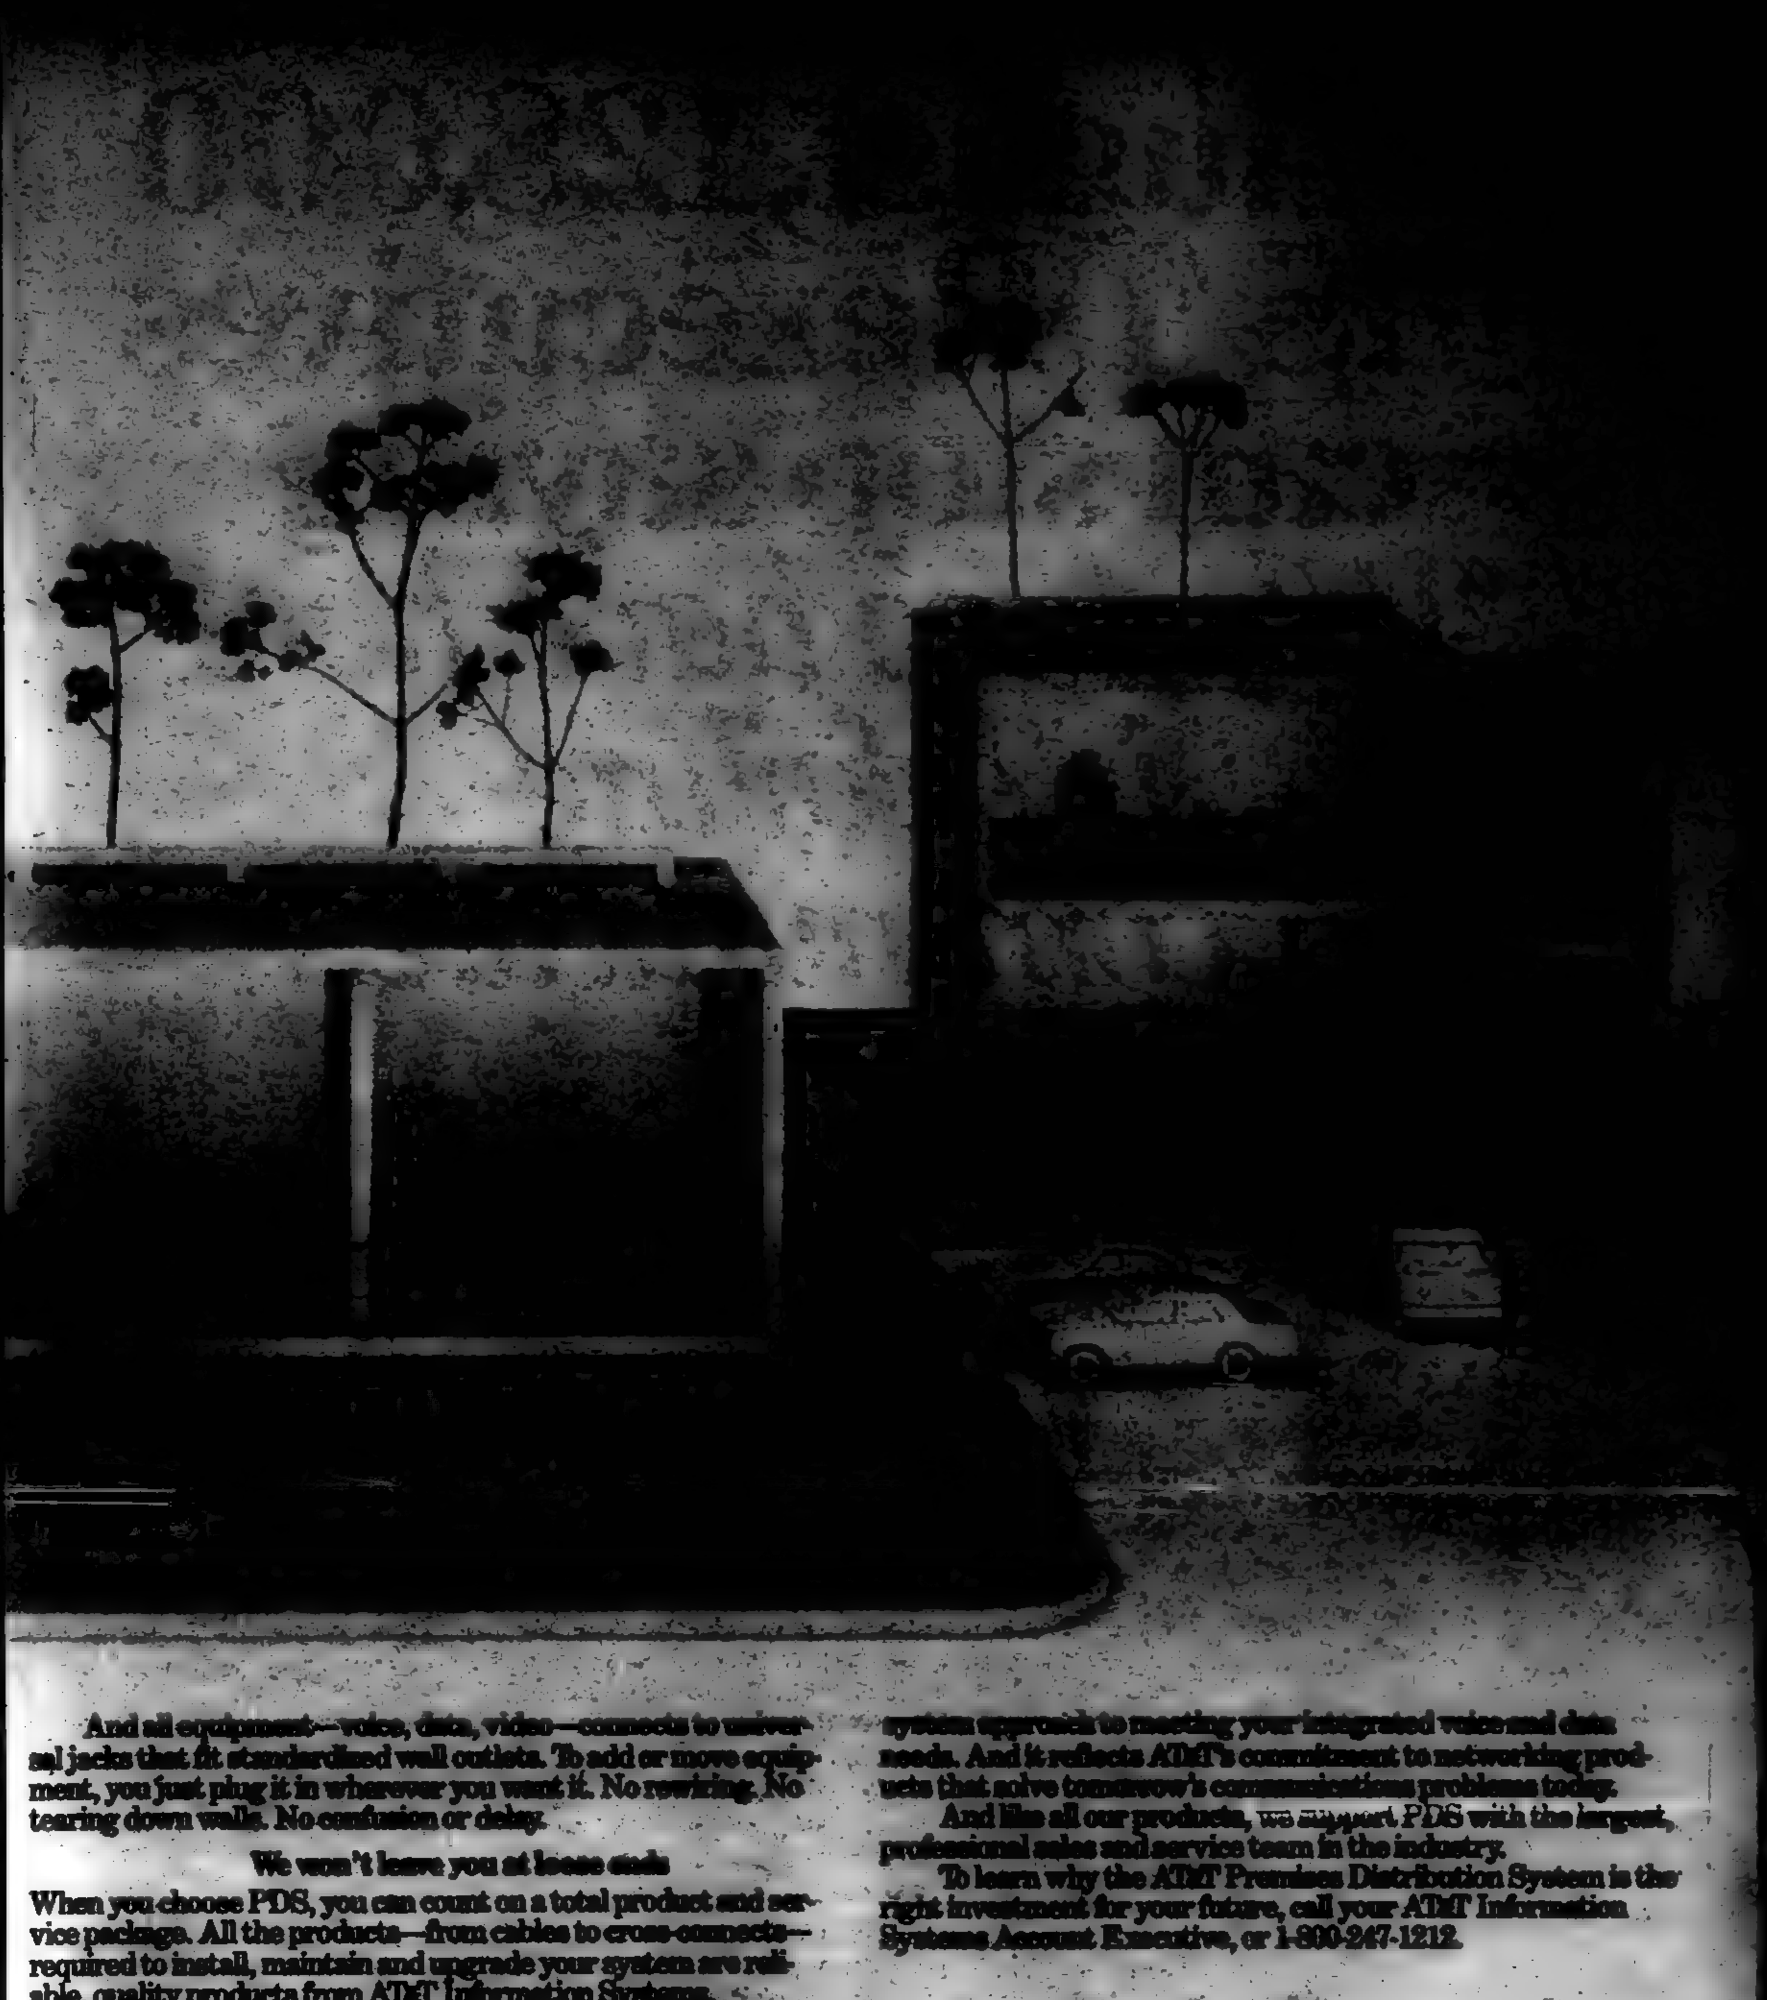
And once installed, it will accommodate all system changes and future technological advances.

Six subsystems—five pertaining to wiring, one to administration—let you alter, upgrade and expand your system in easy cost-efficient steps.

This entire subsystem network can be managed from one central administration point. This allows you to easily control moves, changes and upgrades.

Growth without the pains

A unique design of twisted copper pairs and fiber optics gives you the flexibility to link multiple generations of equipment. And easily add on advanced applications as they emerge.



And all equipment—voice, data, video—connects to universal jacks that fit standardized wall outlets. To add or move equipment, you just plug it in wherever you want it. No rewiring. No tearing down walls. No confusion or delay.

We won't leave you at loose ends

When you choose PDS, you can count on a total product and service package. All the products—from cables to cross-connects—required to install, maintain and upgrade your system are reliable, quality products from AT&T Information Systems.

And only AT&T works with you every step of the way. Whether you're involved in new construction, a renovation or installing a PBX or new data system, we give you end-to-end support. Planning, installing and maintaining your distribution system. If you need help, you know exactly who to call.

You've got good connections

AT&T has a long history of experience in advanced communications research. PDS grew from this experience.

The Premises Distribution System represents our overall system approach to meeting your integrated voice and data needs. And it reflects AT&T's commitment to networking products that solve tomorrow's communications problems today.

And like all our products, we support PDS with the largest, professional sales and service team in the industry.

To learn why the AT&T Premises Distribution System is the right investment for your future, call your AT&T Information Systems Account Executive, or 1-800-247-1212.

AT&T
The right choice.

In August, 128,000 MIS/DP executives can stop saying *"What we have here is a failure to communicate."*

There's a world full of computers out there. And everyone's trying to make them talk to each other.

The trouble is, there are so many technologies, so many products, so many promises, MIS/DP management isn't sure which way to turn.

In the August 28th issue of *Computerworld Focus* on Networks, we'll help them cut through all the smoke with a complete issue devoted to the topic of networking. Which gives you an ideal advertising forum if you've got a relevant product, service or strategy. Because you'll be surrounded by truly topical, informative editorial.

We'll take a look at LANs, PBXs and long-haul satellite technologies, as well as packet networks and teleconferencing. We'll call on experienced users to give us accounts of their own trials-by-fire. We'll ask industry experts to evaluate future directions and advise on the paths that are most likely to be successful for users. And we'll evaluate the products and strategies designed to link desks and offices and buildings and cities into a single integrated system.

So if you want to reach Computerworld's 128,000 paid subscribers, plus bonus distribution at important Fall '85 trade shows, the answer is simple. Get your ads in focus. *Computerworld Focus.* **The August 28th issue. But hurry, closing is July 19th.**

IDC

from page 77

est in the business and have proven to be the most reliable," said IDC President Peter Rowell. "We have not taken part in very hype-filled predictions," he added.

Rowell joined IDC's UK operations nine years ago and shortly after was made managing director, building up the European operations to include six subsidiary offices and eight agency offices. Two years ago, Rowell was brought to the U.S. to take the reins at IDC's corporate offices.

The company's business "is to provide a hand-holding service to our clients," which consist of vendors, computer users and financial firms, Rowell said. "We are a service organization where the responsiveness to clients, answering their day-to-day questions and providing basic information is of paramount importance."

IDC covers all sectors of information processing, including data processing, communications, office automation and software. The products fall into one of four categories: data bases, which are sold to more than 1,000 clients annually; continuous information services, said to be the most profitable of IDC's products; custom consulting; and newsletters.

Approximately 60% of IDC's 3,000 international clients are computer vendors seeking information on market share and product direction, according to Rowell. About 30% of the firm's clients are computer users from Fortune 500 companies. The remaining 10% of the clients are firms in the financial service industry.

The company published more than 250 reports last year, along with seven special reports on topics ranging from a computer industry review and forecast to IBM strategy and personal computer networks. This year, IDC will add 10 more studies covering topics that include text retrieval systems, factory communications and Apple Computer, Inc.'s Macintosh Office system.

Ford said that while competitors view IDC as a number-crunching service, the firm provides much more than that. IDC does rely heavily on "primary data," Ford said, but that data is later combined with analysis in its final reports.

Although some of its analysts such as William Zachmann, vice-president of corporate research, and Jack Hart, vice-president of International Services, enjoy notoriety in both the trade and general press — Zachmann was one of the few industry observers who predicted the current industry downturn — IDC sees itself as somewhat subdued, compared with its competitors.

"We are a conglomerate of individual personalities," said Rowell, who is less visible than his counterparts in other market research firms. "Some of our competitors are built around the personalities of certain individuals," he noted.

IDC's dominance in the market place has been eroded somewhat by younger companies such as Dataquest, Inc., the Yankee Group, the Gartner Group, Inc. and Future Computing, Inc.

"Back when there weren't too many market research companies, IDC was king," said former IDC vice-president Harry Henry, who left IDC a year ago to form his own consulting firm. But, he noted, as the computer industry grew into areas outside IDC's domain, IDC was left open to competition. Each of IDC's competitors today got its start by emphasizing an area not fully serviced by IDC, Henry said.

When IDC was slow to pick up on the emerging growth of the microcomputer industry — a blunder that Rowell clearly recognizes — Future Computing was born.

Recovery from micro error

"We missed the boat in micros to begin with," he said. Today, IDC is attempting to recover from its judgmental error by concentrating on micros in a few specific areas, including the value-added reseller end. "Our microcomputer services is one of the fastest growing services," he said.

For Rowell, maintaining IDC's approximate 30% annual growth rate means a "more-of-the-same" approach. "We must do more of what we've been doing," to compete against firms like Dataquest, Gartner Group and Future Computing, he said. "I want to build our expertise in all areas, to cover absolutely everything. But we're being forced, marketwise, to concentrate on certain issues."

IDC remains committed to building up its client base, with some specific directions in mind. "We want to be more flexible in our user services," Rowell said. Right now, he noted, "We have a number of very rigid services aimed at senior management within large corporations."

The First National Bank of Chicago has been an IDC client since it first formed its MIS department seven years ago. "When we started looking for a consulting service, [IDC] was the only one that offered us what we needed," said systems officer Jack Phillips. The bank primarily uses IDC's Information Systems Planning Service, which provides four reports, the "Gray Sheet," bulletins, conference admission and phone inquiry.

According to Phillips, IDC's telephone inquiry services "give us a place to go for answers to questions about other users. For the bank's purposes, some of IDC's services are "getting far afield" from its needs, he said. "We're really not interested in a lot of the industry-related marketing stuff like the future of the computer market in Japan."

IDC may shift its focus to attract

If you live in Boston and you're interested in personal computing, we have a free program for you.

All you need is a radio and a phone!

"Computerworld" is a two-way radio program designed to help you get (and give) specific information about personal computing.

In addition to bringing you regular guests, "Computerworld" gives you the chance to exchange information with people who have experienced the same problems and pitfalls that you have — without leaving the comfort of your home.

It's a unique information service from CW Communications, the world's largest publisher of computer-related newspapers and magazines.

You can participate in "Computerworld" every Sunday night from 5 to 7 PM on WDLW radio, 1330 on your AM dial.

INVEST

from page 77

amounts of money are being plowed into this strategy to acquire new products, services and technologies quickly and cheaply.

There are three primary advantages to this financing method. First, the corporate partner can supply large sums of capital, often at a cheaper cost than venture capitalists.

Second, it can arrange for marketing the new company's goods, often a tremendously capital-intensive function. If the new company is a manufacturer, the corporate partner can provide manufacturing capabilities under contract.

Finally, a corporate partner can provide a second source of the product. Of course, a downside for the entrepreneur may be giving up future flexibility; the corporate partner's goals may differ from those of the new company.

Partnerships as financing vehicles

Equity partnerships continue to be used as financing vehicles among start-up high-technology companies. An equity partnership is frequently a traditional venture capital investment, with the company starting out as a partnership that allows tax deductions to flow through to some or all of the backers.

Following the development period, the partnership will be "rolled up" into a corporation. Depending on the tax needs of the investors, these partnerships can be very attractive, as the available deductions serve to reduce the investment risk. The entrepreneur benefits through these tax deductions by gaining leverage in negotiations with the investors.

To remain viable and competitive, companies need a commitment from every employee to achieve success. One response to this need has been the increased use of employee stock option plans. These plans provide a new source of financing to high-tech firms, since the new tax laws allow banks to treat a portion of the interest received from employee stock option plan loans as nontaxable.

Loans from stock option plans

As a result, companies may be able to secure loans from banks by use of leveraged employee stock option plans in situations where the loan would otherwise be too costly. Variations of a stock option plan loan often play a part in leveraged buy-outs and corporate divestitures. Although not a new financing scheme, the practice is growing steadily in popularity.

Young companies seeking financing for fixed assets often find that banks require substantial compensating balances to be maintained until several quarters of profitability have been achieved. This puts a big restriction on available cash — often hard fought for in an earlier venture capital financing.

Venture leasing allows a firm to offer warrants to purchase stock in the company at a fixed price to the leasing company or bank and can eliminate the compensating cash balance. Warrants can also be offered to OEMs that commit to large purchase orders. In these cases, the OEM customer earns more warrants at higher and higher levels of purchases and, therefore, has an incentive to continue buying.

Warrants may be issued up front at a fixed price and earned as the company actually buys predetermined levels of products or structured so that the price is not fixed until the warrants are earned. In either case, the accounting implications of these arrangements must be carefully analyzed in advance.

Although not strictly a financing method, warrants can encourage customers to enter into early and significant contracts with the expectation of acquiring stock and profiting through the success of the company.

Least common among the variety of funding alternatives available to a start-up is debt financing. While companies who are shipping products and have investments and accounts receivable can obtain credit lines, it is very difficult for a young company to collateralize fully a loan without assets.

When used by small- to medium-size companies, debt financing increasingly involves a combination of debt and equity. By adding warrants, lenders gain the benefit of upside potential if the company is successful, and warrants allow companies to obtain debt that would otherwise be too expensive or unavailable.

Research and development partnerships have fallen into some disfavor as a result of high risk and diminished tax advantages for many private investors. Until recently, many companies raised money through R&D partnerships, whereby an existing company contributed technology to a partnership, which raised capital from limited partners. Investors took 80% to 90% tax write-offs in the first year, with promises of 30% to 40% after-tax returns. Investment bankers oversold these vehicles; investors blindly went into them without appreciating the risks involved; and the high-tech companies often failed to communicate with their investors. Thus, the investment and business communities are more wary of R&D deals now.

However, money from an R&D partnership is cheaper than equity money because investors look for substantial tax savings. The partnership concept remains a useful, if somewhat abused, tool. Companies should enter such agreements with caution. For instance, if a research and development deal is royalty based, the company must bear a percentage of sales or part of its costs. If the technology is acquired with stock, the current fair value of the stock must be amortized over future periods, which puts additional strain

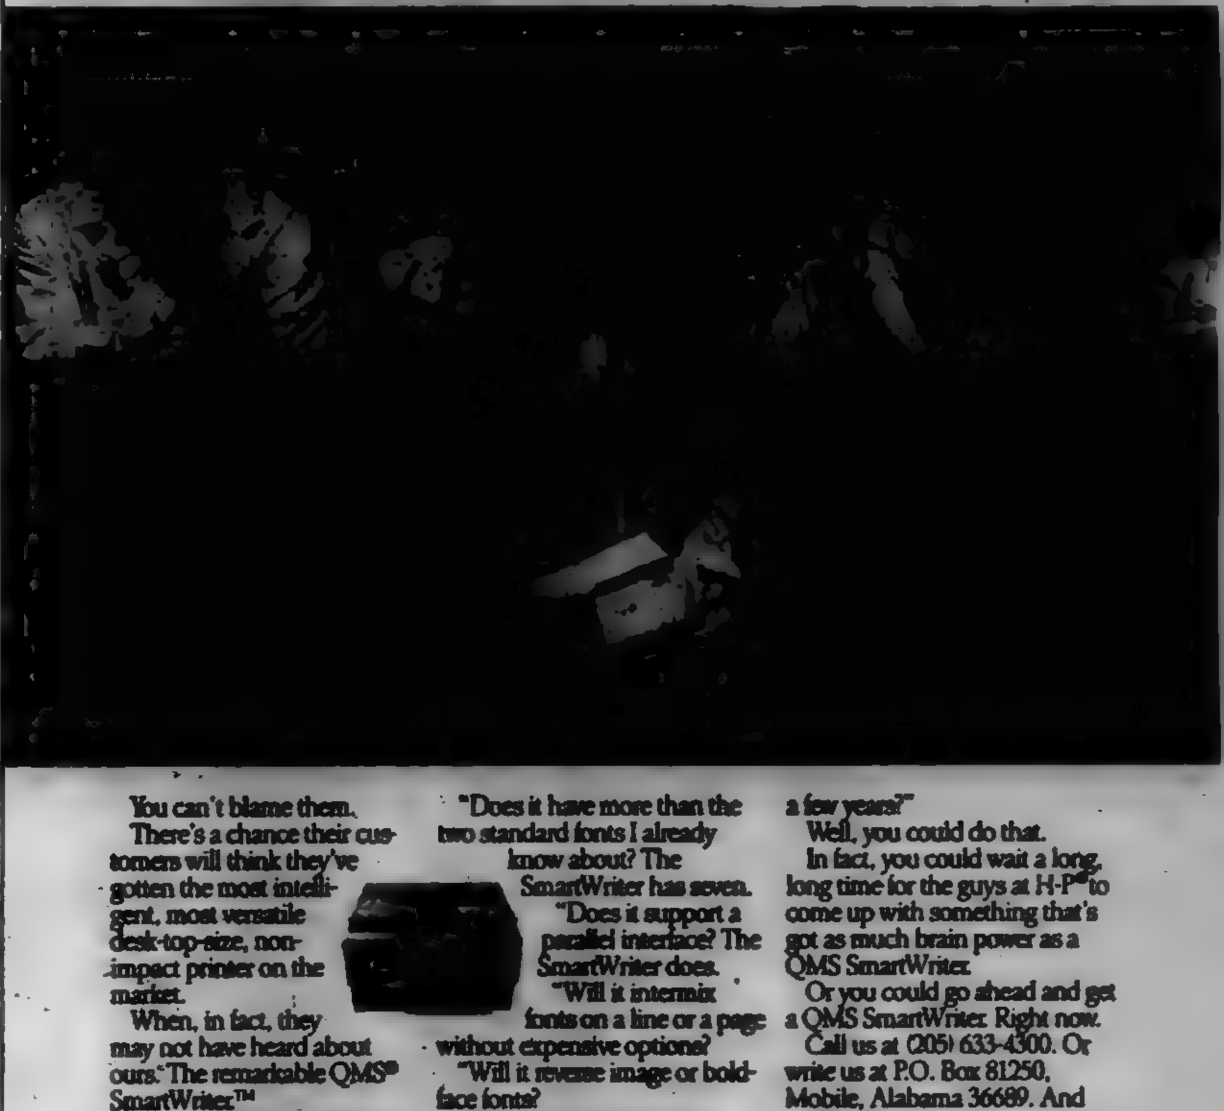
We've Heard Rumors That The Guys At H-P Are Experimenting With A Way To Make Their LaserJet As Smart As Our SmartWriter.™



You can't blame them.

There's a chance their customers will think they've gotten the most intelligent, most versatile desk-top-size, non-impact printer on the market.

When, in fact, they may not have heard about ours. The remarkable QMS® SmartWriter.™

Whoops! This could lead to some very embarrassing questions, such as:

"Will your LaserJet Printer support QUME,® Diablo,® Epson,® and ANSI X3.64 escape sequences? The SmartWriter will.

"Does it have more than the two standard fonts I already know about? The SmartWriter has seven.

"Does it support a parallel interface? The SmartWriter does.

"Will it intermix fonts on a line or a page without expensive options?

"Will it reverse image or boldface fonts?

"Will your LaserJet Printer support overlays, draw lines and boxes, subscript and superscript?"

We can hear their answers now: "Uh, no." "Not really." "Not quite yet." "Sort of." "Almost. Can you wait just a few years?"

Well, you could do that.

In fact, you could wait a long, long time for the guys at H-P® to come up with something that's got as much brain power as a QMS SmartWriter.

Or you could go ahead and get a QMS SmartWriter. Right now.

Call us at (205) 633-4300. Or write us at P.O. Box 81250, Mobile, Alabama 36689. And we'll give you a lot more information. No rumors this time. Just facts.

from page 77

Wiseman, director of Cupertino, Calif.-based Infocorp's fledgling office information network market research service, said the technology and price/performance ratios of office computers have grown by leaps and bounds, while their ability to communicate with each other has lagged far behind. "In 1965, an IBM Selectric typewriter cost $12,000, or the price of two Cadillacs," Wiseman said.

"In 1985, you can buy 12 word processors for the price of one Cadillac. But the problem is similar to the early days of the auto industry — not enough good roads. Office computers need the equivalent of the interstate highway system — the interoffice information system."

In the near future, hierarchical networks such as micro-to-mainframe links will see greater success than peer-to-peer network connections, Wiseman predicted. "Large organizations like the hierarchy of their mainframe and its software systems at the top," he said. "With workstation-based local-area networks, the anarchy [that is] implied goes against their grain. In general, organizations are slow adapters."

For similar reasons, Wiseman's network market forecast is based on the assumption that users want to link their current installed base rather than purchase computer hardware to run on a network. According to Wiseman, "The installed base will drive the workstation market, and the workstation market will drive the demand for printers and file servers."

Opportunities exist to gain market share

Wiseman concluded that wide opportunities to gain market share exist in the office information network business, largely because the market contains many diverse niches and has no clear market leader.

He predicted the largest future office information network market will consist of current noncomputer users in an office who will eventually choose electronic replacements for "their telephones, in-baskets and notepads."

"These are people who don't like computers and never will," Wiseman said. "But if vendors offer them solutions to a problem, they will buy."

UP

from page 77

Calif.-based Infocorp, qualified his optimism with a warning about the health of the U.S. economy. He does not expect overall capital investment and the Index of Leading Economic Indicators to fall significantly over the course of the year but said that the computer industry will suffer if they do.

"I'm assuming the economy will remain strong," he said. "If it turns sour, we could be in for a lot longer downturn than anyone expected."

Bushee said that the absence of local-area network standards and other interconnection shortcomings have contributed to the current downturn, but at the same time, they represent a major potential growth area for the industry.

"In the early 1980s, organizations spent heavily on computers, especially micros," Bushee noted. "Now they all require system interconnection — the key issue facing the industry today. It has been an Achilles' heel to date, but it also represents the most golden opportunity."

Bushee said the lack of networking reliability has contributed to a big problem facing vendors: user dissatisfaction. "As users become more and more familiar with computers, they find out the shortcomings — that the promise has exceeded the reality," he said.

The most successful vendors in the future will be those that market their products as solutions to specific office, industry and home problems rather than as technological wonders, Bushee predicted.

Bushee said the industry's most important growth areas in the near term will be solutions that tie users together through office information networks, file servers, multiuser systems and departmental systems such as a Microvax II or a Hewlett-Packard Co. HP 3000 Model 37.

Bushee concluded that as the industry approaches 1990, there will be significant growth in scientific/technical niche markets, portable computers and artificial intelligence systems.

Introducing The Single Solution To Many Problems That Can Tie Up Your Personal Computer.

APPLE

from page 77

ple's automated plant in Fremont, Calif., will continue to produce IIc and Macintosh computers, while production of Apple IIe products will be shifted to Singapore, and the Cork, Ireland plant will continue European distribution.

"In recent weeks, the mood here has been serious and somber," said William V. Campbell, Apple's vice-president of U.S. sales and manufacturing. "During the layoffs, there were tears mixed with a great deal of optimism about the future. The mixed mood is difficult to describe, but the morale of those remaining is good."

According to Campbell, 21% of Apple's work force was eliminated because the reorganization caused a duplication of marketing and manufacturing efforts within the company. Now, the company's costs will be lower, and it will be able to bring products to the market faster, Campbell said.

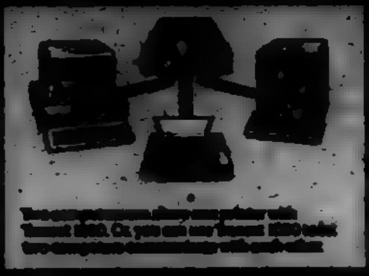
Although the shake-up was larger than expected, analysts have said it will leave Apple more competitive. "It will mean a stronger Apple over the long haul," said John Dean, a computer analyst at Montgomery Securities in San Francisco.

However, several fundamental problems must still be resolved, he said. According to Dean, the company's largest obstacle will be to deliver the products it has announced. Immediate priorities, he said, are a file server and personal computer network card for the Macintosh Office.

Because of the sales slowdown in both home and business computers, sales for the current quarter will be about $390 million, approximately 10% less than the $435.2 million for the previous quarter, Dean said.

Apple's plant consolidations were necessary for the company's survival, said Aaron Goldberg, an analyst at International Data Corp. in Santa Clara, Calif. Apple's manufacturing operations were running at 60% of capacity since February because it was selling less than 25,000 Macintosh computers a month.

According to Goldberg, the reorganization and layoffs indicate that the company is now operating as a financially disciplined Fortune 500 firm, "not like an entrepreneurial outfit still run from a garage."



INVEST

from page 85

on the profits of an emerging firm.

Finally, the ownership of the developed technology should be made as clear as possible to make it harder to find investors.

IDC

from page 83

smaller client companies, Rowell said. "There are many organizations that have no interest in and cannot afford the type of service we're providing," according to Rowell. "We can restructure some new services to focus more on smaller users," he said. Providing more strategic services to users is also a future direction for the company, he said.

For MIS managers in medium-size businesses, IDC has recently introduced "Information Systems: Issues '85," a program focusing on hardware vendor strategies, organizational trends, software engineering and communications. The program gives MIS managers eight IDC reports, telephone consultations on those report topics, newsletters, bulletins and access to the company's Fall Executive Conference. Annual cost of the program is $7,500.

The company is also attempting to make its mark on the investment community. IDC announced a $1 million contract with Goldman Sachs & Co. that will give the investment firm access to IDC research information.

But IDC's attempt to cover all aspects of the computer industry has its drawbacks, former Vice-President Henry believes. "When you are the biggest out there, people come to expect everything from you. It's nice to be big, but it sure is a heavy cross to bear sometimes."

The Meeting of Meaningful Minds

Opportunities in Southeastern Michigan

The recent alliance between Electronic Data Systems Corporation (EDS) and General Motors has created unprecedented opportunities for an engineering and manufacturing systems development division. This division has been chartered to identify systems directly involved with GM functions and organizations, as well as to recommend technologies and quality assurance standards necessary to implement these systems.

At EDS, we strive to find the very best people. And these individuals will be key to the success of this division. If you are results-oriented, EDS can provide unlimited growth, challenge and a highly professional work environment in Southeastern Michigan.

We have several highly-visible, ground-floor opportunities available for professionals to work on current or upcoming projects in engineering-manufacturing systems development and implementation.

ENGINEERING SYSTEMS INTEGRATION

Systems Engineers
- 3 + years experience related to developing, integrating and installing engineering systems within a manufacturing environment, as well as demonstrated proficiency in COBOL, FORTRAN, PL/1 and/or higher level languages, code generators and structured software techniques
- 3 + years experience related to analysis and solution of manufacturing engineering problems from a computer system perspective, using structured software analysis and design concepts. Emphasis on user, business, manufacturing and engineering system interfaces.

MANUFACTURING SUPPORT SYSTEMS

Systems Engineers
- 2 + years experience with on-line transaction-driven manufacturing information systems in one or more of the following areas:
  - Maintenance dispatch
  - Energy management
  - Event annunciation
  - Labor standards
  - Manufacturing costs
  - Quality/Reliability
  - Preventative maintenance
  - Production decision support
  - PL/1 preferred, COBOL acceptable

Programmers/Analysts
- 2 + years experience to include IBM mainframe systems, PL/1, COBOL or FORTRAN

EDS offers unlimited career pathing to enhance your ultimate goal, with compensation, benefits and challenges to meet the aggressive expectations of your potential. We also have one of the most supportive relocation programs available to assist you in any move that may be required. EDS and YOU. The meeting of meaningful minds could be the best career combination for your future. Forward your resume in strict confidence to:

IMS Consulting

If developing applications supported by IBM's IMS/VS data base and data communication software is your specialty, then we're the company you've been searching for. Because that's been DBMI's specialty for over 12 years. We offer the DB/DC applications development specialist the opportunity to work in the most sophisticated data processing environments around and for a consulting firm with a reputation for maintaining the highest professional standards. What's more, we provide advanced training that is second to none and, if you so desire, we can even offer you the opportunity to perform occasional teaching assignments in our Education Division.

In addition to professional development and competitive salaries, our benefits include:

- 6-month salary reviews
- 6-month performance bonuses
- monthly billing bonuses
- profit sharing and 401K plans
- life, health and dental insurance
- relocation assistance

If you have at least three years experience doing analysis, design or programming in IMS, opportunities exist at our locations in Hartford and Stamford, CT; Alexandria and Richmond, VA; and Dallas, TX. To explore these opportunities, please call Jim Gehan at (203) 646-3204 or send your resume and salary history in confidence to:

Say YES to EDS in Michigan

The Electronic Data Systems (EDS) and General Motors alliance is a partnership of two of America's greatest success stories. We are truly impacting the information services industry. Ours is a proud and vital partnership providing the "Best the Future has to Offer" to our employees and offering YOU unprecedented opportunities to begin again in MICHIGAN.

At EDS, people are our most important asset…hard working people, achievers, dedicated people. That should be important to you. It is why our future, your future and Michigan's future never looked brighter.

Currently, we have excellent opportunities for the following:

PROGRAMMER ANALYST/SYSTEMS ENGINEER

- Minimum 1 year experience in Unix and/or "C" language
- Degree in CS/EE or equivalent experience
- Experience using micro/super-micro computers
- Understanding of and interest in advanced technology

TECHNICAL SUPPORT

- 2 + years in data communications
- Degree in CS/EE or equivalent experience
- Background in packed switched network and various value added networks
- Experience with local area networks and satellite communications preferred

You will find the suburban area of Southeastern Michigan to be a country/contemporary lifestyle that warms the senses. From the vastness of the Great Lakes, with the beauty of Canada as your next door neighbor, to the wildflowers of Cranbrook. You'll have the Bluegrass Festival, the excitement of Tiger Stadium and some of the best fishing anywhere.

EDS has one of the most supportive relocation programs available. We also offer a unique benefits package to complement our competitive salaries, such as employee discount programs, a health and fitness program, in-house leisure/travel department, discount stock purchase plan, credit union/savings/loans/free checking and company paid retirement programs, just to highlight a few.

Say YES to EDS and begin again in Michigan. To find out more, send us your resume in strict confidence today:

[illegible]

Pioneering in any field demands inquiring technical minds — people capable of applying present technology to the future. Of looking forward. Pushing limits. Creating ways to apply new hardware and software. Central to our success is our ability to integrate new developments in the rapidly evolving science of communications. The following positions represent an opportunity to play a key role in the development of our services — ways you can become one of the bold pioneers creating new boundaries of networking technology.

TELECOMMUNICATIONS SPECIALISTS

Openings are available for this position throughout the United States to install and maintain sophisticated telecommunications equipment. You must have an AS degree or equivalent in Computer Technology or Electronics, a knowledge of earth stations and switching nodes, (Tandem and/or Rockwell/Collins equipment preferred), and familiarity with communications protocols such as X.25 and HDLC. Practical knowledge of voice grade and DDS data circuits is also required.

SR. TECHNICAL ANALYST/ NETWORK OPERATIONS

You will provide maintenance and diagnostic technical support to isolate and resolve component and system problems; formulate and document operational procedures. You must have a Bachelor's degree or equivalent in Computer Science or Electrical Engineering. Five years professional experience in field maintenance/repair/technical support of high technology computer, microprocessor, office products and/or telecommunications systems is required along with strong interpersonal skills.

PROJECT ENGINEER/IMAGE PROCESSING

You will develop data compression and image processing strategies and provide technical expertise in the design of advanced image processing systems and data compression. A Bachelor's degree or equivalent in Engineering, Mathematics, Physics or Computer Science is required. A Master's degree is preferred. You must have 7 years professional experience in data compression technology, including 3 years experience in image processing research and analysis.

SR. ENGINEER/ DATA NETWORKS

You will participate in the planning, design and engineering of data networks. A BS in Electrical Engineering, Computer Science, Telecommunications or equivalent is required along with 4 years experience in any of the following areas: network planning and analysis; SNA network implementation; network engineering using concentrators and multiplexers; network architecture (X.25, SNA, IEEE 802); or communications software development. Experience in computer programming is preferred.

SR. TECHNICAL ADVISOR/SWITCHING SYSTEMS SOFTWARE

You will develop telecommunications strategies and provide technological expertise and planning to support existing and corporate objectives; ensure cost-effective networking and cost control of network/systems. A Bachelor's degree or equivalent in Engineering or Computer Science is required. Master's degree is preferred. You must have a minimum of 10 years professional experience in data communications network design and analysis. An in-depth knowledge of microprocessor hardware and software, including "C" and Assembler languages is required along with strong organizational, and analytical, planning, human relations and communications skills.

SR. TECHNICAL ADVISOR/ PACKET SYSTEMS DESIGN

You will develop telecommunications strategies and provide technological expertise and planning to support existing and planned corporate objectives; ensure cost-effective networking and cost control of network/systems. A Bachelor's degree or equivalent in Engineering or Computer Science is required. Master's degree is preferred. You must have a minimum of 10 years professional experience in data communications network design and analysis. An in-depth knowledge of microprocessor hardware and software, including "C" and Assembler languages incorporated in packet switching design is required along with strong organizational, analytical, planning, human relations and communications skills.

TECHNICAL ADVISOR/ NETWORK DEVELOPMENT

You will be an authority in the area of telecommunications in performing research, analysis and design of advanced telecommunications systems, thereby ensuring that the most cost-effective systems are consistent with traffic requirements and minimizing expenditures for equipment and services. A Bachelor's degree or equivalent in Engineering, Mathematics, Physics or Computer Science is required along with 7 years professional telecommunications experience. Experience must include 3 years in communications research and analysis with background in traffic engineering, computer architecture, and network modeling. Strong human relations and communications skills are essential.

IMS SYSTEMS PROGRAMMER

At Federal Express, you will be working in one of the most advanced IBM shops in the nation; both in hardware and software. We have five IBM 3084's and were one of the first in the country to install MVS/XA as well as IMS 1.3. Our seven IMS production systems support approximately 15,000 on-line terminals and process 1.6 million transactions per day. Heavy MSC usage is our key to system interaction and FASTPATH is presently being considered for future development.

You will be involved in problem resolution, performance and tuning, and systems maintenance. Qualified individuals must have at least one year experience performing IMS Systems Programming duties with a large IBM mainframe. Knowledge of IMS internals and externals, Assembler language, SMP, and MVS operating systems required. An in-depth knowledge of current IMS maintenance procedures and MSC experience a plus.

OPERATIONS RESEARCH ANALYST

You will analyze broad and complex corporate problems through the use of sophisticated computer-based models and other operations research methods, in order to provide Sr. Management with recommendations and alternatives. Will also provide a broad base of consulting capabilities to other areas of the company. We require a Bachelor's degree in a quantitative discipline such as Math, Computer Science, etc., with a Master's degree preferred. Three years professional experience in a quantitative field, preferably computer programming and mathematics is also required. You must be proficient in Fortran or PL/1 programming languages and possess strong communication skills. Previous operations research experience is desirable.

ASSOCIATE OPERATIONS RESEARCH ANALYST

You will perform scientific and mathematical computer programming and provide problem-solving assistance in support of research planning and analysis. A Bachelor's degree in a quantitative discipline is required along with 2 years professional experience in a quantitative field, preferably in computer programming. You must also be proficient in Fortran or PL/1 programming languages.

Ours is a unique and creative environment for achievement. Technical resources are superior. Salaries are competitive. And our corporate benefit program is comprehensive. If you are eager to create the new boundaries on networking technology, please call Toll Free, 1-800-435-2222, between 8:30 AM and 12:30 PM, Wednesday or Thursday, June 26 or 27, ONLY, or forward a letter or resume indicating your experience and salary history, in confidence, to the address below.

TO EXPEDITE CONSIDERATION, PLEASE INDICATE THE POSITION FOR WHICH YOU ARE APPLYING ON YOUR REPLY ENVELOPE.

DO YOU LACK PROFESSIONALS?

Like all industries the computer industry is rapidly growing and with this growth comes change. We know that in order for your business to keep up with the times you must have qualified people in key places. Our statistics show that Computerworld reaches people in every aspect of the computer industry. With over 120,000+ paid readership Computerworld could be reaching the qualified personnel you're looking for. Our circulation ranges from Consultants, Engineers, Managers, Systems Analysts, Controllers to DP/MIS professionals.

Computerworld is doing everything possible to ease the problems related to advertising. We will accept camera ready copy, typeset copy mailed to us, or accept simple ads over the telephone. Our current agate line rate $10.35, per column inch we are $144.90. Our minimum ad size is 1 column x 2" and costs $289.80. For more information call or write:

Perhaps The Greatest Development Challenge A Systems Professional Has Ever Faced...

And You Will Be Right At The Center When You Join Us In The San Francisco Bay Area.

We Are Talking About One Of The Largest Development Projects Ever.

Bank of America has undertaken one of the largest systems development projects ever by a financial institution. Upon completion, Bank of America's International Banking Systems will link over 2500 terminals spanning the globe from Frankfurt to London to New York to San Francisco to Hong Kong. Utilizing IMS DB/DC technologies, the entire project will be centrally managed from San Francisco, so you'll be able to take advantage of our vast technological resources.

We Use Technology Aggressively And Strategically To Build Value, Quality And Service.

You will be involved in the development of a fully-integrated real-time global banking system. This system uses the most advanced technology to achieve worldwide delivery of financial services. You'll work in a new, highly responsive, multi-technology development environment—one designed to provide development capabilities equal to the IBS challenge.

Initially, you'll be working in San Francisco and will later move to Bank of America's new Bay Area Technology Center.

We Are Looking For The Right Experience.

We are particularly interested in talking with you if you have a proven track record in banking/financial systems applications development, and have worked in a large scale IBM MVS, IMS, COBOL environment with integrated on-line IMS DB/DC based systems. Demonstrated hands-on experience with systems design, programming and testing in a mainframe environment is required. All positions require superior analytical, written and oral communications skills.

We *Have* Exceptional Opportunities *Available* Now.

We have openings in Systems Management, as well as a wide range of technical positions. If you have a solid background in MVS, COBOL, IMS DB/DC, IMS ADF, in an integrated on-line environment and have 3 or more years experience in design, programming, testing or project planning, we would like to hear from you.

Our Systems Architecture Group has openings for individuals with experience in IMS and MVS modeling and prototyping. Additional opportunities exist for candidates with knowledge of international banking applications, combined with a strong systems analysis background.

We Respect Diversity, Recognize Contribution, And Reward Achievement.

We're looking for results-oriented innovators to play a major role in the development of our global systems network. We offer an outstanding salary, benefits and relocation package designed to attract and maintain top professional talent.

We Are Prepared To Move Quickly. So Must You.

But we can't respond until we've heard from you. Please forward your resume and salary requirements to: Sr. Staffing Specialist, Global IBS Staffing, Dept. 5302-CW624, Bank of America NT & SA, P.O. Box 37000, San Francisco, CA 94137. An equal opportunity employer. *Only direct applicant inquiries will be considered.*

Share Our Strategy. Strengthen Our Team.

MOVE AHEAD WITH COMPUTERWORLD

More computer people read Computerworld than any other newspaper in the United States— more than half a million computer people every week. And, among our readers at user organizations, about half claim to look at recruitment ads at least every other week (only a small percentage say they never look at recruitment ads). No wonder Computerworld carries more recruitment ads for computer people than any other publication.

Get your money's worth. Computerworld will lower your cost-per-hire.

When you're looking to fill MIS/DP positions, there's really only one place you need to advertise. Computerworld.

In every major market, Computerworld reaches more data-processing professionals than the local recruitment media. And we reach them for less.

Over 600,000 computer-involved professionals receive Computerworld every week. That's more than any other computer trade journal, business publication, or general-interest magazine.

Computerworld delivers quality readership, too. Fully 41% of our subscribers read Computerworld's recruitment section every week. And 95% of our subscribers read this section regularly.

That's why over 4,000 organizations ran more than 6,500 recruitment ads in Computerworld in 1984. The openings they advertised for cover the whole gamut of MIS/DP positions -- including systems analysts, computer science & software engineers, directors of MIS/DP, programmers, sales managers, and systems managers.

As a matter of fact, recruitment advertising has made Computerworld the national leader in classified advertising among specialized business publications (according to *Business Marketing* magazine).

Compare costs and the people reached. You'll find that Computerworld is the number one medium for computer-related recruitment advertising.

Find out how we can lower your cost-per-hire. Get your copy of our "1985 Quick Reference Rate Card." Call toll-free (800) 343-6474. In Massachusetts call (617) 879-0700. Call now. We'll help you find the people you need.

It's as simple as picking up the phone

CALL 1 800 338 5050
In Georgia call
1 800 422 1799

Not too many things in life are simple any more.

That's why we decided to simplify the way in which you can respond to this ad. We understand that you're a senior computer sales professional, and consequently among the busier people around.

So we invite you to call us–24 hours a day–7 days a week. It's that simple.

Consider joining the company that wrote a good piece of the computer's history–and knows where the computer is going next. Our ability to meet the customer's needs for total systems solutions has helped us write one of the biggest success stories in the computer industry. In just a little less than three decades, we have become a $5.6 billion company and have recently moved up from #84 to #65 on the Fortune 500!

We need a few key members to join the Southern Region Sales team–to help bring our innovative solutions to the marketplace.

We're looking for senior sales people with at least 3-5 years of successful computer systems sales experience and a degree in Math, Computer Science, Business Administration, Engineering or equivalent professional work experience. We seek individuals with a proven track record selling computer solutions, who can provide accurate business analyses and act as management consultants.

Opportunities exist in the following areas:

- Technical Sales
- Commercial Sales
- OEM Sales
- Manufacturing and Engineering Sales

Digital offers sales professionals a career, not just a job. In addition to a competitive salary and generous benefits you will find ample opportunity for personal and professional growth. So call 1 800 338 5050, in Georgia call 1 800 422 1799, 24 hours a day–7 days a week, or if you are unable to get to a phone please drop a line to Denise Washington or Z. Cleaven Royster, Regional Recruitment Consultants, Dept. 0624 3804, Digital Equipment Corporation, 5775 Peachtree Dunwoody Road, Suite 300E, Atlanta, Georgia 30342.

We are an affirmative action employer.

AN EQUAL OPPORTUNITY EMPLOYER

MONTANA

Why should a Systems Programmer join Central and South West?

Because CSW provides an environment where your success is guaranteed, if...

- You enjoy working toward not-so-common objectives in a team environment but also enjoy planning and doing your own work.
- You seek the opportunity to apply your knowledge.
- You are motivated by your own professional 'pressure' to do a job well.

Currently, opportunities are available for persons to apply **CICS** experience and for persons to apply **MVS/XA** knowledge and/or experience as we move toward XA.

- **Senior Systems Software Analyst—MVS**
  Will plan and implement MVS/XA conversion. Will also provide technical support for MVS/SP including installation, maintenance and problem determination. Could support VM and VSE.
- **System Software Analyst—MVS**
  Will assist in installation, maintenance and problem determination of MVS/SP. Will assist in conversion activity for MVS/XA.
- **Senior System Software Analyst—CICS**
  Will provide primary support for planning and implementing CICS and evaluating system performance. Will direct and monitor the work of others.

Our environment includes Amdahl 470 V8's and 580 with MVS, VM, VSE, JES2, TSO/ISPF, ACF2, MSI, CICS, SMP, DFF and ROSCOE.

For immediate consideration, please send your resume and salary requirements to the Employee Relations Department. Principals only.

INTERNATIONAL SYSTEMS ANALYST

Install and implement brand accounting systems (IBM 4300 series - systems 34/38) at Latin/American and European sites. Study analysis of systems to insure cost effectiveness, efficiency and compatibility with world wide operations. Provide software and hardware support to users. Master's degree in Computer Science required plus 1 year experience. Fluency in English and Spanish required. $27,500 per year. 40 hours per week. Dot Code 012.167-066. Resumes to: New York State Job Service, JO #NY5005334, 9745 Queens Blvd. Rego Park, NY 11374.

Don't trust us to keep your classified information secret

Every week, we deliver more of your target audience than anyone else. Over 600,000 computer-involved professionals. Including MIS/DP directors, systems analysts, programmers, and engineers – as well as corporate presidents, treasurers, and general managers.

And we deliver these readers for less. Compare costs and the people reached. You'll see that Computerworld is the number one medium for reaching MIS/DP professionals.

Our readers rely on Computerworld's classified section. In fact, 41% of our subscribers read the recruitment section every week. And 95% of our subscribers read this section regularly.

Readership like this means responses. Just ask some of the 4,000 organizations that ran more than 8,500 recruitment ads in Computerworld in 1984.

We make your ads work harder. Because we divide the classified section into logical categories: Position Announcements; Buy, Sell, Swap; Software For Sale; Time & Services; and The Bulletin Board. (Available on request: Software Wanted; Business Opportunities; and Real Estate).

So the people you want to reach will spend less time looking for your ad, and more time reading it.

We'll even typeset your ad at no extra charge. All you need to do is attach clean typewritten copy to your order. (Figure about 25 words per column inch, not including headlines). Or give us your order over the phone. We'll do the rest.

And since we're published weekly, we can offer you a fast turn-around from when you place your order to when your ad appears. As little as 10 days.

The next time you want results, advertise in Computerworld classified pages. Call toll-free at (800) 343-6474. In Massachusetts, call (617) 879-0700. Call now.

The Mind to Imagine THE SKILL TO DO

Motorola's Government Electronics Group is a leader in the research, development and manufacture of electronic hardware for our country's defense, national security and space programs. We have an immediate need for individuals with the imagination and skill for the following positions:

Project Manager

We are seeking a seasoned, professional Project Manager with formal project management and project estimating experience in a large IBM/Amdahl (308X/5870) environment. This individual will be a major contributor in our ambitious new development efforts that have recently been initiated. Major responsibilities will include reviewing projects to ensure successful and timely completion schedules. Additionally, you will work closely with MIS and User personnel to formally educate them on systems project management tools, and their specific roles and responsibilities. Requires ten years MIS experience plus solid project management experience and training. A degree in Computer Science or a related area is preferred.

Business Analysts

Excellent user communications skills and experience with Manufacturing or Financial applications are essential to this position whose primary responsibility is to identify business problems and provide workable solutions. Strong financial skills with understanding of Data Processing are required. Prefer a degree with three years experience.

Both positions require strong communication skills and the ability to work in a team environment.

Join the professionals of Motorola's Government Electronics Group. The benefits are many. Qualified applicants are invited to forward resume with salary history or call Tony Benavidez collect at (602) 949-3759.

MORRISON KNUDSEN

We've sold AT&T, DuPont, and over 400 other top corporations on Britton Lee.

Just one reason you'll be sold on a future with us.

A solid Fortune 500 customer base isn't the only reason you should work for Britton Lee. Consider our five year technological headstart in the new, multibillion dollar market for relational database systems. Our 70% annual growth rate. Our high-visibility, small-team structure. And we're publicly held. Plus a compensation package in the top 5% of our industry.

If you've got the energy and marketing skills we want, we'll sell you on a future with Britton Lee. Find out more:

Account Managers
New York, New England, Philadelphia, Midwest

Handling our IDM Series of database systems, you'll identify, develop, and service major accounts. Your proven track record selling systems in the mainframe arena, sound background in computer hardware/software and knowledge of DBMS are the keys to this position.

A Bachelor's degree and a minimum of 7 years' successful experience managing hardware/software systems sales to Fortune 500 companies is desired. Self-motivation and great people skills are essential.

Systems Sales Support

As a technical member in one of our various East Coast sales offices, you'll provide pre- and post-sales technical support by analyzing potential customer problems and presenting valid written and oral solutions. In addition to demonstrations, you'll handle systems implementation, future enhancements, application design and troubleshooting.

We desire a BS and 7+ years' experience with system and data management software, large minicomputer/mainframe OS and VAX/VMS or UNIX® internals. Familiarity with sales and marketing for hardware and software is vital. Relational DB experience is a definite plus.

Telecommunications Industry Account Managers & Sales Support
Princeton, NJ and Midwest

Account Managers and Sales Support personnel must have the credentials required of above Systems Sales Support plus:

Account Managers should have experience with UNIX and AT&T 3B computers.

Salespersons should have sales experience with AT&T or Bell Operating Companies.

To apply, call Brian Keane at (201) 863-5900, or send your resumé to his attention at Britton Lee, Inc., 255 Rte. 3, Secaucus, NJ 07094. Principals only, please.

UNIX is a trademark of AT&T Bell Laboratories.

SAIC

Systems Analyst

A challenging opportunity exists with Science Applications International Corporation (SAIC) for a senior systems analyst in a multi-project computing environment. Specific responsibilities include management of several analysts and programmers; planning and control of systems development and implementation; IMS design on VAX systems for scientific/financial applications; and the preparation of system reports for clients, and project reports for management.

The successful candidate must demonstrate a professional background with 2-3 years experience as a Systems Analyst responsible for systems definition, design, production, testing, and installation in a VAX/VMS and/or HP3000/MPE computing environment, and 2-3 years experience in high-level language programming (FORTRAN, COBOL) covering program coding, testing, maintenance, and documentation. Candidates must also possess a B. S. in Computer Science, Engineering, Applied Science or Business. Knowledge of LISP and "C" languages, HP3000 IMAGE DBMS, and SAS are desired. The ideal candidate will also possess facilities in group presentations and oral/written communications.

SAIC is a high-technology, international consulting firm currently providing technical assistance to the Department of Energy at the Pittsburgh Energy Technology Center. We offer a salary commensurate with experience and education and an excellent benefits package. If you are interested in joining our rapidly expanding corporation as part of a professional team, send resume with salary requirements in confidence to:

COMPUTER SERVICES—MANAGEMENT, SYSTEMS SUPPORT

YOU'LL LIKE HOW WE OPERATE

There's a lot of information out there. And, as you know, there are a lot of companies doing data processing work.

GTE Data Services, Information processing, is not like all the rest. We operate differently.

How? We give you a choice. Whether you're interested in a technical career or a management position, we have a spot open for you. And if you have the drive, we're committed to helping you advance your career.

We're also committed to doing a quality job. So we're looking only for people who feel the same way. People who will be dedicated. People who can work hard, think on their feet, and respond quickly. Professionals with new ideas.

A technical position or a supervisory position. We give you the choice.

DATA BASE SUPPORT SUPERVISOR responsible for a Software Support unit within an IBM environment. We are seeking candidates with a minimum of 5 years experience within a systems support environment with experience in one or more of the following areas:

- ►IMS/DB/DC
- ►CICS
- ►JES II
- ►TSO/JCL
- ►IBM Data Dictionary

OPERATIONS MANAGEMENT SUPERVISOR responsible for scheduling and controlling hardware and managing personnel resources to meet production schedules. The selected candidate must have a minimum of 6 years experience within an IBM Mainframe environment gaining experience in:

- ►Production Scheduling
- ►Computer Operations
- ►Troubleshooting
- ►On-Line Systems
- ►JCL
- ►Network Management

CAPACITY PLANNER—we are looking for a Systems Programmer who is customer-oriented, a good communicator and whose background includes several of the following:

- ►Capacity Planning
- ►Operating Systems
- ►Report Generator Languages

Responsibilities will also include working with users and vendors to prepare a Hardware Study for a large multi-computer complex.

SYSTEMS PROGRAMMERS/SR SYSTEMS PROGRAMMERS who function as customer support for the IMS user community. The selected candidates will coordinate user requests, projects and activities pertaining to IMS Systems Software, as well as performing IMS systems generation, problem determination, and applying software maintenance using SMP-E. These positions require a minimum of 2-3 years in-depth knowledge of IMS in a technical support or applications environment with experience using:

- ►MVS, JCL and utilities
- ►Assembler language programming
- ►ISPF/TSO
- ►VTAM

GTE Data Services is a subsidiary of GTE Corporation. We're a growing company with which you can grow.

We think you'll like how we operate.

Please submit your resume with salary history to: L. Gardner, Dept. CW-6/24, GTE Data Services, P.O. Box 1548, D.C. 138, Tampa, Florida 33601. An equal opportunity employer.

GTE Data Services

MIT's Project Athena is seeking qualified candidates to fill the following openings:

- **Systems Programmer** — To be part of System Development Group. Will assist in the development of software for large-scale deployment in support of education, including network service infra-structure, graphics interfaces, and real-time systems. Will develop, design, implement, and document new subsystems, as well as modifications to vendor supplied software, such as UNIX and language compilers. Requires Bachelor's degree and three to five years of professional experience in systems programming. Experience with the UNIX operating system and the C language necessary. Experience with the Lisp language helpful. Professional experience should include work with local area networks, user interfaces, operating systems or compilers. Job #A85-540.
- **Manager of System Development** — To be responsible for managing an MIT staff of five programmers and coordinating task assignments among ten industry-sponsored programmers as well as undergraduate student programmers. Will help lead development of an advanced, UNIX-based programming environment in support of educational computing using workstations, local area networks and centralized service computers. Candidate should have experience and confidence in dealing with advanced systems design ideas; good skills in managing systems programmers; ability to coordinate with industry personnel; an interest in educational impact of computing; and an expansive view of his or her responsibilities. Job #A85-518.
- **DOS Technical Writer** — To research and write brief introductory documentation on DOS, its languages, and utility packages; write conversion guides between DOS and UNIX. Oversee distribution of documentation. Minimum of one year's professional technical writing experience. Knowledge of MS-DOS and at least one programming language – C, Fortran, Pascal or Lisp. Experience with UNIX and/or applications area such as graphics preferred. Writing sample required. Job #R85-605.

Send 2 copies of resume specifying job number to: Ms. Sally [illegible], MIT Personnel Office, E19-239, 77 Massachusetts Ave., Cambridge, MA 02139.

MIT is an equal opportunity/affirmative action employer.

CLASSIFIEDS:

Our business is to help you improve yours— via programmers, analysts, engineers, terminals, printers, software packages, computer time, computer services, office space, advertising for seminars & conferences, business opportunities, etc...*AND* ...

...exposure to an audience of over half a million readers nationwide...
—every week.

[illegible]

A lot of leasing companies will though. They'll have no choice, because they won't be able to offer you a wide range of equipment. As a full-service leasing company, we don't just offer equipment in sizes A, B and C. We have A, B, C and all the way to Z. In other words, we've got what you need — small, big or bigger.

Today you need this kind of complete service. The kind of service you'll get from Greyhound Capital Corporation. We've been leasing, servicing, refurbishing, maintaining and providing financing for computers and other equipment for over 20 years. That means we can lease you whatever you need, in whatever size you need. And to us, that's what full service is all about.

So remember, if your leasing company is locking you into equipment that's not your size, call us.

We've got the key.

MODEM SALE

The height of the year in Computers.

And the height of advertising exposure in COMPUTERWORLD Classifieds

THE NATIONAL COMPUTER CONFERENCE

You've got 3 chances to take advantage of it with us— the Preview Issue *(July 8th)*, the Show Issue *(July 15th) and* the Wrap-Up Issue *(July 22nd)*.

The NCC issues will have a readership over and above our usual 600,000+ readers. It's time to make one of your smartest advertising moves this year.

Give us your advertisement. We have the classification to cover it:

Position Announcements	**Bids & Proposals**
Buy - Sell - Swap	**Auctions**
Software for Sale	**Publications**
Software Wanted	**Seminars**
Time & Services	**Business Opportunities**

*** The Bulletin Board**

The open line rate is $10.36 per line and the minimum ad size is 2 column inches (1 column x 2" at a cost of $269.80). Send us camera-ready copy (*except for Bulletin Board) or copy to be typeset by us at no extra charge. Enclose any logos, artwork, or borders that you want to use in your ad. And if you are a first-time advertiser, please send payment along with your ad.

* Space in the Bulletin Board (used only for selling or buying pieces of equipment in a low-cost format) is bought in 1 column inch units ($140.60 each). The ad set-up usually consists of a headline, body copy, and a contact (name and/or number) – no logos or borders.

Send all materials to Classified Advertising, COMPUTERWORLD, 375 Cochituate Road, Box 880, Framingham, MA 01701. For further information please call: 1-800-343-6474, or in Massachusetts (617) 879-0700.

BIDS & PROPOSALS

CHESTER COUNTY, PA
REQUEST FOR PROPOSALS
CONTRACTOR SERVICES TO IMPLEMENT LONG-RANGE DATA-PROCESSING MASTER PLAN

Chester County is a [illegible] county in the Philadelphia SMSA with a population of [illegible]. The County government has more than 1,[illegible] employees and an annual budget of [illegible] million.

The Chester County Commissioners are seeking proposals from service organizations (1) to implement a comprehensive plan to acquire or develop computer programs in support of major county functions over the next [illegible] years; (2) to assist in installing and managing [illegible] programs; (3) to provide on-site services and assist in transferring [illegible] day-to-day operations of the current computer facility to County staff; and (4) to provide related planning and assistance.

Respondents must be able to offer an appropriate team of employees [illegible] in or near Chester County and must demonstrate substantial relevant experience performing similar services.

The bid package will be available o/a July [illegible], 1985. A pre-bid conference and facility walk-through will be held on July 23, 1985 at 2 p.m. at the Chester County Courthouse, Fifth Floor, High and Market Streets, West Chester, PA 19380. Proposals are due August [illegible], 1985, and the contract is scheduled for award by August 27, 1985.

A bidders list is now being prepared. Please address bid-package requests and questions regarding this procurement to Ted Jacobs, Purchasing Coordinator, Office of Commissioners, County of Chester, at the above address, or call him or Mark Rogers at (215) 431-6100.

CHESTER COUNTY, PA
REQUEST FOR PROPOSALS
SUPPLY/INSTALL COMPREHENSIVE ADMINISTRATIVE SOFTWARE PACKAGE

The Chester County Commissioners are seeking proposals from organizations offering an integrated set of computer programs to support fund accounting, purchasing, budgeting, payroll, and personnel functions. In a separate procurement, the County will replace its two Burroughs B-1955 computers with larger mainframes from Burroughs or another vendor. The new mainframes will be purchased explicitly to support the new integrated software system. Vendors must be prepared to demonstrate the above functions at existing installations.

The bid package will be available o/a July 29, 1985. A pre-bid conference will be held on August 1, 1985 at 10 a.m. at the Chester County Courthouse, Fifth Floor, High and Market Streets, West Chester, PA 19380. Proposals are due August 20, 1985, and the contract is scheduled for award by September 17, 1985.

A bidders list is now being prepared. Please address bid-package requests and questions regarding this procurement to Ted Jacobs, Purchasing Coordinator, Office of Commissioners, County of Chester, at the above address, or call him or Mark Rogers at (215) 431-6100.

CLASSIFIED ADVERTISING ORDER FORM

Computerworld's
Classifieds work.

Issue Date: Ad closing is every Friday, 10 days prior to issue date.

Sections: Please be sure to specify the section you want: Time and Services, Software for Sale, Position Announcements and Buy/Sell/Swap. (Available upon request: Software Wanted, Real Estate, and others).

Copy: We'll typeset your ad at no extra charge. Please attach CLEAN typewritten copy. Figure about 25 words to a column inch, not including headlines. Any special artwork should be enclosed with your ad also. Logos must be submitted on white bond paper for best reproduction.

Cost: Our rates are $144.90 per column inch. (Each column is 1 13/16") Minimum size is two column inches (1 13/16" wide by 2" deep) and costs $289.80 per insertion. Extra space is available in half-inch increments and costs $72.45. Box numbers are $15.00 extra per insertion.

Billing: If you're a first-time advertiser, (or if you have not established an account with us.) WE MUST HAVE YOUR PAYMENT IN ADVANCE, or a Purchase Order Number. Any extensions on this policy must be made through our Credit Department.

OUR NEWEST SOFTWARE TOOK $20 MILLION TO DEVELOP, 5 YEARS TO WRITE AND WE'RE GIVING IT AWAY.

No, we're not crazy. And no, we're not joking.

We're Management Science America, Inc. The largest independent applications software company in the world. And by Jan. 27, 1986, we plan to give $20 million worth of our newest software to over 2,000 of our customers. Instantly making it the industry standard for fourth generation technology.

If you're particular about what you get for free, here are the particulars.

We call this technology Information Expert.™ Because it allows all your software systems to carry on intelligent conversations. With one another. In English. And thanks to our data dictionary, nothing will ever sound like Greek.

For end users, our system makes it easy to design reports. Our menus guide you through the process with such ease and intelligence, they'll even tell you the proper responses to use for whatever job you need.

Information Expert also provides a fourth generation language that your data processing staff can use for applications development. So you can do in minutes what used to take hours. Or do in hours what used to take days.

It even allows borderless retrieval of information. That way, you can get al the information you need. Not all the information you don't need.

Why are we giving all this away? It's part of our customer support polic And if that doesn't sound familiar to you, you should obviously become familiar with us. MSA.

AT&T reaches out

Tools permit limited file exchange between 3B line and IBM mainframes

By Paul Korzeniowski
CW Staff

LINCROFT, N.J. — AT&T last week announced its first set of tools that enables an AT&T 3B computer to communicate with an IBM mainframe.

Included in a deluge of AT&T product announcements were two models of the 3B, four communications products for the 3B line and a version of AT&T's Unix System V Release 2 that runs under IBM's VM operating system (see story page 6).

The communications products include two controller emulation packages, a file transfer program and a communications processor. The products provide IBM 3274 controller and 3278 terminal emulation and supply file transfer capabilities between a 3B system and an IBM mainframe.

The communications products were considered essential to AT&T's strategy for selling its computers to large companies (see story page 6). The announcements establish the 3B2 line as a competitor to Digital Equipment Corp.'s Microvax II supermicro

IBM gives up SBS for 16% of MCI

By Bryan Wilkins
CW Washington Bureau

WASHINGTON, D.C. — IBM last week initiated a major push into telecommunications by selling its 60% ownership interest in Satellite Business Systems to MCI Communications Corp. in return for an immediate 16% stake in MCI, the second largest long-distance carrier. The agreement permits IBM to acquire up to 30% of MCI during the next three years, and IBM indicated it will invest up to $400 million in MCI's network expansion plans.

William McGowan, MCI's president and chief executive officer, said the two companies will align their businesses to target large business users. These users, he said, want to integrate their data communications, data processing and voice links.

IBM and MCI claimed MCI's acquisition of SBS would yield the largest digital communications network in the world, comprising MCI's optical fiber and digital microwave systems and SBS' digital satellite capacity.

"The combination of MCI and IBM is ideal," McGowan said, ad-

Amdahl supercomputers bow

By Jeffry Beeler
CW West Coast Bureau

SUNNYVALE, Calif. — Amdahl Corp. last week extended its supercomputer line both upward and downward by announcing two additional vector processors, one with performance exceeding one billion floating-point operations per second.

With the introduction of Models 1400 and 500, Amdahl's family of IBM-compatible number crunchers, built by Japan-based Fujitsu Ltd., now consists of four machines. The other two are the Models 1100 and 1200, announced last September.

Rated at 133 Mflops, the entry-level 500 reportedly provides exactly half the internal throughput of Amdahl's 1100 and roughly 40% the performance of Cray Research, Inc.'s X/MP-1.

The top-of-the-line 1400, meanwhile, reportedly executes 1.14 Gflops, compared with 533 Mflops for the 9-month-old 1200, and outperforms the X/MP-1 by approximately 400%.

Each of the four Amdahl machines runs the same software and can be upgraded in the field to its next larger sister system, according to the company.

Although the four machines have nearly identical machine cycle times of 7 or 7.5 nsec, the 1400 produces eight vector results per cycle, compared with four, two and one for the 1200, 1100 and 500, respectively, a source said.

Like the middle systems they bracket,

INDUSTRY SPOTLIGHT

European firms take varied aim at U.S. market

By Peter Bartolik
CW Staff

Japanese manufacturers approach the U.S. market for computer equipment from a position of strength: They control or can at least defend their own domestic markets.

The same cannot be said of the leading European vendors, which come to the lucrative U.S. market from a continent where IBM has carved out a dominant position and where other U.S. manufacturers have claimed substantial market shares.

The barriers erected by the Postal Telephone and Telegraph authorities have served to protect somewhat the telecommunications markets for indigenous vendors in each country. However, commercial computer customers have welcomed the leading U.S. manufacturers to Europe with open arms, according to statistics from IDC Europa, Ltd., the London-based office of International Data Corp.

According to a report published last year by IDC Europa, 59% of all large-scale systems installed in Western Europe at the end of 1983 were manufactured by IBM. No European vendor claimed more than 5% of medium-scale system installations, while IBM, Digital Equipment Corp., Hewlett-Packard Co. and Wang Laboratories, Inc. manufactured 49% of the total base.

The market for small-scale systems — those accommodating one to 16 users and ranging from the IBM Personal Computers to the DEC VAX-11/730 — was more diverse: DEC had the leading share of installed systems, at 11%, while European vendors' shares of the installed systems ranged from 4% to 6%.

Even the small-scale systems market seemed to be adopting an IBM trend. Ing. C. Olivetti & Co. shipped the greatest number of units in 1983, but IBM, which shipped 3,600 fewer units than Olivetti, made more money than any other vendor.

Nonetheless, six major European vendors with revenue ranging from more than $1 billion to more than $16 billion have established subsidiaries in the U.S. in the hope of capturing shares of the largest market in the world.

Federal DP crooks profiled

Stress, financial problems tagged as primary catalysts

By Mitch Betts
CW Washington Bureau

> *'I had personal problems because I was $20,000 in debt. But I had also worked my butt off for them, and they passed me over for a promotion. I was good and deserved more . . . I decided to get back at them.'*
>
> **— A federal program manager and perpetrator of a computer crime**

WASHINGTON, D.C. — Perpetrators of computer crimes against the U.S. government typically steal money in response to stress or a crisis, such as a financial problem or disgruntlement on the job, according to a government study based on confidential interviews with 46 computer criminals.

Three quarters of the computer criminals interviewed by the U.S. Department of Health and Human Services' (HHS) inspector general fit that profile. The others were tempted by accidental discovery of a vulnerability in the system or influenced by boredom or free time, the study said.

"Connie," for example, was a terminal operator for a state program who enjoyed exploring the computer system. She discovered there were no security screens for making emergency payments under $1,000. "When it started I was playing on the terminal on a break. I typed in my friend's name and then I hit return; it was processed. I could have canceled it, but I didn't," she reported.

No significant crime barrier

Not surprisingly, most perpetrators said computer security and internal controls in their offices were weak and did not pose significant barriers to their crimes. "They described identification numbers and passwords as simplistic, edits and screens as known and therefore avoidable and supervision as lax or naive regarding automated systems," the study said.

According to a state claims examiner, "Everyone had an ID number, and there was a password to bring the system up. But the codes and ID numbers were [posted] on the wall, so everyone and anyone could see them. No one cared."

HHS Inspector General Richard P. Kusserow reported that the average loss per computer crime was $45,000, and about one-fifth of the cases exceeded $100,000 in losses.

A key finding of the study was that the perpetrators were insiders — federal employees or employees of state or private agencies administering federal programs — and not outside hackers. In general, they were considered good employees, it said.

Kusserow reported that one-fifth of the perpetrators had a prior criminal record. He recommended that government managers reevaluate personnel security policies for persons in positions of trust, including all jobs with access to payroll and payment data.

In a related development, Kusserow reportedly has begun a computer matching program to identify HHS employees who have jobs dealing with sensitive data and have criminal records.

Typically, the perpetrators committed the crime by manipulating input data to trigger the issuance of government checks, and most were aided by co-conspirators who provided a false ID and/or received the checks, the report said.

Recommended actions

To combat the problems highlighted in the interviews, Kusserow's report recommended the following actions:

- Routinely interview perpetrators of computer crimes to better understand their motivations, how their crimes were committed and the effectiveness of security.
- Strengthen computer security by enforcing "personal accountability" for actions taken on automated payment systems; limit user access to only those programs, records or transactions required by the user's job; and periodically review the adequacy of all computer security controls.
- Security specialists should educate program managers about the importance of computer security, and the existence of security controls should be advertised to employees to indicate that "someone is indeed watching."
- Because federal agencies rely on state and private agency computers for many payment programs, vulnerabilities at those installations should be "addressed with the same vigor as those in federal systems."

THE GENIUS OF ADR® IS THAT THEY TAKE THE CONCEPTS OF THE FUTURE AND MAKE THEM COMMERCIALLY PRACTICAL TODAY.

"There's a gentleman here from ADR. He says he's 10 years early."

From the way software companies talk, you'd think every one of them is on the leading edge of software technology. But being a leader takes more than talk, it takes solutions.

When everyone knew putting a programmer on-line would increase productivity, but said terminals and CPU time were too expensive, ADR created the first on-line programming system, ADR/ROSCOE,® and showed that the increase in productivity more than paid for the resources it used.

When everyone knew the computer could manage programs better than people, but complained the cost of storing all those programs was too high, ADR developed the first economically practical system, ADR/THE LIBRARIAN.®

When everyone knew a relational data base management system would close the gap between data processing and end-users, but claimed it would be too slow for high volume work, ADR created ADR/DATACOM/DB,® and proved that a relational data base could deliver the performance production demands.

When everyone knew 4th generation languages would increase productivity, but was concerned they were not suitable for complex applications, ADR developed the first 4th generation application development system, ADR/IDEAL,® the only true functional replacement for COBOL.

And when everyone knew relational software systems would help solve the problems of tomorrow, but found data base conversion too great an obstacle, ADR invented migration software systems like the ADR/VSAM TRANSPARENCY™ and the new ADR/DL1 TRANSPARENCY™ and automated the conversion process.

So, while other companies talk about being on the leading edge, ADR is the leading edge, consistently delivering tomorrow's solutions today.

For more information about innovative software solutions, mail us the coupon. Or call 1-800-ADR-WARE and find out where ADR is leading the software industry.

ADR® WE KEEP WRITING THE HISTORY OF SOFTWARE.

El Salvador murders prompt review of business travel

By Clinton Wilder
CW Staff

Some major computer vendors are rethinking aspects of overseas business travel after last month's murder of two Wang Laboratories, Inc. American employees in El Salvador, but most agreed little can be done to guarantee safety from terrorist and guerrilla attacks.

A Wang spokesman said the Lowell, Mass.-based office automation vendor will consider ways to schedule future meetings on U.S. rather than foreign soil since some of its distribution companies are located in politically volatile countries.

"In light of these incidences, we're looking at alternatives that would not expose Wang employees to danger," spokesman Peter Connell said. "We certainly want to service our customers around the world, but we will look at safer ways to do it."

Wang's director of distributor sales in Central America, George Viney of Coral Gables, Fla., and international marketing consulant Robert Alvidrez of Lexington, Mass., were among 13 people killed on the evening of June 19 when several gunmen opened fire on a sidewalk cafe in San Salvador. Also killed were three Salvadoran employees of Interdata, the local firm contracted to distribute Wang products in El Salvador.

Viney and Alvidrez had made the trip to train Interdata representatives in the sale and marketing of Wang's new Pace data base software in El Salvador. Connell said both had traveled extensively on Wang business in Central and South America in the past. "These men were frequent travelers, and they knew the situation [in El Salvador]," he said.

Few other companies said they planned to scale back, relocate or reschedule business travel in politically unstable countries. But some firms planned smaller changes, such as Data General Corp.'s revision of employee travel guidelines to include safety-related "dos and don'ts" in politically volatile nations.

"It's one way of providing some guidance to our employees," said Harvey Burstein, director of corporate security for Westboro, Mass.-based DG. "But we don't want overreaction, either. We certainly want to protect our employees and assets, but without an awful lot of justification. We don't want to turn our overseas sales offices into Fort Knox. We don't want to alarm employees and scare business off."

'The best you can do is pray'

Burstein conceded that there was little a company could have done to anticipate the San Salvador shootings, which U.S. officials said they believe were the work of leftist guerrillas and had no relation to Wang's activities in the country. "Sometimes, when dealing with terrorists, the best you can do is pray," he said.

DG sales and marketing representatives meet often in foreign countries with DG distributors such as Team Computer and Systems Ltd. in Israel and Bedouin Trading Est. in Kuwait, spokesman Ken Donoghue said. "Overseas distributors are extensions of our sales force, so it's important that they're kept up-to-date on what's happening in the company," he said. "If our employees felt they were in any danger, they would be called back."

IBM's policy of staffing its international sales offices with native employees means few American IBM employees would be in the situation of Wang's Alvidrez and Viney, an IBM spokeswoman said. Employees of IBM distributors are normally trained by members of the nearest IBM sales office in the region, she said.

Corporate monitoring of political climates around the globe is an ongoing process, according to Bob Marshall, director of corporate security for Morristown, N.J.-based AT&T International, Inc. Marshall declined to discuss specific AT&T travel policies but said the San Salvador shootings "have brought security from the back to the front burner in people's minds. Every company has to make its own analysis of each situation, weighing the importance of the business vs. safety considerations."

Richard Cole, author of the book *Executive Security* and security director for a Fortune 50 manufacturer, said companies should be aware of how their presence in a given country is perceived as well as be aware of the level of political unrest there.

"Security requires a more holistic approach than just knowing what nations are terrorist-prone," he said. "Know who you are, what it is you're selling, your marketplace and what is and is not acceptable there."

Cole said changes in the way companies handle business in such countries may come from the bottom up, with employees wary of travel in specific areas requesting not to be sent there.

Belden Menkus, a Middleville, N.J., management consultant specializing in security, predicted that increased terrorist violence will drive U.S. companies out of some nations in the future.

"There comes a point when some of this [business] just isn't worth doing any more," he said. "I know one company that is about to walk away from a major investment in Guatemala. What happened to the Wang employees suggests it might be wise for people to rethink the way they're doing business in the Middle East, Northern Ireland and Central and South America."

VECTOR

from page 1

the 500 and 1400 have access to 83 vector processing instructions. Otherwise, however, the two additions to Amdahl's supercomputer family use the same IBM 370-class instruction set and architecture as IBM or IBM-compatible scalar mainframes such as the 3080 and Amdahl's 580 series, according to the source.

The resulting compatibility with Big Blue's large-scale, general-purpose systems reportedly enables the four vector processors to be attached directly to 370-style disk systems, terminals and other peripherals.

Applications development aid

IBM compatibility also aids the Amdahl supercomputers in the area of applications development, the company said.

With the 500 and 1400, as with the rest of Amdahl's vector processing line, programs are typically written in Fortran on an IBM or IBM-compatible scalar system running under MVS or MVS/XA, the company said.

After the raw source code is created, it is run through a scalar compiler, where it is converted from IBM Fortran to its Amdahl counterpart. The compiler constitutes one of seven applications development utilities that complement the 500 and 1400's Vector Processing System (VPS) control program.

Other VPS utilities reportedly enable the compiled Fortran code to be translated from scalar statements or subroutines to vector instructions and then to be debugged and fine-tuned.

Available since September

Each of the seven application development aids has been available since last September, when Amdahl entered the supercomputing field with the introduction of the 1100 and 1200.

As with the coding itself, all compilation, debugging and fine-tuning of the Fortran code is said to take place on an IBM or IBM-compatible scalar mainframe, which is loosely coupled to one of the four Amdahl vector processors.

The finished programs can then be transferred from the scalar front end to the supercomputer, where they can be run without changes, according to the company.

Like the existing 1100 and 1200, the 500 and 1400 are entirely air cooled and incorporate 400 and 1,300 gate/chip emitter-coupled logic circuits with 350 psec switching times, the source added.

Pricing

The 500, which holds 32M bytes to 128M bytes of main memory, ranges in price from $4.9 million to $9.7 million and reportedly will be available for shipment during the fourth quarter.

The 1400, by contrast, expands from a minimum of 64M bytes of central storage to a maximum of 256M bytes and costs $12.5 million to $21.8 million. Deliveries of the 1400 will begin in about a year, the company said.

Amdahl is headquartered at 1250 E. Arques Ave., Sunnyvale, Calif. 94086.

WHODUNIT

Sortland Yard warns against "Raffles-type sort programs."

Call (201) 568-9700.

Ask for Inspector SyncSort!

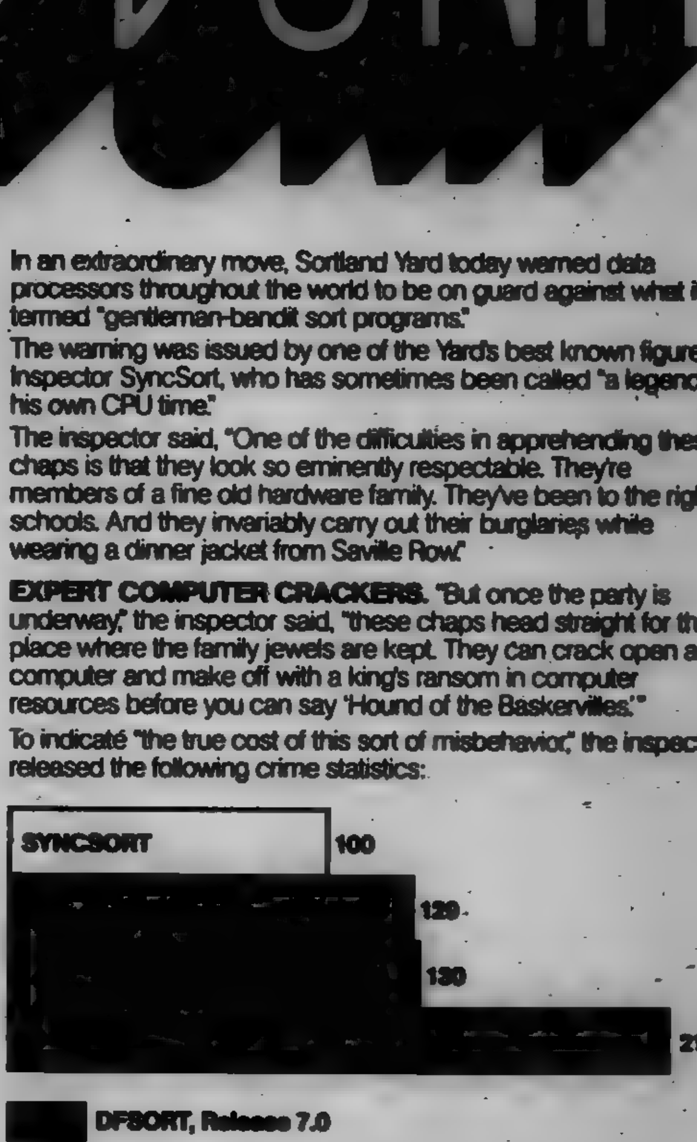
In an extraordinary move, Sortland Yard today warned data processors throughout the world to be on guard against what it termed "gentleman-bandit sort programs."

The warning was issued by one of the Yard's best known figures, Inspector SyncSort, who has sometimes been called "a legend in his own CPU time."

The inspector said, "One of the difficulties in apprehending these chaps is that they look so eminently respectable. They're members of a fine old hardware family. They've been to the right schools. And they invariably carry out their burglaries while wearing a dinner jacket from Saville Row."

EXPERT COMPUTER CRACKERS. "But once the party is underway," the inspector said, "these chaps head straight for the place where the family jewels are kept. They can crack open a computer and make off with a king's ransom in computer resources before you can say 'Hound of the Baskervilles.'"

To indicate "the true cost of this sort of misbehavior," the inspector released the following crime statistics:



SOMETIMES TAKE HOSTAGES. The inspector noted that these black-sheep programs often "take a dreadful toll" of programmers. "They are often tied up for days on end and forced to perform unnecessary coding, compiling and debugging. And they are heartlessly deprived of the labor-saving features that are taken for granted in most parts of the civilized sorting world."

Among these the inspector listed:

- **SORTWRITER**
- **MULTIPLE OUTPUT**
- **RECORD EDITING**
- **FAST FILE COPY**
- **MAXSORT**

TELEPHONE BEST DEFENSE. The inspector urged data processors to call the Yard immediately if they suspect their center is infested by a Raffles-type sort program. "The number is (201) 568-9700. We'll send over one of our highly trained sort detectives to track the culprit down."

Questioned as to what would be done with sort programs caught burglarizing computer centers, the inspector replied, "They will be given a just and speedy trial. If found guilty, they will immediately be transported to Iran!"

AT&T boosts computer line with supermicro, supermini

By Tom Henkel
CW Staff

LINCROFT, N.J. — AT&T beefed up its mid-range, Unix-based processor line last week with the 3B2/400 high-end supermicrocomputer and the 3B15 low-end superminicomputer.

The 3B2/400 32-bit system is based on Western Electric Co.'s 32100 microprocessor. It is available in four basic models featuring 1M to 4M bytes of main memory and can be configured with a math accelerator coprocessor — a Western Electric 32106 CPU — for floating-point applications. AT&T said the unit has a performance of roughly 1.1 million instruction/sec.

The 3B2/400 supports one or two integrated 30M- or 72M-byte hard disk drives, and by using expansion disk controllers and expansion modules, users can configure a system with up to 720M bytes of disk storage, AT&T said.

An integrated 23M-byte streaming tape drive is included with the 3B2/400 for data backup, and the unit is equipped with up to 46 RS-232C ports and 11 parallel ports, according to AT&T.

Available in October, the 3B2/400 was designed to use the firm's Unix System V Release 2.0 operating system, which is included with the purchase price. AT&T said the system was designed to support from 10 to 25 simultaneous users. However, up to 46 terminals can be physically connected to the system.

A basic 1M-byte configuration costs $19,950 and a 4M-byte configuration is $34,950. Similarly configured systems geared for scientific applications cost $21,550 for a 1M-byte configuration and $36,550 for a 4M-byte configuration. The optional Math Accelerator Unit costs $2,200 and will be available in November. A demand paging feature for the Unix operating system costs $360 and will be available in December, AT&T said.

The 3B15 32-bit superminicomputer can support up to 60 simultaneous users and is based on the Western Electric 32100 microprocessor and the 32106 Math Accelerator Unit.

The 3B15 can accommodate up to 16M bytes of main memory, and up to eight disk drives can be attached to it. Four tape drives can also be used with the 3B15.

AT&T offers two types of tape drives — a single-density, 1,600 bit/in. drive or dual-density, 1,600 bit/in. or 6.25K bit/in. drives. Both can be controlled by either of two AT&T Intelligent Tape Controller cards, the company said.

AT&T's Unix System V Release 2.1 operating system is supported on the 3B15.

A basic 3B15 Model 101, consisting of five I/O slots, two general-purpose slots and four memory slots, costs $54,500. Two larger models, the 201 and 301, with 15 I/O slots, four general-purpose slots and eight memory card slots each cost $64,500. The two models differ in the types of disk drives that can be attached. All three models will be available in the third quarter of 1986.

More information can be obtained from AT&T, 1 Speidwill Ave., Morristown, N.J. 07960.

AT&T from page 1

and the IBM System/36 as a departmental computer and the 3B5 as a rival to IBM 4300 mainframes in the low-end mainframe market, AT&T said.

The four communications products include the SNA/3270 Emulator+, the BSC/3270 Emulator+, the 3270 Application Program Interface (API) and AT&T Communication Processor.

The SNA/3270 Emulator+ is a software package that runs on the 3B2 or 3B5. It emulates an IBM 3274 cluster controller and supports four to eight 3278 Model 2 terminal or 3287 printer sessions, AT&T said. The device works with IBM's Synchronous Data Link Control (SDLC) protocol.

The BSC/3270 Emulator+ is said to supply the same capabilities as the SNA/3270 Emulator except that it supports IBM's Binary Synchronous Communications (BSC) protocol, not SDLC.

Both emulators require an expansion card and work with an RS-232 connection at speeds up to 19.2K bit/sec. An Intelligent Synchronous Controller card works with a 3B2 and an I/O Adapter/Synchronous Data Link Interface fits in a 3B5 system expansion slot. When a 3B system is emulating a 3274 controller, a user can run other Unix applications.

The 3270 API provides file transfer facilities between a 3B and an IBM mainframe. The software is made up of a library of routines that enable a user to write programs to transfer data between an IBM mainframe and a 3B.

The product can be used in conjunction with the two emulators to select data from applications that support SDLC or BSC protocols.

The Communications Processor provides a gateway between 3BNet, AT&T's Ethernet network, and an IBM host. It reportedly supplies IBM 3274 controller emulation and protocol conversion capability. The device converts asynchronous transmissions into SDLC protocol, AT&T said. The product is available in two models. The Model 1 can attach directly to an IBM mainframe channel and was designed for local use, AT&T said. The Model 2 was designed for remote use and can be used over dial-up telephone lines.

The Communications Processor consists of a disk drive, microprocessor and random-access memory. The product, which will not be available until the first quarter of 1986, was designed to link a number of 3B machines to an IBM mainframe at speeds up to 19.2K bit/sec.

The emulator packages each cost $700 for a 3B2 version or $1,500 for a 3B5 model. The 3270 API for the 3B2 costs $150; the 3B5 version sells for $250. The communications processor costs $27,000.

AT&T is located at One Speldwill Ave., Morristown, N.J. 07960.

AT&T ties to IBM world key to long-term strategy

By Paul Korzeniowski
CW Staff

The jury is still out on whether AT&T can become a major player in the computer market. However, industry analysts have said AT&T's announcements last week (see story page 1) produced evidence that the communications company can compete with IBM.

Dixon Doll, chairman of DMW Group, Inc., an Ann Arbor, Mich., consulting firm, noted, "AT&T is catering to the real world. If it has any chance [of surviving] in the computer market, the communications company has to recognize the importance of IBM and its pervasiveness in the market. To sell equipment, AT&T has to make it very easy for a user to connect an AT&T system with an IBM product." Jim Renalds, an analyst at Dataquest, Inc., a San Jose, Calif., market research firm, added, "The communications links were the most important part of the announcement. I think that AT&T had to speed up the timetable for these introductions because MIS managers had demanded that AT&T products work with IBM equipment."

Some analysts saw the links as only a first step toward true integration with IBM systems. "AT&T has supplied 3270 terminal support for [AT&T Unix] applications," stated Kim Myhre, director of communications industry research at International Data Corp. (IDC), a Framingham, Mass., market research firm. "It's an important step. But to succeed, AT&T must add value to its links. It has to offer something beyond terminal emulation, such as peer-to-peer communication for enhancements like IBM's LU6.2."

Peter Lowber, manager of the information systems group at the Yankee Group, a Boston consulting firm, concurred. "The AT&T announcement is no big deal, since it only supplies the lowest level of connectability," he said. Other firms such as Digital Equipment Corp. and Wang Laboratories, Inc. are a few steps ahead of AT&T, according to Lowber: "These companies are supplying sophisticated links to items such as [IBM's Document Content Architecture]," he added.

Connectability key

Connectability is becoming a key issue for many companies that use a number of different computer systems. "Not even IBM can connect its systems together," noted Eric Arnum, research analyst at International Resource Development, Inc., a market research firm in Norwalk, Conn.

IBM has begun to address this problem with a series of communications products. "IBM is making a concentrated effort to connect its systems, and AT&T has to keep pace," IDC's Myhre said. "It has to add items such as [IBM's Distributed Office Support System] bridge to the 3B line."

DMW Group's Doll said that most vendors offer the same capabilities that AT&T supplies. "AT&T is addressing connectivity issues with its cabling plan and Information Systems Network," he noted. "The company realizes it has to address problems of higher level protocols. AT&T is close to offering the capabilities that other companies supply. One should realize that these companies are also having problems linking their systems to IBM."

While analysts saw the links as necessary, some doubted AT&T's 3B products could entice IBM customers. "The 3B line cannot stand on its own," Dataquest's Renalds said. "It has to be sold as a supplement or a complement to another line."

A principal reason for this is that the 3B line was built on outdated technology, Renalds added. Another problem is the lack of 3B applications software. There are approximately 4,000 packages for the IBM System/36 and only a few hundred for the 3B line, said International Resource Development's Arum.

System V-VM allows IBM users to 'exploit' power of AT&T Unix

LINCROFT, N.J. — AT&T last week took on IBM in the heart of Big Blue's territory with the introduction of an operating system for IBM's 370 architecture mainframes.

AT&T unveiled a version of its Unix System V Release 2 — dubbed System V-VM — that runs as a guest under IBM's VM operating system on IBM mainframes. The AT&T product is similar to IBM's Interactive Executive for the IBM 370 (IX/370) System V version that IBM announced in February among its 3090 processor introductions [CW, Feb. 18].

According to an AT&T spokesman, System V-VM allows IBM mainframe users to "share existing hardware resources and provides a cost-efficient way of exploiting the power of Unix." The AT&T mainframe operating system reportedly features enhanced systems and operations facilities for the mainframe environment.

In addition, the spokesman said, System V-VM provides support for IBM 3270-type terminals, an interface between VM and IBM's MVS and full-duplex communications for the use of Ascii terminals. The product also offers University of California at Berkeley additions, full screen editing and text processing capabilities and AT&T's Documenter's Workbench software.

System V-VM is currently under controlled release and is scheduled for general availability in October. Yearly lease costs will range from $20,000 to $25,000, depending on whether source code is supplied. IBM's IX/370 is also slated for October shipments and its price, based on the number of concurrent users, ranges from $10,000 to $40,000.

Software International moves to link mainframe tools

By John Gallant
CW Staff

ANDOVER, Mass. — Software International Corp. is expected today to announce the first offerings in a series of products that will eventually tie the capabilities of the company's existing line of applications software.

The company, headquartered here, took up the torch of integration from mainframe software brethren Computer Associates International, Inc. and Uccel Corp., both of which fueled the flames with recent announcements of the integration of their lines of systems software products [CW, June 10, June 17].

Today's product introductions are said to be the first phase in the release of Software International's Masterpiece series, which will feature the firm's current applications enhanced and restructured to utilize the common query and systems management components of the new product line.

Masterpiece products

Regis Kaufman, manager of product marketing, said the Masterpiece products include new releases of Software International's general ledger, accounts receivable and payable, fixed assets and manufacturing resource planning packages, a purchase order package, the Masterquery inquiry and ad hoc reporting system and System Manager. All are slated for availability by the end of this year.

The System Manager includes Master Security, On-Line Help and Menu and Screen Navigation modules. System Manager is said to link Masterpiece applications with Masterquery. The modules provide a single logon facility and application-specific Help text capabilities for moving from screen to screen within an application or between applications.

According to Kaufman, the Masterpiece products are the result of a major development effort aimed at creating what Software International is calling an "intelligent architecture." Within that architecture, application-specific code is isolated from common components such as the query and system management tools. Those common facilities allow users to gain access to and utilize information from the applications, he said.

Future phases of Software International's development effort will involve the removal from the applications of code specific to data base management systems and teleprocessing monitors. In addition, microcomputer-to-mainframe link and production report writer modules will be added to System Manager.

System Manager tools will be made available with the first Masterpiece application a user purchases, Kaufman said. Other applications can then utilize the components. The first application, general ledger, is slated for a September release.

According to Kaufman, current users will receive upgrades to the Masterpiece series at no cost. In addition to the ability to utilize Masterquery and System Manager, the Masterpiece versions of the applications are said to feature significant functional enhancements.

Masterquery will be available this month for the current general ledger system and will include an interface to the Masterpiece series general ledger. It will be priced at $30,000; subsequent interfaces to other Masterpiece products will be priced at $5,000 each.

The Masterpiece products will operate in IBM's OS and DOS environments. Under a special pricing offer, the applications will be priced between $30,000 and $60,000 through 1985. Subsequently, prices will be increased to between $45,000 and $95,000 per application.

Software International is located at One Tech Drive, Andover, Mass. 01810.

DOD to install AT&T 3B line

GREENSBORO, N.C. — AT&T Technologies announced last week it has been awarded a contract to provide and install its 3B line of computers at the U.S. Department of Defense.

The contract, which AT&T said could be worth almost $1 billion, was seen as a major victory by AT&T over a field of computer vendors.

Since its entry into the computer market in March 1984, AT&T's product line has been scorned by analysts, who claim the company entered a highly competitive market with a product lineup that technologically trails those of other vendors.

Under the terms of the contract, AT&T will install and maintain 3B hardware and its Unix System V operating system. "This is a very large procurement, which we worked very hard on for more than a year," said Warren Corgan, vice-president of AT&T's Federal Systems Division, which bid on and will manage the contract. "The customer is a very sophisticated user of computers, and it is very gratifying to be chosen over the other major suppliers."

Proof is in the product: Users guarded on IBM-MCI move

By Bryan Wilkins
CW Washington Bureau

WASHINGTON, D.C. — "I think AT&T is going to have a real contender."

That is how Jerry King, manager of telecommunications for General Electric Co., evaluated last week's announcement of the intended deal which would turn Satellite Business Systems (SBS) over to MCI Communications Corp., while, in return, granting IBM a 16% stake in MCI.

GE is one of many large corporate accounts held by SBS, the satellite communications company held jointly by IBM and Aetna Insurance Co. Other SBS users reacted last week with surprise and caution, mixed with interest, over the deal. Users said they would reserve judgment on the IBM-MCI strategic alliance until products and services were demonstrated.

"Obviously, IBM is a real viable player now in the telecommunications business as a result of this," said Al Ladwig, manager of telecommunications for J. C. Penney Co., located in New York. Penney uses SBS services mostly for the company's voice communications.

"I've got to be shown that this is good for me," Ladwig added. "AT&T is a big company with a lot of plant in place. This deal won't change my attitude overnight because IBM has a piece of MCI. There is a lot of business out there, and MCI can't go after all of it."

"We'll watch how this thing shakes out," Ladwig said. "If we don't get the support [from SBS], then we'll change."

Ladwig admitted to being surprised at the IBM-MCI alliance. "I suppose I shouldn't be. Whether they will be able to serve our needs remains to be

ding. "we take it as a compliment that they think we can do it better than the others. We can now deliver performance for very sophisticated users."

McGowan said one principal market being targeted by MCI and IBM will be the Fortune 500 companies, which, he said, plan to spend an estimated $1 billion on new telecommunications services in the next few years.

MCI in the last year has invested $1 billion in expanding its nationwide telecommunications network, installing 10,000 miles of fiber-optic cable and increasing its already almost ubiquitous microwave links — all in a push to attract the large business customer.

Nevertheless, MCI's marketing effort has not met with success in attracting the businesses and corporations that comprise the largest volume and largest revenue portion of the long-distance business, according to some analysts, because its service was seen as inferior in quality compared to AT&T.

The agreement in principle between the two companies is expected to be finalized in the next month, McGowan said. It also must face Federal Communications Commission review as well as similar scrutiny from the Department of Justice.

Formal review period

McGowan said a formal review period permitting public comment on the strategic alliance will be initiated by the Justice Department in accordance with the Hart-Scott-Rodino law, which requires public participation in mergers and business combinations where market share is affected. He predicted that the merger of SBS into MCI will be accomplished within the next three to four months.

In 1984, SBS generated approximately $400 million in revenue from 200,000 customers, McGowan said. MCI will fold these customers into the company and take over ownership of three Ku-band satellites now in use — SBS 1, SBS 2 and SBS 3 — as well as 21 switching centers, SBS' headquarters and most of its 2,700 employees in McLean, Va.

IBM Vice-Chairman Paul Rizzo, who accompanied McGowan to the press conference here last week to unveil the alliance, said that IBM and its other partner in SBS, Aetna Life & Casualty Co., were absorbing SBS' $100 million annual losses. IBM owned 60% and Aetna 40% of the subsidiary into which $1.8 billion has been sunk. Aetna said it would receive a payment from IBM in the form of MCI stock and cash for a portion of its ownership and would write off a loss in the second quarter.

McGowan predicted that adding SBS' assets to MCI would aid his company and not detract from it, despite an 11-year history of SBS losses. "By acquiring these assets debt free, we can enhance them and enlarge our own system," he said.

IBM's Rizzo commented, "IBM continues to be very interested in telecommunications, and we have taken a minority stake in the most significant independent company in the telephone industry." Rizzo said IBM decided to unload SBS to MCI because "we determined that [SBS] would have required a very considerable investment over the next few years during a period where there is considerable turmoil in the telecommunications market."

Rizzo said IBM did not intend "to be the deep pockets" to fund MCI's expansion. "Unless the economy of this industry makes sense, it will be difficult to attract dollars from anyone, including IBM," he said.

By having in IBM a partner that is established as the dominant presence in the DP departments of corporations and businesses, MCI will find it easier to attract this important segment of telecommunications business, analysts said.

MCI alliance fortifies IBM arsenal for battle with AT&T

Industry analysts generally felt IBM's intended acquisition of a 16% stake in MCI Communications Corp. would benefit both companies, while AT&T reacted to last week's announcement by calling for an end to government regulation of its operations.

Greg Carlsted, an analyst with Dataquest, Inc., said, "MCI understands communications. IBM gains a foothold in the market where they will ultimately be in direct competition with AT&T. MCI needed the capital to expand its network."

Mary Johnson, a senior analyst with the Yankee Group, said, "IBM is bracing for its battle with AT&T. But it did not know much about communications. Now they can turn to MCI and let them do it."

Johnson predicted a very close working relationship between the two companies. "MCI has a packet-switching data network that IBM may be interested in as it begins to include support for IBM products," she added.

The strategic alliance between the two companies prompted AT&T Communications President Randall Tobias to remark, "IBM has now staked out a very big role in the long-distance market. This announcement should put to rest any remaining questions about the strength of competition in the telecommunications business — and whether or not it is here to stay."

Tobias called on the Federal Communications Commission to relax current regulatory barriers that bar AT&T from combining its long-distance service with its computer and office automation product lines, which are presently offered through its AT&T Information Systems subsidiary. That petition is now being considered by the FCC.

GTE Telenet Communications Corp., whose Sprint Communications Corp. subsidiary is the third largest competitor in the long-distance market, said, "The action that IBM and MCI have [taken] shows the severity of the problems in the long-distance market and the need for changes for the transition to effective competition with AT&T."

William McGowan, MCI president and chief executive officer, said MCI's alliance with IBM will not diminish competition in the long-distance industry but rather enhance it by making MCI better able to compete with AT&T. He said that the current 10% market share held by carriers other than AT&T was not relevant in determining if competition was enhanced by the IBM-MCI alliance.

McGowan downplayed the suggestion that IBM would eventually buy a controlling interest in MCI. "There's nothing in the plan which says IBM will obtain the 30% interest. It only says thay can go to that amount without getting board approval. We initiated the discussions. We wanted [Satellite Business Machines] and a relationship with IBM."

IBM Vice-Chairman Paul Rizzo added, "IBM is not interested in exercising a controlling interest." Nevertheless, IBM last year completed a $2.5 billion takeover of private branch exchange and switching system manufacturer Rolm Corp. of Santa Clara, Calif., after initially buying a small stake in the company and then gradually increasing its interest until a complete buy-out was agreed to.

McGowan said IBM had not asked for a seat on MCI's board and added, "I don't think it would be any problem if they wanted to."

— Bryan Wilkins

seen; I've got to be shown," he said.

Similar sentiments were voiced by Wells Fargo Bank's San Francisco manager of telecommunications, Ron Lee. "The only interest in this is in the financial arrangement. There are no benefits I can see that we can derive from this in the short term. Maybe in the long term, they can offer improved service and improved availability," he said. Lee said Wells Fargo dropped SBS as a telecommunications supplier several years ago.

Natural fit

Jerry King, GE's telecommunications manager, said he saw the merger of SBS' digital satellite capacity with MCI's terrestrial microwave and fiber-optic network as a natural fit.

"SBS can put its voice customers on the terrestrial network, getting rid of the space delay problems [associated with satellite voice links], and MCI can put its data communications traffic on the satellites. AT&T has a real contender," he said.

Most SBS users contacted were unanimous in predicting that IBM would eventually want to obtain complete control over MCI, which they saw as a "feisty, independent" company.

The managers of large corporate telecommunications networks said they preferred having a number of competitors from which to choose for their service and voiced some doubts whether in the long run competition would be served by the IBM-MCI alliance.

Joe Brophy, manager of telecommunications for Travelers Insurance Co. of Hartford, Conn., also a user of SBS, said the IBM-MCI alliance probably won't affect his company immediately.

"Business as usual"

"It will be business as usual, most likely. I don't expect anything to come of it for the first year or so," he said.

For the long term, Brophy said, the alliance will aid both IBM and MCI. "I'd expect to see new products, penetration into data communications by IBM, combining its [private branch exchange] technology contained in Rolm," he added.

Travelers' voice needs are currently being supplied by a large investment in a Centrex system as well as heavy reliance on AT&T Communications for long-haul links. MCI is used very little, said Brophy, who added that switching to MCI was not currently in his company's future plans.

Integrating voice and data is one of Travelers' major goals, Brophy said, but "that's really a PBX problem how the architectures will be constructed."

Dick Kaufman, a telecommunications consultant in Rowayton, Conn., said the alliance will make large-scale data file transfers over SBS satellites a viable business if managed by MCI without IBM interference. But Kaufman said that customers of these new sophisticated business services have been left behind, afraid to buy the offerings because they don't know what to do with them once they have them."

"I'm very pessimistic. IBM has failed; AT&T has failed. We need massive customer education to take advantage of all this wonderful stuff. There is very little going on to harness the data capacities of these communication pipes," he said.

In an industry of "firsts," Oracle is proud to announce a "last." ORACLE is the last DBMS you'll need. Of course, we're proud of our "firsts," too. Like introducing the first relational DBMS and the first implementation of SQL back in 1979.

Today, eight of the ten largest U.S. companies use ORACLE. In fact, INC MAGAZINE ranks Oracle as the fastest-growing software company in the USA. Surprised? Don't be. ORACLE is the number one relational DBMS, with thousands of installations on IBM mainframes, DEC, DG, HP and most other vendors' minis and micros, including the IBM PC.

Why not IDMS/R, FOCUS or DATACOM/DB?

Compatibility. There is a clearly defined standard for relational database systems. It's called SQL, and it's from IBM. IDMS/R and the others aren't compatible with SQL. These non-standard DBMSs lock you into one vendor, one technology. Only ORACLE gives you total IBM SQL compatibility.

Portability. Few organizations today use only IBM mainframes. So why buy a DBMS that runs only on IBM mainframes?

Applications written with ORACLE run identically on IBM mainframes, DEC, DG, HP, AT&T, Stratus, Honeywell, Sperry and most other vendors' minis and micros, including the IBM PC.

Why not just go with DB2 or SQL/DS?

Capability. DB2 and SQL/DS are relational DBMSs. Period. ORACLE is a relational DBMS plus an integrated set of 4th generation tools for application generation, report writing, graphics and networking. Together, ORACLE's relational DBMS and tools reduce and often eliminate traditional programming.

Portability. DB2 and SQL/DS run only on IBM mainframes. Period. ORACLE runs on all your computers and operating systems, from MVS and VM, to VMS, UNIX and PC/DOS. But if your organization is committed to IBM's DBMS products, ORACLE on minis and PCs is a unique complement to either DB2 or SQL/DS.

What about Goldengate, dBASE III and pfs:File?

Connectability. The problem with Goldengate and the other PC packages is that they are completely incompatible with the software on your minis and mainframes. This incompatibility makes it difficult to share data, impossible to share programs, and forces users to learn multiple interfaces: One for the PC and another for the mini or mainframe. ORACLE is your standard software solution. All your machines - PC, mini and mainframe - run the same software and have the same user interface. And ORACLE's communications software lets you connect those machines in a network to easily share data and distribute the processing load.

ORACLE

Make your next DBMS inquiry your last. To attend the next free, half-day seminar in your area or receive additional information, write Oracle Corp., Dept. C3, 2710 Sand Hill Rd., Menlo Park, CA 94025, or call 415/854-7350 ext. 1060.

EUROPE from page 1

Each of the six, however, has adopted a strikingly different strategy.

- **Siemens AG of West Germany.** In 1983, this vast electronics conglomerate was second only to IBM in its number of large-scale systems shipments, according to IDC Europa, but that ranking was a far-distant second: Siemens shipped 112 units compared with IBM's 700 units. But Siemens AG does not ship any computer systems to the U.S., preferring instead to nurture functionally independent U.S. subsidiaries engaged in telecommunications equipment, semiconductors, factory automation and fiber optics.

- **Nixdorf Computer AG of West Germany.** Domestically a poor cousin to the older Siemens, this firm — through its Nixdorf Computer Corp. U.S. subsidiary — is the only one of the six major vendors to market a line of general-purpose computer systems in the U.S. and has gained a niche by offering IBM-compatible hardware.

- **International Computers Ltd. (ICL) of the UK.** Despite the aid of the British government's nationalistic buying tendencies, ICL suffered financial problems for a number of years and was acquired last year by Standard Telephone and Cable. The firm's ICL, Inc. U.S. subsidiary has lived a stop-and-go existence and is concentrating on vertical-market applications of small business computer systems.

- **N. V. Philips Gloeilampenfabrieken of the Netherlands.** A multibillion-dollar conglomerate like Siemens, N. V. Philips' claim to fame in the U.S. lies with its majority ownership of North American Philips Corp. and attendant consumer brands such as Magnavox, Norelco and Sylvania. In the U.S computer arena, Philips owns a semiconductor manufacturer and operates a subsidiary to sell office automation products manufactured by a Canadian subsidiary. It has aggressively entered the emerging market for optical storage products in partnership with Control Data Corp.

- **Ing. C. Olivetti & Co. of Italy.** Despite the uneven performance of Docutel/Olivetti Corp. in the financial systems and office equipment markets, Olivetti recently announced it is seeking to increase its ownership of Docutel/Olivetti from 46% to 100%. The No. 1 European manufacturer of small-scale systems is indelibly wedded to the U.S. market through an equity interest held by AT&T and a variety of venture capital investments.

- **Telefonaktiebolaget L. M. Ericsson of Sweden.** This firm is one of the leading telecommunications equipment companies, with revenue of more than $3 billion. Of the domestic small systems installed base, Ericsson claimed only 3% of the total in 1983, and medium systems were only 8% of Sweden's installed base. In the U.S. it operates Ericsson, Inc. in partnership with Atlantic Richfield Co. and has formed and acquired an impressive stable of U.S. operating units.

The lure of the U.S. market to European vendors is obvious. "It is a big, homogeneous market," noted

See EUROPE page 13

Technological lag spurring partnerships

By Peter Bartolik
CW Staff

European vendors may not want to admit publicly that the problem exists, but they are all taking aggressive steps to halt what has been perceived as a serious technological lag.

In his 1984 report to shareholders, W. Decker, chairman of N. V. Philips Gloeilampenfabrieken, said, "There is much talk of a 'technology gap' between Europe and the rest of the world. We are of the opinion that, in our field at least, such a gap does not exist at the present time. There is considerable danger, however, that Europe will indeed fall behind if the available technological knowledge cannot be translated into products required by the market. . . . Accordingly, in the past year we have done everything within our power to help bring about the common and homogeneous market that is so desirable."

Both with government sponsorship and without, European vendors are increasingly banding together with each other and with Japanese and American vendors in an effort to ensure technological progress and to establish viable distribution channels.

'Trying to fight IBM'

According to Chris Wicka, director of research for IDC Europa, Ltd., the London-based office of International Data Corp. (IDC), the impetus behind technological and marketing alliances is simple. "They are trying to keep away from IBM and trying to fight IBM," he said of the European vendors.

IDC Europa's figures (see story page 1) point out the naked truth. Where IBM has yet to grasp the dominant share of the marketplace — such as it holds in the European mainframe market — it has at least established a trend as the fastest growing supplier in small- and medium-scale systems.

So, International Computers Ltd. (ICL) and Siemens AG have turned to Fujitsu Ltd. for mainframe technology, and Ing. C. Olivetti & Co. has turned to Hitachi Ltd. to fill a similar need. While selling micros to AT&T, Olivetti is also reselling AT&T's 3B line of minicomputer products in Europe. N. V. Philips also recently reached an OEM agreement with Harris Corp. to resell Philips' Sopho-Net wide-area network communications products. The communications products are part of a broad Sophomation family of products from micros to large superminicomputers that are designed for a fully integrated office automation environment.

Both N. V. Philips and Siemens are engaging in U.S. semiconductor operations, as well as cooperating in Europe on a venture to develop submicron semiconductor techniques; Philips is taking a leading role, in partnership with Control Data Corp.,

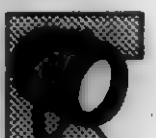
European vendors cool on entrance to U.S. markets

Strategies focus on pioneer areas

By Peter Bartolik
CW Staff

The U.S. market for general-purpose computer systems seems to hold little allure for the Europeans. With one exception, the strategies for gaining U.S. market share are based on thrusts into areas of technology that either are just getting off the ground or have yet to be dominated by U.S. vendors. That exception is Nixdorf Computer AG, which has circumvented Siemens AG's dominance and closeness to the West German government by developing a range of IBM-compatible products.



A 1½-year-old study by the U.S. Congress' Office of Technology Assessment (OTA), "International Competitiveness in Electronics," characterized Nixdorf as, "perhaps the closest to an entrepreneurial firm in the American style that the European electronics industry has seen."

According to the OTA study, although Siemens has acquired only 20% of the West German computer market and less than 10% of the European computer market, it has received the greater share of West German government funds for research and development in computer technology. In contrast, the study said, "Nixdorf is an aggressive worldwide competitor in its chosen markets. . . . The company has accomplished this with little government assistance."

Yet Siemens has undoubtedly been successful. According to a report last year on international competitiveness by Newton-Evans Research Co., "Siemens AG is West Germany's largest producer of electrical and electronic engineering equipment, and when ranked by sales and numbers of employees, the company ranks as one of the six largest companies in the worldwide electronics and electrical industries."

Siemens' U.S. efforts date back to 1970, and its U.S. employees number about 15,000, Newton-Evans said. A spokesman for Siemens Capital Corp., the holding company for Siemens' U.S. ventures, said the company does not ship CPUs into the U.S., and it has adopted a decentralized structure, with various divisions reporting directly back to European headquarters. The Siemens U.S. strategy targets four areas: semiconductors, telecommunications, medical systems and factory automation. When Allen-Bradley Co., the U.S. factory automation firm, was up for sale earlier this year, Siemens reportedly made a $1.5 billion offer, although Rockwell International Corp. submitted the winning bid.

> ”
>
> *Olivetti has an increasing presence in the U.S. and seems anxious to make its presence felt.*

N. V. Philips Gloeilampenfabrieken, the Dutch conglomerate, is as big as Siemens yet much more diversified. Its U.S. presence is well cemented with 58% control of North American Philips Corp., the lighting and appliance manufacturer that ranks among the 100 largest U.S. corporations. In recent years, N. V. Philips has moved to broaden its U.S. presence with the 1979 acquisition of semiconductor manufacturer Signetics Corp. and its 1984 partnership with Control Data Corp. to develop and market optical mass storage products. Philips also has a thriving Canadian-based office automation company, Philips Information Systems, Ltd., which markets Micom systems. Newton-Evans estimated that the Canadian company generated 20% of Philips' 1983 information-processing-related revenue; that only amounted to $224 million, however.

In the U.S., N. V. Philips' business systems and peripherals subsidiaries were consolidated into Philips Information Systems, Inc., the U.S. sales arm for both its Canadian-built and European-built products. On June 1, according to N. V. Philips, the company combined its information and communications products groups into the Telecommunication and Data Systems division. "This division intends to strengthen its presence within the U.S. market; however, nothing specific can be said on this at this moment," the spokesman said.

In the Netherlands, N. V. Philips has built a 23% share of the installed base of medium-scale systems, second only to IBM's 24% share, according to IDC Europa, the London-based office of International Data Corp. In small systems, its domestic share at the close of 1983 was only 4% of the installed base, the fifth largest share. Unlike International Computer Ltd., Siemens and Ing. C. Olivetti & Co., Philips has no mainframe systems installed, according to the IDC Europa statistics.

Olivetti has an increasing presence in the U.S. and seems anxious to make its presence felt. The Docutel/Olivetti Corp., formed by the 1982 merger of Docutel Corp. and Olivetti, has had an uneven financial performance and has undergone several reorganizations; its two major components are financial automated teller systems and office equipment.

Olivetti has established a venture capital investment arm that reportedly has invested in some 30 start-up electronics firms and is very involved in California's Silicon Valley. This venture reportedly has acquired a large stake in the Microage retail store chain. The big news came last year when it was announced that AT&T would resell Olivetti's M24 micros as the AT&T Personal Computer 6300 and that AT&T had purchased 25% of the Italian firm, with an option to acquire as much as 40%.

Olivetti's U.S. presence was built on the back of its success with typewriters and other office equipment. According to Bill Cronin, vice-president of Docutel/Olivetti's office products division, sales are made mainly through dealer and other indirect channels, with the exception of federal government sales and a small direct sales force set up to assist dealers with major accounts.

The writing systems line, a series of typewriters and word processing stations, is distributed through 400 dealers, while the M24 micro is sold through 100 dealers.

The office products division has no role in the AT&T resale agreement, which is handled directly by Olivetti in Italy, according to Cronin.

There is no conflict between AT&T and Docutel/Olivetti selling the M24 machines, Cronin said. "There are plenty of customers for both of us," he said.

L. M. Ericsson Telephone Co. has built a varied base of operations in the U.S. The central company, Ericsson, Inc., is a partnership with Atlantic Richfield Co., with whom L. M. Ericsson cooperated on cable ventures in South America.

U.S. market share

John Meurling, head of Ericsson's corporate and marketing communications and vice-president of U.S investor relations for L. M. Ericsson, said the U.S. market represents 35% to 40% of the worldwide market for information technologies products and about 30% of Ericsson's worldwide revenue.

Despite business press reports of the make-or-break nature of its operations in the U.S., Meurling said, "It's a big slice that we are interested in, but it is not a stand-or-fall situation."

A relative newcomer to the systems equipment market, L. M. Ericsson has developed a broad range of products ranging from workstations to financial systems. However, its strength is clearly in the telecommunications area.

LAG

from page 13

to develop optical storage. ICL has linked with Groupe Bull, the other dominant European company that has not yet established a U.S. beachhead, to explore artificial intelligence software techniques.

On the home front, all but L. M. Ericsson Telephone Co. have signed a pact to standardize applications packages around AT&T's Unix System V operating system to enable porting of software among their various systems.

All except L. M. Ericsson are also participating in the European Strategic Program of Research in Information Technology (Esprit), the Common Market-sponsored program of applied technological development.

L. M. Ericsson has gone somewhat alone in its approach, aside from one joint venture in England and a Honeywell, Inc. partnership in the U.S.

"Right now we're not involved," said John Meurling, vice-president of U.S. investor relations for the Ericsson Group and head of Ericsson, Inc.'s corporate and marketing communications. "There are two lines of development [for these alliances]; one is along the lines of the Common Market, to which we do not belong."

The other line, he said, is the transoceanic partnerships such as the one linking AT&T to Olivetti and a recently announced pact linking Olivetti to Toshiba Ltd. in Japan.

Randolph Richmond, president of ICL, Inc. in the U.S., said, "The only way to compete with IBM is to team up; I think we'll see more and more of that, particularly with communications and computers."

But he dismissed the concept of a technological gap, claiming that ICL's design of semiconductors built by Fujitsu are leading-edge products.

Nixdorf AG, although a participant in Esprit and the Unix pact, has a somewhat different story, according to Robert C. Nicewicz, senior vice-president with Nixdorf Computer Corp. in the U.S.

The company has never adopted the approach that it can develop all the best components, but rather has "selected the best and most modern" products from other vendors that can be integrated into a Nixdorf system.

Both Siemens and Ericsson have set goals to capture large shares of the U.S. telecommunications market, spurred by the breakup of the Bell system. Nixdorf also views the U.S. market as one of growth, but as yet has not announced any plans to adopt its European private branch exchange products in the U.S., according to Nicewicz.

European telecommunications products, Nicewicz noted, are designed according to the standards established by the various Postal Telephone and Telegraph (PTT) authorities in each country, and are not immediately transferable to the U.S. market.

Francis McInerney, a vice-president with Northern Business Information, Inc., a New York-based market research company focused on the telecommunications arena, held little hope for European vendors breaking into the U.S. market.

"In Europe, the PTTs set the features packages; they are designed as a matter of policy and expand for a number of years," McInerney said. "Here in the U.S., features are user driven and change very quickly."

The international situation puts the Europeans in a quandary, McInerney said. The leading vendors are conditioned to establish standards via a political process.

But, he said, "If they realize that the future is in networking, they have to be in North America because it is the only large, open market."

> ***'The only way to compete with IBM is to team up; I think we'll see more and more of that.'***
>
> — Randolph Richmond
> ICL, Inc.

EUROPE

from page 10

Chris Wicks, director of research with IDC Europa. The European manufacturers may be "too sophisticated for the U.S. market" in that they have evolved and grown by developing products for "the excessive heterogeneous aspects of the European markets," Wicks said. Although the relative mass markets of the U.S. offer the potential for greater sales of uniform products, the European vendors "don't necessarily have the skills and infrastructure to succeed," he said.

Randolph Richmond, president of ICL, Inc., said ICL's 10-year-old U.S. subsidiary has decided, since he was hired 2½ years ago, that "rather than compete across the board, we have to get very focused — that is the only way to sustain progress."

But ICL also hopes to tap a broader vertical market by targeting multifunction workstations at professional and management personnel.

"The U.S., businesswise, represents a tremendous market," said John Meurling, vice-president of investor relations (U.S.) with Ericsson and Ericsson, Inc.'s director of corporate and marketing communications.

The U.S. product strategy is built around Ericsson's AXE central office switch, its MD110 private branch exchange, fiber-optic cable products and peripherals such as financial and IBM-compatible workstations.

In addition to the potential for increasing market share, Ericsson has other key goals in the U.S. "We are trying to internationalize our ownership; about one-third of [Ericsson] shares are held by U.S. interests," Meurling said.

Charles River Data Systems adds 68020-based system

By Tom [illegible]
CW Staff

FRAMINGHAM, Mass. — Charles River Data Systems, Inc. last week joined the ranks of vendors offering supermicrocomputers based on Motorola, Inc.'s 68020 microprocessor with the high-end addition of Universe 32 to its Universe line of Versabus-based systems.

About 2,000 current users of the firm's Motorola 68000-based processors, the Universe 68 line, can field upgrade to the Universe 32 by swapping processor boards. The upgrades, which cost $8,000 (the vendor is offering a $1,500 trade-in rebate on older CPU boards), will be available in August. The company said users can double their system performance with the upgrade.

The Universe 32 was designed around the 12-MHz version of the 68020, however, Daniel DeLea, vice-president of marketing, said the company will switch to the 16.7-MHz version of the microprocessor when it becomes available this fall.

A basic Universe 32 processor with 1M byte of main memory, an integrated 35M-byte Winchester disk drive, a 1M-byte floppy disk drive and four serial ports costs $23,000 and will also be available in August.

Supports up to 1.6G bytes disk storage

The Universe 32 can be configured with up to 12M bytes of main memory, a 45M-byte streaming tape unit and either a 35M-, 115M- or 400M-byte Winchester disk drive. The system can support up to 1.6G bytes of disk storage and up to 64 serial ports, the vendor said.

In addition to the 68020, the Universe 32 uses a Motorola 68000 microprocessor as an I/O character processor. The 68000 is dedicated to character-oriented devices such as terminals, printers and serial network ports. A socket is also provided on the Universe 32 processor board for an optional Motorola 68881 floating-point coprocessor.

The Universe 32 supports UN/System V, the company's implementation of AT&T's Unix operating system and Unos, Charles River Data Systems' Unix-compatible, real-time operating system kernel. The two operating environments share the same device drivers and object formats. They also support C, Fortran 77, Pascal, RM/Cobol and Basic II programming languages.

Universe 32 users can configure systems into the firm's Universenet local-area network by installing a Versabus network interface module. Universenet conforms with the International Standards Organization's seven-layer Open Systems Interconnect model, General Motors Corp.'s Manufacturing Automation Protocol and Boeing Computer Services Co.'s Technical Office Protocol, the vendor said.

Charles River Data Systems is located at 983 Concord St., Framingham, Mass. 01701.

Net program lets Universe users share Unix capabilities

FRAMINGHAM, Mass. — Charles River Data Systems, Inc. has announced a networking package that permits users of its Universe family of supermicros to share AT&T Unix capabilities in a network that conforms with International Standards Organization (ISO) specifications.

Called Unicluster, the package consists of IEEE 802.3 Ethernet-type local-area network interconnect hardware and General Motors Corp.'s Manufacturing Automation Protocol (MAP) and Boeing Computer Services Co.'s Technical Office Protocol (TOP) software that has been added to Charles River Data Systems' Universenet local-area network. The package costs $2,000 per node and is available immediately.

Unicluster consists of two network capabilities: the Distributed Resource Management System (DRMS) and Network Applications Services (NAS).

DRMS permits a user to access files on any Charles River Data Systems unit in the network and exchange data with all systems, regardless of its manufacturer, using the ISO, MAP and TOP protocols. The user accesses the file by entering a Unix path name that accesses remote files in the same way local files are accessed. This, the vendor said, eliminates the need to add communications codes to applications. Other features of DRMS include remote process execution and virtual terminal connections.

NAS supports three applications: electronic mail, electronic messaging and printer spooling. These applications support request queues, and all requests eventually will execute even if the destination system or intermediate system in the request route is not running. The remote printer spooling feature enables any user on a network to operate any available printer on the network by executing the same command used for a local printer. The printer can queue the messages and print them as time becomes available.

Charles River Data Systems is located at 983 Concord St., Framingham, Mass. 01701.

NCR unveils 32-user supermini

FRAMINGHAM, Mass. — NCR Corp. last week unveiled the most powerful version of its Tower superminicomputer to date, the Tower 32, based on Motorola, Inc.'s 68020 microprocessor and capable of supporting up to 32 interactive users.

Claiming two to three times more power than Tower XP, the previous top-of-the-line Tower system, the Tower 32 was designed to use Release 5.2 of AT&T's Unix System V operating system and an optimized C compiler, according to John Walsh, NCR's assistant vice-president of product marketing.

Software programs developed for existing members of the firm's Tower line — the Minitower, Tower 1632 and Tower XP — will run without modification on the Tower 32, the company said.

Available with 1M to 16M bytes of main memory, the Tower 32 can use 44M to 4.6G bytes of disk storage. Floppy disk storage ranges from 1M to 2M bytes, and the unit can accommodate a ¼-in. 45M-byte streaming tape drive. Up to three reel-to-reel type tape drives can also be attached, NCR said.

Up to 32 CRT terminals can be attached to the Tower 32. The unit can also support a serial printer operating at up to 300 char./sec., a 720 line/min printer and up to four parallel I/O devices connected via Centronics Data Computer Corp.-compatible ports.

The Tower 32, based on a 16.7-MHz 68020 microprocessor, was designed to use Intel Corp.'s Multibus bus architecture and the IEEE' Small' Computer System Interface to control data flow. The unit includes an I/O subsystem based on Motorola's 68010 microprocessor and a Processor Memory controller that offers 8K bytes of cache memory and a 14M-byte virtual address space, the vendor said.

Available in the fourth quarter, a basic configuration for the Tower 32 consisting of 1M byte of main memory, 46M bytes of disk storage, a 45M-byte cartridge tape drive, I/O subsystem, battery backup and the Business Basic Module of the Unix System V operating system costs $21,900.

NCR's corporate headquarters is located at 1700 S. Patterson Blvd., Dayton, Ohio 45479.

Apple axes direct sales channel

By Kathleen Sullivan
CW West Coast Bureau

SAN FRANCISCO — Apple Computer, Inc. President John Sculley last week described his company's plans to dismantle its national accounts program, thereby abandoning the most widely used method of selling micros to large corporations.

Instead, all Apple sales will be handled through its dealer network. Because the vast majority of personal computer sales to the Fortune 1,000 market, by most accounts, are made through direct sales, the decision calls into question Apple's commitment to selling to the corporate market.

Sculley, who once championed the Macintosh as a business machine for corporate America, took a different tack in last week's speech. "We are a company that builds personal computers for individuals," he said.

In his first public appearance since Apple's recent management shake-up and company consolidation, which resulted in the layoff of 1,200 employees, Sculley sought to reassure the audience that Apple will continue to be a major player in the industry.

New framework of openness

Acknowledging that he would have to do "incredible things" to clear up the confusion over his firm's corporate direction, Sculley promised a new framework of openness and pledged his firm's commitment to "an appreciation for accountability."

Sculley also announced plans to strengthen Apple's relationships with third-party software developers and peripherals manufacturers. He declined to discuss specific peripheral products and said, "The ideas themselves must come from entrepreneurs, as they have in the past."

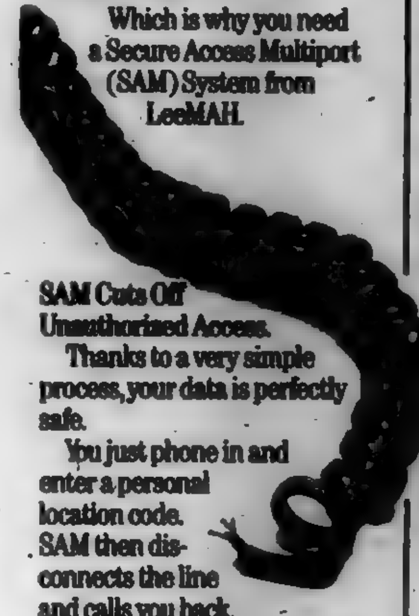
In his speech, Sculley emphasized Apple's desire to build bridges and make it easier for third-party developers to design products for the Macintosh.

"Apple will make a gradual transition to select industry standard protocols and workstation expandability," he said.

Apple's internal product development efforts will continue. The company will begin shipping an external hard disk drive for the Macintosh in October, he said.

Although he did not give a specific date, Sculley said Apple still plans to introduce a file server for its Appletalk network.

No-Breakthrough Technology from LeeMAH.



Computer crime is a real threat. Because nothing can damage your business faster than lost or stolen data.

Which is why you need a Secure Access Multiport (SAM) System from LeeMAH.

SAM Cuts Off Unauthorized Access.

Thanks to a very simple process, your data is perfectly safe.

You just phone in and enter a personal location code. SAM then disconnects the line and calls you back.

It stops the home hacker cold. Because SAM can only call back a terminal if the phone number is stored in memory.

And SAM doesn't acknowledge phone calls with tell-tale tones. So if someone's randomly dialing numbers to find a computer, they'll never know if they've found one.

Best of all, SAM can disconnect the line even when the caller refuses to hang up. So no one can ever enter a stolen access code.

All of which adds up to a system that's virtually impenetrable.

Keeps Track Of Every Call.

SAM even helps with the trickiest type of computer crimes.

Employees who attempt to break into your data base, industrial spies, or overzealous competitors.

It gives you an audit trail. With the exact dates, times, durations and identities of every authorized user who's called your computer. Plus a record of incompleted calls, or illegal attempts to gain access.

So you get double protection against theft.

A Record That Couldn't Be Better.

SAM systems are already protecting more than 6,000 computer ports around the world.

With no known breakthroughs.

That's why LeeMAH is the leader in call-back security systems. And why hundreds of companies turn to us for data protection. We're not just more economical, we're more effective.

After all, no-breakthrough protection does more than protect your data.

It protects your business.

LeeMAH Datacom Security Systems are available for immediate delivery.

Informatics General takeover not to cause upheaval

Users think Sterling Software will retain products, services

**By John Gallant
and Peter Bartolik**
CW Staff

Users of Informatics General Corp.'s software expressed little concern last week about the pending acquisition of that company by Sterling Software, Inc., a much smaller, Dallas-based company.

Many users were surprised that the Woodland Hills, Calif.-based Informatics, which had vigorously opposed earlier takeover attempts by Sterling, consented to be acquired. However, they said it was unlikely that Sterling would tamper with Informatics' product line.

"I do not know much about Sterling, but I do not expect much disturbance to the products," said Chappy Holbrook, data base analyst at Chevron Geosciences, Inc. in New Orleans. Holbrook's shop has used Informatics' Mark IV applications development system for nearly 15 years. "Mark IV is a very mature product, and I am sure its sales are not what they once were," he said. "But it still sells, and it is a good product. Since its development costs are probably fully amortized, there would be little reason for Sterling to get rid of it. It would not sell for much anyway.

"There is always the possibility that Sterling would discontinue or sell off products," Holbrook said. "But it would not do that within the next one or two years. That would destroy Sterling's reputation as a software vendor."

Not to affect maintenance

Holbrook said the merger would have little effect on software maintenance and upgrades, which are tied to maintenance agreements already in place.

Even if Sterling was to abandon Mark IV, Holbrook said, Chevron Geosciences' DP center is prepared to migrate completely to a similar product already in use.

Carl Weber, information center manager for Arco Chemical Co. in Philadelphia, said the future looks bright for Informatics' existing products. Arco currently uses Informatics' Mark IV and Inquiry IV-IMS, IBM's IMS query facility, and is considering purchasing Informatics' Answer/DB data retrieval and reporting tool.

> *'There is always the possibility that Sterling would discontinue or sell off [Informatics General's] products, but it would not do that within the next one or two years. That would destroy Sterling's reputation as a software vendor.'*
>
> — **Chappy Holbrook**
> **Chevron Geosciences, Inc.**

'No great concerns about the merger'

"I have no great concerns about the merger," Weber said. "I think the new owners will continue to support and nurture the products. It seems Sterling will be well positioned with the Informatics products, and I do not see any problems ahead."

Informatics accepted a new bid by Sterling of $27 per share, equal to $135 million for the company. Earlier bids of $25 and $26 a share had been rejected, and a proxy battle by Sterling principals to unseat Informatics Chairman Walter Bauer and another director had failed.

Sterling's offer was conditional on its obtaining two-thirds of Informatics stock and on obtaining financing by July 17.

Informatics, Sterling revenues

Informatics reported 1984 revenue of $193 million, while Sterling had 1984 revenue of only $18.7 million.

Sterling spokesman Ray Hannon said that Bauer will remain as chairman of Informatics, which will operate as a subsidiary of Sterling, and Sterling President Sterling Williams will be chief executive officer.

No other management decisions have been made at this time, he said.

Debt financing

Sterling, which has essentially been in operation for 2½ years and has grown by acquiring existing software companies, will raise the cash for the acquisition through debt financing, a move that had prompted much speculation that parts of Informatics' varied product lineup would be sold.

Hannon said there is no current game plan to sell any assets but added that it may be determined in the future that some parts of the two companies are not compatible.

Informatics spokesman Ron Freeman would not comment on any management changes. He did say, however, that the financing being arranged by Sterling would probably not require the disposal of any assets.

Intel down for second round; Gould to reduce operations

SANTA CLARA, Calif. — With the semiconductor industry mired in its worst depression in years, Intel Corp. last week announced its second round of layoffs this year.

In another development, Gould, Inc. reported it will reduce the scope of its semiconductor operations, resulting in a second-quarter write-off against earnings of about $150 million. The company said layoffs are anticipated, but it declined to release any specific figures.

As previously reported [CW, June 17], Intel had been considering a number of options to cut costs in light of a continued slump in semiconductor sales. The company announced that it will cut 4% of its work force, or about 950 employees out of a total worldwide labor force of 24,200. The cutbacks will affect all of its domestic integrated circuit operations and support groups, the company said. Earlier this year [CW, Feb. 25], Intel laid off 900 employees, a majority of whom worked at its systems and components division, and phased out a test facility.

Also, Intel said it will phase out its Fab2 facility in Santa Clara, Calif., which it said is the oldest and smallest wafer fabrication plant operated by the company. In other cost-cutting moves, employees will be required to take seven days of unpaid vacation in the third quarter, and merit pay raises will be delayed at least until the first quarter of 1986.

> *'This is the most severe shakeout in our industry in over a decade.'*
>
> — **Gordon E. Moore**
> **Intel Corp.**

"This is the most severe shakeout in our industry in over a decade," said Gordon E. Moore, chairman and chief executive officer of Intel. "We continue to receive a low rate of incoming orders."

At Gould's semiconductor operations, work reportedly will now be focused on custom circuit production, an area that has "remained relatively strong over the past few years and where, because of our expertise, we expect our growth to be in the future," according to William T. Ylvisaker, Gould chairman and chief executive officer.

Gould will write off $150 million to reflect obsolete assets, plant reductions, inventory valuations, offshore facilities and interest in overseas joint ventures.

Excluding the write-off, the company said, second-quarter earnings are expected to be 15% below the first quarter, and it expects fiscal-year profits to be slightly below those of 1984.

CDC unwraps DBMS, DSS, tools for Cyber 180 systems

MINNEAPOLIS — Control Data Corp. has announced the Information Management/Virtual Environment (IM/VE) family of software, including a data base management system, decision support system (DSS) tools and an applications generator.

The IM/VE packages run on CDC's Cyber 180 systems with the firm's NOS/VE operating system.

Initial offerings in the family include Information Management/Data Management (IM/DM), a dictionary-driven DBMS; Information Management/Zero Effort User System (IM/Zeus), a fourth-generation-orientation DSS; and Information Management/Information Processing Family (IM/IPF), an applications development facility.

The company said it would announce a data dictionary and intelligent screen management interface at a later date.

Product features

According to a vendor spokesman, the IM/DM DBMS allows nontechnical users to enter and retrieve information, manipulate data, produce reports and issue queries and commands. Technical users are given a set of tools for modifying applications aimed at improving productivity.

IM/Zeus reportedly is intended to give novice users the ability to format, write and edit sophisticated reports and make on-line queries using function keys.

IM/IPF, a package of eight integrated productivity tools, is said to allow sophisticated users to develop a range of applications and access data on the Cyber 180 system.

Product pricing

IM/VE product pricing is based on CPU size. IM/DM is priced from $23,520 to $184,884; IM/Zeus costs from $5,880 to $46,200; and IM/IPF costs from $19,960 to $89,190.

CDC also offers Micro IPF, said to enable nontechnical users to develop stand-alone and distributed applications on microcomputers in the personnel and departmental data areas.

CDC can be reached through P.O. Box 0, 8100 34th Ave. S., Minneapolis, Minn. 55417.

Computervision launches CAE, CAD/CAM software

Runs on 3000 series, IBM microcomputer

LAS VEGAS — In a number of announcements, Computervision Corp. last week unveiled software products for computer-aided engineering (CAE) and computer-aided design and manufacturing applications. The packages run on either Computervision 3000 series workstations or the IBM Personal Computer AT.

The CAE products were developed by Metheus-CV, Inc., the Hillsboro, Ore., joint venture formed last year by Computervision and Metheus to provide an automation link with Computervision's CAD/CAM software systems.

Products announced at the Design Automation conference here included the following:

- The Personal Engineer, an IBM Personal Computer AT-based schematic capture package, priced at $7,000 and scheduled for fourth-quarter availability.
- Two enhancements for the Logic Design/3000 system, which was designed for logical testing of circuitry for printed circuit boards or integrated circuits. The enhancements include Hilo-3, a simulator from Genrad, Inc., priced at $14,000; and Timver, a timing verifier used to identify critical paths, priced at $2,900. Both are scheduled for third-quarter availability.
- Symbolic Layout/3000, for symbolic layout and compaction, priced at $25,000 per workstation and scheduled for fourth-quarter availability.
- VLSI Advanced Layout Editor (Vale), for use with Metheus-CV's Full Custom Design/3000 system for integrated circuit design, priced at $105,000 and scheduled for fourth-quarter availability.
- Electrocadds/3000, a printed-circuit board design package derived from Computervision's Cadds 4X software and customized for the company's CDS 3721-E 32-bit workstations. The package is priced at $15,000 and is scheduled for fourth-quarter availability.

The company also announced the following interfaces, all scheduled for fourth-quarter availability:

- Cadds Connect Interface for system-to-system interfacing between IBM Personal Computers, Computervision's CDS workstations and Computervision's Cadds resource systems. The interface is priced from $8,000 to $30,000.
- Scicards, Racal-Redac and Cadds 4X interfaces for format-to-format interfacing between Logic Design/3000 and Scicards, Racal-Redac and Computervision's Cadds 4X printed-circuit board systems. All are priced at $4,900.
- Cvpac, a computer-aided design wire harness software that eliminates the need to design wire and cable connections between system components, priced at $12,000 per system.

Computervision is located at 15 Crosby Drive, Bedford, Mass. 01730.

Meet to eye human resources

HOT SPRINGS, Ark. — The 17th annual meeting of the National Association for State Information Systems (Nasis) will be held Aug. 5-8 at the Arlington Hotel here.

The conference theme is "Managing the Human Resource in an Information Systems Environment."

Conference topics will include comparable worth and sexual harassment in the workplace, key areas of change for managers, office automation, end-user computing and stress management.

W. Frank Blount, executive vice-president of networks for AT&T Communications, will deliver the keynote address on "Human Resources Development in a Changing Business Environment: Challenges and Opportunities, 1985-1990."

Cost of the conference is $160 for government representatives and $280 for private-sector employees. An additional $20 fee will be charged for registration after July 15.

More information is available from Nasis, P.O. Box 11910, Lexington, Ky. 40578.

Commercial, OA applications of AI focus of July conference

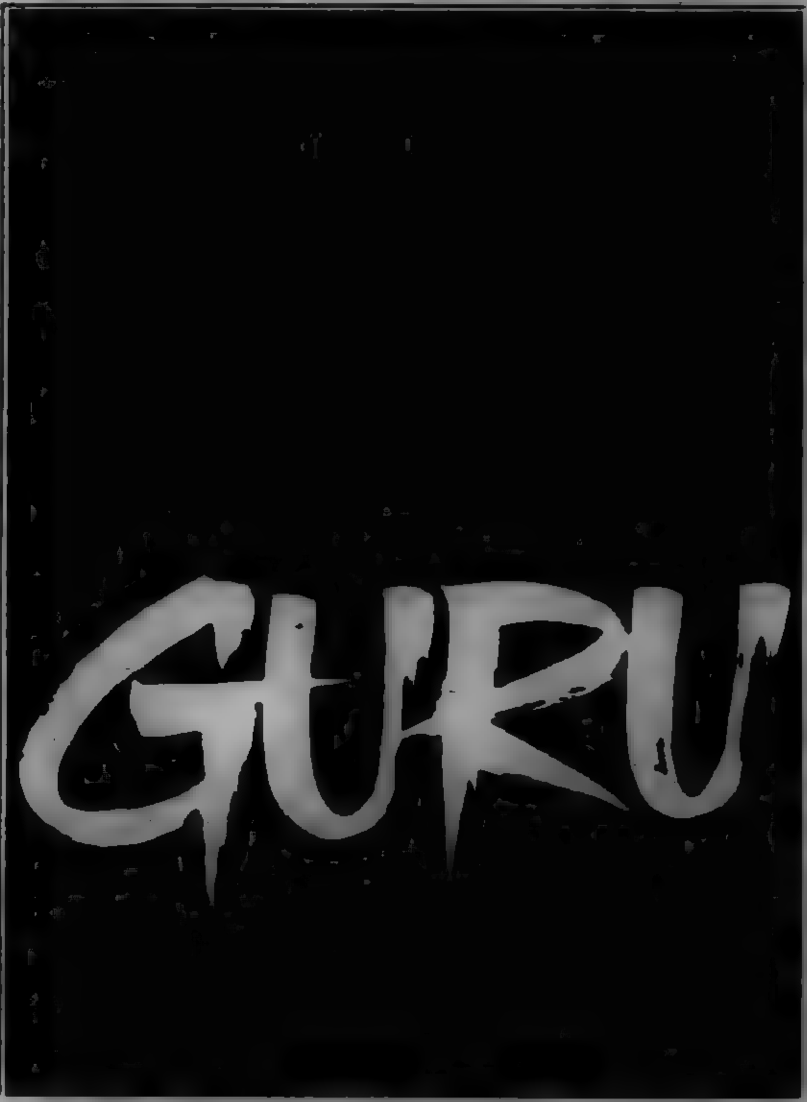
HYANNIS, Mass. — A three-day seminar on artificial intelligence, software and the commercial applications thereof will be held July 10-12 at Dunfey's Hyannis Hotel here.

Sponsored by the Technology and Innovation Council and the Information Industry Association, the seminar will include discussions on AI developments in microcomputing, decision tools, the emergence of commercial applications and AI in office automation.

Among the speakers at the conference will be Larry Harris, president of Artificial Intelligence Corp.; Frederick Hayes-Roth, chief scientist, Teknowledge, Inc.; and Maxine Rockoff, director of OA for Paine Webber, Inc.

Before June 3, the registration fee is $345 for Information Industry Association members and $445 for nonmembers. After June 3, the fees are $395 and $495, respectively.

More information on the conference is available from the Information Industry Association, Suite 400, 316 Pennsylvania Ave. S.E., Washington, D.C. 20003.



Hewlett-Packard unwraps enhanced Portable laptop

PALO ALTO, Calif. — Hewlett-Packard Co. today will introduce the Portable Plus computer, an enhanced version of its Portable laptop that offers a 25-line by 80-char. flip-up LCD display and sells for $2,295.

Designed for "mobile professionals," the new system is built around a Harris Corp. 80C86 Cmos microprocessor, comes with 128K bytes of Cmos random-access memory (RAM), expandable to 896K bytes, measures 13- by 10- by 3-in. and weighs less than 10 lb, according to the vendor. The Portable Plus reportedly will run on batteries for up to two weeks of normal use on a single charge.

The laptop runs under Microsoft Corp.'s MS-DOS 2.11 operating system, and software applications are available either in plug-in read-only memory (ROM) cartridges or in 3½-in. floppy disks for an external disk drive, HP said.

The 192K bytes of built-in ROM-based software includes MS-DOS, the Personal Applications Manager operating environment, HP Link for communicating with the IBM Personal Computer as well as other compatible systems, diagnostics and other utilities.

Optional applications

Optional ROM-based applications include Lotus Development Corp.'s 1-2-3 ($495), Microsoft's Word ($375), HP's Memomaker/Time Management ($195) and HP's PC 2622 ($395), which emulates the HP 2622 and Digital Equipment Corp. VT102 terminals.

Instead of a mechanical disk drive, the Portable Plus reportedly offers an "electronic disk" — a battery-powered RAM circuit for nonvolatile storage of data and programs.

The antiglare LCD supports bit-mapped graphics with a resolution of 200 by 480 pixels, according to HP. The viewing angle is continuously adjustable.

Two expansion drawers can be configured with additional ROM or RAM for a total capacity of more than 3M bytes, HP said. The ROM drawer accepts industry-standard Cmos 32K-byte or 128K-byte plug-in ROM or 32K-byte erasable programmable ROM.

Optional Portable Desktop Link packages provide hardware and software to connect the system with HP Touchscreen microcomputers or IBM Personal Computer-compatible systems. A version for HP micros costs $175, while a package for IBM-compatible personal computers is priced at $150.

A 300/1,200 bit/sec. modem, also optional, costs $495.

The system can link up to a variety of existing HP peripherals, including the battery-powered 3½-in. HP 9114A disk drive, which handles 710K-byte diskettes, and the Thinkjet printer, HP said.

HP will continue to manufacture the earlier Portable system, which offers a 16-line by 80-char. LCD screen, and the Portable's price will remain unchanged, the company said. No upgrade kit will be offered.

More information is available from HP Inquiries Manager, HP, 1020 N. E. Circle Blvd., Corvallis, Ore. 97330.

HP's Portable Plus battery-powered personal computer

FCC rules Accunet unlawful

WASHINGTON, D.C. — The Federal Communications Commission recently ordered AT&T Communications to withdraw its Accunet Packet Service after determining that the offering discriminated in favor of AT&T Information Systems, which made up 95% of its business.

The FCC determined that the service was priced below its cost and was therefore unlawful. It ordered AT&T Communications to withdraw the current Accunet tariffs within 120 days and imposed an accounting order designed to account separately for the service's costs, revenue, investment and net earnings.

The Accunet Packet Service objected to by the FCC was originally called Basic Packet Switch Service. After it was renamed, AT&T Communications reconfigured the service by bundling its packet switches with the transmission component and changed the pricing of transmission to a usage basis rather than a leased-line basis.

The FCC said that a packet-switch service offered by AT&T Communications to the general public, and to AT&T Information Systems, must unbundle the switching portion from the transmission portion.

SERIES/1 EDUCATION
EDX AND CF

For the benefit of those users who are unable to attend the standard Series/1 courses provided by IBM, SSCP is now offering a complete curriculum of Event Driven Executive (EDX) and Communications Facility (CF) education. The classes are conducted at our education center, located in the San Francisco Bay Area. For the convenience of the larger user, we also provide onsite education at the customer's location.

SSCP offers:

- Curriculum prepared by former IBM Series/1 education specialist
- Small class size for individualized attention
- Courses ranging from basic operator training through advanced programming and systems internals workshops
- Hands-on labs designed to help your Series/1 staff reach a high level of EDX and CF expertise quickly
- Classes conducted at SSCP Education Center or at customer location
- Excellent availability
- Reasonable prices

U.S. attorneys push to clarify vague '84 DP crime law

By Mitch Betts
CW Washington Bureau

U.S. prosecutors are dissatisfied with the Computer Fraud and Abuse Act of 1984 and have suggested changes in that law as well as pending legislation to make prosecution of computer crimes more successful in court.

At a recent congressional hearing, for example, David Geneson, assistant U.S. attorney for Washington, D.C., said he is working to obtain a grand jury indictment in a computer crime case but is having difficulty using the 1984 law. He declined to provide details.

Cathy Goodwin, an assistant U.S. attorney in Denver who recently obtained a conviction under the law, said in a recent interview that the law needs some refinements or else it will be open to challenges that it is unconstitutionally vague.

Through a plea-bargain agreement, Goodwin obtained the conviction of Philip Gonzales Fadriquela, a Los Angeles man who was charged with trespassing in U.S. government computers in Colorado [CW, June 24].

> ❞
>
> *'We wanted to challenge the constitutionality of the law.'*
>
> — Robert Booms
> defense attorney

Goodwin said she is concerned with a provision in the law that defines criminal trespass as conduct that affects the operation of the government computer, because the term "affect" is not defined and is apparently unnecessary. She noted that Fadriquela's defense attorney filed a motion to dismiss the case on grounds that the law's language is vague.

Robert Booms, Fadriquela's attorney, confirmed, "We wanted to challenge the constitutionality of the law," arguing it is too broadly drawn and "subject to gross misinterpretation."

He said it is not clear what affecting a government computer means. If it covers the act of entering an access code without authorization, Booms said, "It's like being charged with tapping on a door without ever going behind it."

Because the case was settled by plea bargaining, the defense motion was moot and the language in the 1984 law was not tested.

Provisions referring to unauthorized use of a government computer and trespassing in credit bureaus to obtain information also need to be clarified, Goodwin said.

Goodwin said the law, as a deterrent to hackers, should expressly provide that the perpetrator forfeit his computer equipment, a move also supported by the U.S. Department of Justice. Under the terms of the plea bargain reached in the Denver case, according to Goodwin, Fadriquela had to forfeit his equipment.

Prosecutors and computer crime specialists also are studying legislation pending in the U.S. House Subcommittee on Crime, particularly a bill [H.R. 1001] that would prohibit trespassing in private sector computers and permit federal attorneys to prosecute cases involving crimes in which more than $5,000 a year was gained.

Goodwin and other computer crime specialists strongly opposed the $5,000 threshold. "From a prosecutor's point of view, that is going to eliminate so many cases," Goodwin said. "You can't put a dollar value on gaining information."

Federal jurisdiction should be triggered when the trespass crosses state borders, such as in the wire-fraud statute, she said.

The $5,000 threshold was included in the bill, sponsored by Rep. William J. Hughes (D-N.J.), because that is the way the House Judiciary Committee traditionally has defined federal jurisdiction, leaving lesser crimes to state authorities, according to a congressional source.

John T. Vanadia, who follows legislation for the Electronic Data Processing Auditors Association (EDPAA), also opposed the $5,000 threshold. "The problem is that it's hard to put a value on the theft of computer services or information." Vanadia and Jim Fleming, cochairmen of the international government relations committee at EDPAA, said these issues were discussed by Goodwin and others at the recent EDPAA International Conference in Salt Lake City.

After the conference, the EDPAA officials vowed to sponsor an advisory group composed of EDP auditors, attorneys and legislators to discuss the technical aspects of computer crime.

Goodwin predicted that prosecutors will handle an increasing number of computer crimes, including bank fraud and embezzlement cases, and will need to form partnerships with groups such as the EDPAA to better understand computer crimes.

"The computer is the white-collar crime medium of the 1980s and '90s," she said. "We're just going to have lots of cases in the federal system involving computers, and we need a really good statute for it."

Now one word says it all.

Practically everything you need in digital communications in one word. *Pathways*™—advanced network services from the NYNEX telephone companies, New York Telephone and New England Telephone. Pathways services will link your business in ways you never thought possible. With peace of mind you never thought possible.

NYNEX Pathways services will include a wide range of digital operations that will eventually provide complete ISDN capability. But while Pathways services will be growing for years to come, you don't have to wait years to start. Already, your business can take advantage of services such as:

Digipath™ digital service, to provide multi-point data transmission that can send data at speeds up to 56 kbps with exceptional accuracy.

Superpath™ 15 mbps service, to transmit voice, data or images quickly and economically.

And before the end of 1985, we plan to introduce five new services:

Flexpath™ digital PBX service provides direct inward and outward dialing for digital PBXs over a 15 mbps facility.

Intellipath™ digital Centrex service that will offer a wide range of features directly throughout our network, rather than through premises equipment.

Infopath™ packet switching service allows economical and reliable transmission for interactive data applications.

Switchway™ switched 56 kbps service offers a cost-effective alternative

Bulletin boards target of crime legislation?

Computer crime experts and prosecutors interviewed recently agreed that future computer crime legislation should address the use of electronic bulletin boards in computer crimes and should modernize courtroom evidence rules.

Cathy Goodwin, assistant U.S. attorney in Denver, said hackers frequently get access codes for trespassing in computer systems and networks from electronic bulletin boards. "To me, it's akin to having a billboard by the street saying: 'Here is the combination to the Colorado National Bank vault, if anyone wants to use it,'" she said.

Richard Cashion, chairman of the Data Processing Management Association's computer crime committee and assistant DP director for Tennessee Technological University in Cookeville, Tenn., agreed. He said he is drafting a model computer crime bill that would penalize electronic bulletin boards for aiding and abetting in a crime or solicitation of a computer crime.

The failure to address this issue is a big deficiency in pending computer crime legislation, added John T. Vanadia of the EDP Auditors Association.

Goodwin, Cashion and Vanadia also said that the courtroom rules of evidence should be revised so that computer-generated business records will be admissable in court. Legal experts say computer printouts are not automatically accepted in court [CW, May 20]. Under his draft legislation, Cashion said, computer reports would be admissable if the report is used in the normal operations of the business or organization; it can be verified as accurate and complete; and it can be put in the form of paper or micrographics for the convenience of the court.

The experts said this reform is especially important in computer crime cases because the system's activity log is crucial to the prosecution. "Without that [log]," Goodwin said, "you have almost no way of proving what was done to the system, other than witnesses."

Quickway℠ digital service provides a digital data service for areas where Digipath service is unavailable.

[redacted]

In the future, we'll be adding important new services to keep Pathways services ahead of their time. And since NYNEX is one of the leaders in developing international ISDN standards, you know the Pathways services will be compatible with new digital systems as they're developed. So your communications won't grow obsolete. Only better.

[redacted]

You can rely on us to have network services that are compatible with your equipment, and your needs. Because we don't represent a single manufacturer's interests—we represent your interests. And with our years of experience in the world's toughest business market, no one knows your communications needs better. And no one is more committed to your future.

Before you make your next move, call 1 800 441-1919 for the names and numbers of contact personnel for New England Telephone and New York Telephone, or our authorized sales agents.

German survey ranks CDC tops

DELRAN, N.J. — Control Data Corp. ranks first in customer satisfaction among German computer users, according to a recent survey.

With values ranging from 1 to 4, the company received a 4 in the areas of engineering support and technical training for all of its computer system models, according to the survey, which was conducted jointly by *Computerwoche* newspaper — a *Computerworld* sister publication — and Datapro Research Corp. The company received an overall rating of 3.75, with the Siemens AG Model 7800 coming in second overall with a 3.33 rating, according to the study.

The next five overall rankings are as follows:

- BASF (Series 7) — 3.29.
- Burroughs Corp. (all models) — 3.20.
- IBM (Series 4331) — 2.94.
- Siemens AG (Series 7500) — 2.91.
- Honeywell, Inc. (DPS 7 and 8) — 2.88.

Five hundred survey participants evaluated leading computer companies in the areas of computer systems, peripherals, customer engineering support, software and technical training.

Additional information is available from Datapro, which is located at 1805 Underwood Blvd., Delran, N.J. 08075.

Architectures topic of meets

SAN JOSE, Calif. — Communications Solutions, Inc. (CSI) has announced that a seminar titled "IBM's Advanced Communication Architectures" will be held at two locations this summer.

According to CSI, the two-day seminar will examine office communication architectures, including IBM's Systems Network Architecture (SNA) Distribution Services, Advanced Program-to-Program Communications, Document Interchange Architecture and Document Content Architecture.

The seminar will discuss how these products are related to IBM's SNA and how IBM's latest SNA enhancements accommodate IBM's Logical Unit 6.2 and Physical Unit 2.1 capabilities.

The seminar will detail the implementation of IBM's architectures in such products as the IBM 5520 Administrative System and its host-based Distributed Office Support System.

The seminars are scheduled for July 15-16 in Washington, D.C., and Aug. 5-6 in New York. The enrollment fee is $695 per person.

More information on registration is available from CSI at 992 S. Saratoga-Sunnyvale Road, San Jose, Calif. 95129.

INTERNATIONAL REPORT
CW International
News Network

AUSTRALIA

AVALON — To help reduce manual labor costs, the Australian Government Aircraft Factory (GAF) has installed a National Advanced Systems Corp. (NAS) 8023 mainframe to perform backup and testing. The 16M-byte NAS system contains 5G bytes of disk storage and will run parallel with an IBM 4341 Model 11, according to Bruce Macneil-Brown, GAF data processing manager.

■

QUEENSLAND — Australia's first open-access electronic funds transfer (EFT) switch has been launched here by Datec, Inc., a major Australian software house. The switch will be open to card-issuing companies and will be linked to EFT switches in other Australian states. The program has been endorsed by the Queensland state government and by 11 of the largest banks here, sources said.

■

CANBERRA — The government's legal aid system, produced entirely with Information Builders, Inc.'s fourth-generation language, Focus, is undergoing major hardware upgrades due to system inadequacies. According to sources here, the system so overtaxed the agency's IBM 4331 mainframes that upgrades have been ordered from National Advanced Systems Corp.'s 6630 series and IBM 4341 systems.

FRANCE

PARIS — While Sperry Corp. in the U.S. balked at merger talks with Burroughs Corp., Sperry France underwent a shake-up. The president of the French subsidiary was let go, apparently as a result of the firm's recent financial difficulties.

■

PARIS — Groupe Bull has unveiled a financial version of its workstation based on Convergent Technology, Inc.'s products. The Groupe Bull Questar 400 F is intended for banks and insurance applications.

HONG KONG

HONG KONG — A three-pronged plan to combat software piracy has been launched here. The Anti-Software Piracy Association (Aspa), a coalition of Asian distributors and major personal computer software firms, has been formed to decrease piracy by changing public attitudes toward it. According to Aspa cofounder Jodee Rich, this can be accomplished by publicizing the success users experience with legitimate programs and by launching marketing campaigns throughout the region emphasizing the technological and training support that comes with legal software. The group has also allocated a $100,000 fund for taking pirate dealers to court.

HUNGARY

BUDAPEST — Despite a late start, computerization is thriving here, according to Zsolt Naray, director of Hungary's Institute for Coordination of Computer Technology. Naray said the Hungarian government is firmly committed to educating the population here and has launched a program to integrate computers in most schools and universities. Also, the government has sponsored a television program that features instruction in Basic programming. The TV program has resulted in the formation of users groups that enable viewers to test their lessons and exchange ideas.

WEST GERMANY

HAMBURG — Members of the European Computer Leasing and Trading Association (Eclat) are up in arms against IBM's leasing division, IBM Credit Corp. Eclat plans to file a complaint against IBM Credit Corp. for violating competitive leasing practices. According to Eclat spokesman Horst Gruhlke, the problem lies in IBM's attracting users with low prices initially and later inflating the price when a system needs upgrading. Also contributing to Eclats' outrage is a recent statement by IBM GmbH general manager, Bernhard Dorn, who reportedly threatened to cut off leasing representatives if they worked with any other leasing company besides IBM Credit.

■

MUNICH — Why are women less likely to choose high-tech careers? The Federal Ministry for Education and Science here recently conducted a survey on this question and discovered that women tended to avoid high technology because they are less interested in computers and are not as comfortable around them as their male counterparts. In the study, women revealed that after some exposure to computers, their initial reluctance faded. After this occurred, women were found to be just as adept in dealing with the computers as their male colleagues.

■

BOBLINGEN — Hewlett-Packard GmbH has boosted revenues by 30% during the first half of this business year, an HP GmbH spokesman said. Meanwhile, the U.S. parent company experienced a more modest revenue growth of 16%. Last year HP GmbH experienced a 42% increase in revenue, to $706 million, as well as a 35% increase in net profit after taxes, to $43 million. During that period HP GmbH increased its staff by 21% and now employs 4,167 workers in West Germany, the spokesman said.

Realia COBOL.
Migration without migraines.

Until recently, you had to abandon the business computer language when you developed microcomputer application software. The available micro COBOLs were inadequate—too limited, too slow. The best alternative—the XT/370 or AT/370 using IBM's COBOL—was very expensive and still too slow. To get acceptable performance, you had to retrain your programmers in Pascal or C.

Realia COBOL is the cure for such headaches.

Realia's compiler supports most IBM VS/COBOL and VS/COBOL II features, such as:

- COMP and COMP-3 data
- SELECT assignment names
- Multiple entry points
- GOBACK, EJECT, and SKIP statements
- Structured programming extensions of VS/COBOL II

You can download mainframe systems for development, maintenance, and testing. Productivity will soar.

You can compile faster with Realia COBOL than in most mainframe environments, even on floppy-based systems. Compile-time options allow cross-reference, brief and full code listings, and helpful features like subscript and decimal value checks.

Our interactive debugger lets you follow the program source, display and modify data, and set breakpoints using the normal optimized machine code.

The results are startling.

Our users report that their systems run up to 20 times faster when compiled by Realia COBOL. That's compared to our nearest micro competitor. The ratio is up to 100 times faster when compared to any of the others.

On the IBM PC AT, your programs can run at 370/148 to 370/158 speed. Realia's file system really makes your machine deliver, giving it a distinct edge over Pascal or C. Our indexed file system even has full key compression and buffer controls just like VSAM. The generated code is pure MS-DOS, so it can be run on most of the 8088/8086 machine family.

And you can sell your programs without paying us a royalty fee.

Realia COBOL is priced at $995, including one year of maintenance and upgrades. Subsequent maintenance and upgrade contracts are currently priced at $125/year/copy. Available for the IBM PC, PC XT, 3270 PC, PC AT, PC-compatibles, and the TANDY 2000.

Realia COBOL. What a relief.

IBM, IBM PC, PC XT, 3270 PC, XT/370, PC AT, and AT/370 are registered trademarks of International Business Machines Corporation. MS-DOS is a registered trademark of Microsoft Corporation.

CALENDAR

WEEK OF JULY 28

JULY 28-AUG. 1, OTTAWA — **The Urban and Regional Information Systems Associations' (Urisa) 23rd Annual Conference.** Contact: Urisa Secretariat, Suite 300, 1340 Old Chain Bridge Road, McLean, Va. 22101.

JULY 29-30, ST. LOUIS — **Southwestern Bell.** Contact: Telestrategies, Inc., P.O. Box 811, McLean, Va. 22101.

JULY 29-30, NEW YORK — **Integrating Voice and Data in the Private Branch Exchange.** Contact: Business Communications Review, 950 York Road, Hinsdale, Ill. 60521.

JULY 29-30, BOSTON — **CICS/VS Performance and Tuning.** Contact: On-Line Software International, Inc., Fort Lee Executive Park, Two Executive Drive, Fort Lee, N.J. 07024. Also being held Aug. 5-6 in Atlanta.

JULY 29-31, BOSTON — **Standard Network Protocols: International and National Packet-Switching Networks.** Contact: Data-Tech Institute, P.O. Box 2429, Lakeview Plaza, Clifton, N.J. 07015.

JULY 29-AUG. 1, FORT LEE, N.J. — **CICS/VS MRO/ISC.** Contact: On-Line Software International, Inc., Fort Lee Executive Park, Two Executive Drive, Fort Lee, N.J. 07024.

JULY 29-AUG. 1, CHICAGO — **CICS/VS Application Design.** Contact: On-Line Software International, Inc., Fort Lee Executive Park, Two Executive Drive, Fort Lee, N.J. 07024. Also being held July 29-Aug. 1 in Los Angeles.

JULY 29-AUG. 1, NEW YORK — **IMS/DB (DL/1) Application Programming.** Contact: On-Line Software International, Inc., Fort Lee Executive Park, Two Executive Drive, Fort Lee, N.J. 07024.

JULY 29-AUG. 2, ATLANTA — **CICS/VS Internals.** Contact: On-Line Software International, Inc., Fort Lee Executive Park, Two Executive Drive, Fort Lee, N.J. 07024. Also being held July 29-Aug. 2 in Denver and Aug. 5-12 in New York.

JULY 29-AUG. 2, FORT LEE, N.J. — **CICS/VS Application Programming — Command Level.** Contact: On-Line Software International, Inc., Fort Lee Executive Park, Two Executive Drive, Fort Lee, N.J. 07024. Also being held July 29-Aug. 2 in Los Angeles and Washington, D.C.

JULY 29-AUG. 2, PARSIPPANY, N.J. — **CICS Command-Level.** Contact: Chubb Institute, P.O. Box 342, 8 Sylvan Way, Parsippany, N.J. 07054.

JULY 30-AUG. 1, — **SAS Basics.** Contact: SAS Institute, Inc., P.O. Box 8000, Cary, N.C. 27511.

JULY 30-AUG. 1, CARY, N.C. — **SAS Programming for New Computer Users.** Contact: SAS Institute, Inc., P.O. Box 8000, Cary, N.C. 27511. Also being held Aug. 12-13 in Toronto; Aug. 19-20 in Portland, Ore.; Aug. 22-23 in Calgary, Alta.; and Sept. 9-10 in Atlanta.

JULY 31-AUG. 1, BOSTON — **Recovery/Restart.** Contact: On-Line Software International, Inc., Fort Lee Executive Park, Two Executive Drive, Fort Lee, N.J. 07024.

JULY 31-AUG. 2, BOSTON — **The IBM Personal Computer.** Contact: Data-Tech Institute, P.O. Box 2429, Lakeview Plaza, Clifton, N.J. 07015. Also being held Aug. 5-7 in Washington, D.C.; Aug. 7-9 in Los Angeles; Aug. 12-14 in Seattle; Aug. 21-23 in Chicago; and Aug. 26-28 in New York.

JULY 31-AUG. 2, HOUSTON — **Data Analysis and Logical Design Workshop.** Contact: Elise Rabalais, Learmonth & Burchett Management Systems, Inc., Suite 405, 2900 N. Loop W., Houston, Texas 77092.

AUGUST 1-2, TORONTO — **Networking the IBM Personal Computer.** Contact: Center for Advanced Professional Education, Suite 110, 1820 E. Garry St., Santa Ana, Calif. 92705. Also being held Aug. 15-16 in San Jose, Calif.; Aug. 20-21 in Chicago; Aug. 22-23 in Houston; Aug. 26-27 in Arlington, Va.; and Aug. 28-29 in Hasbrouck Heights, N.J.

WEEK OF AUGUST 4

AUGUST 4-9, DALLAS — **Systems Development: Analysis Phase.** Contact: Arthur Young & Co., Education Center, 1950 Roland Clarke Place, Reston, Va. 22091.

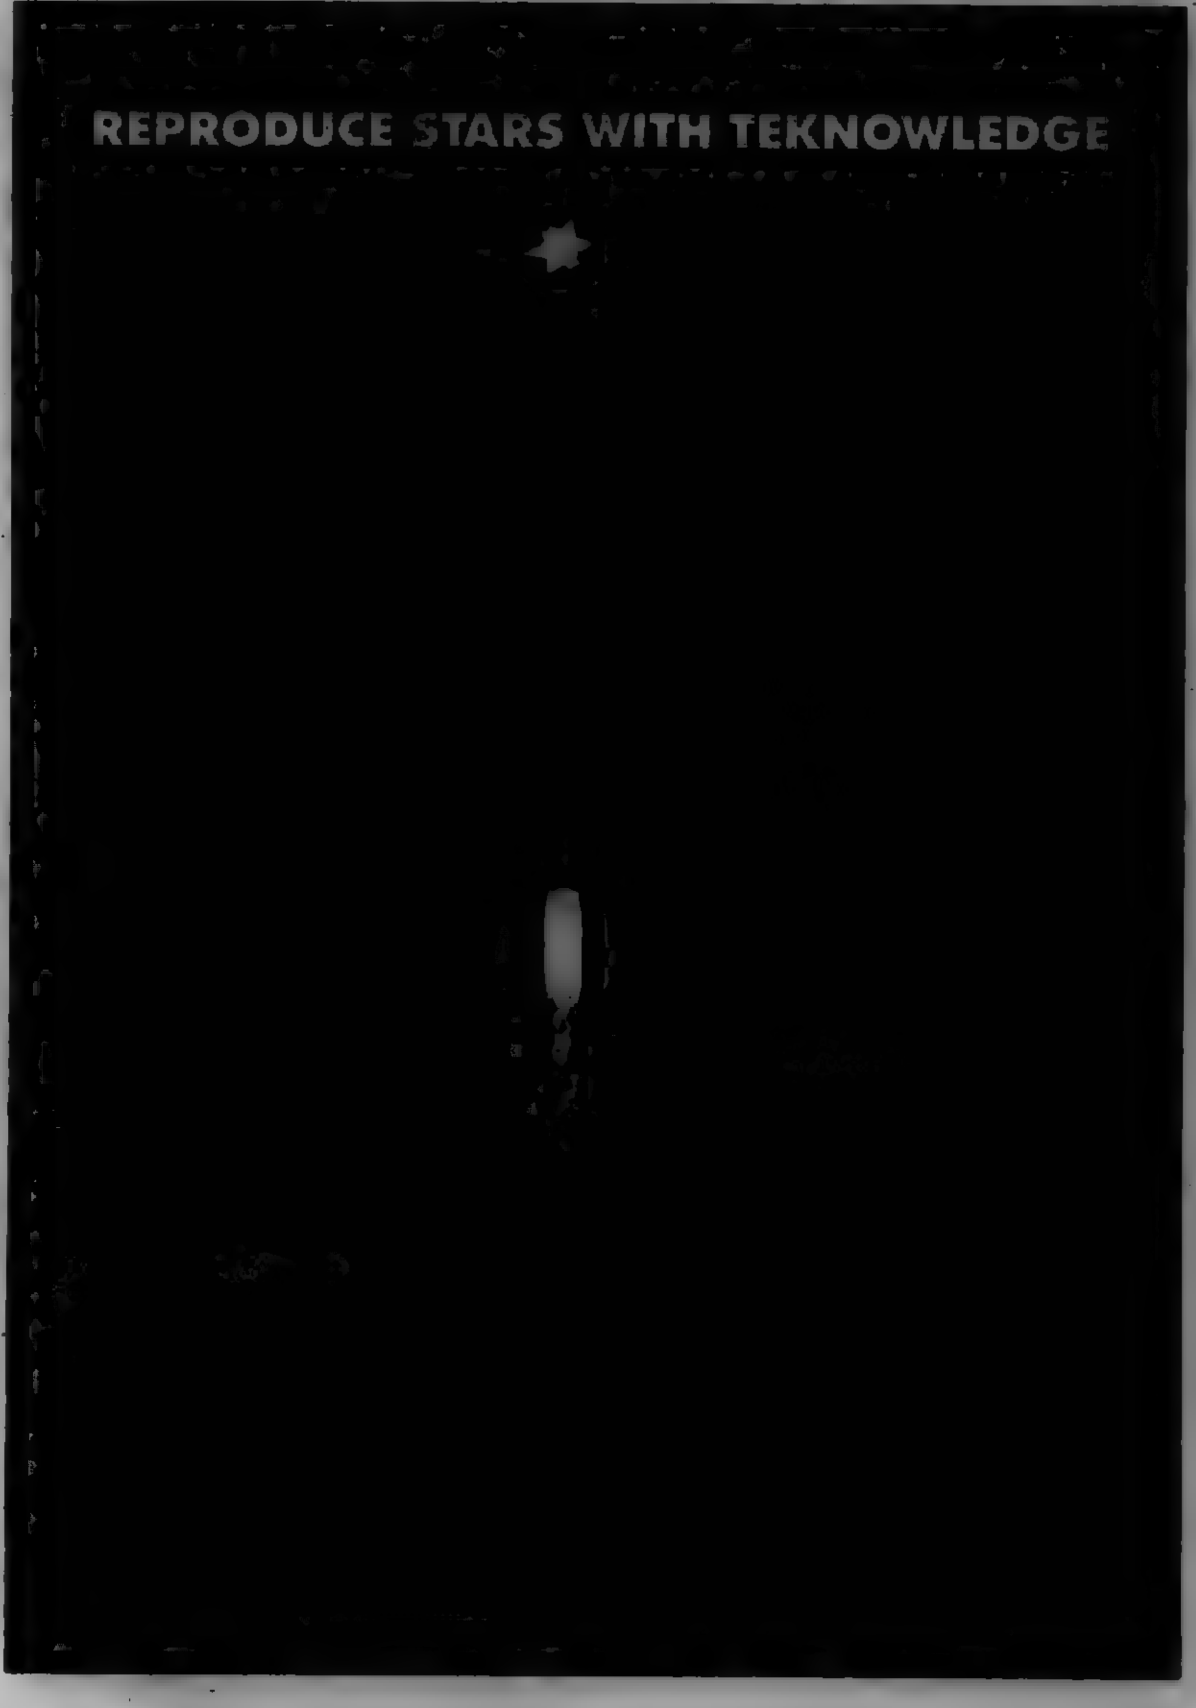
AUGUST 5-6, MINNEAPOLIS — **Unix/Xenix.** Contact: Center for Advanced Professional Education, Suite 110, 1820 E. Garry St., Santa Ana, Calif. 92705. Also being held Aug. 7-8 in Columbus, Ohio; Aug. 19-20 in Hasbrouck Heights, N.J.; Aug. 21-22 in Hartford, Conn.; Aug. 26-27 in St. Louis; and Aug. 28-29 in Philadelphia.

AUGUST 5-7, PARSIPPANY, N.J. — **TSO/ISPF.** Contact: Chubb Institute, P.O. Box 342, 8 Sylvan Way, Parsippany, N.J. 07054.

AUGUST 5-7, JACKSON HOLE, WYO. — **EDP Audit Managers Roundup.** Contact: Beth Evans, MIS Training Institute, Inc., 4 Brewster Road, Framingham, Mass. 01701.

AUGUST 5-7, BOSTON — **1985 American Society of Mechanical Engineers (ASME) International Computers in Engineering Conference and Exhibition.** Contact: ASME, 345 E. 47th St., New York, N.Y. 10017.

AUGUST 5-7, WHITE PLAINS, N.Y. — **The IBM Personal Computer.** Contact: Center for Advanced Professional Education, Suite 110, 1820 E. Garry St., Santa Ana, Calif. 92705. Also being held Aug. 7-9 in Detroit and Las Vegas; Aug. 12-14 in Milwaukee; Aug. 14-16 in Baltimore and Seattle; Aug. 19-21 in Baton Rouge, La., and St. Louis; Aug. 26-28 in Cherry Hill, N.J., and San Diego.



WE CHALLENGE ALL COMERS TO A LASER BATTLE.

DIGITAL'S NEW LN03 IS FAST AND AFFORDABLE.

Until now, laser printers fell into the category of pure science fiction for most applications. Those that could handle even a modest work load cost more than the moon and stars. And those that were affordable just couldn't keep up with a busy office.

Now there's Digital's new LN03. The most productive laser printer you can buy for less than $7000. A lot less. In fact the LN03 costs little more than half that. Yet it leaves every laser printer in its price range in the dust.

For pure speed, nothing in the price range can beat the LN03. At 8 pages per minute – or 333 cps – it can handle the volume of a busy office with ease.

It also prints true compound documents, with business graphics and text on the same page, in a single pass. And it prints on virtually any cut sheet paper, including overhead transparencies. All of which makes it ideal for almost any multi-user environment.

IT WON'T WASTE YOUR TIME.

The LN03's real edge in speed and productivity comes from its paper handling capacity. With 250 page input and output trays, the LN03 can print thick documents – pre-collated – without reloading. Try that with any other laser printer in the class and someone will end up changing the paper 10 times or more, reverse collating every page by hand, and babysitting the entire process. Which is counterproductive to the whole idea of office automation.

BETTER QUALITY THAN LETTER QUALITY.

The LN03 also gives you advantages over daisywheel and dot matrix printers, too. Because one LN03 can do the job of the two conventional printers you're probably using now.

In fact it can do *more* than *both*. For a lot less money.

For starters, it forms characters precisely with 300 x 300 dot resolution. Characters that are not only far cleaner than your dot matrix printer, but even better than your letter quality printer. You may actually have trouble telling the difference between text that's been printed on the LN03 and text that's been professionally typeset. In fact the LN03 characters are so well formed, they're recognized by Optical Character Readers with no problem at all.

To give your documents a professional appearance, the LN03 lets you pick and choose from a virtually unlimited variety of typefaces, sizes and styles. And they've all been developed especially for the LN03 by Compugraphic Corporation, the world's recognized authority on computer-generated typefaces.

Two resident typefaces give you no fewer than 16 different sizes, styles and pitches, while optional ROM cartridges let you add just about any face or font you might consider. Including your own custom designed faces. You can even down-line load your own character set or custom designed graphics fonts to print your logo, letterhead or forms. If you like, the LN03 can print sideways, down the length of the paper as well as across, to accommodate spreadsheets, compiler listings, graph captions or other special effects.

In short, the LN03 gives you a remarkable combination of print quality and versatility. So every piece you print makes a great impression.

© Digital Equipment Corporation 1985. Digital, the Digital logo and LN03 are trademarks of Digital Equipment Corporation.

FASTER AND MORE FLEXIBLE THAN DOT MATRIX.

The LN03 doesn't stop with better-than-letter-quality quality. It also gives you the advantages of dot matrix printing. And then some.

At 8 pages per minute, the LN03's speed approaches that of a line printer. The fact is, it's faster than both your dot matrix and daisywheel printer working together.

Crisp business graphics are a snap. And unlike either of your conventional printers, the LN03 can mix graphics and true letter quality on a single page. In a single pass.

Noise is a barely audible 55 dB. Far quieter than any impact printer. No louder than your copier. So the LN03 won't distract and annoy workers even in an open office.

The LN03 will even make transparencies for overhead projectors. Try that on any of your printers.

Finally, the LN03 is one of the least expensive printers you can own, with a cost-per-page of just 3.2 cents. That's a savings of 20% or more over dot matrix printing. And substantially more compared to your daisywheel printer.

So, an LN03 really makes a lot of sense. You get better economy. More flexibility. Additional capabilities. A professional look. Which makes the LN03 the most productive printer you can buy for the money.

BEST ENGINEERED MEANS ENGINEERED TO A PLAN.

The LN03, like every Digital hardware and software product, is engineered to conform to an overall computing strategy. This means our products are engineered to work together easily and expand economically. Only Digital provides you with a single, integrated computing strategy from desktop to data center.

EDITORIAL

The potential for a potent trio

Turnabout is fair play.

Two weeks ago, IBM launched a fleet of products with a string of specifications 237 pages long trailing behind it . Early last week, AT&T let loose its own product barrage, a roster of 70-plus products, featuring emulation ties into IBM systems.

Now IBM, the world's largest computer systems vendor, is about to become a part owner of a communications company second only to AT&T.

Apparently gratified with the results of its acquisition of Rolm Corp., a major player in the business communications market, IBM has adjusted its sights to accommodate a nationwide, retail scale.

Trading most of its stake in money-losing Satellite Business Systems for a minority position in profit-making MCI Communications Corp., IBM now has a significant piece of what is touted as the world's largest digital communciations network.

At worst, IBM has consolidated its losses from SBS and invested money in MCI, the biggest challenger to AT&T in the common carrier business. At best, IBM-Rolm-MCI makes a potent combination — the leader in information processing systems, a leader in communications equipment and a firm with a nationwide consumer-based network in place.

A greater concentration on communications and network offerings should be forthcoming from IBM, at the very least. More attention to consumer products, such as home videotex services — IBM currently owns one-third of Trintex — and a second wave of home computing offerings, should follow.

The phrase "integrated solution" could take on a whole new meaning. IBM will be able to make aggressive moves bundling communications capabilities with systems. If IBM takes this initiative, AT&T will only be able to watch, its hands tied by the divestiture edict from the Federal Communications Commission.

AT&T may have assumed that with its communications advantage, it had a sizable window in which it could develop a competitive position in the data processing market. That window may have just slammed shut. Instead of growing its DP products at home, AT&T may be forced to enter into the acquisition market.

As things stand now, IBM has a lot of options open to it, options that are closed off to AT&T and that add to the mounting pressure on the erstwhile telephone company. But there are some voices that have not yet been heard — the Department of Justice and the FCC, regulators who have been know more than once to spoke corporate wheels, or at least slow them down.

I-R-M — IBM hardware, Rolm interfaces, MCI transmission services — for many people will spell "trust." There are sure to be congressional hearings on antitrust issues if IBM moves to acquire all of MCI, as it did last year with Rolm Corp. Demands from AT&T that the FCC release its stronghold are certain to come in amplified volume.

Users can be certain that as the demand increases for information communications, the options will also burgeon in the short term.

DATA PAST

Five years ago

CAMBRIDGE, Mass. — Threatened by computerization, a significant number of hospital workers — including doctors, nurses and data-entry personnel — were deliberately interfering with the operation of computer-based medical information systems.

PENNSAUKEN, N.J. — The cost of service and the quality of preventive maintenance were found to be relatively unimportant to managers when compared with keeping a system available for production work and a fast response time to repair.

ARMONK, N.Y. — IBM raised lease, rental and maintenance charges on virtually all of its major hardware.

Ten years ago

NEW YORK — In regard to the U.S. government's antitrust case against IBM, one of Big Blue's attorneys had contended, "The stockholders of IBM stand on a different footing . . . than a general citizen of the country." The attorney argued that IBM had a right to inform its stockholders of its side of the case, even though both parties had been barred from discussing the case with the press and the general public.

SAN FRANCISCO — Itel Corp. had bolstered the movement of IBM 370 users back to IBM 360s with the announcement that it would supply its simulated DOS/VS environment to any IBM 360 shop that bought Itel disks, tapes or add-on memory units.

VIEWPOINT

Realizing or rationalizing a career move

THE DATA CENTER
John P. Murray

Sooner or later, a change in environment is not only in our best interests but also in the best interests of our organizations. When that time comes, we do a disservice to ourselves and to the organization if we stay.

Some people may never encounter such a circumstance. Others do but ignore it and find themselves unable to leave the organization. This is a pity. Still, others accept that they need to change and move on to the next situation.

I am not talking about the malcontents or prima donnas of our profession or those people who are prone to move every year for a few additional dollars. We all know those people — the ones who have four to six different jobs in five years. I am talking about those employees who have done well, who have made solid contributions, but who know that the time to move on has arrived.

It is usually a combination of factors, rather than a single issue, that encourages the move. Even though it may be clear that leaving is the appropri ate course, it is not always easy. Fear of the unknown is always a factor. Complacency or simple inertia are also factors. The accumulation of various "golden handcuffs" can also impede the decision to go. Such considerations should not be allowed to obscure realization that the time to move on has arrived.

The rationalization of staying, of waiting, is based upon the hope that someone up the line will retire or move on, producing an opportunity for advancement. This is usually more of a wish than a reality. It does happen, after years of waiting, that the job opens up and is given to someone outside the organization.

> *In assessing the move, reason should always prevail over emotion. It is time to go if your talents are not being used, if your contribution is not appreciated or, worse yet, if you suffer from persistent boredom.*

The appropriate time to leave should be based on sound reason and careful assessment of the circumstances associated with the decision. It should not be a reaction to some emotional issue or crisis which, upon calm reflection, will be viewed as a momentary issue or an aberration.

That does not mean that some specific incident may not be the final straw. Such an incident may be the catalyst that will finalize the decision but should not be the overriding factor. In assessing the move, reason should always prevail over emotion.

Every day brings its portion of irritation. We all have to deal with dissatisfied clients, unhappy managers and critics of one type or another. All that simply goes with the territory. Those situations will be waiting for us wherever we go. Although these day-to-day situations can be distracting and sometimes frustrating, they certainly should not be allowed to cloud reason or long-range thinking about what we want to do with our lives.

The factors that indicate that it is time to move will differ for everyone. Individual needs and personalities have a great deal to do with the decision, but there are general guidelines that can be used to begin the process of objectively thinking the issue through.

Reasons to stay

With a job that offers challenge, where your supervisors understand, appreciate and support your efforts, you have reason to remain. When you know you have given it your best, you have reason to remain.

Conversely, it is time to go if your talents are not being used, if your contribution is not appreciated or, worse yet, if you suffer from persistent boredom.

In the information processing environment, people either grow or fall behind. If you are falling behind and do nothing about it, you have no one to blame but yourself.

It may be that job opportunities are too plentiful. It may be that some of us are too willing to move on too quickly. The opportunity to do something more exciting, more challenging and more rewarding, can make *not* moving a career mistake.

Heeding his own advice, Murray has moved on. He is now director of management and information services for American Breeders Service, a DeForest, Wis., division of W. R. Grace & Co. He is also the author of Management Information Systems as a Corporate Resource.

Tracking T&M costs: Too much of a good thing

MANAGEMENT MATRIX
Walter F. Cuirle

A friend recently moved to a new job in a custom DP house. I asked the obvious question, "How do you like it so far?"

"The work is interesting, but the environment's a problem. For example, there's the copying machine just outside my office. It's not the noise from the machine [that bothers me], it's the noise from the people using it. They have this code gadget on it — you have to punch in your personal ID and a job control number to get copies.

"Twelve digits, and a different code for each project. So all day long it's 'beep . . . beep . . . beep, Arrgh!' Then people come into my office and waste my time complaining about the system before they cool off, give up and go away."

Estimating costs

Ah, technology. It's wonderful. Somewhere, still alive no doubt, is the person who invented that particular electronic thumbscrew. The alleged idea behind it is to track costs. But the real cause of these extreme measures is inefficiency.

It starts innocently enough. Estimating time and materials (T&M) is the obvious way to determine the cost of a project. But at some point along the way, somebody wants a firm accounting of how much money was actually spent on the project in terms of T&M.

Suddenly, an experienced manager's educated guesses, spot checks and estimates aren't good enough anymore. Justified figures and itemized lists for everything become the rule. Demands like this cause management to get obsessed with billing everything to some kind of control number other than "general overhead."

Soon, everybody is running around tracking time by the minute and counting photocopies. In the above case, the control number was used three to four hours per week just to fill out the required tracking forms — that's roughly 10% of the available time — and costs were billed to the clients as "administrative expenses."

Sure, you can justify every penny this way, but what happened to common sense? This method is too much of a good thing.

How did that company get into such a situation? How did all this get started? It sounds harsh, but the odds are that the end user probably demanded those itemized lists because too many projects came in past their deadlines and over their budgets, and by then there was no other supplier left.

> *DP is labor-intensive. The raw material is time. But selling a system in terms of time alone is equivalent to selling a car in kit form by the pound. It's this attitude that emphasizes cost-justification of the parts at the expense of the whole product. It leads to high overhead and $650 ashtrays.*

Had there been a reliable product at a fair price, the demands probably would not have been made; instead, two organizations got enmeshed in picking endless nits, and the whole external billing practice moved over to T&M.

Sometimes it makes sense to bill by the hour. For example, surveys, consultations and occasional training courses are all situations where the value of the product sold is clearly proportional to the time spent. But in many cases, end users don't buy time; they buy a product: a finished system, a modification, a report or analysis. In this case, the value of the product is not proportional to the time spent. Only the costs are.

Internal cost controls

DP is labor-intensive. The raw material is time. It's elusive stuff and measures like T&M are necessary internal cost controls. But selling a system in terms of time alone is equivalent to selling a car in kit form by the pound.

It's this attitude that emphasizes cost-justification of the parts at the expense of the whole product. It leads to high overhead and $650 ashtrays.

Cars and systems have this in common: it doesn't matter how you slice up the costs, the products aren't worth a thing until they run. Seeing a system as a product changes the focus from how much time is spent on it to how well that time was spent. Rather than having individual employees feeling accountable for every minute of their time, teams are challenged to meet a deadline and create a product that works. The emphasis changes to high quality and accuracy. And that is something of which you cannot have too much.

Cuirle is a senior associate with Nicholas DeMaio Associates in Bryn Mawr, Pa.

Sun
workstations:
open architecture,
open network,
open options.

Sun workstations are in the vanguard of the open rebellion against proprietary computer systems. And the closed minds that design them.

Sun Microsystems™ took an open approach to designing their complete line of general purpose workstations, fully integrating industry standards for hardware, software and data communications to create a new standard for high performance, compatible workstations.

This open attitude, backed by hundreds of other open-minded companies throughout the computer industry, gives computer buyers the freedom to incorporate state-of-the-art products from a wide variety of vendors, while protecting their existing computer investment.

The value of the open approach is self-evident: Freedom from single-vendor delays in delivering new products. Freedom from high single-vendor prices. Freedom from having to commit your company's future to any one computer company.

Sun's Open Line

Sun's entire family of workstations is built around the same powerful "standard" features, including: A Motorola 68010 microprocessor. Ethernet 10 megabit/sec. local area network (LAN). An advanced UNIX™ operating system, supporting up to 16 megabytes of virtual memory space per process. 9-slot Multibus® (IEEE-796) or 15-slot VME cardcages. High resolution, 1152 x 900 pixels, display and 66Hz non-interlaced refresh. Two RS-423 serial ports with full modem control. Mouse pointing device. Latest Sun software release including: SunWindows,™ SunCore™ graphics library, Sun Network File System, C/Fortran/Pascal compilers, a 68010 assembler. And more.

Sun keeps your options open by allowing you to configure your workstations with or without disk, as standalone units, nodes in a network, or as fileservers. Sun Workstation® options include: Main memory expansion of up to 8 megabytes. Up to 380 megabytes (formatted) disk subsystem. ¼" cartridge tape and ½" tape drive subsystems.

The open attitude built into every Sun workstation begins with an advanced version of the industry-standard UNIX operating system, supporting fast I/O to disk, multi-processing and diskless workstation operations. Fast hardware combines with the power of more than 220 UNIX utilities, plus additional tools, to create the most productive computing environment available today.

Distributed Computing Network

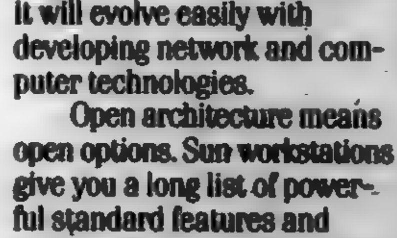
Lack of access to files stored throughout a heterogeneous network has always been the weak link in the team engineering chain. Until now.

Sun's Network File System (NFS) opens the lines of communication between multi-vendor computers, giving each user a window into a transparent information network. Via this network, large teams of professionals can cooperate on project work, accessing any specialized computing resources they need.

And, since Sun NFS is independent of any particular hardware or operating system, it will evolve easily with developing network and computer technologies.

Open architecture means open options. Sun workstations give you a long list of powerful standard features and options, built around proven industry standards. *Plus*, the benefits of the open market: an abundance of third-party companies working to open new doors for you and your company.

To find out more about Sun's open attitude and the workstations that have evolved from it, write: Sun Microsystems, Inc., 2550 Garcia Avenue, Mountain View, CA 94043. Or, simply call (800) 821-4643. In California (800) 821-4642. Our lines are open.



Open Systems for Open Minds.

SOFTWARE & SERVICES

IBM enhances QMF, tools

RYE BROOK, N.Y. — In addition to the plethora of software IBM recently introduced that merges its System/38 with its Office Systems network [CW, June 24], Big Blue announced a variety of other software products, including Release 2 of its Query Management Facility (QMF) for the DB2 data base management system under MVS.

QMF, which also operates with IBM's SQL/Data System data in VM/SP environments, reportedly features report-writing enhancements, batch invocation of QMF procedures and improvements in error-handling capabilities. QMF Release 2, available now, has a one-time charge of $6,420 or a monthly charge of $1,070.

IBM also announced Release 2 of Network Services, which supports the attachment of a customer's Systems Network Architecture (SNA) network with IBM's Information Network's remote computer services and other attached networks. Release 2 allows users to interconnect with one or more existing customer networks as well as with the Information Network's remote computing facilities. The service includes multiple parallel links and alternate paths. Applications in attached networks can communicate with applications in other attached networks or in Information Network host processors. Release 2 will be available at the end of the month, and pricing will be based on usage.

IBM also announced the following:

- DFSort Release 7.1 for sorting fixed-length records in MVS/XA environments. The release also supports OS/VS1 and MVS/370 environments and includes enhanced capabilities for processing multivolume Sort Out data sets during a Block Set sort or merge function. The product also allows users to preserve the original order of collating records during a Block Set merge. The product includes link-editing capabilities of user exit routines. The monthly license charge is $247.
- Enhancements to the System/38 Interactive Data Base Utilities. Release 7 includes predefined joined logical files that are supported by the software's Query functions. A predefined join logical file will appear to the Query user as a single-record format in a file, a spokesman said. The product also allows Data File Utility (DFU) users to display, add, delete or change records without exiting an application. Users may also enter the verify mode from any other DFU mode. The product will be available in September at a one-time charge of $3,000 or a $250 monthly charge.

Will hardware chart course for data base management?

SOFTALK
John Gallant
CW Senior Editor

Whither thou goest DBMS? Does the future of data base management lie in hardware or in software? The vendors (currently two) of data base machines — a blend of relational DBMS software and specialized hardware — are betting that the future of data management lies in hardware. But it isn't clear that users agree with them, at least not yet.

It seems certain that future generations of hardware will be better equipped to handle data management functions. Hardware's evolution may involve anything from the microcoding of key DBMS processes to the development of a data base machine architecture that is radically different from current data base machine designs.

For today, the path to success for data base machines is strewn with provisos. Data base machine technology will be embraced *provided* the following:

- Users want to move to a relational DBMS and are willing to invest the effort necessary to migrate existing production — not just ad hoc or information center-type — applications to such a system.
- Users in mainstream commercial shops are facing the storage constraints data base machines are intended to relieve. The data base machine vendors admit their current users have application-specific needs, such as compiling and manipulating massive amounts of seismic data. But they point to the fact that users are now spending more for storage systems than they are for computing power.
- Users are convinced that specialized data base hardware is the answer to the performance problems associated with relational DBMS technology.
- Users are looking to tie together heterogeneous processors through a central data base machine — a capability data base machine vendors

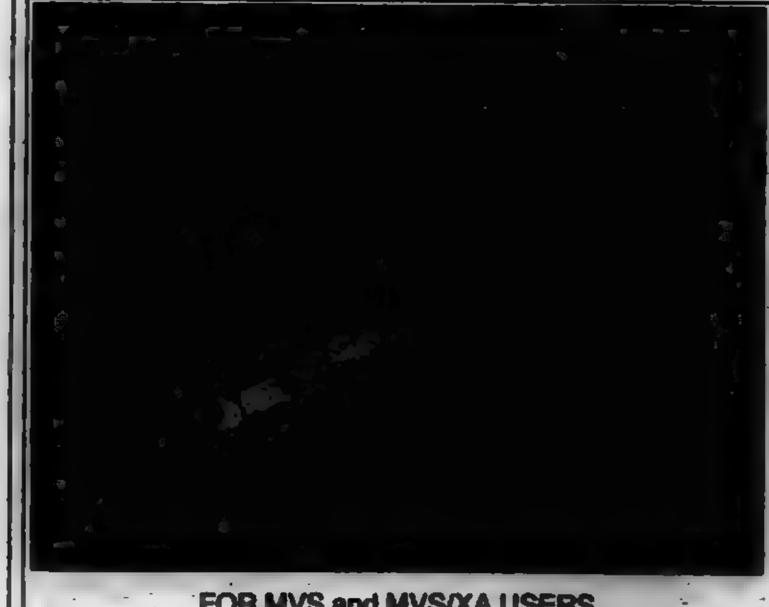
INSIDE

Systems Software/36

International Data Corp. (IDC), the Framingham, Mass.-based market research firm, predicts that the fastest growing segment of the software and services industry for the remainder of this decade will be microcomputer software. That market is expected to grow at a compound annual rate of more than 50% until at least 1990. In contrast, IDC said, the remote computing services market is expected to decrease at a compound annual rate of 5% for the same period, due in large measure to "plummeting hardware costs."



FOR MVS and MVS/XA USERS

Break the I/O Bottleneck

PMO — Reduces disk busy, channel busy and CPU utilization to dramatically improve response time and system turnaround!

CPO — Gain virtual storage constraint relief and improve response time automatically!

Quick-Fetch — Eliminates master catalog searches, reduces response time and CPU overhead automatically!

Software gaining momentum in DP battle of the budget

By Randall Litchfield
Special to CW

ANALYSIS

If the computer industry had a junior partner, it was traditionally software. From the perspectives of both revenue and status, software took a backseat to the might of mainframes, the glamour of minis and the sheer sex appeal of microcomputers.

By all accounts, that is quickly changing. A decade ago, $1 out of every $10 spent on data processing went to software. The split is now 50-50 and is predicted to swing wildly in software's favor — to a ratio of about 4-1 — by 1990. By then, software in North America is expected to be a $50 billion industry.

To a much greater degree than hardware, software is revolutionizing the concept of the corporation itself. In a recent James Martin seminar, the reputed wizard of information processing claimed that developments in software are nothing less than a management revolution in the making that is bent on flattening the corporate pyramid.

These issues were the setting for the latest Computer World Round Table discussion between senior managers of 11 prominent software companies. Since the companies represented ranged from large mainframe-oriented multinationals such as Management Science America, Inc. (MSA) to smaller micro-based companies such as Basic Software Group of Vancouver, B.C., a wide spectrum of viewpoints was presented. But basic to every argument was the dire need to move swiftly in an industry that is absolutely merciless to stragglers.

One thing the participants agreed on was that software companies are starting to look like service bureaus. Mike Walczak, general manager at MSA Canada Ltd., said, "In the old days, software was a simple 64K bytes that the user could load. But with 70% to 80% of our time being spent on customer hand-holding and education, we are quickly moving from a software industry to a service industry."

Much of the hand-holding stems from the fact that software companies are penetrating departments other than traditional MIS stomping grounds. There have been several inroads, including such end-user-oriented software as fourth-generation languages and decision support systems.

Vehicle to carry software into '90s

Viewed as the vehicle that will carry software into the 1990s, fourth-generation languages are expected to move into fairly broad use by the end of the decade. Michael Potter, president of Cognos, said that 12% to 14% of IBM installations have fourth-generation language products today and most will be using them by the end of the decade.

But even defining a fourth-generation language in an industry as lacking in definition as the software industry has been is a problem. "The only consistent definition of [a fourth-generation language] seems to be that it isn't Cobol, or that it improves user productivity in the eyes of the vendor," said Harvey Gordon, vice-president of marketing for Mathematics Products Group Canada Ltd.

Whether fourth-generation languages could actually replace Cobol, however, is as hotly debated among vendors as it is among MIS professionals. Avery Burdett, director of operations for Systemhouse Ltd., saw them only as supplements to Cobol, adding that there are simply some things that can't be done with fourth-generation languages.

Walczak, on the other hand, made the blunt statement that there is probably some genius program developer in a garage banging the last nail into Cobol's coffin.

The micro has had perhaps the greatest impact on end-user computing and in creating the political struggle going on within many MIS departments. "We've been conditioned to address the MIS guy, but since the [personal computer] has entered the workplace, we are now making inroads into other departments," said Larry Lloyd, general manager at Infobuild, Inc.

Not so many years ago, software vendors wouldn't dare approach the end user for fear of MIS wrath. But with predictions that as many as two million people will be using decision support tools by next year, selling to the end user is practically unavoidable.

"Our approach is that when we know that we are going to sell a major piece of software, a committee is formed of MIS and end users," said Comshare, Inc.'s president, Derek Price. "You can't afford to collect a lot of 'no's' in the selling cycle, so you have to sell all the levels making sure that the package satisfies all the needs."

The other factor is that MIS often doesn't have the signing authority for some of the larger software pur-

Litchfield is the editor of Computer World Canada, *a sister publication of* Computerworld *based in Mississauga, Ontario.*

"In one day, we'll show you how to manage your company's information needs for years to come."

James Martin
Author, Lecturer and
Chairman, JMA, Inc.

Information Engineering can revolutionize the way your company processes and distributes information. A one-day consultation with James Martin Associates can show you how. It can help your people develop the information programs they need. So they can make important decisions correctly. It can be the first step toward improving response time, making data bases flexible and integrating personal computers.

It's the first step that can help you develop a comprehensive information strategy that reaches into every aspect of your organization. We can provide a total overall insight that unites the functions of data processing departments and the business needs of end-users.

The Information Engineering solution.

We have learned that information management is essentially an engineering problem. The proper methodology and framework assure a system that works for all who depend upon information. For this reason, we carefully examine the requirements of everyone from top management to mid-level supervisors to programmers. We then place powerful, easy-to-use software tools in the hands of those who need to transform data into useful information.

And, most significantly, you don't have to wait. Instead of platforms and proposals, we give you tools that are available . . . now.

Gary Slack, Exec. V.P. (l), Jason Martin (r), Bob Mylie (c), and their associates can help you put information engineering tools to work in your company today.

Information Engineering also links and centralizes data bases for optimal efficiency so that you derive maximum potential from your current technology.

In fact, our whole approach makes the most of the systems you currently have. You don't have to start from scratch.

The information strategy approach: All the information you need when you need it.

Information Engineering involves clear-headed logistics so that information moves precisely where it should. Rather than having rooms of programmers, writing in cumbersome languages like COBOL or Fortran, you can have end-users creating their own applications with new fourth-generation software tools. Your hardware assumes the burdensome task of generating code. And your users obtain information in a fraction of the previous time.

Our one-day seminar shows you how.

We'll demonstrate the information engineering approach to you at a one-day seminar, conducted at your location for up to fifty people. If you decide to proceed with a consulting agreement, there is no cost or obligation. Just an opportunity to learn from our experts.

For more information, call us at (703) 435-7292. Or write us at the address below. One day could be crucial in managing information for years to come.

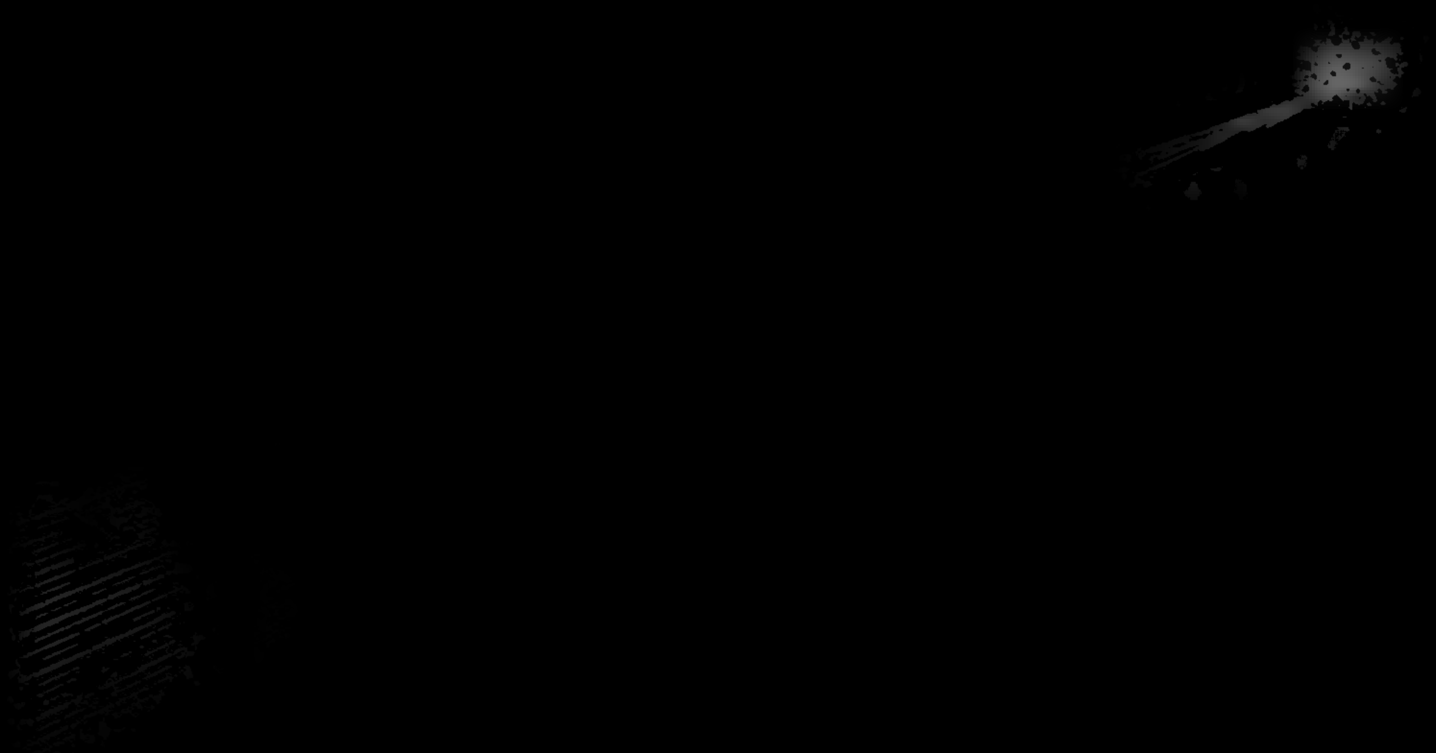
LASER WARS



SHIFT

from page 34

chases that can range to $500,000 or more. As Sandy McNair, vice-president of marketing for Minicom Data Corp., said, "We find that the best decisions come from the bottom up, where the president waits for his people to say what the best route is."

But if the president is to make an intelligent final decision, it increasingly involves getting his hands dirty in something top management has so far avoided like the plague. "Senior executives are getting left behind by computers and need to get their own [personal computers] in order to understand what the revolution is all about," Lloyd said.

Another issue is portability. Software vendors are observing that the most obvious trend is that customers are not scratching their heads over what kind of machine to use for a specific function, as long as it networks.

Though AT&T's Unix operating system has been touted as a solution, there are the obstacles of a lack of applications software and customers to be overcome. It's a catch-22 situation — vendors won't develop the applications without a solid customer base to sell to, and customers won't switch to Unix hardware until they see a good crop of software to harvest.

Conversion may be answer

The answer may be conversion. According to Dennis Kukulsky, president of Human Computing Resources Corp., "A criticism of Unix has been the lack of application software, but there is a lot out there to be converted. The problem is that to code in C is very difficult and expensive. This is a prime case [in which] we need those fourth-generation productivity tools to get Unix applications on the market."

Still, there was the general notion that Unix would steam ahead and eventually prevail as an operating system, since heavy hitters such as Sperry Corp. and NCR Corp. were standardizing their high-end hardware around it. But that still leaves the question of which variation of Unix will prevail.

Artificial intelligence is another issue with which practically every software firm is trying to come to grips. Though not firmly entrenched in the commercial arena yet, most predictions tout AI as the future direction of the software industry itself.

Ian MacLachlan, vice-president of Logicware, Inc., predicts that AI will gradually integrate into the traditional software worlds of tools and applications. A major component will be expert systems — the practice of embodying human expertise in software.

Ted Comfoltey, president of Basic Software Group, Inc., said his company has been taking a hard look at expert systems, expecting that they could have a strong impact on the perpetual problem of user interface.

"We don't expect generic expert systems to be of much use. Solutions become user dependent, and systems will have to be custom-made to provide them," he said.

But lest software developers comfort themselves with the idea that AI will be the last hurdle for a while, Paul Bassett, vice-president of research for Netron, Inc., shared a sobering observation: "With parallel processing just around the corner, we could all be living in a fool's paradise. Software vendors haven't been thinking about this and the profound changes it could bring about."

SYSTEMS SOFTWARE

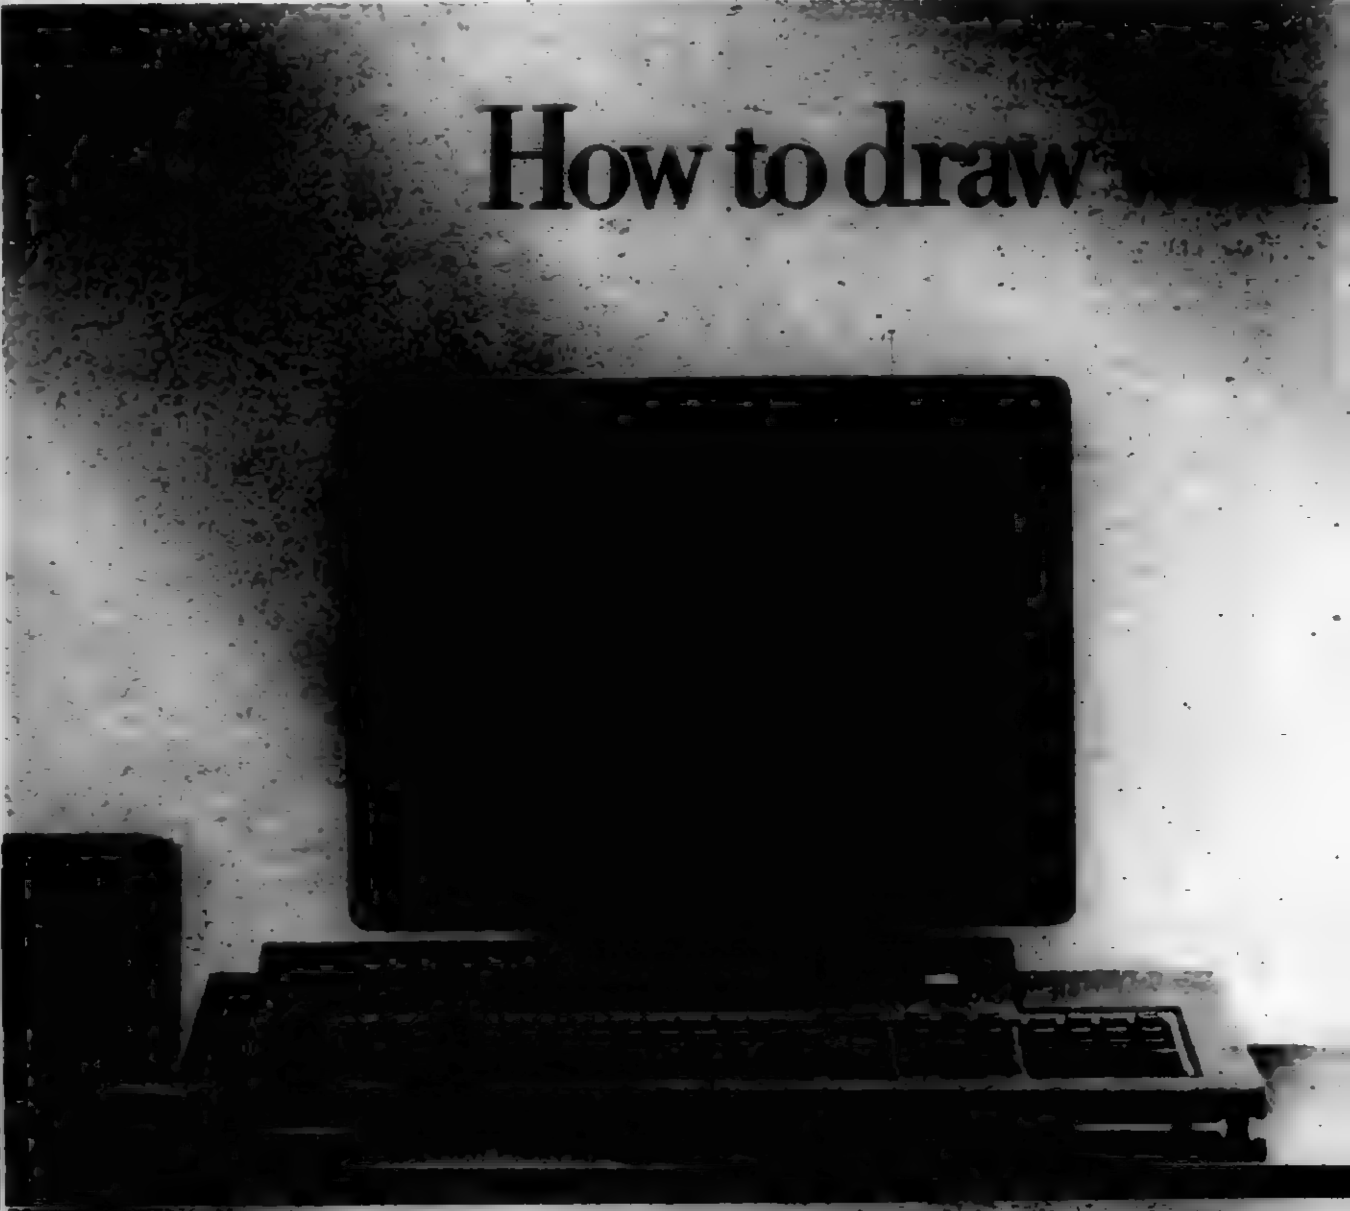
■ **Optimation, Inc. has announced a Tektronix, Inc. 4010 emulator for Hewlett-Packard Co. HP 200 series microcomputers running Pascal 2.1 or 3.0.**

The emulator permits either full screen display or windowing onto the full T4010 screen size, a spokesman said. The package provides output capability to any HP-supported printer or plotter for hard-copy display.

The T4010 is offered as an add-on feature to the company's HP 2623 emulator running under its compatibility mode. This allows files and HP text and graphics to be transferred between the HP 300 and the HP 1000, HP 3000 and HP 9000 processors.

The T4010 costs $550.

Optimation, 81 Faxon Road, Atherton, Calif. 94025.



How to draw

IBM 3270 PC/G

If your department gets repeated requests for presentation graphics, IBM has [illegible] answer.

[illegible] to a Smart Desk equipped with a [illegible] Personal Computer/G or GX.

The 3270 PC/G or GX gives you easy access to host-based graphics and data. And, with IBM's new Graphics Editor and Picture Plotting software, you can work offline locally to draw your own high-resolution charts, diagrams and free-form sketches.

You can actually create or edit directly on the screen, using either a mouse or a tablet. What's more, you can select from a wide range of colors, lines and type styles to arrive at a presentation that works the best for you.

If you want to create foils for a business meeting, just zoom and scroll to position the graphics you want to reproduce. Then use IBM's Picture Plotting to plot the results. You also get a handy graphics index, so you can file and retrieve pictures for future presentations.

But there's more to the 3270 PC/G or GX than just pretty pictures. Each system can display up to four host graphics

SOFTWARE & SERVICES

IBM from page 33

■ Enhancements to the Subsystem Data Analyzer menu design.

■ Availability of the Cross System Product/Application Development Version 1 and Cross System Product/Application Execution Version 1 under IBM's VSE/AF Version 2. The Cross System Products also now support CICS/VS, MVS/TSO, SSX/VSE and VM/SP CMS. The former product carries a one-time charge of $5,300 or a $198 monthly charge. The latter has a $4,000 one-time charge or a $150 monthly charge.

■ Data Facility Data Set Services Version 2.1 for XA/370 or IBM 370 mode. Version 2.1 now includes a function to support Dasd conversion, Dasd space management, logical data set processing and expanded data set selection criteria. The monthly charge for the product is $215.

■ The System/36 Cryptographic Facility. The product is compatible with the IBM 4700 Finance Communications Subsystem and includes capabilities for encryption and decryption of data allowing the user to create, protect and organize cryptographic keys used by a system.

Other encryption operations include capabilities for generating personal identification numbers for financial institutions and message authentication codes to determine if data has been tampered with. The product is available immediately for a one-time charge of $5,000 or a $250 monthly charge.

■ Teleprocessing Network Simulator Version 2.3 for MVS, MVS/XA and VM/SP. The product was designed to test on-line applications programs, control programs and networks.

Enhancements include an Advanced Communications Function/Vtam application program, said to eliminate the need for a communications controller in some testing environments.

Version 2.3 will automatically be sent to current users. The product is available immediately.

■ Release 8 of Device Support Facilities for MVS and MVS/XA. It also supports IBM 3380 models running VSE/AF and runs as a stand-alone version.

Functions for the program are necessary for initialization, surface maintenance and error recovery of supported fixed-block architectures and count-key data Dasds. The product also includes the ability to default the I/O devices to the console. Release 8 will be available this month.

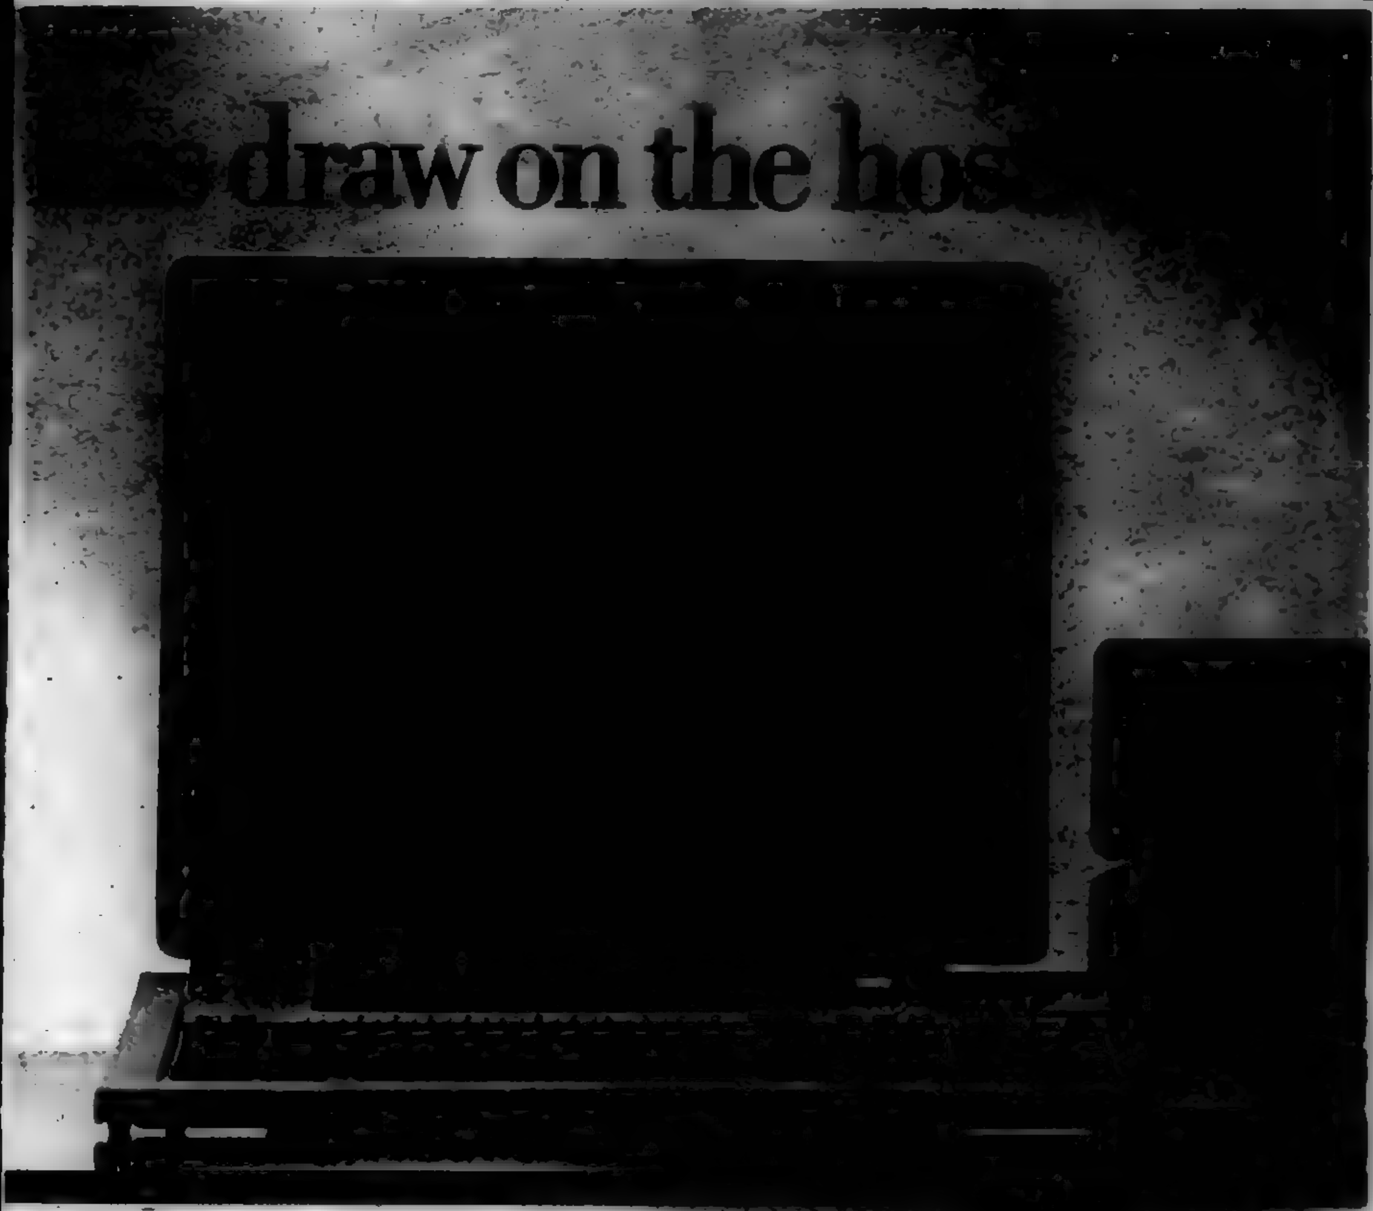
■ Version 2 of the System/36-to-System/38 Conversion Aid that now supports functions added to the System/36 System Support Program Release 3. The product will be available this month and carries a one-time charge of $600.

> ”
>
> *Other encryption operations include generating personal identification numbers.*

■ Non-SNA Interconnection Licensed Program Releases 2 and 3 for the IBM 3725 communications controller. The product is an enhancement to IBM's networking program and allows the 3725 to select RJE devices and network job-entry subsystems.

The facilities can transport bisynchronous communications data through the SNA network and share the use of the Synchronous Data Link Control network links. The product now includes support for the IBM Displaywriter in the IBM 2780 mode, as well as support of VM/Pass-Through-to-VM/Pass-Through connections.

Release 2, which will be available in October, operates under MVS/XA, MVS, OS/VS1 and VSE/AF with ACF/NCP Version 2. Release 3 will be available in December and operates under MVS/XA and MVS with ACF/NCP Version 3. The versions have a one-time charge of $1,606 or a $465 monthly charge.



IBM 3270 PC/GX

sessions, one PC session and two notepads concurrently. And each keyboard has a variety of ergonomic features, including special function keys and a numeric keypad for increased productivity.

Sit yourself behind a Smart Desk equipped with an IBM 3270 PC/G or GX, and draw your own conclusions. We think you'll agree it's a graphic example of the state of the art.

DBMS

from page 33

tout as one of the most important assets of the technology.

- Users are willing to purchase a data base machine from one of today's relatively unknown vendors, rather than simply wait for their current hardware supplier to offer a similar machine. That may take some time. Computer manufacturers are more than happy to push software DBMS that chew up more and more hardware resources.
- Users are convinced that data base machines can solve their productivity problems. Productivity is seen as a primary concern and one that outweighs such concerns as data storage constraints and the linkage of disparate processors.

Those are weighty conditions. Thus, it is no surprise that pundits parry over the fate of data base machines. Scott Smith, vice-president of Gartner Group, Inc., said he believes the data base machine market is in a nascent stage and could grow rapidly. Michael Geran, vice-president in research with E. F. Hutton & Co., said he thinks there is no significant interest in data base machines.

Los Gatos, Calif.-based Britton-Lee, Inc. seems to be doing fairly well in the mini arena. The company has installed about 500 of its Intelligent Database Machines (IDM) and predicts roughly a 65% revenue growth for the upcoming fiscal year.

But the mini world is light-years away from the IBM-dominated mainframe world, where only Los Angeles-based Teradata Corp. has thus far ventured. The company has installed about a dozen of its DBC/1012 data base machines and it hopes to ship at least twice that many in its upcoming fiscal year.

In addition to the provisos mentioned above, however, Teradata faces what may prove to be an insurmountable obstacle. The fledgling company is going against IBM in what William Inmon, a director at Coopers & Lybrand in Denver, called the heart of Big Blue's operations.

"The problem facing Teradata is not the technical aspects of its product, not the fact that it is a data base machine," Inmon said. "The real problem is the marketplace it is trying to penetrate. It is trying to compete against the IBM [30 series] processors."

Ronald Ross, editor of the "Data Base Newsletter" published by Boston-based Data Base Research Group, emphasized Inmon's point. "There is a lot of skepticism, and it isn't about the machine's capabilities," Ross said. "Most users in the IBM world are not accustomed to a multiple hardware vendor configuration. That is not so true in the mini world. But the data base machine could, conceivably, obsolete the mainframe. It could act as a data management node with midsize processors and micros attached. IBM has demonstrated the capacity to blow out any competitor like that."

For the time being, the attitude toward data base machines appears to be one of "wait and see." Will the conditions impeding the adoption of data base machines be met? Time will tell. It will be interesting to see how the data base machine vendors, each with its own target audience, philosophy and architecture, fare in a market that remains skeptical.

Teradata Corp.'s DBC/1012 data base machine

IBM announces videotex tools

NEW YORK — IBM has announced Videotex/370, which allows an IBM mainframe to serve as a videotex host, and PC/Videotex-Graphic Artist Facility (VTXGraf), for enabling an IBM Personal Computer to create color graphics for the host system.

Videotex/370 can run with other applications in MVS/CICS environments. The Videotex/370 product was developed by Videodial, Inc., in conjunction with IBM, and is being sold under a nonexclusive licensing agreement. VTXGraf was developed by IBM and incorporates a program from Cableshare, Inc. under an exclusive licensing agreement.

The PC/Videotex program enables an IBM Personal Computer to create pages of videotex information combining color graphics and text.

Videotex/370 is priced at $75,000 and is scheduled for early 1986 availability. VTXGraf is priced at $2,500 and will be available in September.

IBM also announced two videotex services from the IBM Information Network. Videotex/370 Application Development Service enables subscribers to develop videotex applications on the network. Users are billed for on-line time. Videotex/370 Host Attach Service allows subscribers to use the Information Network to deliver their videotex service to end users. It has a fixed monthly charge.

IBM is located at 900 King St., Rye Brook, N.Y. 10573.

MICROCOMPUTERS

Hyperdrive boosts speed of Mac business software

By Kathleen Sullivan
CW West Coast Bureau

LAKE TAHOE, Calif. — Homestar, a property management firm based in this resort community, depends on its Apple Computer, Inc. Macintosh computer to provide services to its clients. Until a couple of months ago, however, Homestar president Steve Kubby was disappointed in the computer's performance.

"It was not the serious business machine I thought it was," said Kubby, who described the Macintosh as a slow, cumbersome system that could not keep up with his secretary's rapid-fire typing.

But the situation has changed dramatically since Homestar bought Hyperdrive, an internal 10M-byte hard disk drive for the Macintosh, designed by Cambridge, Mass.-based General Computer Co. Although the transition was not a smooth one — it took three installations to get a trouble-free unit — Kubby is an enthusiastic user.

"I now have a business machine that makes no apologies to anyone," he said. The Hyperdrive, now running "like a well-tuned clock," has transformed the Macintosh, he said. "It's such a treat to zoom down a list with data popping up and not have to wait for the computer to catch up with you."

Kubby's remarks were echoed by other users, who praised the Hyperdrive's speed and ease of use. "It's a very impressive product," said Joe Garappolo, manager of Macintosh software development for New York-based Peat, Marwick, Mitchell & Co. "Its speed is not approached by any other hard disk drive."

Garappolo said the accounting firm, a beta test site, discovered problems in an earlier release. But a second unit has performed without a hitch. Garappolo said the firm had done an excellent job designing the Hyperdrive's system software, which allows users to partition the drive into 22 drawers.

Rick Richardson, national director of microcomputer technology for Arthur Young & Co., agreed, saying that the Hy-

See DRIVE page 51

IBM micro, videodisk aid in training

By Edward Warner
CW Staff

WARREN, Mich. — When a company newsletter comes out, most employees are likely to flip through its gray pages and give it a quick heave-ho. A pioneering program scheduled to get under way last month at General Motors Corp.'s Technical Center here, however, hopes to use laser disk-based video displays to present company news more colorfully.

The GM program, being developed by its Electronic Data Systems Corp. (EDS) subsidiary, relies on Natick, Mass.-based Visage, Inc.'s marriage of the IBM Personal Computer and a laser videodisk player.

Twenty of the Visage machines, called V:Stations, will be placed at various locations around the headquarters of GM's Chevrolet/Pontiac Canada division. They will be used to "publish" a video company newsletter with which employees can interact.

IBM the buyer's choice as micros go blue collar

SMALL TALK
Edward Warner
CW Senior Writer

With the office already awash in personal computers, micros will next work their magic on the factory floor. The year 1985 could mark the start of a revolution in automation similar to that wrought in offices in 1981 when IBM first introduced its 16-bit wunderkind.

Consider the evidence:

- IBM's year-old 5531, a Personal Computer in a hardened case for factories, outsells IBM's Personal Computer AT, according to Peter Cohen, a factory automation analyst with International Data Corp. He added that a large number of nonhardened Personal Computers also find their way into the factory, a place no longer usually filled with flying sparks and smoky haze.
- At the recent Robots 9 show in Detroit, one of the hottest items was not an advance in robotics but an enhancement of the old standby of factory automation, the programmable controller. The enhancement was the incorporation of a personal computer into a programmable controller — truly a PC within a PC.
- The use of computer-aided design software for personal computers is spreading. Though not a new idea — Autodesk, Inc. pioneered the market with its Autodesk software — personal computer CAD products are proliferating. The boom is being spurred by advances in personal computer technology in general and the Personal Computer AT in particular. A 63% growth rate is predicted for the personal computer CAD industry, which will hit the $1 billion mark in software and systems revenue by 1990, according to a recent market research report from Technology and Business Communications, Inc.
- The adaptation — by users — of Lotus Development Corp.'s 1-2-3 spreadsheet for on-the-spot analysis of factory

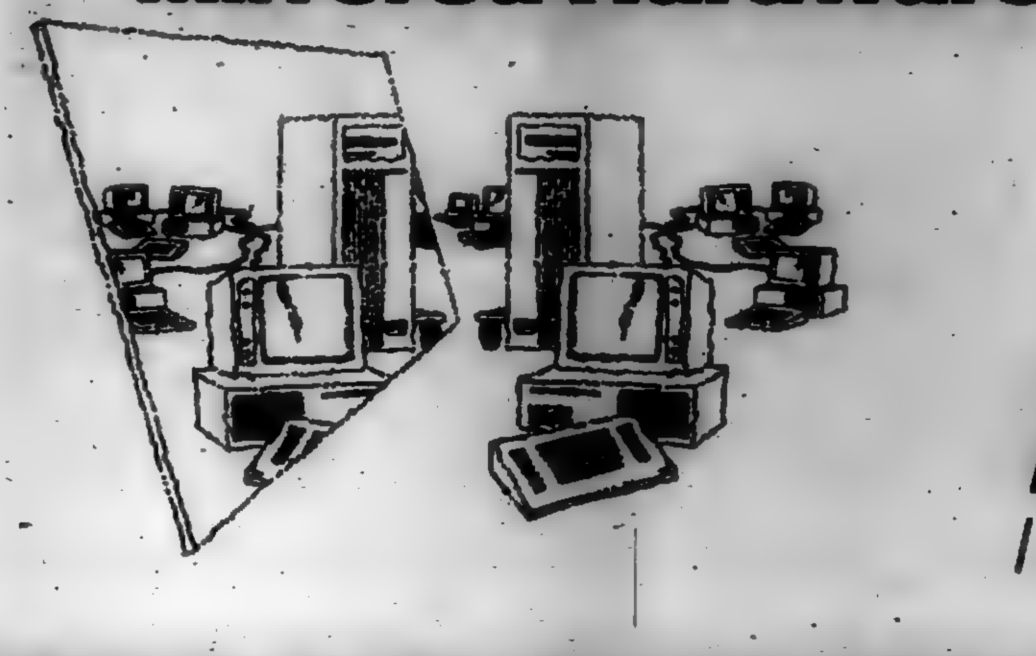
Mirrored Hardware



Unmatched System Reliability

A mirror image of your data. Just what you need to ensure yourself of reliable data reliably transmitted and reliably received. NESTAR's engineers ensure the reliability of your system—and your data—by designing into its products such features as tape backup for hard disk files, automatic checksums on transmitted data, full duplexing, and mirroring of file servers.

Banks trade and transfer billions of dollars every day. They demand a network that stores, transfers, and retrieves data reliably. Banks trade and transfer their billions of dollars every day over NESTAR networks.

NESTAR

HP unwraps IBM micro-compatible disk, tape products

By Jeffry Beeler
CW West Coast Bureau

CUPERTINO, Calif. — Hewlett-Packard Co. today entered the IBM Personal Computer-compatible storage business with the introduction of two hard-disk units and a ¼-in. streaming tape module.

To its existing 10M-byte 9154A and 20M-byte 9134H Winchester disk models HP has added the necessary interface cards, cable and software utilities to enable the two products to support the Personal Computer, Personal Computer XT and AT and Compaq Computer Corp. Portable Computer, the company said.

For the first time, HP is also now offering a 60M-byte tape backup system that reportedly works with either the company's Touchscreen family of micros or with its IBM and IBM-compatible equivalents. Unlike the 9154A and 9134H hard-disk units, which were available with the Touchscreen before they were adapted to provide IBM compatibility, the 9142A streaming tape module is new.

Product strategy revived

In functionally enhancing and reintroducing its Winchester offerings, HP is reviving a product strategy that reportedly was used to good advantage on the output side of its micro peripheral line.

Although its low-end plotters and printers were originally intended to be sold primarily to its own customers, HP later broadened the output devices' target audience to include users of IBM Personal Computers as well. Now, the company is again diversifying the intended market for its microcomputer peripherals — but this time at the mass storage end, according to John Boose, a marketing manager with HP's Greeley, Colo., division.

All three of the IBM-compatible additions to HP's disk and tape product line cost about $200 less than the comparable units previously sold with the Touchscreen family.

The 20M-byte 9134H provides twice the capacity and 20% greater throughput than a Personal Computer XT mass storage upgrade for $100 less, Boose said.

Backup for the 9134H and its 10M-byte sister product is supplied by the 9142A streaming tape unit, which copies hard-disk files at 2M byte/min, Boose said.

The 10M-byte 9154A, meanwhile, is aimed at users who have exhausted the capacity of their floppy disk-based IBM Personal Computers and need to upgrade to a Winchester disk system.

Available immediately for customer delivery, the 9154A, 9134H and 9142A cost $1,698, $2,390 and $1,690, respectively.

HP is headquartered at 3000 Hanover St., Palo Alto, Calif. 94304.

Kodak announces plain-paper printing: the lowest-cost retrieval you can buy.

Presenting the Kodak IMT-350 microimage terminal and the Kodak Starvue II reader-printer, the first image-management work stations from Kodak with the plus of plain-paper printing. And unmatched retrieval savings.

Both units offer high-speed front delivery of positive prints from either positive or negative film. Under-2¢-a-print economy. Improved work flow. Labor and materials savings. And the means to increase your productivity up to *50%*.

These new, advanced work stations bring operator and operations closer together. All controls are within a 12-inch reach, so there's less time spent getting to the information, more time with it.

Add up all the economics...lower search-and-print costs, reduced labor and materials costs...factor in a level of productivity up to twice that of similar plain-paper retrieval units...and you'll get unbeatable bottom-line retrieval savings.

For high-volume, fully integrated technology interfaced with your computer or the Kodak KAR-4400 or KAR-2200 information systems, look into the IMT-350 microimage terminal. For high-speed, semiautomatic printing capability, choose the Starvue II reader-printer. Either way, you're getting maximum output at the lowest cost available today.

Let us prove it to you. Write to us:

IBM micros get modem

SUNNYVALE, Calif. — Cermetek Microelectronics, Inc. has introduced a 300/1,200 bit/sec. modem card for the IBM Personal Computer, Personal Computer XT and Personal Computer AT that sells for $199.

The Info-Mate 1200TPC modem reportedly permits the microcomputer to autodial voice or data calls either directly from the keyboard or from a 200-name disk-based phone directory, Cermetek said. Autologon strings for data base services also may be stored. QC-Modem, a windowing communications software package, is included with the modem, the vendor said.

The product is compatible with Hayes Microcomputer Products, Inc. modems and will operate with most popular communications software packages, such as Microstuf, Inc.'s Crosstalk, Highland Press' PC-Talk II and Lotus Development Corp.'s Symphony, according to the vendor. It supports Xon-Xoff, Paced, Xmodem and Xmodem CRC file transfer protocols. Other features include autoanswer and automatic selection of speed and parity.

More information is available from Cermetek at 1308 Borregas Ave., Sunnyvale, Calif. 94089.

Lotus to offer Spotlight tool

CAMBRIDGE, Mass. — Lotus Development Corp. has announced that it will market Spotlight, a desktop manager for the IBM Personal Computer, at a price of $75.

Spotlight, which Lotus acquired through the purchase of Software Arts, Inc., reportedly includes a notepad, on-screen calculator, phone book, appointment book, index card file and a DOS filer.

The accessories are said to appear as windows, which can be called up while an application is running or by themselves.

Lotus is headquartered at 55 Cambridge Pkwy., Cambridge, Mass. 02142.

AST Research introduces memory board for IBM micro

IRVINE, Calif. — An IBM Personal Computer memory board that provides up to 2M bytes of expanded memory, and reportedly supports and improves upon the Lotus/Intel Expanded Memory Specification (EMS), has been introduced by AST Research, Inc.

According to the vendor, the Rampage! board requires less software overhead and offers a more flexible paging scheme than does the EMS specification, developed by Lotus Development Corp. and Intel Corp. AST said the board was created from a superset of the EMS specification.

Rather than allocate a single 64K-byte window in high memory (the area from 640K bytes to 1M byte) for paging, as does the standard EMS, the AST board reportedly permits applications software to exchange data into all of the available 16K-byte blocks in high memory. This feature doubles the potential paging area, the vendor said.

Rampage! also is said to offer split memory addressing, under which the board's memory is added to the Personal Computer's existing random-access memory (RAM) until the 640K-byte level is reached. As many as four Rampage! boards reportedly can be installed to bring a Personal Computer's memory up to 8M bytes beyond the 640K-byte threshold.

A Rampage! software driver, included with the board, is said to operate transparently to the user.

Rampage! is bundled with AST's Superpak utility software, which includes Superdrive, a RAM disk simulator. The board will be available in July for $595 with 256K bytes of memory.

For more information, AST Research is located at 2121 Alton Ave., Irvine, Calif. 92714.

IBM unveils enhanced micro Basic Compiler

WHITE PLAINS, N.Y. — IBM has announced an enhanced version of its Basic Compiler for its Personal Computer.

Personal Computer Basic Compiler 2.0 reportedly supports IBM's Topview operating environment and PC Network. It includes such program control structures as named subroutines, user-defined multiline functions, separately compiled Basic subprograms and the ability to branch to alphanumeric labels.

The enhanced version also permits larger programs to be compiled, with instruction space separated from data space. It supports large numeric dynamic arrays, with the maximum index for any dimension of a numeric array now at 32,767, IBM said.

Other features are said to include expanded access to IBM's PC-DOS, support for redirection of standard I/O, addition of an input editor and new metacommands.

The product costs $395. Users of the IBM Personal Computer Basic Compiler may upgrade for $195.

IBM Information Systems Group's National Accounts Division is located at 1133 Westchester Ave., White Plains, N.Y. 10604.

Micro-MRP introduces two modules

FOSTER CITY, Calif. — Micro-MRP, Inc. has introduced two modules for use with its MAX, The Production Manager material requirements planning (MRP) software for the IBM Personal Computer.

One of the modules, Just-in-Time (JIT), reportedly supports the just-in-time style of MRP pioneered by Japanese firms. JIT permits a manufacturer to reduce the amount of raw materials that must be stored on site, cutting inventory costs.

The Micro-MRP JIT module features a system of prioritization that gives production priority to those orders that are needed and available, according to the vendor.

It also provides load and queue detail and summary reporting to concentrate attention at the work center level and displays exceptions (orders that are needed and not available or available but not needed). Also included is a manual override feature that allows managers to permit exceptions.

The Data Collection Module reportedly prints automatic audit trails and tracks shop floor completions, scraps and order splits. According to the vendor, it also interfaces with most data collection devices for personal computers.

The JIT module sells for $4,000. The Data Collection Module costs $2,000.

Micro-MRP is located at 1065 E. Hillsdale Blvd., Foster City, Calif. 94404.

this integrated office program in one
you'll already know three more

Only one doesn't have to.

The one and only IRMA™. From DCA.

But you can't blame all the others for trying. With over 100,000 boards installed in just three years, IRMA has become the standard micro-to-mainframe link in IBM 3270 environments.

No wonder. For the user it offers the ability to get information out of the mainframe and into his PC quickly and easily without tedious and time-consuming data re-entry. And for the DP manager it offers a reliable and easy-to-use technology that can be used throughout the system.

Of all the 3270 micro-to-mainframe links you can buy, only one isn't trying to imitate IRMA.

But what have we been doing while everyone has been busy copying us?

Just extending the power of IRMA, with host-based software like IRMAlink FT/TSO™, FT/CMS™ and FT/3270™, a new IBM file transfer package—all compatible with the IBM PC, XT and AT.

Find out more. Just call 1-800-241-IRMA. Or Telex 261375 DCA UR.

dca
Digital Communications Associates, Inc.

IRMA and IRMAlink are trademarks of Digital Communications Associates, Inc. DCA is a registered trademark of Digital Communications Associates, Inc. IBM is a registered trademark of International Business Corporation.

Do you know the future of micro-to-mainframe communications? IRMA does.

Introducing IRMAX.™

IRMAX incorporates the Distributed Function Terminal technology that will become the standard in IBM 3270 networks in the future. From the people who've established today's standard in 3270 micro-to-mainframe communications—the IRMA™ family of products.

Despite its use of breakthrough technology, IRMAX is designed so that you can comfortably upgrade your IBM network, one controller at a time.

We're also introducing several IRMAX products at once so that you can better match their features with the different needs and skills of your staff. IRMAX Graphics™ gives you full GDDM program symbol graphics functionality. IRMAX Multi-Sessions™ delivers as many as four host sessions and several

notepads while simultaneously running a PC DOS session. IRMAX Graphics and IRMAX Multi-Sessions are available in board-form, but if you're currently an IRMA user, there's also a simple conversion kit. And IRMAX file transfer software products make it possible to upload and download quickly in a number of different operating environments.

It's true not everybody can use all the capabilities of IRMAX today. But like you, we're counting on a lot of tomorrows.

For more information, call toll-free 1-800-241-IRMA. Or telex 261375 DCA UR.

Terminal emulation tools announced for IBM micro

ST. LOUIS — Polygon Associates, Inc. has introduced its Poly-Com/220 terminal emulation and file transfer software, an addition to the company's family of terminal emulation and file transfer programs.

The Poly-Com/220 package reportedly allows the IBM Personal Computer to be used as a Digital Equipment Corp. VT52, VT102 or VT220 terminal and allows file transfers between the IBM Personal Computer and another IBM Personal Computer or a DEC minicomputer.

Poly-Com/220 resides in the microcomputer's memory and can be accessed by a hot key.

All VT100 and VT200 keys are implemented, as are DEC's international 8-bit character set and the Compose key, according to Polygon Associates.

The system is backward compatible with previous Poly-Com packages. Users of previous versions can upgrade to the Poly-Com/220 version for $52.

The package costs $200, the vendor said.

Polygon Associates is located at 1024 Executive Pkwy., St. Louis, Mo. 63141.

SOFTWARE

■ **Software Services of Tampa, Inc. has introduced its Lease Vs. Purchase Analyzer software for the IBM Personal Computer.**

The software is said to be a menu-driven program that performs an analysis of the cheapest method of equipment acquisition. The analysis can be performed on a present value, after-tax basis. Before-tax and raw dollar amounts can also be shown.

The software reportedly also performs purchase conversion and lease buy-out analyses of an existing lease. This would permit users to determine whether it would be less costly to exercise a purchase option than it would be to remain on a lease, the vendor said.

The software is priced at $196 and requires at least 128K bytes of memory and one diskette drive.

Software Services of Tampa, Suite 1001, 4410 Ranchwood Lane, Tampa, Fla. 33624.

■ **National Information Systems, Inc. has announced that its VUE project management system is available for the IBM Personal Computer XT and AT and compatibles under Microsoft Corp.'s MS-DOS operating system.**

VUE uses the critical-path method to track up to 3,000 activities per project. Ninety-nine related projects can be scheduled and tracked, the vendor said.

Fourteen reports are said to be standard, including printer graphics output of bar charts and network diagrams.

The package costs $895.

National Information Systems, Suite 130, 20370 Town Center Lane, Cupertino, Calif. 95014.

■ **Breakthrough Software Corp. has announced enhancement of its Time Line project management software for the IBM Personal Computer line.**

Time Line 2.0 reportedly includes support for an unlimited number of resources and costs for each project. A resource may be defined as either a person or a resource pool, and managers may allocate all or part of the resource to a particular task. Time Line is said to monitor resource allocation continually and to advise the user of overscheduling.

Time Line 2.0 also is said to define fixed, unit or variable costs for each cost category. The number of digits for an individual cost has now risen to eight, allowing a single cost up to $100 million.

Also added are reporting features, including an earned value analysis report and two table reports that summarize either task or resource information. Cost reports can tally either total dollar amounts or man hours, the vendor said.

Time Line 2.0 is priced at $495. Registered users may upgrade for $75.

Breakthrough Software, 505 San Marino Drive, Novato, Calif. 94947.

■ **Control Data Corp. has released its Cybernet-Express Project Manager software system for the IBM Personal Computer XT and compatibles that is said to help engineers plan, control and track projects with as many as 10,000 separate activities.**

The system provides critical-path scheduling, resource leveling, management reporting and graphics capabilities, the vendor said. It integrates Primavera Systems, Inc.'s Project Planner and its Primavision plotter interface with the Cybernet-Express series of engineering applications systems.

The Project Manager costs $4,450.

Control Data, 8100 34th Ave. S., Minneapolis, Minn. 55440.

■ **Taxcalc Software, Inc. has introduced a tax planning template for use with software such as Lotus Development Corp.'s 1-2-3 on the IBM Personal Computer.**

The software, Corporate Tax Plan-

Come talk to us at NCC '85

IBM, Hewlett-Packard, Control Data, Digital, AVX and companies like them—including 49 of the top 50 U.S. electronics companies—have subsidiaries in Britain. Indeed, Britain is by far the preferred location for U.S. business in Europe.

The Invest in Britain Bureau and Peat, Marwick, Mitchell & Co. are holding a BRIEFING ON BRITAIN in Chicago on July 16, 1985, during the National Computer Conference. The Briefing is specifically designed for executives whose companies are considering expanding in Europe. It will be given by David Trippier MP, British industry minister; John Alvey of British Telecom; and Mark Arvin of Peat Marwick. There will be ample opportunity for questions and private discussion.

To register, contact Edith Jaffe, British Consulate-General, 845 Third Avenue, New York, N.Y. 10022. Telephone (212) 593-2258. Or come talk to us during NCC at the Invest in Britain Bureau and Scottish Development Agency booth, number 1231/1232/1233.

VISAGE

from page 41

More than 6,000 employees will be able to use the system's color touch-screen monitor to call up short video segments on GM's latest corporate news or to add their vote to a weekly opinion poll. Their responses to that poll will be stored on each V:Station's hard disk, combined with those of all respondents and displayed in a graph on the system during the next week.

GM is one of the first to use the V:Station, introduced last November. Its use is also unique; most other early users have put the machines to work providing interactive employee training.

A user of the more traditional stripe is Gould, Inc.'s Programmable Controller Division in Andover, Mass., which is using V:Stations to develop training for users of Gould's Numeric Controllers (NC), one of the simpler forms of factory automation equipment.

Gould is using 10 V:S 2006 machines — each of which comes with 512K bytes of memory, a 5¼-in. diskette drive, 10M-byte hard disk and touch-screen monitor — to write instructional software for three training courses that it plans to market this fall to buyers of its Gould 584 programmable controller. The courses, each on three videodisks, will include one for factory electricians on programmable controller maintenance, one for plant supervisors, offering an overview of the 584, and one for OEM customers.

Rely on interaction

Like any application for the V:Station series, the Gould courses will rely on the interaction of the videodisk player and instructional software running on the system's Personal Computer. That interaction is brought about by the videodisk controller board, inserted into the Personal Computer, and the instructional software, or courseware, authored by the user.

To author its courseware, Gould is using Troy, Mich.-based Sandy Corp.'s System for Authoring Microtraining (SAM), a package that, according to Richard Michaels, Sandy account director, is entirely menu driven and requires no programming skills. Michaels explained that the courseware for the V:Stations begins life as a flow chart, or storyboard, which maps out the structure the course is to follow.

The storyboard is made up of segments, each combining video in the form of a still picture or a film clip with an overlay of text. Each segment is produced separately, but when they are combined, "it turns into a runtime package," Michaels said. Depending on the student's answers to the course's occasional quizzes, the courseware will skip ahead one or several events or jump back several events for a review.

'Satisfies everything we need'

Richard Bell, director of training and development for the Gould NC division, said SAM "satisfies everything we need to use it for," but added that authoring the courseware was only part of the job. The six who worked on the course for Gould 584 training, he noted, will have spent nearly six months on the course when it premiers Sept. 1.

The best feature of the Visage machines, according to Bell, is that they are based on the Personal Computer, a machine that can be used for other office automation tasks. As he put it, "a customer doesn't have to go out and plop down $12,000 to buy a lot of equipment that is just for training."

Though the V:Stations include a Personal Computer, they do not include a videodisk player. Visage said that almost any videodisk player, including those of Hitachi America, Ltd. and Pioneer Electronics, will interface with it.

Bell said there have been no hardware or software problems with the V:Stations and that Gould has received "incredible on-site support," from Visage. "Anything we've asked them to do," he said, "they've been willing to do."

At GM, the V:Stations cum newsletters are being programmed to run a series of eight 4- to 5-min. GM "featurettes," which users can choose via a touch-screen monitor, according to Mike Allie, an EDS account manager handling the GM project.

Allie said the feature of the V:Stations he liked most was that "their learning curve [was] very small." This ease of use, he explained, "insulated the developer from getting involved in the little details." It also sped development time. The machines were acquired in March and the first prototype of the electronic newsletter was ready in one month, he pointed out.

Continued from page 48

ner, reportedly offers users the ability to compare the minimum tax, the alternative tax on capital gains and credits and special deductions.

The software is said to interface with other applications including Lotus' Visicalc IV and Microsoft's Multiplan.

Corporate Tax Planner costs $150.

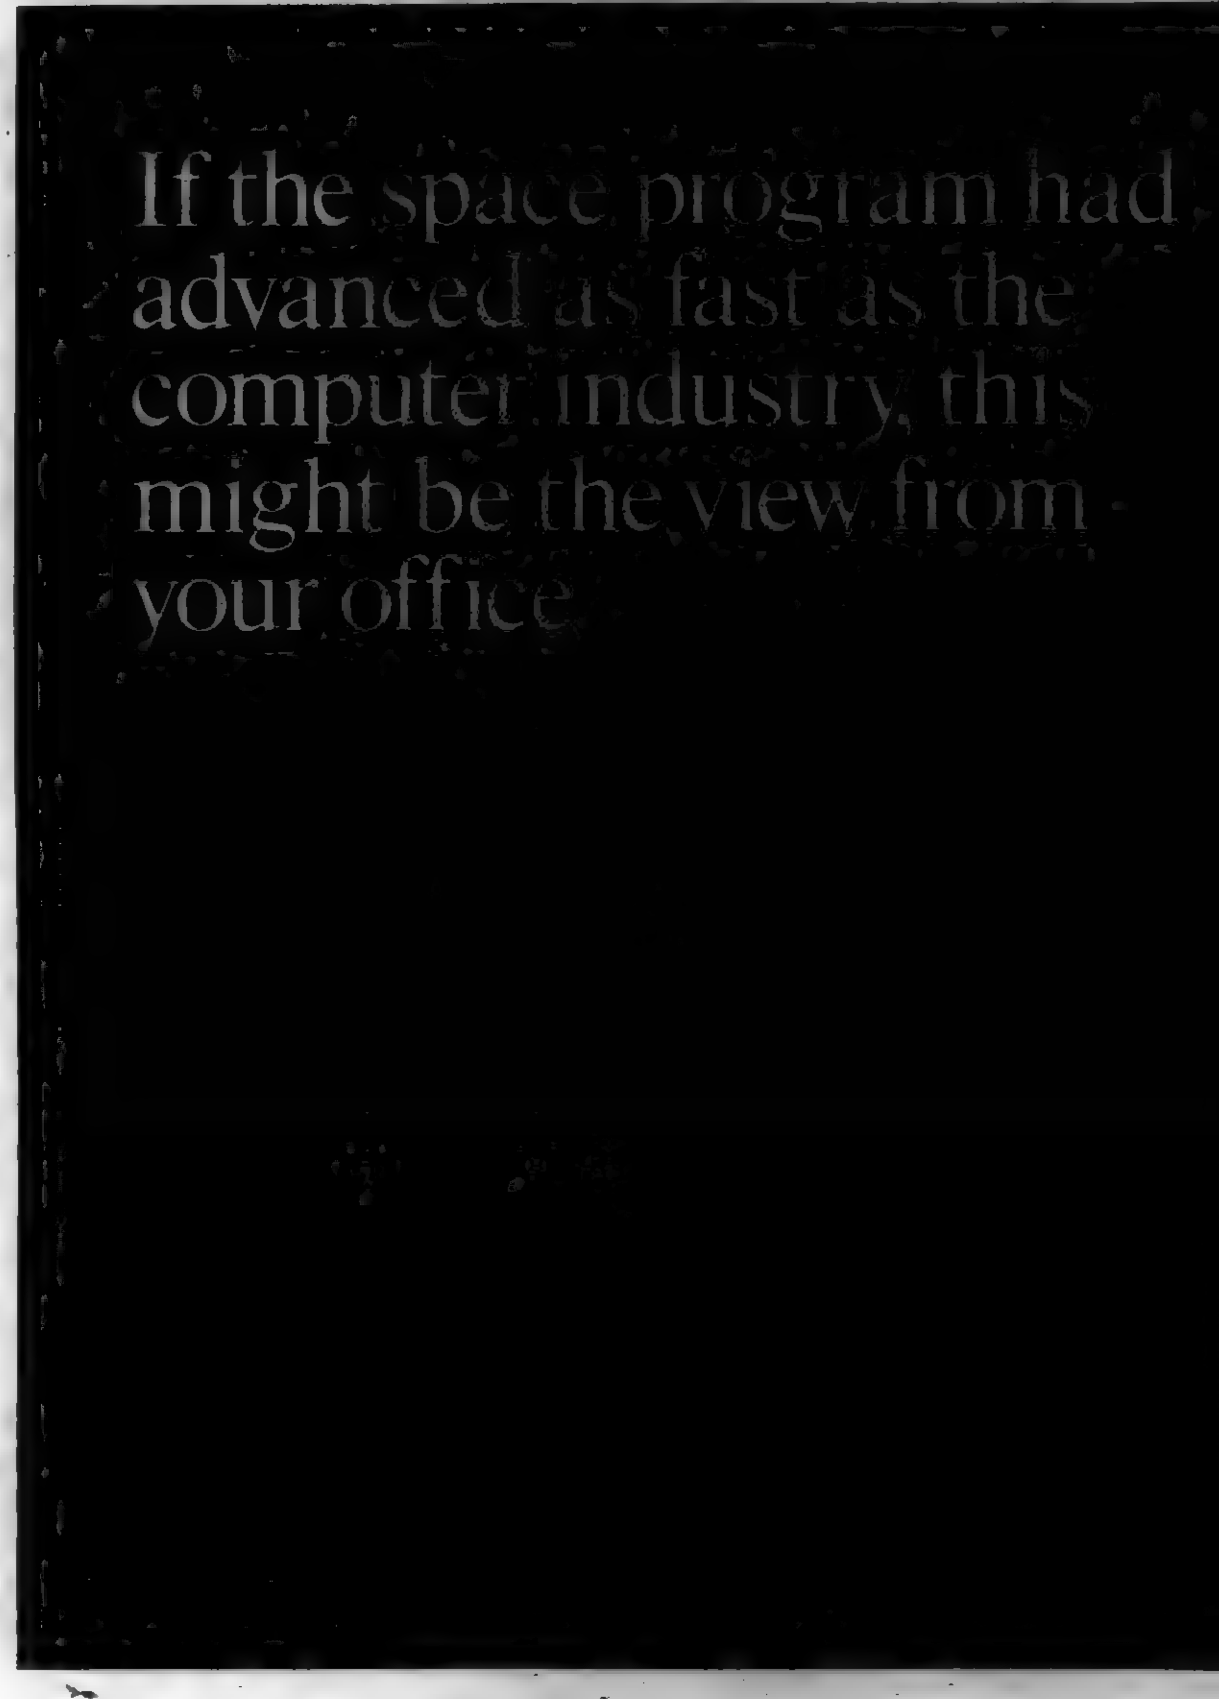
Taxcalc Software, 4210 W. Vickery Blvd., Fort Worth, Texas 76107.

■ **Software Studios, Inc. has announced enhancement of its PC-Desk desktop manager software for the IBM Personal Computer.**

PC-Desk II reportedly offers memory partitioning, which permits two programs to be active at the same time. With a single command, users may switch between programs. Also included is a cut-and-paste command.

The package is available free, but a $49 registration fee reportedly entitles the user to telephone support and free updates of the software.

Software Studios, 8516 Sugarbush, Annandale, Va. 22003.



If the space program had advanced as fast as the computer industry, this might be the view from your office.

FACTORY

from page 41

floor data is increasing. Shop floor managers are using 1-2-3 because they want to make corrections as needed, noted Sandra Gunn, vice-president and general manager of Lotus' Engineering and Scientific Products division. "By the time they get the information back from their mainframe or from their MRP [material requirements planning] system, it's too late," she said.

Ultimately, that is what drives the factory floor boom in personal computing — a need for quick response. Ironically, at a time when talk runs high about getting factory floor devices to communicate with the corporate mainframe, the micro is coming to be seen as the solution to the mainframe's weak points, such as high cost, slow response time, and data center tyranny.

For those who believe the factory should be completely tied to the corporate mainframe, William Rankin, a Deere & Co. manager for computer-aided manufacturing, argued that this is an outdated concern. "One of the problems we've had in the past," he said, "is that data didn't stay in the plant."

Like the personal computer revolution in the office, the onslaught of the blue-collar personal computer will be fueled by software. In the short run, new applications will include such products as the integration of graphics with MRP packages. In fact, Micro-MRP, Inc. promises such a package by the year's end.

Also on the horizon, according to Micro-MRP President David Meyer, is software that integrates MRP with CAD, allowing the mainframe to download a robot's operation program, for example, to the shop floor personal computer.

With the spread of personal computing to the factory come concerns much like those presented when a horde of micros reared their screens in the office. There is one difference: Most factory users are buying only one brand of computer — IBM.

Another positive sign is the imminent arrival of full specifications for General Motors Corp.'s Manufacturing Automation Protocol (MAP), which would permit a factorywide local-area network that handles products from diverse manufacturers. With IBM supporting MAP and factory users demanding more and more Personal Computers, the final irony may be that the boom in factory personal computing is in truly blue-collar computers.

DRIVE

from page 41

perdrive was easier to use than other hard disk drives. Its software, which conforms to the Macintosh user interface, is said to allow users to create and name a file drawer, add a password or encrypt a file by using pull-down menus, dialog boxes and a mouse.

The Hyperdrive reportedly allocates memory dynamically. Since the software partitions the 10M bytes of storage as files and drawers are created or deleted, users do not have to decide ahead of time how to divide up the memory, Richardson said.

Partitioning also speeds up the performance of the Macintosh operating system's Finder software, users said. Users can mount the file drawers to be used in a work session on the Macintosh desktop, while other drawers are hidden.

"The advantage of partitioning is that the Finder doesn't have to look through a vast reservoir of 10M bytes of memory," said Jay Friedland, vice-president of operations for Turning Point Software, Inc., a Watertown, Mass., software firm. On a 10M-byte hard disk drive, he said, users would wait a long time for the Finder to come back, he said.

Garappolo and Richardson, who are evaluating a backup utility for Hyperdrive, gave the program high marks. The utility allows users to back up individual files or drawers, or perform "incremental backups," which back up the files in a selected drawer that have been created or modified since the last backup.

Turns Mac into 'a real computer'

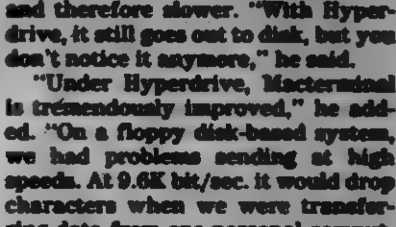
According to Friedland, Hyperdrive "turns the Macintosh into a real computer." It improves the performance of Macintosh applications software, most of which is disk based and therefore slower. "With Hyperdrive, it still goes out to disk, but you don't notice it anymore," he said.

"Under Hyperdrive, Macterminal is tremendously improved," he added. "On a floppy disk-based system, we had problems sending at high speeds. At 9.6K bit/sec. it would drop characters when we were transferring data from one personal computer to another. We don't have problems like that anymore."

Garappolo voiced a concern about the long-term effects of the drive on the Macintosh, noting that the installation added a second power supply, a fan and a piggyback circuit board.

"I wish Apple would come out and say, 'It's a great product, and it won't harm the internals of the Macintosh' or say, 'Stay away from Hyperdrive, it hurts the Mac's internals,' " he said.

Garappolo also worried about the effect of future Apple upgrades to the Macintosh, pointing out that there was no assurance Hyperdrive would be able to interface with an enhanced Macintosh. Nevertheless, he is sold on the drive. "I have real concerns," he said. "But at the same time I love using Hyperdrive."



"Overqualified, underqualified or computer casualty?"

In One Week Software International Will Announce A Masterpiece In Mainframe Applications Software.

Here, in these pages, in one short week, we will announce a mainframe applications software product so well thought out, so richly functional, so laden with features, so simple to use, it will be simply impossible to ignore.

Watch.

SOFTWARE INTERNATIONAL

A Call For MAINFRAME SOFTWARE STANDARDS

When mainframe software vendors conform to standards of design, development and support, users benefit. A modular design and intelligent architecture shorten learning time and lower the cost inherent in adopting hardware and applications changes.

By Robert Healy

Despite its general success, the applications software industry is not as effective or efficient as it could be in building new products or supporting existing ones. The reason is because the industry lacks standards for designing and supporting mainframe applications software.

Today's software offerings are typically updated by patching — adding layer upon layer of corrective or enhancement code to application logic built years ago. Perhaps that is the only way to change old monolithic programs. But the resulting code is convoluted and nearly impossible to maintain. Patching leaves the user burdened with an outdated product.

In many cases, the term "standards" is confused with an exhaustive list of product features. Often vendors operate on the assumption that what is best for them is best for their users.

Setting standards will enhance productivity industrywide. Here are 15 possible industry standards. Ten deal with product design and five with support and service.

Product design standards

Standard 1: Applications software product design must utilize an intelligent architecture, one that isolates key system components in a modular fashion to accommodate changes in operating environments and technologies.

The major building block of a software product is its architecture. An intelligent architecture is completely modular in nature. Its intelligence is characterized by its ability to adapt to change.

What constitutes an intelligent architecture? Consider the following components:

- Applications interface to data bases controlled by a service module external to the application logic that translates or reconverts logical data views.

- Applications interface to data bases controlled by a service module external to the application logic that translates or reconverts logical data views.

- Applications interface to teleprocessing monitors handled by a service module,
- Dictionaries containing screen literals, error messages, Help text, definitions of data base elements and editing rules to permit easy maintenance, user modification and multilingual formats.
- An open architecture permitting easy access to other applications and utilities. As a result, applications products can be integrated with other proprietary applications.

To date, most applications software is partially modular in structure and has an unintelligent architecture. The major benefit of an intelligent architecture is that it insulates the user against dislocations caused by change. For example, a company can change its software environment or respond to new hardware technology by replacing one module in the applications software product rather than having to replace it entirely.

A user can move to a new data base management system or teleprocessing environment without impacting applications and without a major conversion effort. Additionally, generic functionality reduces the user's learning hurdle by creating an environment of similar products. Users can tailor applications without modifying code because of flexible data and editing rules. Productivity is enhanced by individually tailored screens, messages and Help text.

Using an intelligent architecture allows software suppliers to support and enhance the product more easily. The savings can be passed on to the user in the form of better service and support.

Standard 2: Applications software must be flexible so that it appears to be designed for each user's individual needs.

Some vendors offer applications software that might be described as "what you see is what you get." Although these hard-coded packages may meet a buyer's basic needs, they are highly inflexible. Advances in both fourth-generation languages and applications development tools have led to flexible systems that can be tailored to meet users' specific needs. These types of systems are becoming more popular and more affordable.

Software capabilities are required that allow for system tailoring, such as the ability to generate specific reports, to change and build new input and inquiry screens, to define new systems functions and to tailor error messages and Help text.

Software systems must incorporate the latest technological improvements — for example, ergonomically designed screens featuring color and visuals, cursor movement and simplified navigation between systems.

Benefits of flexibility

Increased flexibility and custom-tailored applications software give the user individualized solutions. Product lifetime is greatly increased because the applications software can respond to change. Productivity is increased because the software can better meet each user's needs.

Flexibility allows for customization, which reduces the burden on the DP department by helping to make users more self-sufficient. In effect, increased flexibility and tailoring applications software gives the user a customized solution at an affordable price.

Standard 3: Applications software must provide the ability for users to combine or chain-process events to reflect their business practices. This is event-oriented software.

When examining how business is transacted, it is immediately apparent that current applications software is structured for DP methodologies rather than day-to-day business practices. Event-oriented software takes traditional business activities and performs information processing for these activities in a logical, sequenced fashion.

With event-oriented applications software, information created by paying a bill or making a sale is transparently utilized. Appropriate software tools update data stored in accounts payable and general ledger systems simultaneously.

By incorporating advances in data handling alternatives, data dictionaries can be expanded to include information about the data stored along with the relationship between one piece of information and another.

The logical relationships that comprise event-oriented systems reduce the number of steps required to automate a business. Thus, productivity is increased and the potential for manual errors decreased. The relationship between users and software is transformed from software-driven to user-driven.

Not long ago, *PC* Magazine called MDBS III "The most complete and flexible data base management system available for microcomputers." That's a powerful statement. But then, MDBS III is an amazingly powerful software package. So powerful, in fact, that it lets you build mainframe-quality application systems on your micro or mini. MDBS III is not for beginners. It's for application developers with large data bases or complex data interrelationships who want to define data base structures in the most natural way—without resorting to redundancy or artificial constructs. It's for professionals who can appreciate its extensive data security and integrity features, transaction logging, ad hoc query and report writing capability and its ability to serve multiple simultaneous users. And if you want the power and the glory that only the world's most advanced data management system can provide, MDBS III is for you. For information on MDBS III and our professional consulting services, write or call Micro Data Base Systems, Inc., MDBS/Application Development Products, 85 West Algonquin Road, Suite 400, Arlington Heights, IL 60005. (800) 323-3629, or (312) 981-9200. **MDBS III. ABSOLUTE POWER.**

WE'LL GIVE YOU THE POWER.

YOU TAKE THE GLORY.

Standard 4: Applications software must be a working partner in the information center. The system's architecture must allow for easy interface and integration with other products and inquiry tools.

As information needs increase in size and complexity, so does the trend for companies to establish information centers that act as clearinghouses for information processing. Activities handled by an information center include recommending software applications products for usefulness, training new users in information technology and coordinating key data processing activities.

Applications software products will no longer be directed to an individual audience. Rather, they will be required to run in an information center environment.

Critical factors in information center compatibility include the following:

- Use of file access and DBMS facilities in their native mode. Query and report generation tools used by an information center must have direct access to applications data.
- Integrated and sound applications data base structures.
- Real-time update of applications data bases where possible.

Software as partner

Offering hooks to tie in other information center software products will make applications software more usable. Less custom coding will be necessary. The applications software will be implemented more easily and quickly.

These factors will help to alleviate today's near-universal backlog of applications development projects.

Applications software as a partner in the information center will increase the quality of information available to users. It will stop being an obstacle to new technology, as it has been in the past.

Standard 5: Applications software must be designed in such a manner that common functions or tasks can be provided through a single, shared software module.

There are many functions common to most applications. For example, navigation, Help text, security and inquiry tools all could and should be shared.

Users would benefit most from sharing these functions because they would eliminate the frustration of having to perform repetitious tasks. Needlessly struggling for information that exists in another application also would be eliminated.

The ability to share these common functions has come to be known as generic functionality.

Eliminating the segregation of these functions and the boundaries that their division creates greatly increases productivity. Shared generic functionality in applications products provides several advantages. Access to multiple applications is made easier. Training and learning cycles are shortened. The complexity of the system is reduced. Finally, there is less redundancy in systems development.

Standard 6: Applications software must support the continuing trend toward expansion of functionality to networked personal computers.

> ”
>
> ***The ultimate goal is to bring applications closer to the user and transfer some of the processing responsibility from the MIS group to the actual user.***

The personal computer has revolutionized the concepts of software development, systems design and the relationship between terminals and mainframes.

The partnership between mainframes and personal computers is now represented primarily in micro-to-mainframe links. These links serve principally as vehicles for data transfer. Data analysis is usually handled on the personal computer. Micro-to-mainframe links signal the beginning of an important change. The way in which large and small computers interrelate and relate to the user is evolving.

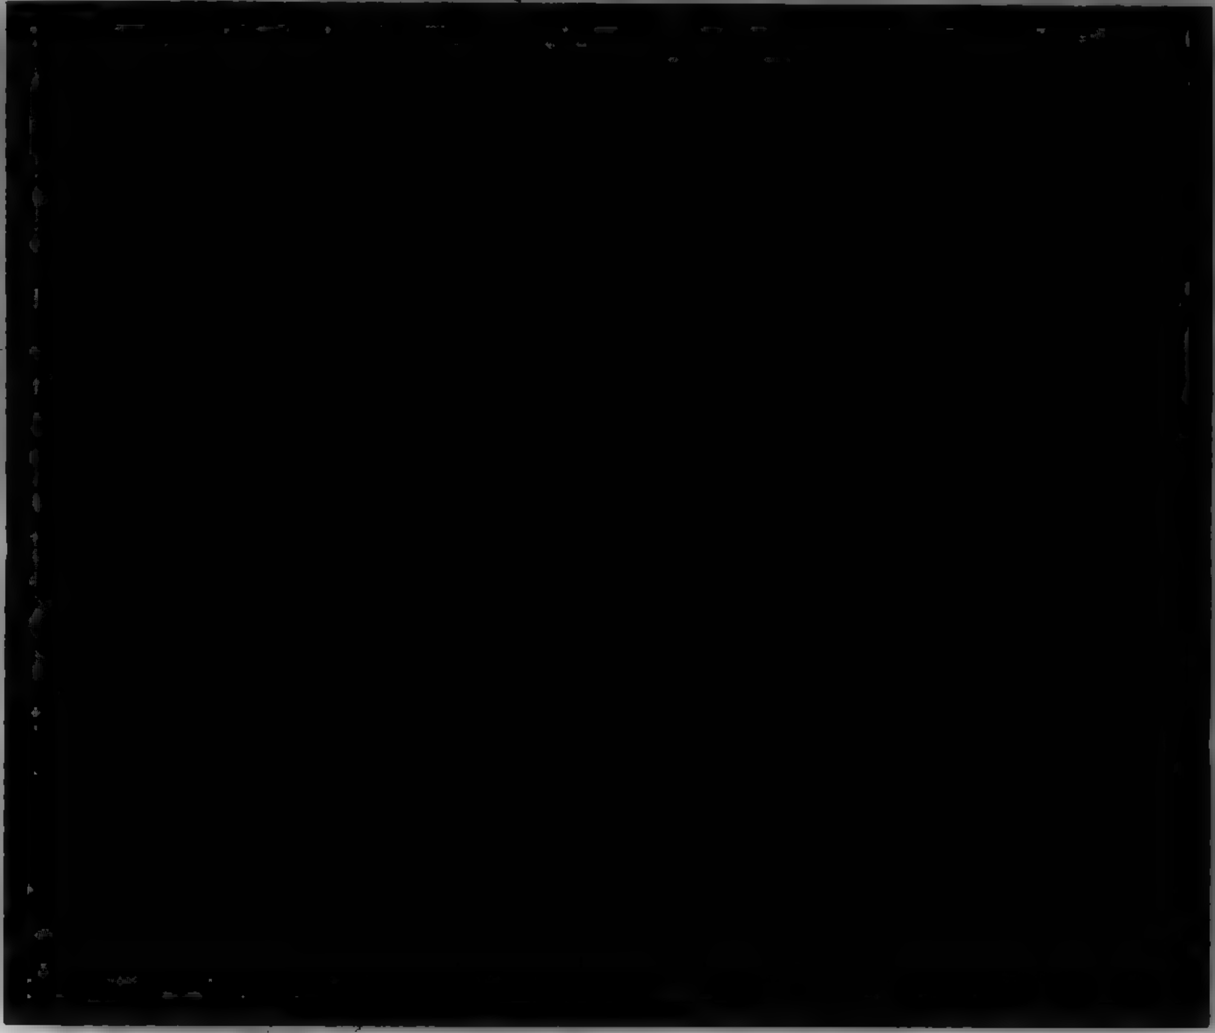
In the future, this relatively new technology will serve as more than a medium for data download and upload. The microcomputer will become an integral part of the application itself, especially as mainframe applications software is designed with the personal computer in mind.

Processing that is handled primarily by the host will be distributed to the personal computer. These developments are being driven by the increasing power of the personal computer. The industry's continuing trend toward user orientation has enhanced usability and friendliness.

The ultimate goal is to bring applications closer to the user and transfer some of the processing responsibility from the MIS group to the actual user. The result will be greater departmental productivity and better use of new technology.

In addition, personal computers will be tied together via local-area networks to provide multiple-user access to information. Distributed data bases will be served through personal computers as well. Enhanced communications between these computers will be considered the norm.

The use of personal computers has distinct benefits. These benefits include the promotion of more efficient



WHAT TO WARE TO SURVIVE THE HIGH SEAS OF BANKING

Ware something extraordinary. Ware INFOPOINT℠ banking software by UCCEL. The most complete, most proven line of integrated financial software on the market. The software that keeps you cool in calm waters no matter how turbulent the market gets.

With INFOPOINT's 21 major applications, you'll not only survive — you'll survive in high style. And continue to grow and prosper — even while others are going under. What's more, INFOPOINT costs less than ordinary software and can be implemented in less time.

Survive the high seas of banking in high style. Call UCCEL now at 1-800-UCC-1234.

SYSTEM

Announcing Version 5

computer use, which means more processing per dollar spent; strengthened information access capabilities, because barriers are removed between users and the information they wish to access; and the ability to take full advantage of available resources.

Standard 7: Application logic must be independent from other key components of the applications software product.

The goal is to have applications software universally adaptable to the user's environment. Universal adaptability serves as the user's insurance policy against technological change.

Successfully designing applications software with applications logic independent of all other software system components means that the software architecture must be intelligent, modular in nature and open. An intelligent architecture allows for independent application logic because the code required to interface with a given operating environment is independent of all the applications programs.

In addition to acting as an insurance policy for change, such an architecture supports the use of tools specific to individual environments.

Independent systems

The savings for the applications software user are twofold. The manpower needed for modifying the applications to meet changes in technology, whether software or hardware changes, are immense. Also, the time that would have been expended relearning the modified system can be spent more productively.

Applications developed with an intelligent architecture allow for portability to new environments if a change is made. As a result, it is not necessary to change the application to run in a new environment. This significantly reduces system maintenance. Software suppliers can provide enhancements much faster. The result is a greater return on the maintenance dollar invested.

Currently, software suppliers determine the importance of specific hardware and operating systems to their product line and then release application enhancements in the order of the hardware environment's relative importance to the vendor. It can be a matter of months before key features of a product enhancement are brought to additional hardware environments.

Software designed with an intelligent architecture allows the application code to be segregated from code related to a hardware environment. When code that allows an application to work in a particular hardware environment is designed with an intelligent architecture, changes in the application code can be made and distributed immediately.

By structuring the software system with an intelligent architecture, product enhancements are more quickly available to users. Additionally, customer support is more effective because problems with the product are solely application-oriented and are not embedded in the environment code.

Standard 8: Applications software code must be delivered in a generally accepted programming language and not require use of nonstandard or proprietary languages.

When software suppliers provide product features or development tools that increase product flexibility, yet deliver the capability via proprietary software code, a potential problem is created.

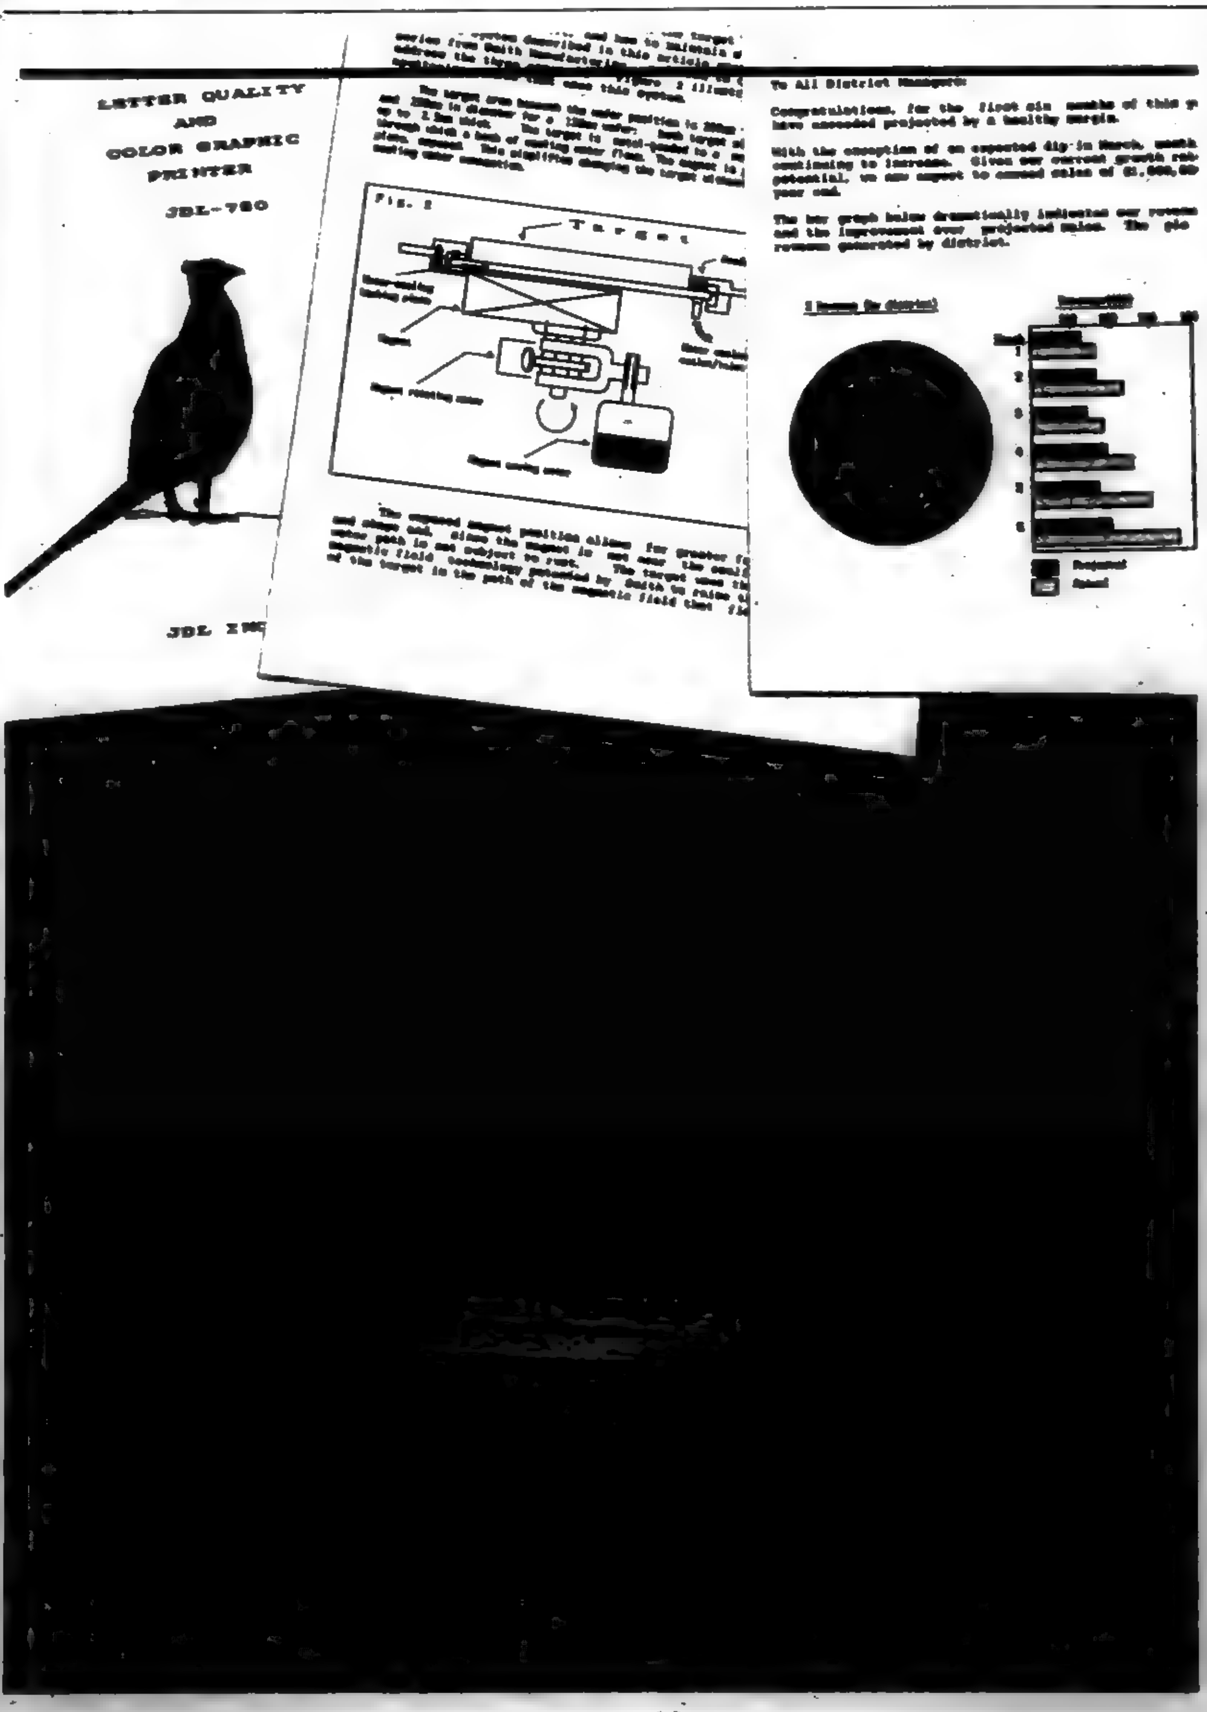
Complications are bound to arise because the software code cannot be maintained by the user. If it is to be updated by the user, a new programming language must be learned. Developing an application with proprietary languages increases the likelihood that the program will someday become obsolete because of programmer attrition. Support and training also are hampered by proprietary languages. Recruiting new employees fluent in the proprietary languages becomes an additional complication. As would be expected, maintenance of such a system, because of its complex setup, is more expensive and time-consuming.

IBM sets the standards for mainframe programming languages. If IBM is using a particular language, it is safe to assume that this language will become a standard in the software industry.

The situation is complicated further by constant alterations and improvements to hardware. Applications development tools must be capable of generating source code that can be compiled on the user's computer. The cost of replacing applications development tools is immense. In some cases, these costs are prohibitive, and the user is limited by the operating environment and the applications software.

Universal product

Applications software delivered in a generally accepted programming language gives the user a universal product. It can be maintained more



IBM/38-36 BACKLOG REDUCTION

The world's most successful companies have made Fusion Products Intl. the leading supplier of query/report-processor and spreadsheet software for the IBM/38-36. Call 415 461-4760 or write.

FUSION.

easily because the pool from which to select technical talent is larger. Furthermore, salary costs are kept within reason because the constraints of hiring specialists in the proprietary language are eliminated.

Another factor that reinforces this standard is that a wider array of compatible products will be available to the user. Not only are the risks of choosing an incompatible applications product eliminated, but so are the frustrations caused by limited product compatibility.

Standard 9: Applications software must utilize standardized reporting and inquiry tools so that users can retrieve information easily and not be required to learn and understand MIS concepts.

Users should be able to use any reporting or query product they wish to access an applications data base. Reporting information will continue to be a critical function of applications software in the future. However, a reporting mechanism can no longer require users to understand complex MIS concepts or the ins and outs of data structures. Reporting must be easy to do and understand.

All levels of an organization need to have access to information that will assist in making management decisions. In the past, this process was accomplished by using the DP department to retrieve information or by learning DP-oriented tools.

More often than not, when information is retrieved it is not up to date. This is because maintaining current information is almost impossible. When crucial decisions or analyses need to be made, day-old information is not good enough. Once again, time is lost.

Advances in fourth-generation languages have eliminated the need for having to know DP-specific information in order to have access to data. Reporting tools must be easier to use, especially because of the increasing popularity of the personal computer.

Reporting tools are important to users because they often represent the end result of many information processing activities. A lack of standardization has hindered productivity and limited their usefulness.

With seamless on-line query and cross-application report writers, users will have to learn only one set of reporting tools. As with generic functionality, time and money is saved in training people to retrieve information from a family of applications products. With this facility, the user need only purchase and install one query and reporting product.

Standard 10: Applications software must be developed in an automated fashion to provide users with high-quality products expeditiously.

Ironically, the principal tools of office automation have been developed in a nonautomated, piecemeal fashion. Future software development will, in many ways, mirror today's manufacturing assembly plants. Fourth- and fifth-generation language tools will be used to develop and test applications software code.

Imagine how the system would work: Component software pieces would be developed in different parts of the applications software factory. When needed, universally accepted software components would be taken off the shelf and used to build the applications product.

These products would be modular in nature. Following final assembly, their last stop would be testing and quality assurance — as is the case for any factory.

Software development

Incorporating reusable code in new products allows for the product to be developed faster and at a higher quality because the code has already been extensively tested. Product releases can occur faster because development cycles are shortened. Reusable code also reduces the number of bugs in a system. This leads to a product that is easier to install and maintain.

Using development tools will increase programmer productivity. For example, designing an input screen with old coding methods could take as long as eight hours. Using tools, this effort can be reduced to a matter of minutes.

The ultimate value of an automated software development environment is higher quality software. An average application consists of 350,000 lines of code. Even a small reduction in the percentage of errors translates to a significant improvement in quality.

Automated tools make sense because they allow software developers to make optimum use of their employees. Repetitive tasks will be reduced. Tools also promote product design that is universal in nature and has highly structured code. The time required to build, enhance and correct a problem is reduced.

Industry standards

The following five standards set goals that a responsive, professional software company should meet to support its user base:

Standard 11: Applications software must be serviced and supported by a dedicated organization.

A full-time, dedicated service organization is critical to the success of

> ***The cost of replacing applications development tools is immense. In some cases, these costs are prohibitive, and the user is limited by the operating environment and the applications software.***

How to order reprints from Computerworld

If you would like reprints of one of our articles, you can obtain them for most articles in one of the following ways:

For larger quantities (100 minimum), please contact Nancy Shannon, Rights and Permissions, CW Communications/Inc., Box 880, Framingham, MA 01701, (617) 879-0700.

Single copies of articles (for personal use only) may be obtained through one of two sources:

UMI Article Clearing House
300 North Zeeb Road
Ann Arbor, MI 48106
732-0616

Data Courier
The Database Company
620 South Fifth
Louisville, KY 40202
800-626-2823

Back issues are also available for many issues in limited quantities, on a prepaid basis. To check availability and cost for what you want, please contact our Back Issue Department, CW Communications/Inc., Box 880, 375 Cochituate Road, Framingham, MA 01701.

>
> *Comprehensive installation assistance reduces the uncertainty that accompanies an applications conversion and protects the user's software investment.*

any applications software product. Establishing and maintaining such an organization is costly but essential.

Support organizations must focus on a comprehensive array of support activities, including education and training, product installation, customer support, continuing education and specialized consulting.

The support group should be separate from the product development team. This separation ensures faster product enhancements and a team of dedicated support specialists. The support team should not be isolated from the development process. By actively tracking a product's development, the team will be able to provide the best support.

With a dedicated service and support organization, users can get direct attention and immediate response to questions. It also guarantees that users will have a full range of services to assist them with product implementation, use and enhancement. These factors contribute to a longer product life cycle.

Standard 12: The applications software vendor must supply multitiered education and support.

Today's applications software products are sophisticated and complex. The user needs product education and training to receive maximum benefits from them.

Centralized training is a crucial component of multitiered training. Systems users from different organizations should be brought together in a classroom setting for instruction. The classes should be limited to 20 people.

During the sessions, hands-on training should be given with no more than two people per terminal.

In the case of training tailored to an individual company, on-site sessions should be cost-effective. A self-paced, self-teaching alternative should also be available.

No matter where the education and training is to take place, the instructors should be certified educators. They should be supplied with professionally prepared educational materials.

Initial product training is important, but it should be followed up with continuing education opportunities. Through such opportunities, a mechanism will be in place for users to learn about new product features and to share experiences.

A multitiered education program allows tailored training programs. Personnel receive individual attention, learn faster and increase comprehension. Continuing education guarantees the maximum value from a software investment.

Standard 13: Applications software must be installed in a quick, clear and effective manner.

Installing a product is often more difficult than expected. The degree of difficulty is directly related to the amount of time and attention a vendor has given to preparing for the installation.

An installation guide is only the first of many features that should be supplied. Conversion programs and job control language are necessities. A trained installation assistant should be on-site to assist with the process. The assistant should run tests and fine-tune the system before it goes on-line.

Effective installation sets the tone for a long-term partnership between vendor and user. Comprehensive installation assistance reduces the uncertainty that accompanies an applications conversion and protects the user's software investment.

Standard 14: The applications software vendor must provide support when the user needs it.

Users often struggle to solve problems common to a broad range of companies. Instead of receiving timely advice, they often are asked to call back in a few hours. Not only should trained, dedicated specialists be available, but there should be an easy way to contact them. A toll-free, 24-hour hot line is one solution. An automated client services system that logs calls and responses would provide a useful inventory of solutions to common problems.

Standard 15: Applications software vendors must limit new product announcements to 90 days before commercial delivery.

Preannouncing products leads to confusion in the marketplace. Limiting announcements to 90 days prior to commercial shipping establishes realistic expectations. This action would eradicate vaporware and lower the number of unmet promises. The 90-day period allows ample time for users to plan for new products.

Standardized lead times for new product announcements will benefit everyone. Rather than failing to answer current needs because of anticipation of a product that never arrives, users can develop realistic solutions to problems.

Clean your desk.

Has an avalanche of messages made your desk a mess for the ages? Take heart, you can now clean up your act (and your desk) without cleaning out your budget.

Presenting Northern Telecom Displayphone-Plus,™ which you can now rent from Leasametric.

It's a set-up to forget. Forget about modems, telephones and terminals. Forget about telephone message tags. Displayphone-Plus is a complete information management system in one neat package. With its "electronic mail box" feature, one user can call another and have the message printed out on the receiving end. No fuss, no muss.

All possible because our unit offers download emulation of virtually any cursor-addressing conversational CRT, and plug-and-play compatibility with DEC VT-100™ terminals.

All this, and service that's slick as a whistle. From Leasametric. Each Displayphone-Plus arrives ready to work because we've put it through its paces before we ship to you. You'll get operator's manuals, cables and everything to get you up and running. Plus, to keep you running, a toll-free number for on-line diagnostics. On-site maintenance if it's needed. And the iron-clad Leasametric guarantee to replace any unit immediately, in the unlikely event of a malfunction.

Finally, to make it a clean sweep, great financing. Standard rentals, volume pricing, rentals with options to buy, leasing and even used-equipment purchases.

For more about Displayphone-Plus, or any of the thousands of quality items in our current catalogue, call Leasametric today. In California: 800-528-6891.
Outside California: 800-228-6314.

Sampling: The smaller view

All people, whether they realize it or not, are aware of the outstanding results achievable with applied sampling theory, a branch of statistics. It is used in political polls and presidential elections, making it possible to predict who will win an election eight to four hours prior to the closing of the West Coast polls.

Sampling theory can be applied to data communications to achieve substantial monetary savings in certain situations. Sampling, however, does not mean voice digitation rates or techniques; these procedures are an example of the general theory.

Sampling is a way to choose and study a small subset of cases from a large population and to generalize the results, taking into account the entire situation. The generalization can be carried out with high statistical confidence.

The theoretical results are fully developed and are generally understood fairly easily. The classic reference is *Sampling Techniques* by W. Cochran (John Wiley & Sons, Inc., New York). As indicated, sampling theory states that to obtain results about a large population, one need only do the following:

- Determine the population homogeneity.
- Use the theory to obtain the necessary sample size.
- Obtain the scientifically specified sample for which appropriate measurements will be made.
- Adjust the results to fit the whole population using the formula.

See POLL page 70

Minoli is an associate vice-president, systems planning and engineering, of Prudential-Bache Securities, Inc. in New York.

IBM debuts include modems

Offers high-speed duo, short-haul model

RYE BROOK, N.Y. — IBM announced two high-speed modems and a short-haul modem in its mid-June product barrage.

The IBM 5866 and IBM 5865 are synchronous modems reportedly designed for point-to-point or multipoint, four-wire, unconditioned leased lines. The 5866 works with trellis-coded modulation and transmits data at up to 14.4K bit/sec. with a fallback speed of 12K bit/sec. The 5865 operates at 9.6K bit/sec. and falls back to 7.2K bit/sec. when lines degrade, the vendor said.

The modems are said to include a keypad and a display panel that can be used to configure the modem or illustrate line parameter statistics. The products are available in stand-alone or rack-mount versions, IBM said.

The short-haul modem, the IBM 5811, transmits data at distances up to 15 miles. It supports half- and full-duplex synchronous data transmission at 2,400, 4.8K, 9.6K and 19.2K bit/sec. The four-wire IBM 5811 can be used in point-to-point applications or with four tributary modems in a multipoint application.

The product is available in stand-alone or rack-mount versions. The product's diagnostic capabilities include local self-test, local loop-back test, loop transmit test and remote loop-back test.

The stand-alone IBM 5866 costs $6,000, and a rack-mount version sells for $5,300. The IBM 5865 sells for $4,000, and its rack-mount version costs $3,300. The IBM 5811 costs $595, and its rack-mount version costs $550.

For additional information, IBM is located at 900 King St., Rye Brook, N.Y. 10573.

Bell Atlantic IVDM to be sold as CPE

WASHINGTON, D.C. — Bell Atlantic Corp. has unveiled a $200 integrated voice/data multiplexer (IVDM) that will permit a customer's telephone and a computer terminal to share a copper-wire local telephone line.

The IVDM, manufactured by Teltone Corp. in Kirkland, Wash., permits data communications at speeds up to 19.2K bit/sec. Bell Atlantic said it plans to market the IVDM, classified as customer premises equipment (CPE), in conjunction with its regulated Centrex service, provided that it obtains permission from the Federal Communications Commission.

Currently, Bell Atlantic has two sites testing the Centrex-IVDM configuration, which the telephone company is calling a central office local-area network. The two sites are West Chester University in West Chester, Pa., and Virginia Polytechnic Institute (VPI) in Blacksburg, Va.

Fifty of West Chester University's Centrex lines now support simultaneous 9.6K bit/sec. voice/data communications in an asynchronous mode, connecting on-campus terminals with two mainframes.

At VPI, Bell Atlantic said it set up a Centrex 19.2K bit/sec. local-area network to connect 60 on- and off-campus terminals to the university's mainframes, while using the same lines for voice communications.

According to Bell Atlantic, the Centrex service is an important part of its campaign to fight the erosion of the Centrex market to office-based private branch exchanges.

The company revealed that 300,000 federal government Centrex lines will soon come up for contract bid as existing leases expire. According to Bell Atlantic Vice-President of Marketing A. C. Tedesco, obtaining FCC permission to combine the provision of Centrex service with the IVDM CPE is critical to the viability of Bell Atlantic's Centrex service.

"We're asking the FCC for a waiver of FCC rules requiring separation of basic

Digilog net management out for DEC Microvax

MONTGOMERYVILLE, Pa. — Digilog, Inc. has introduced a network analysis and management system that runs on Digital Equipment Corp.'s Microvax supermicrocomputer.

The Digilog Network Analysis and Management System is said to provide alarm notification, local and remote diagnostics and critical network path control.

The product's data base reportedly supplies performance history, vendor references, device information, network link data and interconnection specifications. The system features automatic processing and notification of alarm conditions from any point on the network, according to the vendor.

The package is said to supply user-selectable alarms, automatic circuit identification, alarm descriptions and date-time stamp to a console and printer. The network analysis tool reportedly supports up to three local or remote color consoles.

The package's management and analysis reports include activity summary log, trouble tickets, trouble history summary reports and an inventory management facility, the vendor said.

The Digilog Network Analysis and Management System costs $48,000.

For more information, Digilog is located at 1370 Welsh Road, Montgomeryville, Pa. 18936.

Timeplex offers two-task multiplexer for data links

WOODCLIFF LAKE, N.J. — Timeplex, Inc. has announced a combination statistical and time-division multiplexer for wideband links operating at up to 64K bit/sec.

Microplexer DTM48 reportedly supports up to 48 ports over point-to-point data links. As a statistical multiplexer, the device supports asynchronous and half-duplex synchronous transmission at up to 9.6K bit/sec.

The time-division multiplexing capability reportedly provides transparent handling of synchronous protocols through 44 ports at up to 38.4K bit/sec.

The bandwidth can be dynamically allocated or permanently assigned on a per-port basis, according to Timeplex.

Network manager

A network manager can reportedly mix time-division multiplexer ports and statistical ports. The network manager can be programmed to sound an alarm whenever data link synchronization is lost, according to the vendor.

The product costs $6,800 for a unit with four time-division multiplexer ports, four statistical ports and a standby data link.

For additional information, Timeplex can be reached at 400 Chestnut Ridge Road, Woodcliff Lake, N.J. 07675.

Canadian message net connects 29 institutions

Conforms to CCITT X.400 standard

VANCOUVER, B.C. — CDNet has linked 29 Canadian institutions from Newfoundland to British Columbia on a message network that conforms to the CCITT X.400 message standard.

The network was established by the Distributed Systems Research Group at the University of British Columbia and Consortel, which was responsible for developing the software for the network.

The research group reportedly has tested linking CDNet with a KDD, a Japanese message network also based on the X.400 standard.

Consortel was created by the Interprovincial Association for Telidon and Telematics and funded by the Canadian Federal Department of Communications.

Consortel's goal is to create an information network to link Canadian institutions.

Consortel will now manage continued research and development of CDNet.

Paradyne enhances network management system series

LARGO, Fla. — Paradyne Corp. has enhanced its Analysis 6500 series of network management systems and has added two modems to its product line.

Paradyne's Analysis network restoral facilities have been expanded to include an intelligent Multidrop Automatic Call Unit (MCAU) and a Dual Call Auto Answer (DCAA) card.

The MCAU is said to restore service over dial-up lines automatically in the event of a failure in a point-to-point or multipoint leased line.

The device's switching logic enables multiple lines and remote drops to be supported from a single unit, reducing the number of standby dial backup lines required, the vendor said.

The DCAA reportedly can be used whenever a primary leased line connection degrades or is disconnected.

New modems announced include the HDX 9600, a synchronous 9.6K bit/sec. modem that is said to have fallback rates of 4.8K bit/sec. The half-duplex product was designed for point-to-point applications and uses quadrature amplitude modulation. The product includes automatic dialing and answering capabilities.

The FDX 1200 is a full-duplex, 1,200 bit/sec., asynchronous/synchronous modem that uses phase shift keying modulation. The product features reverse calling modes, automatic rate speed detection, tandem and alternate dialing with tone and busy recognition and call progress monitoring.

Prices for network management packages range from $12,600 for a 10-line system to approximately $200,000 for a 900-line system. HDX 9600 costs $1,995, and FDX 1200 costs $365.

Paradyne can be reached through P.O. Box 1347, 8550 Ulmerton Road, Largo, Fla. 33450.

PROTOCOL CONVERTERS

■ GSD Systems, Inc. has announced two single-channel protocol converters that enable asynchronous printers or terminals to access IBM System/34, 36 and 38 computers.

GSD One attaches a serial asynchronous printer to one of the systems and enables it to mimic an IBM 5224, 5225 or 5256 printer, the vendor said. GSD Two is said to connect an asynchronous terminal or microcomputer to a System/34, 36 or 38 and enables the device to emulate an IBM 5251 Model 11 terminal.

The products can be daisy chained off a host CPU or a 5251 Model 12, 5294 or 5295 controller.

GSD One costs $1,495, and GSD Two sells for $1,595.

GSD Systems, Suite 505, 600 S. Dearborn St., Chicago, Ill. 60605.

SOFTWARE

■ Account-A-Call Corp. has announced a software package that reportedly helps determine a company's voice network needs.

The Interactive Traffic Analysis System calculates the number of trunks needed to meet a required grade of service at minimal cost, the vendor said. It determines customer needs for a number of services including Wats, foreign exchange lines and long-distance services.

There are two versions of the product: One runs on IBM Personal Computers; the second works with IBM mainframes. The micro version of the package costs $5,000, and the mainframe version costs $12,000.

Account-A-Call, 4450 Lakeside Drive, Burbank, Calif. 91505.

INTRODUCE YOUR DATABASE TO INTELLIGENCE OF A HIGHER ORDER.

The intelligence we speak of isn't science fiction. It's science fact.

In fact, it's the Information Expert™ from Management Science America, Inc. The fourth generation technology that not only recognizes the limitations of database vendors but addresses them.

For example, Information Expert allows all your software systems to work in a completely new manner. Together. In unison. In seconds. Whether it's with existing software or new software.

But not only will we put your systems on speaking terms, they'll be speaking the same language. English (or any local language input you use).

There's even a data dictionary so nothing will ever sound like Greek.

If it appears we're saying end users will find our system easy to use for designing reports, we are. Our menus guide you through the process with such ease and intelligence, they'll even tell you the proper responses to use for whatever job you need.

Information Expert also provides fourth generation language that your data processing staff can use for applications development. What's more, it's more efficient and easier to use than COBOL. So you can do in minutes what used to take hours. Or do in hours what used to take days.

Then, to speed things up even more, our system ignores all boundaries and allows borderless retrieval of information. That way, you can get all the information you need. Not all the information you don't need.

All of which proves one thing. If you want more intelligent software, go to a more intelligent software company. MSA. For more information, call Robert Carpenter at 1-404-239-2000.

MSA SOFTWARE

INTELLIGENCE OF A HIGHER ORDER.™

Getting spreadsheets, word processing, graphics, communications and the IBM PC to work together can be tough, too.

If you think solving the federal budget deficit poses a challenge, you haven't tried getting a company's personal computers under control.

When you do, you'll find that most users require different configurations to handle their various computing needs. And while there are plenty of hardware and software products that perform well, they don't necessarily perform together.

Enter DunsPlus. A combination PC product and service that brings a new level of integration and cooperation to the IBM PC, software, communications, user education and services.

DunsPlus offers you the choice of any IBM PC, already configured with proven software programs like 1-2-3 and MultiMate or DisplayWrite word processing. It also includes software tools for data integration, file management, micro/mainframe communications, and systems development.

Unlike static integrated products, DunsPlus has the flexibility you need to add software to its consistent, easy-to-use, menu-driven operating environment.

And it's backed up with comprehensive education programs and support services.

DunsPlus. Like NOMAD, now NOMAD2, the premier 4GL/DBMS, it's one in a continual evolution of computer software services from Dun & Bradstreet.

To assure that your PC products work together, write DunsPlus, 187 Danbury Road, Wilton, CT 06897 or call 800-DNB-PLUS.

DunsPlus

We make PC products work the way they should. Together.

TEST EQUIPMENT

■ Hanson Data, Inc. has announced a board-level product for IBM Personal Computers that enables a user to monitor an RS-232 line.

Hanson Serial Line Monitor can be used with half- or full-duplex data transmissions of up to 19.2K bit/sec. User-selected data in Ascii, Ebcdic or hexadecimal formats can be displayed on 21 lines.

Signals that can be displayed are Request to Send, Clear to Send, Data Terminal Ready, Data Set Ready, Carrier Detect and Ring Indicator. The board works in monitor data on keyboard command, monitor when triggered by data or signal change and simulate/transmit pattern to peripherals.

Data can be displayed on a screen or stored in a buffer or on a disk. Framing, parity and overrun errors are indicated by blinking characters.

The board costs $1,495.

Hanson Data, 18732 142nd Ave. N.E., Woodinville, Wash. 98072

AUXILIARY EQUIPMENT

■ Hall-Comsec, Inc. has announced the Gatekeeper Security System, a call-back verification system said to support up to 16 RS-232 ports.

The product reportedly can be programmed to call back users at a fixed location or direct password checking for traveling users. The direct-dial passwords are generated randomly through an automatic password generator that is said to supply more than 60 million passwords.

Through a call-routing feature, only one automatic dialing modem is said to be needed with the product. The Gatekeeper Security System enables an operator to reverse phone charges to call-back or direct-access users, the vendor said. The product logs any illegal access attempts to any serial port.

The average cost of a 16-port system is $185/port.

Hall-Comsec, 1024 Wakerobin Lane, Fort Collins, Colo. 80526.

■ Votan, Inc. has announced the VTR 6050 Voice Terminal, a voice recognition and synthesizer for use with personal computers and other Ascii devices. The product has a 150-word vocabulary.

The VTR 6050 includes a 3½-in. floppy disk with 320K bytes of storage for saving messages or voice files. The 6050 responds to conversational English, according to the vendor.

Votan's Voice Key Software is said to let users incorporate voice capabilities into existing software applications packages without any modifications to the software itself. The VTR 6050 is a stand-alone voice I/O subsystem that includes chassis, power supply, microphone and speaker.

The VTR 6050 costs $4,950.

Votan, 4487 Technology Drive, Fremont, Calif. 94538.

IVDM

from page 61

telephone service from provision of telephone equipment] on the basis that the customer, the U.S. government, wants it," Tedesco said. He added that opposition from other CPE vendors to the Bell Atlantic waiver petition is without foundation because Bell Atlantic said it will obtain the equipment from unaffiliated vendors.

"We feel that we've fixed the application called Centrex and are now looking at what other applications we can do. We think local-area networks are the next thing. We've put the [data communications capability] in the central office. The key thing is using the existing copper wire. That is the strategic advantage with customers who are concerned about costs," Tedesco added.

Bell Atlantic's waiver appeal from the FCC on joint provision of Centrex with CPE cites the commission's permission to allow AT&T Information Systems, AT&T's equipment arm, to resell basic telephone service with its telehone equipment.

On its current agenda, the FCC is also considering dropping the requirement that AT&T must maintain the subsidiary to market CPE. Bell Atlantic said it will support the competitive market that exists for PBX office-based equipment by offering equipment with its own Centrex service.

If you buy a TI 855 printer now, you won't have to upgrade to one later.

Don't tack just any printer on your new PC for now, thinking that you'll get what you really need later. Start with the best, a TI 855 or TI 865 printer. That way you can put the money you'd have spent on a needless upgrade on some other smart investment.

You see, our OMNI 800™ Model 855 is actually three printers in one. For word processing, it delivers letter-quality printing that rivals the best daisy wheel printers around. For data processing, it prints at 150 characters per second. And for your graphics, it reproduces screen or monitor images in the finest detail.

Of course, these advantages are all true of our TI 865 wide-carriage printer, too.

What's more, since our printers are among the easiest to use, you can utilize all the capabilities built into your PC and software right from the start. Instead of sometime later. You even have a choice of over 30 different plug-in type fonts, any three of which can be printed on the same page without ever stopping the printer! Just touch the control panel and it happens. Simple. So every document looks just the way you want it to. Professional.

As for reliability, TI printers are legendary. Just ask any major airline.

So don't downgrade your PC's performance with a printer you'll outgrow in a month. Get yourself a TI 855 or TI 865 printer now. It's easy. Just call 1-800-527-3500, ext. 801, for the TI Dealer near you.

COMPUTER FAT.

HOW TO AVOID IT, FROM THE LEADER
IN ON-LINE TRANSACTION PROCESSING.

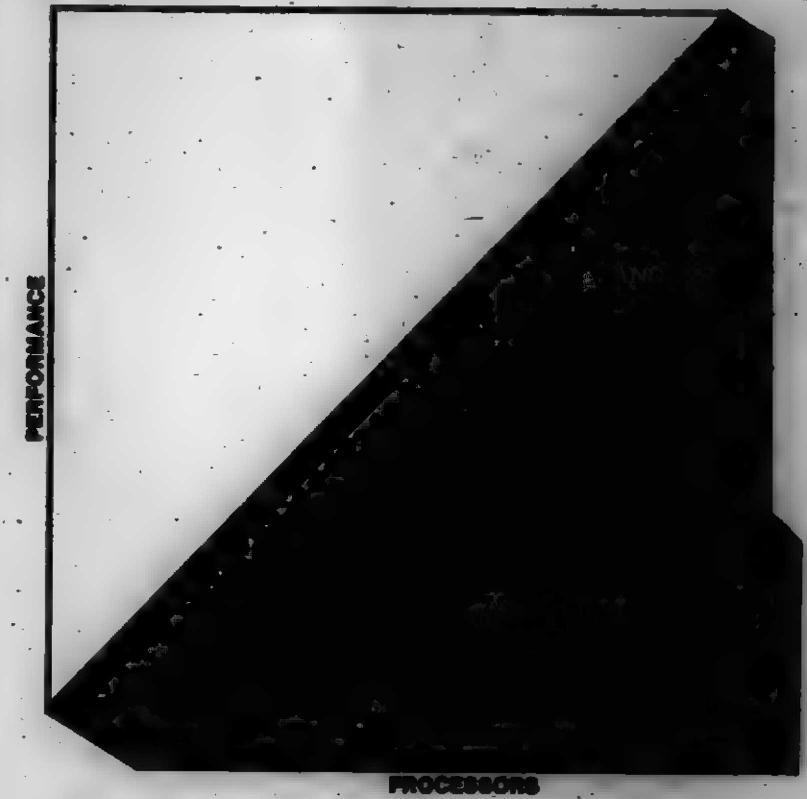
WHAT COMPUTER FAT IS.

Computer fat is created when you buy more computer than you need. With conventional computer architecture, you have no other choice. You buy the closest fit available and "grow into it."

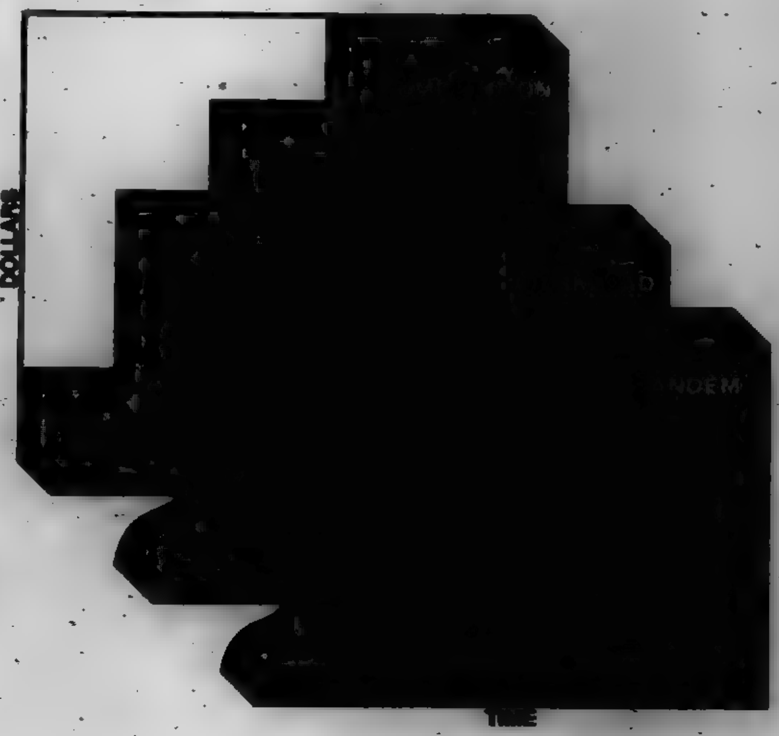
So there is always waste and inefficiency. And you pay dearly for it.

WHAT IT COSTS.

The performance cost. With conventional computer architecture, doubling your processors does not double your performance. With Tandem, each incremental increase in processing power provides matching performance.



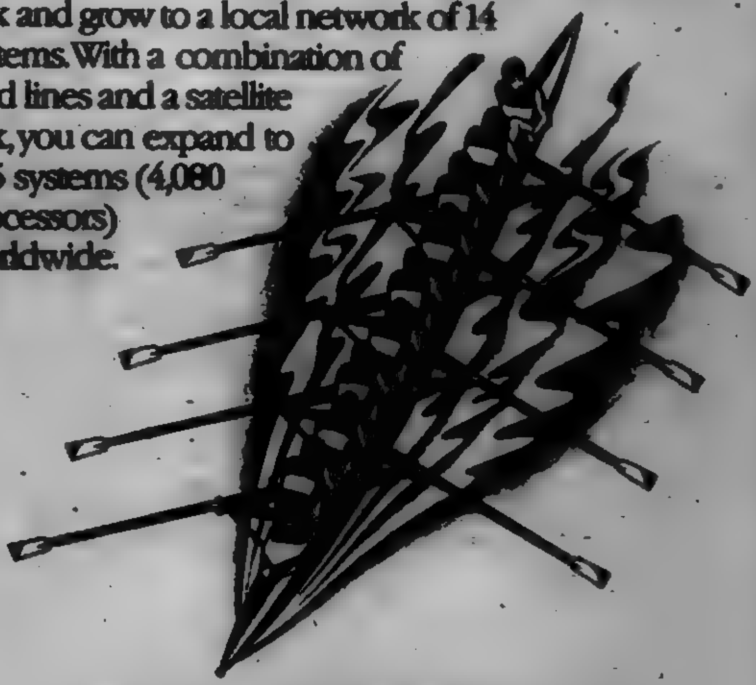
The dollar cost. With conventional computer architecture, growth is convulsive. You must continually over-invest to assure sufficient processing power. With Tandem, growth matches need. You never invest more than you have to.



TANDEM'S NON-FAT ARCHITECTURE.

Tandem Computers has developed the ultimate system for on-line transaction processing. It is the fault-tolerant system that can grow as your needs grow, expanding at any increment you choose.

You can start with two processors and grow to 16 processors in a system. You can put in a fiber-optic link and grow to a local network of 14 systems. With a combination of land lines and a satellite link, you can expand to 255 systems (4,080 processors) worldwide.



In a Tandem system, there are no idle backup components. They all share the workload.

With Tandem, your software expands, too. All systems work like one system, and you'll never have to rewrite a line of applications code.

The Tandem NonStop™ system is also enhanced by a high-performance, relational data base that can be geographically distributed to wherever it's needed. And no single component failure can shut you down.

LET'S CHEW THE FAT.

Tandem systems are already at work for FORTUNE 500 companies in banking, telecommunications, manufacturing, transportation, retailing and energy, as well as several branches of the U.S. Government.

To find out what we can do for you, call (800) 482-6336. Or write for our annual report. Corporate Headquarters: 19191 Vallco Parkway, Dept. 762, Cupertino, California 95014.

TANDEMCOMPUTERS

POLL

from page 61

Homogeneity tests the uniformity of a given population. If all objects, people or situations are likely to be similar in principle, then there is homogeneity, and an "unstratified sample" would be used. If the objects or entities can be classified into areas likely to have some intrinsic difference, then a "stratified sample" would be used. This means that a sample must be taken from each of the classes defined.

For example, if one wishes to determine the characteristics of traffic habits of asynchronous users throughout the U.S., one may want to define an "urban population" and a "rural population." On the other hand, it may not be necessary to stratify the population by male and female users, as both categories can be assumed to have the same characteristics.

Sample size is determined by a set of formulas and depends on the degree of accuracy demanded. If the accuracy must be 100%, then the entire population must be consulted; this could be very expensive. If one can live with 95% accuracy, then only a small subset of the population needs to be consulted. This subset varies from 1%, for very large situations where the universe is in the one-million-population range, to 5% for a 10,000-population range to 20% in a 500-population range.

Once the size of the sample is determined accurately, the sample must actually be picked, namely, the individual representatives to be examined. One is not free to pick just any representatives, otherwise the results would be biased. Generally, one must choose a random subset; in a stratified environment, a random subset from each population is required. With the example above, one would not, despite the convenience, be able to select the "urban users" from New York only; one would have to pick some from New York, some from Los Angeles, some from San Francisco and some from other cities.

Data communications uses

The bottom line is to save money. The following three concrete examples — among others that easily come to mind — will suggest how DP managers can use sampling techniques to save money. In addition, one should bear in mind that voice digitization is an example of sampling: It was shown that to reconstruct a continuous telephone voice signal made up of billions of continuum levels, one need only take 6,000 samples per second.

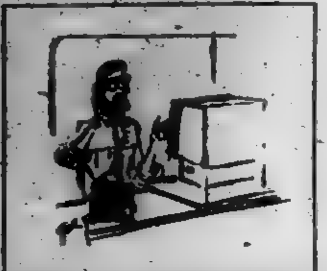
■ An international record carrier wanted to classify the 800,000 calls a day its switch carried into national destination percentages and to calculate the blocking factor to each nation.

To achieve this goal, the company executed a daily batch job requiring eight hours every night and several disk drives — an inefficient program that parsed every one of the 800,000 transactions. Clearly, the firm could have applied sampling techniques and sampled 8,000 transactions with a program running for only 0.05 of one minute. The sampling techniques would have saved in millions of instructions per second and disk storage capacity.

■ A company wishing to determine the feasibility of receiving a one-way broadcast satellite signal in 550 business office locations sent out a battery of technicians to visit each of the 550 locations to survey line-of-sight conditions to a satellite. The firm could have surveyed fewer offices and reached the same statistically valid conclusions, while saving manpower and travel expenses.

■ An operations manager wanted to determine firsthand the type of problems experienced by his approximately 200 major network users.

A project was undertaken to contact each of the 200 users at considerable manpower expense. Again, a sample of approximately 50 users would have been statistically sufficient.



"But my modem won't talk to your modem until your modem apologizes!"

CLEO is your SNA or BSC Gateway

INTRODUCING
THE MOST RADICAL
ALGORITHM
IN DATABASE HISTORY.

COMMON SENSE.

[illegible]

IT'S NOT HOW HARD YOU WORK. IT'S HOW MUCH YOU GET DONE.

There's an odd contradiction built into most database software. Most of the features that make it powerful enough to do the job make it a real struggle to use.

But at Microrim,® we've never thought it makes sense to do things the hard way. That's why we're introducing R:base™ 5000. With a brand new feature that makes life a lot easier for everyone in your company. From beginning PC users to your most experienced programmers.

PRODUCTIVITY:
R:base 5000 vs. dBASE III

Using R:base 5000 and dBASE III,™ we built this menu and linked it to its subroutines. The resulting applications were equivalent. The effort required wasn't.

	R:base 5000	dBASE III
Keystrokes	434	6588
Command Lines	47	244
Automated steps	37	0
Time*	9 minutes	2 hours

*Actual time may vary depending on skill level

THE APPLICATION EXPRESS.™ WHAT A DIFFERENCE.

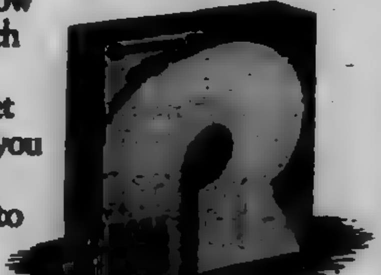
Since the Application Express automatically generates programming code, it can give you the tremendous advantage we've documented in the attached chart. For people who've never programmed before, these automated steps can make all the difference between getting the job done and giving up completely. And for your experienced programmers, the Application Express can give you ten to one productivity gains. Of course, R:base 5000 also has the powerful procedural language and report writer it takes to create highly customized applications.

SEE FOR YOURSELF: 1-800-547-4000.

If you believe in common sense as much as we do, you won't take our word for it; you'll get your hands on a copy and make up your own mind. And that's just what we'd like you to do. For only $9.95 (plus shipping) we'll send you a mini-version of the product that lets you build real-life applications.

Just call 1-800-547-4000 and ask for Dept. 995 . From Oregon, or outside the U.S., call 1-503-684-3000, Dept. 995 . We'll send your copy right out. If you'd like to see R:base 5000 today, head straight for a leading software store or computer dealer. If you own R:base 4000, ask your dealer for a trade-up kit.

We'll show you how much more your people can get done. When you give them a smarter way to handle their workload.



R:BASE 5000
FROM MICRORIM
IT ALL COMES DOWN TO COMMON SENSE.

dBASE III is a trademark of Ashton-Tate.

In August, 128,000 MIS/DP executives can stop saying *"What we have here is a failure to communicate."*

There's a world full of computers out there. And everyone's trying to make them talk to each other.

The trouble is, there are so many technologies, so many products, so many promises, MIS/DP management isn't sure which way to turn.

In the August 28th issue of *Computerworld Focus* on Networks, we'll help them cut through all the smoke with a complete issue devoted to the topic of networking. Which gives you an ideal advertising forum if you've got a relevant product, service or strategy. Because you'll be surrounded by truly topical, informative editorial.

We'll take a look at LANs, PBXs and long-haul satellite technologies, as well as packet networks and teleconferencing. We'll call on experienced users to give us accounts of their own trials-by-fire. We'll ask industry experts to evaluate future directions and advise on the paths that are most likely to be successful for users. And we'll evaluate the products and strategies designed to link desks and offices and buildings and cities into a single integrated system.

So if you want to reach Computerworld's 128,000 paid subscribers, plus bonus distribution at important Fall '85 trade shows, the answer is simple. Get your ads in focus. *Computerworld Focus.* **The August 28th issue. But hurry, closing is July 19th.**

For more information, contact Ed Marecki, Vice President of Sales, *Computerworld Focus,*
375 Cochituate Rd., Framingham, MA 01701.
Or call (617) 879-0700,

SYSTEMS & PERIPHERALS

Sony adds unit to Sios disk system

By Mitch Betts
CW Washington Bureau

WASHINGTON, D.C. — Sony Communications Products Co., a division of Sony Corp. of America, officially unveiled the IOS-1050 workstation processor for use with its newly announced optical disk system, intended for very large-scale document storage and filing applications, in-house publishing and computer-aided design.

At a briefing at the National Archives here, Sony officials said the intelligent workstation is part of the Sony Integrated Office System (Sios), which includes optical disk storage, document scanners and laser printers.

The Sios workstation engine incorporates a 16- or 32-bit microprocessor linked to five other 16-bit processors by a multiplexed bus system. The operating system is AT&T Bell Laboratories' Unix V.

The five subsystems control the display, a file-transfer network, compression/decompression of digital image data, printers and scanners and storage on a standard 75M-byte hard disk drive, expandable to 300M bytes, or optical disk unit, Sony officials said.

The workstation permits processing of text, graphics and visual images using the IDM-1715, a full-page high-resolution VDT. The display has a resolution of 150 dot/in., but information is stored in a 200 dot/in. format. According to the vendor, this allows images to be magnified up to four times without visible loss of resolution.

The Sios workstation provides windowing for multiple functions, a mouse interface and communications via an Ethernet local-area network, the vendor said.

Sony's 12-in., write-once optical disk, the WDM-3DL0, stores 1.64G bytes per side and costs $300, the vendor said. The archival-quality disk will last for 30 years, Sony officials said, citing company tests.

Other products for the integrated Sios line include the WDA-3000 optical disk autochanger for up to 50 disks, the WDC-3000 writable disk controller, the WDD-3000 writable disk drive and the IRD-1330 image scanner, which now operates at 5 page/sec.

The company said the workstation and

DEC offers workstation for engineering market

MAYNARD, Mass. — Digital Equipment Corp. has unwrapped a color workstation for engineering and manufacturing markets that is based on the floating-point processor recently introduced with DEC's Microvax II.

The Vaxstation 520 — said to have the power of a VAX-11/780 — costs $42,780 and includes 2M bytes of main memory, DEC's Q-bus network adapter Ethernet interface, the MicroVMS operating system, a 32M-byte Winchester disk and dual 400K-byte floppy disks.

The unit features a Tektronix, Inc. 4125 graphics subsystem said to offer segment editing, zoom and pan capabilities and arc drawing.

The graphics subsystem includes a 19-in. Tektronix 4125 monitor with 1280- by 1280-pixel resolution, convergence accuracy of 0.3mm over the display area, the capability to display 256 colors from a palette of 16 million, pick operations, pop-up menus, two-dimensional transforms and windows that allow a user up to 64 viewports.

The workstation can be linked to other VAX and PDP-11 computers as a node in an Ethernet local-area network, the vendor said. The Vaxstation 520 can also be used as a terminal within a multiterminal environment.

Options include up to 6M bytes of additional memory, a four-line asynchronous line controller and an external 31M-byte disk.

Graphics options include a three-dimensional wire-frame upgrade, 3-D solid shading upgrade and additional planes of video display memory.

The unit will be available midsummer of this year.

More information is available from DEC, Maynard, Mass. 01754.

Analyst calls IBM mid-range plans unclear

By John Desmond
CW Staff

NEW YORK — Convincing users that its System/36 small-systems processor is of long-term strategic importance is what the IBM announcements of June 18 were all about, analyst Laura Stuart of the Boston-based Yankee Group said at a seminar here recently.

IBM, however, is putting the cart before the horse by releasing mid-range systems before its entire networking plan is in place, Stuart asserted in a talk on IBM's office automation strategy. She described the IBM Cabling System announced in June 1984 as the "Great Cabling System Bust" and pointed to the absence of an IBM local-area network. "IBM is in the iron business still," said Stuart, Yankee Group's director of small-systems planning.

With the System/36 focus, IBM's strate-

IBM enhances 4361 series processors

RYE BROOK, N.Y. — IBM has announced extended capabilities for its 4361 series processors.

Enhancements were made to the Workstation Adapter for the 4361. They include a distributed function terminal mode of operation that provides up to four concurrent host sessions, eight colors, extended highlighting and programmed symbols on the IBM 3270 Personal Computer and support of the Models 24 and 26 with the IBM 3295 Plasma Monitor.

Additional enhancements to the Workstation Adapter are said to include attachment of the 3270 PC/G and 3270 PC/GX with full graphics functions, support of user-selectable printer assignment and support of the IBM 3262 printer Models 3 and 13.

No charges apply except for customers who install the communications adapter enhancement on other than new production machines.

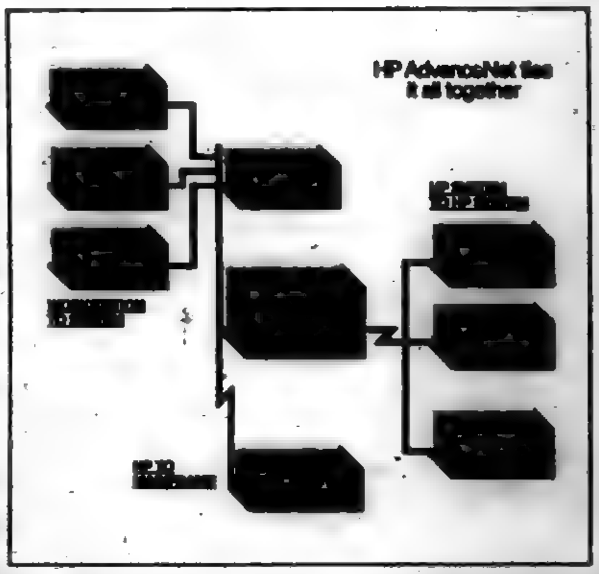
The HP 3000 compu

However much you change, you're going to need both office automation *and* distributed data processing. Fortunately, one company gives you both in a single system.



Hewlett-Packard's HP 3000 is a fully compatible family of computers, ranging from a new system that handles as few as two users to a distributed mainframe that connects up to 400. You can run the same software right up the line.

And our systems can change and grow as you do. When you're ready for upgrades and additions, you simply plug your existing programs into the new systems. No recompiling. No time and money wasted on conversion.

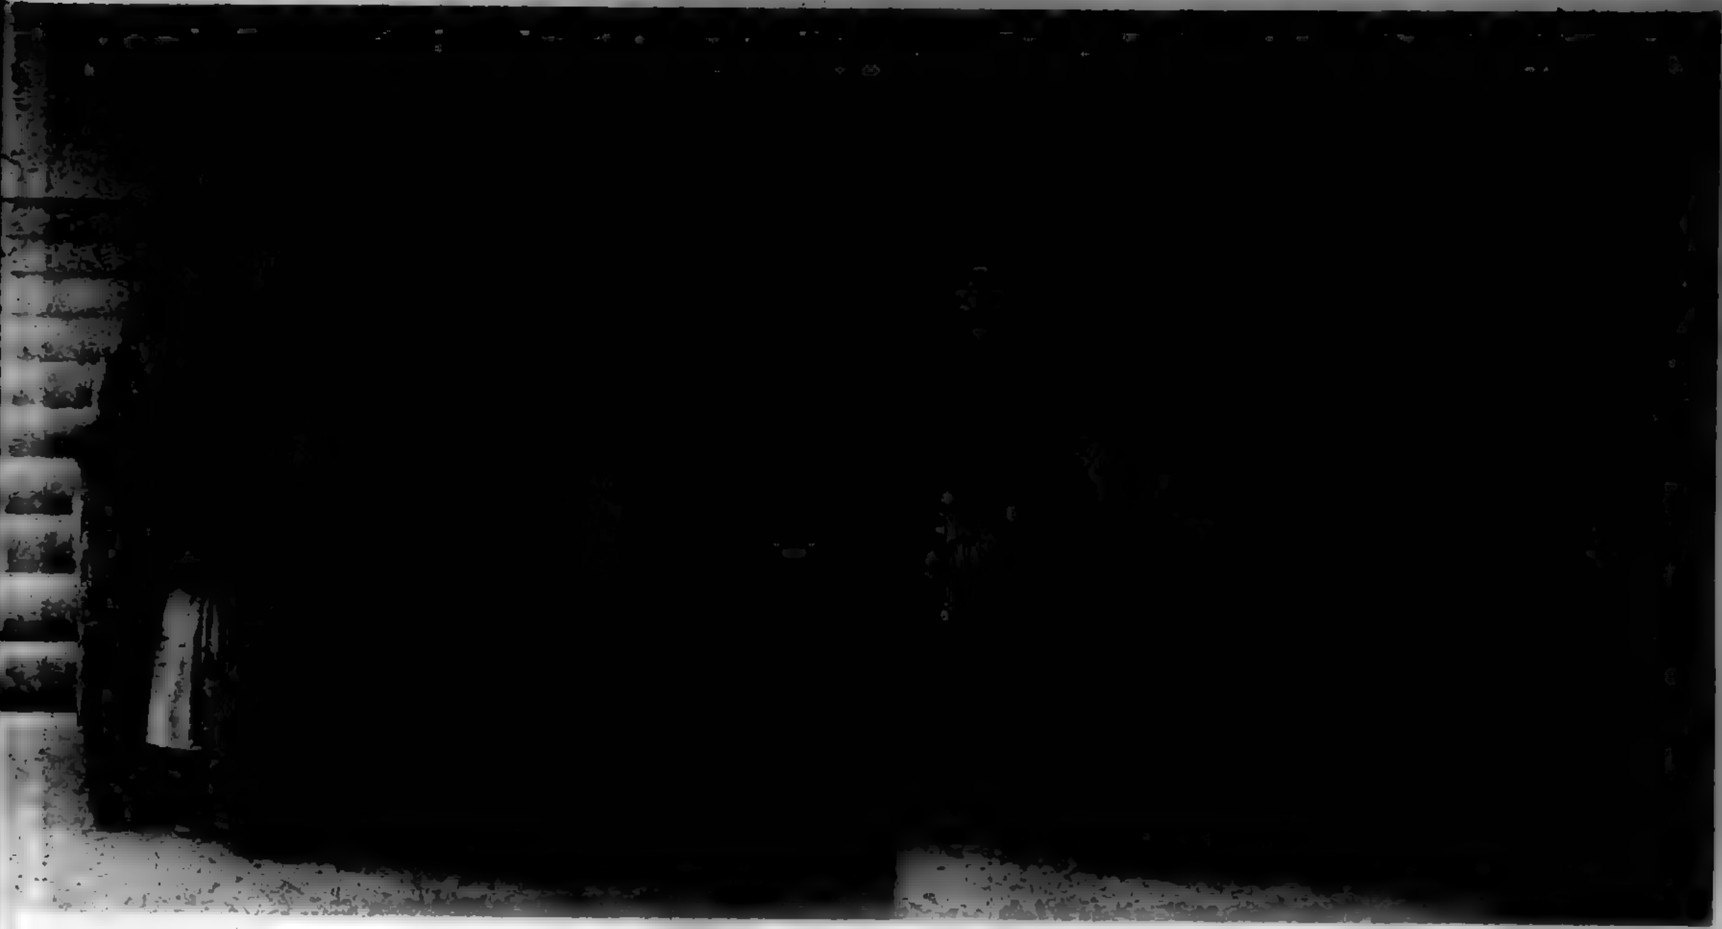
A small, but mighty, addition.

The new HP 3000 Series 37 Office Computer, the latest member of the family, puts the power of the HP 3000 within the reach of smaller budgets.

So now you can afford to give your branch offices and departments their own systems. And they'll still remain part of your overall DP picture with links to other systems.

In the office, the HP 3000 is the heart of our Personal Productivity Center. This integrates the information people need to get their jobs done more productively.

It provides an interface for a wide range of workstations, peripherals and personal computers, including our Touchscreen Personal Computer and The Portable, as well as IBM PCs. And it allows them to interact directly with



ter. One family fits all.

the HP 3000. So your people won't have to learn DP commands.

You'll communicate better with HP AdvanceNet.

Our communications go well beyond this office network. With HP AdvanceNet, they extend to links with other HP 3000s, in the same building or on the other side of the world. And to your mainframe computers, ours or IBM's.

Currently, more than 10,000 HP 3000 systems are working in networks so effectively that our communications were voted #1 in a national survey.

A Datapro poll also rated our service #1. So you get more than office automation and data processing in a single system. You get all the support you need from a single company.

To find out more about the single solution for both sides of your company, send us the coupon. (To make it easier, just attach your business card.) In Canada, call 1-800-387-3867.

We'll send you complete information, including our 12-page brochure. It shows how we can fit you no matter how much you change over the years.

☐ Send me a copy of The HP 3000 Business Computer Systems: *The Hewlett-Packard Approach to Selecting a Business Computer.*

☐ Have an HP representative call me to answer questions.

It's Easy With AST-5251/11:™ Fast Hookup, File Transfer And Extra Capabilities

Standard Twinax Cable Support Makes Installation A Snap. Now you can offer your customers an easy, cost effective direct cable attachment from PC to the IBM® System 34/36/38—no expensive communications adapter necessary. And it's as easy as plugging our AST-5251/11 emulation board into a PC/AT/XT, portable or compatible and connecting the twinax cable. With this complete solution that's all it takes to use a PC just like a standard IBM 5251/11 terminal.

File Transfer Is Only The Beginning. With AST-5251/11 the PC functions as always, and emulates a features-enhanced Model 11 terminal to access the host minicomputer. Now your customers can transfer files bi-directionally between their host and PC, in a ready-to-use format.

Lets Your Customers Use Their Favorite PC Software. AST's file transfer support not only eliminates the burden and the errors of re-keying, it adds the ability to manipulate transferred data using today's favorite PC software packages, like Lotus 1-2-3™ and WordStar.® And Hot-Key support allows concurrent DOS and host sessions, while our applications program interface (API) makes integrating PC and host applications simple.

Even Greater Efficiency. AST-5251/11 also provides host-addressable 5256 printer emulation for PC printers in a background mode.

To find out more, contact:
AST Research, Inc., 2121 Alton Avenue, Irvine, CA 92714
(714) 863-1333
TWX: 753699ASTR UR.

KEY FEATURES

- *Plugs into PC/XT/AT and compatibles; connects to System 34/36/38 via twinax cable and supports cable thru.*
- *Emulates 5251-11, 5291, or 5292-2 display terminal.*
- *Provides host-addressable 5256 printer support (background mode) on PC-attached printer.*
- *Selectable DMA and I/O interrupt channels.*
- *Application program interface and bidirectional file transfer included.*
- *Complete package includes hardware, software, twinax cable assembly and comprehensive user manuals.*
- *Supports fixed or hard disk.*
- *Hot-Key assist for concurrent host and PC sessions.*

Gould offers Sci-Clone/32

FORT LAUDERDALE, Fla. — Gould, Inc.'s Computer Systems Division has announced its Sci-Clone/32, a multiple-node processor system that uses the company's Concept/32 parallel processing minicomputers as nodes in a system linked by dual-ported integrated memory modules. The system runs under Gould's MPX/32 operating system.

The system was designed for applications such as flight simulation, signal processing, power plant simulation and energy management.

The basic configuration is a host-Concept/32 SC27, the Reflective Memory System memory module and a node unit cabinet that will allow for expansion up to four single-card SC27 nodes with one SC27 node processor for $277,200.

The top-of-the-line system costs $1,377,000 and includes a Concept 32/9780 host computer, the Reflective Memory System and two node units fully loaded to handle 16 Concept 32/SC27 minis with parallel processing units. All configurations include two 9-in. 340M-byte Winchester disk drives and one 100 in./sec., 1,600 bit/in. streaming tape drive.

More information can be obtained from Gould through P. O. Box 9148, 6901 W. Sunrise Blvd., Fort Lauderdale, Fla. 33310.

Sun announces workstation, price cuts

MOUNTAIN VIEW, Calif. — Sun Microsystems, Inc. has announced its Sun-2/130 Sunstation workstation, a mass storage subsystem for its Sun-2/50 Desktop Sunstation, across-the-board price cuts on its systems and memory and upgrades to its VME bus-based products.

The AT&T Unix-based Sun-2/130 Sunstation is a VME bus-based monochrome workstation with a 19-in. display, a library of graphics utilities and a display manager. Mass storage options for the Sun-2/130 range from 71M-byte disks that cost $4,900 to 760M-byte disks that cost $36,600. Both ¼-in. streaming cartridge drives costing $3,000 with disk or $4,000 if bought separately and ½-in. tape drives costing $9,500 each are available for backup.

List price for a 2M-byte Sun-2/130 Sunstation is $16,900, and it is available in configurations of up to 8M bytes, with memory available in increments of 2M bytes at $1,500 per 1M byte. The optional mass storage subsystem for the Sun-2/50 Desktop Sunstation consists of a 71M-byte disk along with a 45M-byte ¼-in. cartridge backup tape. It costs $8,500.

Sun also announced that it is doubling the maximum memory available on its products to 8M bytes. The cost of 1M byte of memory has been cut from $4,100 to $1,500, the vendor said. The cost of the 2M-byte diskless Sun-2/50 was cut to $8,900 from $13,400; the cost of the Sun-2/160 Color Sunstation with 2M bytes of memory was reduced to $27,900, down from $36,400; and the price of 71M-byte drive with a 45M-byte ¼-in. streaming cartridge tape option available for the Sun-2/120, Sun-2/130 and Sun-2/160 pedestals was reduced from $10,900 to $7,900.

In addition, the company unwrapped upgrades from the Motorola, Inc. 68010 processor to the 32-bit Motorola 68020 processor for its VME bus-based products, the Sun-2/130 and Sun-2/160. The cost of the upgrade is $4,000.

More information can be obtained from Sun Microsystems, 2550 Garcia Ave., Mountain View, Calif. 94043.

Interface Data unwraps tape drives for IBM CPUs

BOSTON — Interface Data, Inc. has announced cable-through tape drives for the IBM System/36 Model 5362 and the System/36 and 34 computers.

The controller was designed for use with the company's Series 5 tape drives and supports a ½-in. tape format. The cable-through feature is said to allow the tape drive to bypass the communications port and be configured so that the System/34 or 36 thinks it is communicating with a local workstation. The package includes tape control software that facilitates data exchange with both IBM computers and non-IBM equipment, the vendor said. The Tape Librarian software has a timer that is said to allow operations to be scheduled in advance.

The Series 5 Model 98 tape drive is a self-threading, front-loading desktop unit that accepts 7-in. reels. It costs $5,995. The Series 5 Model 89 is a reel-to-reel unit in a self-supporting cabinet that supports both 800 bit/in. and 1,600 bit/in. recording densities and accepts 7- to 10½-in. reels. It costs $13,995. The Series 5 Model 99 self-threading front-loading unit accepts 10½-, 8-, and 7-in. reels. It is available with either 1,600 bit/in. or 3,200 bit/in. data densities and costs $10,795.

More information can be obtained from Interface Data at 18 Assembly Square Drive, Somerville, Mass. 02154.

Reach the number one computer market in Western Europe — West Germany.

Your ad in CW Communications' West German publications will reach the largest computer market in Western Europe. According to International Data Corporation (IDC) the world's leading information industry research firm, the West German computer market is growing at an annual rate of 16% and total data processing expenditures are expected to reach $18.8 billion (U.S.) by the end of 1989. Our West German publications cover all segments of this prospering marketplace.

30,000 West German MIS/DP professionals rely on *Computerwoche* for up-to-date analysis and information on all aspects of the industry.

Microcomputerwelt reaches 60,000 business, scientific, educational and hobby microcomputer users each month.

PC Welt is read by 54,000 West German, Austrian and Swiss IBM PC users each month.

Computer Business circulates monthly to 15,000 readers. It provides a direct link between third-party marketers and potential business partners.

152,000 Commodore owners and buyers read *Run* each month for reports on new products and services in the Commodore marketplace.

Each month 60,000 Apple owners and potential buyers in West Germany read *Apple's*.

CW International Marketing Services makes advertising your products in West Germany, and around the world, easy. We have over 50 publications in more than 25 countries. For more information on our wide range of services, complete the coupon below and mail it today.

Three more firsts from the people who invented the wheel.

From day one, Xerox and Diablo have been known as the two best names in daisywheel printers. And now there are three more in the Xerox line to choose from.

The Xerox Advantage D-25 Diablo printer turns out letter quality documents quickly and quietly. And it does all that for the price of a dot matrix printer.

At 80 c.p.s., the D-80IF is the fastest daisywheel printer ever made by Xerox. It has a built-in double bin sheet feeder. As well as the capacity to handle up to 16 computers at once.

And the D-36 spells reliability. It averages 4,000 hours of printing between maintenance calls.

But Xerox didn't stop there. Each of these new machines is compatible with most computers on the market, including the IBM-PC. And they're all easy to use. They're also a part of Team Xerox, so they can be serviced by the national Xerox service force and authorized service locations across the country.

So if you're looking for the latest in daisywheel printing technology, go with the people who've been in the business the longest. Call 1-800-833-2323, ext. 25, your local Xerox office, an authorized Diablo or Xerox dealer or send your business card to Xerox Corporation, Dept. 25083, P.O. Box 24, Rochester, NY 14692.

SYSTEMS & PERIPHERALS

TERMINALS

■ Motorola/Four-Phase Systems, Inc. has announced its FT45 intelligent terminal that works with the Motorola, Inc. Series 6000 minicomputers.

The FT45 has a 14-in. screen with a choice of amber or green characters. Three styles of adjustable keyboards are available, the vendor said. Features are said to include a security keylock, a high/low intensity control and tile/swivel capability.

The terminal is priced at $2,100.

Motorola/Four-Phase Systems, 10700 N. De Anza Blvd., Cupertino, Calif. 95014.

■ Beehive International, Inc. has released its ATL-220 terminal, said to be equivalent to Digital Equipment Corp.'s VT220 terminals.

The ATL-220 is a low-end model of the company's ATL-220E, formerly designated as the ATL-220. The ATL-220 is said to offer a 14-in. screen and five operating modes, including DEC VT200 seven- and eight-bit control modes and a VT100-compatible mode.

The user may modify communications protocols, interfaces, tab settings, printer controls, function key definition and keyboard parameters through menu-driven terminal operating features, the vendor said.

The unit costs $895.

Beehive International, 4910 Amelia Earhart Drive, Salt Lake City, Utah 84116.

PRINTERS/PLOTTERS

■ BDS Corp. has announced the BDS Laser 630/8, which is compatible with Diablo Systems, Inc. 630 daisywheel printer protocols and is said to be capable of accepting data through parallel IBM Personal Computer-compatible and serial RS-232C interfaces.

The Laser 630/8 has nine type fonts in the basic configuration and can accept a maximum of 16 fonts. Optional font cartridges include one that reportedly allows a host processor to download user-defined fonts.

Printer features include combined underlining and boldfacing or italic and boldfacing, the vendor said.

The BDS Laser 630/8 costs $3,495.

BDS, 800 Maude Ave., Mountain View, Calif. 94043.

■ Southern Systems, Inc. has announced its ST series of printers, which are compatible with IBM's System/34, 36 and 38 and Series/1 systems; Texas Instruments, Inc.'s 990 family and Business Systems computers; and Digital Equipment Corp. PDP-11 and LSI machines.

The models ST 450 and ST 900 printers come with either a Data Products Corp. parallel interface or a Centronics Data Computer Corp. parallel interface. An RS-232 interface is optional.

The ST 450, said to be a 450 line/min band printer, costs $6,795. The ST 900, reportedly a 900 line/min band printer, costs $7,995.

Southern Systems, 100 N. Belcher Road, Clearwater, Fla. 33575.

■ Southern Systems, Inc. has unveiled the Mercurion 7450, a low-end version of its Mercurion 1 page printer.

The 7450 reportedly operates at 45 page/min, when using 8½- by 11-in. paper. It has a duty cycle of 50,000 to 300,000 page/mo and is field upgradable to the 60 page/min Mercurion 1, the vendor said. It comes with an IBM mainframe interface.

The Mercurion 7450 costs $49,950.

Southern Systems, 100 N. Belcher Road, Clearwater, Fla. 33575.

■ Hewlett-Packard Co. has announced that it has lowered the prices of its HP 7580 family of drafting plotters by an average of 25%, effective immediately.

The HP 7580B has been reduced from $13,900 to $9,900, the company said.

Also reduced is the HP 7585B, from $16,900 to $12,900, and the HP 7586B, from $21,900 to $16,900.

HP, Inquiries Manager, 1820 Embarcadero Road, Palo Alto, Calif. 94303.

■ Test & Measurement Systems, Inc. has released its TP-35 video printer for use with Tektronix, Inc. Logic Analyzer models 1240, DAS 9100 and 318/338.

The thermal printer gives a hard copy on white thermal paper from a CRT display. It prints any CRT image generated by the measuring instruments in 16.7 sec., the vendor said.

The TP-35 is priced at $1,295.

Test & Measurement Systems, Suite 301, 349 Cobalt Way, Sunnyvale, Calif. 94086.

■ Facit, Inc. has released a four-color printer, which can handle text and graphics, for use with micros and minicomputers.

The C7500 is said to print dual-resolution graphics at speeds of 2,400 dot/sec., draft-quality text at 400 char./sec. and near-letter-quality text at 100 char./sec. A fanfold or cut-sheet tractor feed are standard.

The unit costs $2,495.

Facit, 9 Executive Drive, Merrimack, N.H. 03054.

GRAPHICS SYSTEMS

■ Chromatics, Inc. has announced its CX 1280 Colorgraphic Display System, which supports Digital Equipment Corp.'s VMS and AT&T's Unix operating systems.

The CX 1280 base system includes four single-buffered image planes, CX 1280 resident firmware, a 1,280- by 1,024-pixel resolution monitor and an engine that processes 500,000 fully transformed vectors per second.

The basic unit costs $24,995.

Chromatics, 2558 Mountain Industrial Blvd., Tucker, Ga. 30084.

STUART from page 75

gy is "install today and rationalize tomorrow," Stuart said.

Although System/36 is inexpensive and easy to use, she noted that it has a 16-bit architecture with a limited processing range. "Right now five or six System/36 users using Displaywrite will bring a high-end system down," she said. With the improvements announced June 18, "nine to 11 users will take the system down. That's not a very significant improvement," she said.

The System/36 Personal Computer, priced at approximately $7,000, that IBM announced on June 18 offers 75% of the performance of the former low-end System/36, she noted. Disk speed is a constraining factor, she added. The System/36 Personal Computer can run PC-DOS with the System Support Program (SSP), but the PC-DOS application must be suspended for the machine to get into SSP, she said. She called that co-resident feature more significant for IBM than for users.

"We predict a real extension of the System/36 product line later this year," Stuart said. The product will support an SQL front end to the System/36 file system, a feature Stuart said will round out System/36 by offering data base management system access.

"Can IBM improve System/36 performance to run a [data base management system] in a multivendor environment?" Stuart asked rhetorically. "That remains to be seen. Until users see a workable OA package or a workable extension to the product line upward, some skepticism is deserved." She noted that the IBM 8100 distributed processor was IBM's former strategic OA product.

'Merging the successful with the endangered'

With the announcement of the 3270 Personal Computer AT, IBM is "merging the successful IBM Personal Computer and the endangered 3270 environment. IBM does not want to lose its 3270 terminal end users," Stuart said, noting that several million such terminals are installed. "A hybrid 3270 and Personal Computer product will result," she predicted.

Generalizing about the announcements, Stuart said, "IBM continued on a slow path of bringing its disparate systems into compatibility with its architecture." In the Yankee Group's view, IBM will exploit the installed base of System/36 in corporate OA environments.

Thus, IBM will eventually offer System/36 support for Distributed Office Support System (Disoss), its documents interchange package, Stuart said. IBM is working in its Rochester, Minn., plant on a long-range plan to combine System/38's object-oriented architecture and integrated data base features into a System/36-like processor, Stuart maintained.

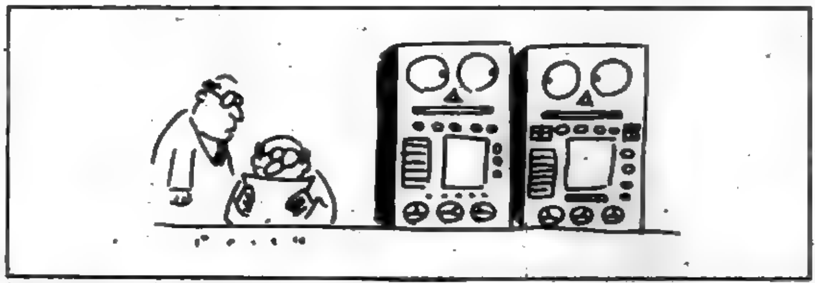
Although System/38 has certain advanced features, its shipments have been stable at approximately 3,000 per year, Stuart said. "We see [the] System/38 as relegated to niche accounts," such as small businesses and small manufacturers. "It will continue to be enhanced but not brought into the mainstream strategy." Instead, she said, "IBM will give the System/36 base a path to an alternative architecture, a non-370 architecture," she said.

Stuart predicted that IBM will eventually announce a token-ring local-area network. "System/36 will eventually have a [local-area network] connection so it can act as a file server," she said.

In viewing IBM's OA strategy, Yankee Group divided IBM's strategic office products into the following three areas:

- Applications such as Displaywrite and Professional Office System.
- Logical connection products such as Disoss, Document Interchange Architecture, Document Content Architecture and Topview.
- Physical connection products such as the Cabling System and the various hardware products.

"Where physical compatibility fails, construct logical compatibility; until then, a little applications compatibility will do," Stuart said, describing IBM's OA strategy.



"Ever get the feeling they're just using us?"

SONY from page 75

the model IPL-1345 laser printer will be available in the fourth quarter, and other parts of the Sios line will be available in the first quarter of 1986, the vendor said.

Sony said the basic workstation hardware, including the microprocessor, keyboard, mouse and display, costs about $60,000. Hardware for the integrated system, including the workstation, printer, image scanner and optical disk system, will cost about $80,000, Sony said.

The hardware will be sold to software and systems developers that will provide software and configure the system for users with mass storage needs, the vendor said. Applications software for the system is not available yet, officials added.

Sony is located at Sony Drive, Park Ridge, N.J. 07656.

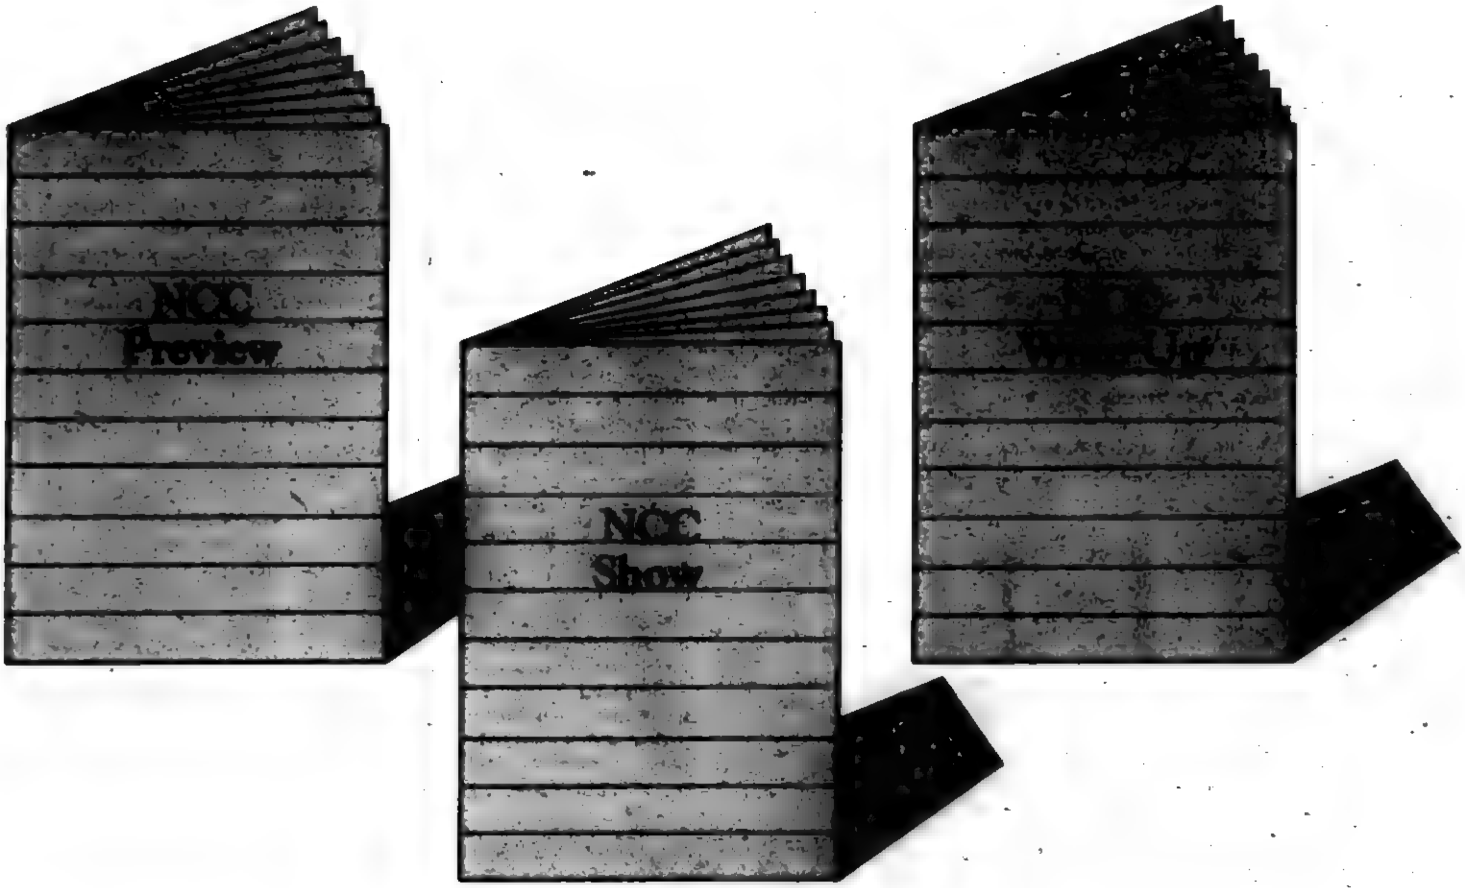
How to make NCC *really* work for you



Thousands of your customers and potential clients will go to NCC this summmer (in Chicago, July 15-18). And hundreds of thousands more will follow the show by reading Computerworld.

We'll provide our readers with complete coverage of NCC in three special issues — the July 8th Preview issue, the July 15th Show issue, and the July 22nd Wrap-Up issue.

Our editors will showcase the new products; report on the major speeches and seminars; and take a look at industry trends of interest to our readers.

Protect your investment in NCC. Advertise in these issues now to keep your company and your products in front of more than 687,000 computer-involved professionals all during this eventful period.

Call your local Computerworld representative today to reserve space for your NCC campaign. Or call Ed Marecki, Vice President of Sales, at (617) 879-0700. Call now. These issues will be closing soon:

COMPUTER INDUSTRY

Dataquest: Generalist amid specialists

FOURTH OF A FIVE-PART SERIES

By Kathleen Burton
CW West Coast Bureau

SAN JOSE, Calif. — At a time when its competition is increasingly coming from specialists, Dataquest, Inc. remains one of the market research field's most confirmed generalists.

With operations in three continents and a staff of 130 analysts and researchers, Dataquest boasts a range of products and industry coverage that few of its competitors can match, according to company President E. David Crockett.

Breadth provides Dataquest with an effective hedge against the industry's periodic downturns and recessions. "If one research area is in a slump, Dataquest can cut back and lay off staff with hardly a ripple in the rest of the operation," according to Michael Killen, president of Strategic, Inc., another market research firm here.

Breadth is also the key weapon with which Dataquest hopes to combat a growing host of niche-seeking competitors.

How well Dataquest copes with these rivals will determine, to a large degree, whether the firm meets its current goal of 30% revenue growth during 1985.

Dataquest's competitors span a broad range of geographical areas and products: Phoenix-based Instat Corp. focuses on semiconductors; Dallas-based Future Computing, Inc. covers the personal computer market; Software Access International in Mountain View, Calif., specializes in software; and the Boston-based Yankee Group targets telecommunications.

But Dataquest's most significant competitor, Crockett said, is Cupertino, Calif.-based Infocorp, founded in 1982 by three former Dataquest employees.

Infocorp, which now has 250 clients and a revenue of $4 million that company officials say will double this year, competes head-to-head with Dataquest in the small systems and microcomputer areas, said Skip Bushee, Infocorp's executive vice-president.

Bushee said Dataquest failed to do extensive basic research in the small systems and microcomputer markets. "Dataquest presents its results to clients in attractive packages and talks a good story, but they don't back their numbers with sufficient primary research, which requires talking to large numbers of end users, dealers and distributors," Bushee said.

Dataquest — a subsidiary of A. C. Nielsen Co., a Chicago-based media ratings conglomerate — was founded in 1971 and has since become the largest syndicated market research firm in the U.S., with an annual revenue estimated at $35 million to $40 million, company officials said.

David Norman, William Coggshall, and Ronald Miller became involved in market research in the late 1960s as employees of Creative Strategies, Inc. in San Jose. The three left to begin Dataquest, envisioning the firm as a "one-stop, automated information boutique," and that philosophy

Software services mart to grow 20%

By Charles Babcock
CW New York Bureau

NEW YORK — The computer software and services industry will continue to grow by 20% to 21% annually through the end of the decade, despite the current slowdown of hardware sales, said Peter A. Cunningham, president of Input.

Figures collected by Cunningham's Mountain View, Calif., market research firm, which were presented to the Association for Data Processing Service Organizations, Inc. here recently, indicated that software and services firms' revenues grew quickly in late 1983 and early 1984 but have slackened some since then.

"The industry grew at its fastest rate in 1984, 24%," with actual growth rates of 24% to 28% in the first half, Cunningham said. He called it genuine growth — few price increases

See GROWTH page 94

Financial software maturing

Signifies broader trend in mainframe packages

By Charles Babcock
CW New York Bureau

NEW YORK — The market for mainframe software is maturing, and the companies that produce it are going to have to grow more sophisticated if they plan to survive, said Gerald C. Chichester, president of Focus Research Systems, Inc., a Dun & Bradstreet Corp. company in West Hartford, Conn.

Chichester made his remarks before 200 people attending the Association of Data Processing Service Organizations, Inc.'s (Adapso) 12th annual software and services financial forum here recently. His comments were directed at vendors of financial applications software packages such as payroll, general ledger and accounts receivable, but what is happening to financial packages signifies broader changes in the industry, he said.

"The older, more substantial solutions have been provided. The challenge now is for vendors to find new applications areas that they heretofore have ignored," he said.

Chichester's organization analyzed its data base of 10,000 IBM System 370 mainframe users — including 3080 series, 4300 series and the 3033 — and found that their purchases of financial applications packages peaked during the first quarter of 1984 and have gradually declined since.

The number of users of general ledger has increased for many years, but that trend leveled out in 1984, the survey indicated.

"I infer that all those who want it,

Synapse execs withhold public comment on firm's demise

By Kathleen Burton
CW West Coast Bureau

MILPITAS, Calif. — Synapse Computer Corp. quietly closed its doors last month, but company officials have refused to confirm its demise.

At first, officials at Synapse, a privately held on-line transaction processing systems manufacturer backed by $35 million in venture capital, said they would release a statement about the company's closure. Later, Mark Wilson, Synapse's vice-president of administration and finance, said, "We're a privately held company, and other than talking to our customers, we do not plan to make a public announcement about recent activities or about our future plans."

A Synapse employee, who asked not to be identified, confirmed that the company had locked its doors at the close of business June 14, and the remaining employees "are just Xeroxing resumes and packing personal belongings. The parking lot is empty, and the doors are locked," he said.

According to the employee, the closing came as a shock to the company's 98 workers, who had been led to believe that a merger with aerospace giant McDonnell Douglas Corp. was imminent. "We didn't know a thing until Friday [June 14] at 2 p.m. when [Synapse Chief Executive Officer James Bochnowsky] called us all into a room and told us the McDonnell Douglas deal had fallen through the night before, and the company was closing," he said.

"We feel ripped off"

The employee said that Synapse's workers were angry that a severance and vacation pay package that had been promised in the event of a shutdown was not forthcoming. "They paid us only through Friday, our last day," he said. "We feel ripped off."

McDonnell Douglas had been considering a merger with Synapse until late last week, said Glenn Marquist, McDonnell Douglas' director of marketing and product planning in Irvine, Calif. McDonnell Douglas decided against the merger because it was seeking an entry-level system priced well below Synapse's $350,000 entry-level systems, Marquist said.

According to insiders and analysts, a series of management and technical problems plagued the company during its five years of operation.

Synapse became mired in several problems that included shipping delays and a market crowded with competitors, said Gwen Peterson, an analyst with Dataquest, Inc., a market-research firm in San Jose, Calif. "When the company started in 1980, only [Tandem Computer Corp.] was there, but now there are half a dozen competitors in the same niche," Peterson said.

Synapse shipped nine systems during 1983 and 1984 and had two active users — General Motors Corp. in Pontiac, Mich., and the police department in Nashville — according to Omri Serlin, president of Itom International, a market research firm in Los Altos, Calif. The other seven systems the company shipped were bug-ridden prototypes, Serlin said.

RESEARCH from page 85

still guides the company today, said David G. Jorgensen, Dataquest's current chairman.

The three gradually moved on. In 1982, Norman left Dataquest to found the San Jose-based Businessland chain of computer stores. Coggshall, who left the company in 1983, is now chief executive officer at Software Access International. Miller is vice-president of Boyden Associates, a high-technology recruiting firm in Menlo Park, Calif.

Dataquest has a roster of 900 blue-chip clients that includes IBM, Prudential-Bache Securities, Inc., 60 venture capital firms and the Big Eight accounting firms. Dataquest's first research forays tracked copiers, semiconductors, mobile homes and recreational vehicles. The first two divisions provided a launching pad for the company's expansion into the more lucrative areas of electronic printers and computer storage.

Dataquest subscribers pay between $9,000 and $35,000 annually for single subscriptions, which include industry-specific analyses and specialized studies aimed at Fortune 1,000 CEOs.

The firm's clients receive binders with information charting market size, order and shipment rates and pricing strategies. Clients also receive newsletters on subjects germane to their subscriptions, have telephone and in-person inquiry privileges and can attend one or more of Dataquest's 25 industry-specific annual conferences.

'Only game in town'

According to Curt Francis, vice-president for strategic planning at Advanced Micro Devices, Inc. (AMD) a Santa Clara, Calif.-based semiconductor manufacturer, "Dataquest is the only game in town for semiconductor data."

A Dataquest client for five years, AMD bases crucial marketing and strategy decisions on Dataquest's numbers, Francis said. Semiconductor firms like AMD need to understand and interpret the international market, from the shipping rate of graphics controllers to how fast companies will switch to digital telephony, Francis said.

Perq Systems Corp., a graphics workstation manufacturer in Pittsburgh, spends $24,000 annually to subscribe to Dataquest's computer-aided design and manufacturing and small computer services, which it uses to evaluate competitors and construct a marketing plan, said Linda Richardson, Perq's marketing specialist. "Dataquest's numbers about our competition are very accurate," she said.

Though each Dataquest division is run separately and is responsible for its own profits and losses, the research activities of each group overlap, said Robert Sanekoff, vice-president of Dataquest's graphics and display terminals division.

"It's not hierarchical here. The company is run like a law firm with everybody working on several 'cases' simultaneously," Sanekoff said. Dataquest's semiconductor group, for example, would be "flying blind" if it could not cross-check information with the telecommunications, laser printer and terminals groups, according to Sanekoff.

According to Crockett, Dataquest's philosophy is based on the premise that the price/performance ratios and growth rates of computer-related industries have predictable life cycles.

He claimed success in predicting IBM's 20% per year price reductions, based on the equivalent functions of products. "Our projections on IBM may vary two months based on parts availability," Crockett said, "but we understand IBM's product cycles, and, as IBM goes, so goes the rest."

During its 14-year history, Dataquest has had successes and failures. "Market research is not an exact science," Crockett conceded. Because of this, Dataquest has miscalculated trends and technology breakthroughs, including the mercurial growth of under-$5,000 laser printers and the sluggish expansion of robotics and office automation.

But the company claims significant successes. It predicted the last five downturns in the semiconductor industry and Xerox Corp.'s 1972 loss of market share in the copier industry, according to Crockett.

Dataquest's success formula is based on aggressively filling niches that no one else has targeted, according to Jorgensen.

New services launched this year include a London-based Western European printer group that set a sales record during its first months of operation by signing up a record number of clients. In the U.S., newly established groups include software, semiconductor materials and electronic publishing divisions, he said.

In spite of Dataquest's successes, however, problems cloud the horizon. "It's difficult being No. 1," Jorgensen said. "Though we try harder, the bar goes up all the time. Clients

International software mart showing high sales potential

By Charles Babcock
CW New York Bureau

NEW YORK — Many software manufacturers are missing the fact that the international market for software "is larger than [that of] the U.S. and growing at a faster rate," according to a Software AG officer.

Michael Jakes, senior international vice-president of Software AG in San Diego, told the Association for Data Processing Service Organizations, Inc. (Adapso) here that foreign languages, laws and other barriers presented difficulties for U.S. software companies selling overseas. But the biggest obstacle is their conception that the U.S. outstrips every other market for their products.

Jakes cited IBM's international software sales vs. those in the U.S. In 1982, IBM's international sales trailed domestic sales, $758 million to $935 million. In 1983, when reported in 1982 dollars, they had drawn closer together, at $1.13 billion to $1.29 billion. And in 1984, for the first time international sales exceeded U.S. sales when reported in 1982 dollars, $1.97 billion to $1.71 billion.

In reality, the increase in the value of the dollar shortchanged IBM part of the return on its international sales, since it deals in the currency of each country rather than in dollars, Jakes said. The same figures as reported by IBM in its 1984 annual report are as follows: $758 million international to $935 million U.S. in 1982; $1.01 billion compared with $1.29 billion in 1983; and $1.49 billion vs. $1.71 billion in 1984.

The five countries in which IBM does the bulk of its international business are Canada, the UK, West Germany, France and Italy. As software markets, these countries "are far less saturated than the U.S.," Jakes said.

Some rapidly developing third-world countries "are incredibly viable markets," he added.

Proven software packages in the U.S. cannot automatically transfer their success overseas. Accounting laws differ from country to country, and legal systems, office automation packages and educational software all tend to follow local conventions rather than international standards.

"Hardware tends to be global, but software is local; it reflects local culture," Jakes said.

Nevertheless, international markets represent "a great untapped reservoir" for those with the drive to take advantage of them, he said.

Wang creates telecom group

LOWELL, Mass. — Wang Laboratories, Inc. recently announced the creation of a service arm focusing on the communications market that its founder and chairman predicted "will become a second major business" for the office automation company.

Wang Information Services Corp. (Wisc) will be a wholly owned subsidiary that will offer voice mail, telecommunications switching, data base and other services to users of Wang products.

Wang Chairman and Chief Executive Officer An Wang said he has set a revenue goal of $100 million for the subsidiary by next year.

Wisc is scheduled initially to offer Wang customers monthly rentals of nationwide electronic voice mail services.

Future services

The other networking and distributed data processing services will be offered in the near future.

"Technology has become very complex for many users," Wang said. "Wisc has been organized to provide advanced but easy-to-use services without forcing the user to deal with the technology directly or make heavy investments."

Senior Vice-President Robert M. Boseman Sr. will head the Wisc subsidiary, reporting directly to Wang's CEO.

AEA offers guide to Japan

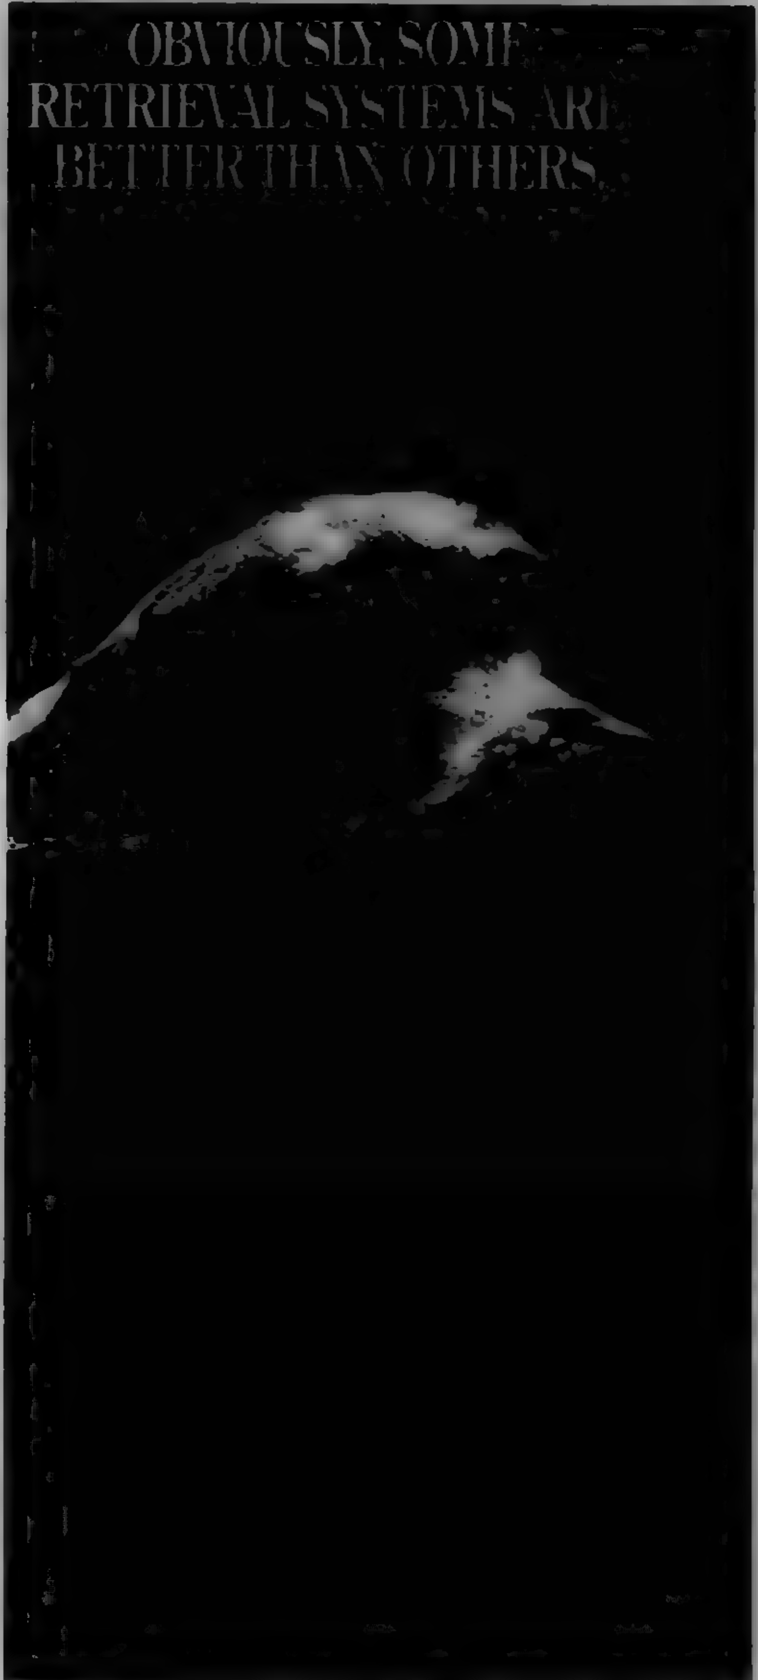
PALO ALTO, Calif. — The American Electronics Association (AEA) recently published a 72-page guide titled "Sources of Electronics Information in Japan."

The booklet provides information on Japanese electronics trade organizations; government, industry and academic publications; research laboratories; technical libraries; computer data base sources; consulting firms; and trade fairs and exhibitions.

Information for the publication was collected by the AEA's Japan Office in Tokyo, opened last spring. The AEA said one of the purposes of the office is to improve the quality and volume of information about the Japanese electronics market available to U.S. electronics industries.

The report costs $45.

AEA can be reached through P.O. Box 10045, 2670 Hanover St., Palo Alto, Calif. 94303.



Ours has Automatic and Transparent Restore.

We like to think of our software as *innovative* and *non-traditional*. It is.

Our new subsystem, Intelligent Transparent Restore (IXR), working under our ASM2 software, provides you with the ability to archive more data and to access it automatically.

Intelligently, as it were.

Because you can submit a job or issue a command which accesses an archived dataset without the imposition of manual processes.

You'll find that IXR intercepts the desired reference to an archived dataset, performs a restore in real-time and the job or command processes normally.

That's fast and smart.

IXR not only provides the S213 intercept, but also intercepts for VSAM Open and Dynamic Allocation.

As mentioned, we design intelligent software.

But that's not all. We also provide job and step level staging for archived datasets. And IXR inhibits execution until all restores are complete and then reschedules the job automatically.

For further information on the ASM2 subsystem, IXR, please write or telephone Mr. Shawn McLaren direct; (415) 941-4558.

After all, who says you can't teach a software system new tricks.

Woof.

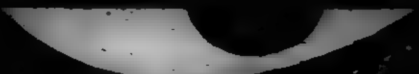
Software AG Users
spell it out...Datapro™ survey
rates ADABAS

E-X-C-E-L-L

SOFTWARE AG
Where the future
comes as no surprise.



E-N-T!

ADABAS does it again—and we're not surprised!

The results are in! Datapro Research Corporation asked systems software users to rate their data base management systems. And, Software AG users rated ADABAS "Excellent!"

Exactly the same thing happened in an earlier survey when Data Decisions asked users what they thought. For the third year in a row, ADABAS went right to the top of the list as the highest ranked DBMS for the IBM mainframe. And NATURAL was a top contender for best fourth-generation language.

Together, ADABAS and NATURAL make an unbeatable team!

At Software AG we don't believe in surprises. We believe in providing our users with the most powerful software tools available anywhere. And that's the proper plan for the world leader in advanced systems software.

So, if you want the facts about systems software, just ask our users. For starters, send us the coupon below and we'll rush you the official Datapro DBMS report. Or call us at 1-800-336-3761. (In Virginia and Canada, call 1-703-860-5050.)

Rush me the facts.

RCA, Sharp plan joint chip manufacturing venture

NEW YORK — In the midst of an increasingly bitter U.S.-Japan trade war in the semiconductor industry, RCA Corp. and Sharp Corp. recently announced the first major U.S.-based joint venture between U.S. and Japanese integrated circuit vendors.

The companies will combine to build a $200 million production facility for Cmos and very large-scale integration (VLSI) chips in Camas, Wash., a suburb of Portland, Ore. RCA will hold the controlling interest in the joint venture, called RCA/Sharp Microelectronics, Inc., with 51% of equity and five of nine seats on the board of directors of the new company.

The 270,000-sq-ft plant is expected to open late this year and employ 650 people by 1989. The facility will include a design center and wafer fabrication center for the production of standard, custom and semicustom chips.

RCA President and Chief Executive Officer Robert R. Frederick said that despite the current semiconductor slump, the market for Cmos chips will grow dramatically through the end of the decade. Frederick predicted that the total annual worldwide sales of Cmos chips will grow 35% to 40% annually from its current level of $3.5 billion to $28 billion by 1990.

"There is no question of the cyclical nature of the industry," Frederick said. "But . . . we believe that electronics, and particularly Cmos, will grow through the years and that we will grow with the industry. We are in it for the long haul."

"Separately, Sharp and RCA each have tremendous capabilities in Cmos LSI," said Atsushi Asada, senior executive director and group general manager of Sharp's Integrated Circuit Group. "We feel that combining our forces will be synergistic, resulting in considerably faster progress than could be attained without such a combination," Asada added.

The companies named RCA's Jon A. Shroyer president and CEO of RCA/Sharp Microelectronics. Shroyer had been division vice-president of LSI products and technology development for the RCA Solid State Division.

Downturn prompts layoffs at four Silicon Valley firms

By [illegible] Burton
CW West Coast Bureau

The computer industry slump claimed more casualties in California's Silicon Valley recently as four more companies announced staff cutbacks.

■ Raychem Corp., a materials manufacturer in Menlo Park, Calif., will eliminate 300 jobs, effective immediately, as part of a cost-cutting move. Approximately 100 of the jobs are local; the remainder are overseas where Raychem does approximately 60% of its business, according to a spokesman.

Raychem, which manufactures a broad array of products for the electronics, telecommunications and defense industries, employs 9,600 people worldwide.

For the third quarter ended March 31, Raychem posted profits of $4.4 million on sales of $164 million, compared with profits of $8.6 million on sales of $156 million during the same period a year ago.

■ Verbatim Corp., a floppy-disk manufacturer in Sunnyvale, Calif., will cut 200 workers from its staff through attrition and layoffs by August.

A spokesman for the company said the cutbacks are the result of a slowdown in orders and are not related to Verbatim's recent acquisition by Eastman Kodak Co. of Rochester, N.Y. Approximately 1,100 employees will remain after the cutbacks.

Verbatim reported a before-tax loss for the third quarter of $6.2 million on sales of $41.6 million, compared with a loss of $4.5 million on sales of $42.1 million for the same period in 1984.

■ Scientific Micro Systems, Inc., a microcomputer manufacturer in Mountain View, Calif., will cut 15% of its staff following the recent consolidation of its manufacturing operations. Scientific Micro Systems posted a $175,000 loss during the first quarter on sales of $8.7 million, compared with a profit of $960,000 on sales of $9.6 million for the same period a year ago.

■ Burroughs Corp., based in Detroit, will trim 300 jobs from its Santa Clara, Calif.-based media products group, formerly a division of Memorex Corp. A Burroughs spokesman said the company will attempt to move the displaced workers to other Burroughs divisions. Burroughs will relocate its 5¼-in. manufacturing operation overseas and its 3½-in. operation to an existing facility in Santa Clara.

OEM Computer Product Buyers

"The Invitational Computer Conferences bring to you the latest high-tech information you need to hear, and the major OEM products you need to see. We'll be there!"

And you'll find other top OEM manufacturers, such as NCR, Fujitsu, Xebec, Lear Siegler, Siemens and IBM, to name but a few.

Celebrating its 15th year, the "OEM Only" ICCs bring you, the volume buying decision makers, together with the key suppliers of computer and peripheral products. The ICCs also bring you a full day of high-tech seminars, explaining the latest in computer product technologies and what they mean to you, the systems design engineer. As an invited guest, there is no charge to attend the seminars or product displays.

The ICCs, a series of eleven, one-day regional conferences are convenient to where you work. The small, exclusive setting makes it easy for you to meet potential suppliers one-on-one.

Hear what the OEM manufacturers have to say, learn about new technologies, and remember, you may attend "by invitation only."

Reach over 60,000 French computer professionals.

Advertise in CW Communications' French publications and sell your products directly to the thriving French computer market. According to International Data Corporation (IDC), the world's leading information industry research firm, France is the second largest market in Western Europe with DP expenditures for 1984 at more than $14.4 billion (U.S.) and a projected growth to over $30 billion (U.S.) by 1989. Our publications can help you reach all segments of the computer industry in France.

Each week 20,000 MIS/DP executives read *Le Monde Informatique* to keep abreast of the latest developments in the industry.

Each month *OPC (PC World France)* reaches over 15,000 IBM PC users and potential buyers who are looking for the latest information on the IBM PC and compatible products.

Distributique is read each month by 8,500 computer distributors and retailing professionals. The editorial focuses on the third-party reseller market in France.

26,000 Apple computer users turn to *Golden* magazine each month for the latest information on Apple and Apple compatible computer products.

CW International Marketing Services makes advertising your products in France, and around the world, easy. We have over 50 publications in more than 25 countries. For more information on our wide range of services, complete the coupon below and mail today.

IBM Software Notes
News for the DP professional

Rail car leasing is just one of the financial services supported by the GE Credit Corp. network. IBM's Information/Management helps GECC identify network problems fast.

Information/Management Helps GE Credit Keep Network On Track

"We have happier customers," says Tom Dixon, manager of computing and telecommunication services for General Electric Credit Corporation (GECC) in Stamford, Conn. He is describing the use at GECC of IBM's Information/Management, Version 2—a licensed program that helps manage large data networks.

With assets of $17 billion, GECC is one of the country's largest commercial lenders—active in retail credit, commercial leasing and mortgage banking.

And GECC operates a very large network: one with more than 2,000 terminals. The users, Mr. Dixon's customers, are in GECC field offices, retail stores and GECC client offices. They operate workstations, point-of-sale terminals and credit authorization terminals.

IBM's Information/Management program helps Mr. Dixon's staff use its computer to provide better service to customers. It enables the staff to record and retrieve all the data relevant to any network operating problems: the list of equipment at each site, the details of every communication link, a complete record of every problem occurrence at each site, complete data on every type of equipment used in the network, and a detailed file on each vendor.

These data files can be searched to learn, for example, the history of a particular incident or of all previous occurrences of similar problems.

"We know our customer's environment," Mr. Dixon says. "Over the telephone from GECC's customer support center, we can provide procedures to identify or correct the problem. We can see every change made to the telephone circuit serving that site. We can see all problems on that circuit, year to date. And we can talk to the telephone vendor in specific, geographic terms.

"We're automating ourselves so that our present staff can handle a much larger network and a much greater rate of network change," Mr. Dixon continues. "We're already handling about ten times more devices than two years ago. And we're eliminating paperwork and becoming more responsive.

"Our next step will be to automate the management of network change with Information/Management." ▪

Pacific Northwest Bell Creates Online System Fast

"This is a very large and complex system," says John Osterfeld of Pacific Northwest Bell Telephone Company. "Yet we were able to implement it with 12 programmers—half of them brand-new to programming—in a total of 13 months from preliminary design to an online production system.

"It would have taken at least twice as long without ADF."

Mr. Osterfeld, a system analyst for Pacific Northwest Bell, is referring to IBM's Application Development Facility (ADF). Designed for users of the IMS/VS data base/data communication system, ADF greatly reduces the amount of programming required to create an application.

The programmers, under the technical guidance of Mr. Osterfeld, worked with ADF to develop a new version of the Customer Account Retrieval System (CARS) used by Pacific Northwest Bell representatives to call up account histories while answering customer telephone inquiries.

"We were up against a hard deadline. The application had to replace an older version within 13 months," he continues.

"Fortunately, ADF simplified the IMS programming to the point where we could meet the deadline using some people with no programming experience at all.

"CARS now has several thousand users," Mr. Osterfeld points out, "and a very large data base. In our largest center, CARS handles 350,000 transactions a day—12 per second at peak times. So it is an application with a lot of demand on it. Execution has to be very efficient.

"And this version handles 28 I/O calls per transaction, compared to 20 or less in our previous system.

"In other words, the system as written with ADF is actually more efficient in execution than the conventionally programmed system it replaces." ▪

IBM Software Experts Answer the Call to Keep Systems Running Smoothly

It's 2:00 a.m. You're testing a new application on a tight deadline. Suddenly, something—you don't yet know what—triggers an "abend."

With software, that happens. Each new hardware configuration, new application, or different combination of software releases is a unique environment that may cause a previously hidden problem to surface.

So, to keep IBM intermediate and large system customers up and running, the skills of more than 1,500 software service professionals are always on tap. Part of the IBM National Service Division, these professionals have the full power of special data bases at their fingertips.

You just call a special 800 number. At any time, 24 hours a day, seven days a week, you reach an IBM support center in Chicago, Boulder or Tampa. These locations service IBM's MVS, MVS/XA, DOS/VSE, VM and VS1 system products and the licensed products associated with them. The centers also service licensed products for the Series/1 and the 8100.

Often the IBM Program Support Representative (PSR) taking the call recognizes the problem and gives the customer a remedy. To help the PSR, IBM maintains a data base of symptoms and solutions for known problems. If the problem requires a revision to the code, the PSR has a Program Temporary Fix (PTF) sent to the customer by the fastest possible method—in some cases, by a telephone link.

Over 50 percent of problems are solved by the PSR. But when a problem is a new one, the customer is put in touch with a program specialist, who often is located near the actual developers of the software product.

On the most severe problems—those which have halted processing—the first goal is to find some remedy, such as a bypass, that allows work to resume. The objective is to complete this within 24 hours.

The second goal for the program specialist is a permanent solution. When this requires a new PTF, the objective is to develop and test it within 14 days. The specialist re-creates the problem, functionally tests the new PTF, and then runs "regression tests" to be sure the fix is reliable.

To close the loop, IBM periodically makes available service updates which combine all recent program changes. ▪

To consult a data base of software symptoms and solutions, IBM representatives at customer sites talk by phone to these specialists at the IBM support center in Chicago.

Cross System Product Set–Version 2 Recently Announced

With the recent announcement of Version 2, the IBM Cross System Product Set becomes a strategic productivity tool for large systems, as well as for intermediate and distributed systems. This application generator includes three licensed programs: one for creating applications, one for executing them and a third that permits end users to query the VSAM or CMS files.

The Cross System Product Set runs under all operating systems for 30XX and 4300 systems and under DPPX/SP in the 8100. With this version, support is added for IMS/VS/DB and DL/I as data bases for CICS/VS. In addition, it has been enhanced to run in systems with large networks of terminals.

Simplify MVS Installations

The IBM Custom-Built Installation Process Offering (CBIPO) is a simplified packaging of MVS. A CBIPO can cut the time to install an MVS system or subsystem from weeks to days.

Conventionally, a major system change involves a separate tape, documents and installation procedure for each program product.

With CBIPO, you first select the program products you intend to use with MVS. Then, with an automated process, IBM custom-builds an MVS system consisting of the ordered products in the form of distribution data sets.

The CBIPO also includes customized documentation that provides a step-by-step single installation path.

If you're interested in the growing information needs of business professionals, you'll be interested in *IBM Software Notes for the Business Professional and Manager,* an advertisement in recent business publications that featured these products:

- IBM's Query Management Facility (QMF). QMF is part of Dow Corning's end-user computing program. QMF lets employees do ad hoc queries on relational data bases.
- The Information Facility (TIF). Pratt & Whitney manufacturing experts create computer applications quickly, easily and in plain English.
- Info Center/1 is a new functionally integrated decision support product, combining and enhancing three popular IBM products: ADRS, APL/DI, and FPS.
- The IBM Personal Decision Series (PDS) lets PC users perform a variety of tasks on corporate, departmental or personal data bases.

For literature on these products, check "Business Professional Software" in the coupon at the right.

IBM

Sun Microsystems divides

MOUNTAIN VIEW, Calif. — Sun Microsystems, Inc. recently announced a major reorganization that will split the company into four divisions. Former Vice-President of Engineering Bernard Lacroute has been promoted to executive vice-president and is responsible for all four divisions.

The Workstation division will continue to concentrate on the engineering, manufacturing and marketing of the existing Sun Microsystems product line of workstations for technical and scientific users.

The reorganized Software Products division will be responsible for the continuing development of Sun Microsystems software products, according to the firm.

The East Coast Engineering division was formed with the purpose of establishing and running a Sun Microsystems technology center on the Eastern seaboard.

The Federal division, housed in a new facility in Milpitas, Calif., will address the special manufacturing and marketing needs of Sun Microsystems products to government organizations through both direct sales and OEM channels.

The Software Products division will be headed by former Director of Software Engineering Eric E. Schmidt and the Federal division by former Vice-President of Operations Russell Bik.

GROWTH

from page 85

inflated the revenue figures. The growth rate slowed to the 19% level by the end of the year; throughout 1984 user expenditures rose to $39.9 billion from $32.2 billion the year before.

Not all segments of the industry have shared equally in the expansion. Software products companies, whose revenues grew 30% in 1984 compared with 41% in 1983, benefited the most. Software product revenues amounted to $10.4 billion in 1984.

Processing services companies, which include facilities management, remote and batch processing, distributed data processing, time-sharing and network services, grew 18% in 1984 compared with 17% in 1983. Professional services companies grew at comparable rates in both 1983 and 1984. They include systems design, programming, consulting, education and training and installation services.

Processing services amounted to $15 billion in revenues in 1984, and professional services amounted to $8.6 billion.

Turnkey systems, where a firm offers a combined hardware and software solution to a business problem, grew 32%, compared with 21% in 1983. Turnkey system revenues amounted to $5.9 billion last year.

Vendors have engaged in "too much hype," creating disbelief among potential buyers of new products. Cunningham cited microcomputers and AT&T's Unix operating system as examples.

Manufacturers, believing the good times were rolling, overstocked their inventories. "[Intel Corp.] representatives visited several customers and were distraught at the amount of inventory people were sitting on," Cunningham said.

The need to resolve questions of communications and integration before buying more technology has led to many more people getting involved in purchasing decisions. And more people means slower decision-making, he said.

The skepticism in the marketplace has been joined by doubt over what the economy will do next.

"When you have a lot of uncertainty, people don't like to make decisions," he added.

ADAPSO

from page 85

have it," Chichester said.

Users are also more frequently purchasing multiple applications from the same vendor. In 1981, according to the Focus Research survey, Management Science America, Inc. (MSA) had sold 1.5 packages per user for the five financial packages surveyed. In 1983, MSA's sales of packages rose to 2 per user, and in 1985, to 2.4.

McCormack & Dodge Corp. had sold a similar 1.2 packages per user in 1981, 1.4 in 1983 and 1.9 in 1985. Cullinet Software, Inc., which only recently started offering financial applications, sold 1.9 per user in 1985, Chichester said.

The number of unit purchases has peaked, but the purchase size is growing as users buy multiple applications packages, he said.

To succeed in the face of these trends, Chichester said, software houses will have to integrate families of applications to make them more attractive to users, publish special editions of packages for particular industries, use speedier development techniques to get packages to market more quickly and provide easy-to-access, "borderless" information for users.

RESEARCH

from page 86

have higher expectations today. They ask more technically sophisticated questions." And, even with 25 divisions, there are still holes in Dataquest's information, according to Jorgensen.

Dataquest's growth plans include refining industry demographics and launching new business and telecommunications systems divisions during 1986, Jorgensen said.

How to advertise in every major computer market in the world as easily as you advertise in the U.S.

CW INTERNATIONAL Marketing Services will help you penetrate the most profitable computer markets worldwide — easily, effectively, and economically.

Your ads will receive the attention they deserve. Our network of more than 55 computer publications in over 25 countries is the largest in existence. Over 9,000,000 computer-involved people around the world rely on our publications for the information they need to stay ahead.

With more than 10 years experience in international marketing, we're the only service of our kind. We can help you make your ads more effective. Our local offices can translate your ads for a 15% surcharge on the space you purchase.

We'll help you increase your market penetration. We're also available to advise you on your campaign strategy — such as when to advertise in order to coincide with special-focus issues and trade shows. And you'll be able to advertise in even more markets when you take advantage of our corporate discounts.

All you need to do is send us your advertising materials. We'll handle all the transactions. And we'll bill you in U.S. dollars so you won't have to worry about exchange rates.

Call Diana La Muraglia today if you want to reach the computer buyers in any of the following countries: Argentina, Australia, Brazil, Canada, Chile, Denmark, Finland, France, Greece, India, Israel, Italy, Japan, Korea, Mexico, Norway, People's Republic of China, Saudi Arabia, South Africa, Southeast Asia, Spain, Sweden, The Netherlands, United Kingdom, Venezuela and West Germany.

You can reach her toll-free at (800) 343-6474. In Massachusetts call (617) 879-0700. Or you can reach her through Telex, at number 95-1153. Or, if you prefer, fill out the coupon below and return it today. Do it now. The sooner we hear from you, the sooner you'll hear from our readers.

POSITION ANNOUNCEMENTS

CHALLENGING POSITIONS IN AIRCRAFT WEAPONS INTEGRATION

The Navy's major research, development, test and evaluation activity, located at the foot of the Sierra Nevada, has immediate openings for candidates with experience in one or more of the following areas:

- PROJECT MANAGEMENT
- NAVIGATION SYSTEMS & ICNI
- SYSTEMS DESIGN
- DISPLAYS & CONTROLS
- SYSTEMS ANALYSIS
- RADAR, LASER, EO-IR TARGETING SENSORS
- AUTOMATIC TARGET RECOGNITION
- SOFTWARE QA & CONFIGURATION MANAGEMENT
- AIRCRAFT FIRE CONTROL
- DIGITAL SYSTEMS ARCHITECTURE
- TACTICAL EMBEDDED COMPUTING
- SOFTWARE DEVELOPMENT & VALIDATION
- AVIONICS T&E
- DIGITAL DESIGN
- DATA ANALYSIS
- HUMAN FACTORS
- INSTRUMENTATION
- INTEGRATED AVIONICS SYSTEMS
- SYSTEM & SUBSYSTEM SIMULATION
- FLIGHT TRAINER SOFTWARE
- PRODUCT ASSURANCE FOR ADPE HW & SW

Applicants with a BS or advanced degrees in Engineering, Physics Computer Science, Math or other appropriate disciplines are encouraged to apply.

SALARY TO $47,000

NAVAL WEAPONS CENTER
ANN 092-31-85-1
CHINA LAKE, CA 93555-6001

An equal opportunity employer U.S. citizenship required

SAUDI ARABIA

SYSOREX INTERNATIONAL, a California corporation and a rapidly growing systems management company, now developing innovative multi-technology systems in Saudi Arabia, has the following challenging position:

PROGRAMMER ANALYST

5 yrs. experience in developing and maintaining interactive systems using large-scale IBM OS/MVS, CICS, COBOL, ADABAS and TSO.

Payroll/personnel applications experience required and experience in structured analysis design work as part of a small team. Must be able/willing to program as required. Degree required.

We offer an excellent benefit package including: medical, life, accidental death, disability and profit sharing plans. You will additionally receive 25 working days vacation, 15 holidays, free furnished housing, annual return home travel, paid relocation expenses, plus eligibility for present Federal Income Tax exclusions.

Please send resume, with present salary history, to Personnel Dept. CW-7/1, SYSOREX INTERNATIONAL, INC., 10590 N. Tantau Ave., Cupertino, CA 95014. U.S. CITIZENSHIP REQUIRED. Principals only apply.

SYSOREX
Sysorex International Inc.

Data Base Analyst

$27-35,000

Visibility on the leading edge

As a DP professional, you know that when you are fortunate enough to find a large scale, sophisticated, state-of-the-art environment - it's generally in a tall tower belonging to a multinational conglomerate giant. You realize you'll have to sacrifice visibility and impact to work with the latest and best - there is just too much distance and too many people between you and the decision makers.

The Federal Reserve Bank of Atlanta is big enough to maintain large shop state-of-the-art technology - but small enough to remember your name - and smart enough to notice your achievements.

We are a member of the 12 bank Federal Reserve System and provide high quality financial services and supervision to financial institutions and research to formulate and implement monetary policy.

Obviously the volume of data we process demands the most sophisticated of configurations. We are a large IBM mainframe facility running under OS/MVS/XA.

As part of our Automation Support Group you will perform data base administration functions to support IMS data base applications. Responsibilities will include data base recovery, reorganization, performance tuning and maintenance of IBM's Data Dictionary. You must have a solid knowledge of IMS DB/DC. A background in data base design, IBM Data Dictionary, SMU II, ISC and BTS is preferred.

Our location in Atlanta allows you to enjoy one of the most elegant lifestyles in the country - at a 'cost of living' figure that makes the good life very affordable. The area is known for its natural beauty and range of recreational options - it is one of those rare 'more for less' situations.

We offer a generous relocation package and exceptional benefits - because we are determined to attract the best talent.

If you are interested in seeing your work make a difference - and receiving the applause an exceptional performance deserves - look to the South. Please send your resume in strictest confidence to Robert Blain, DP Recruiter, Federal Reserve Bank of Atlanta, 104 Marietta Street, N.W., Atlanta, Georgia 30303-2713. As always, we are an Equal Opportunity Employer, M/F/H/V.

FEDERAL RESERVE BANK OF ATLANTA

SYSTEMS ANALYST/ PROGRAMMER

Administrative Systems Support at Oberlin College is reopening the search for a Programmer/Analyst or Analyst/Programmer. Oberlin College is embarking on major enhancements to administrative computing using a DEC VAXcluster network consisting of one VAX 8600 and two VAX-11/780 systems.

A Baccalaureate Degree is required. The preferred candidate will have proven COBOL programming skills and experience with VAX/VMS systems, as well as strong systems analysis, project leadership, and communication skills.

Competitive salary commensurate with experience. To ensure consideration, submit resume by July 22nd to:

Michael Dieckmann,
Acting Director Of Administrative Systems Support
Oberlin College
Oberlin, Ohio 44074

Affirmative Action/Equal Opportunity Employer

POSITION ANNOUNCEMENTS

DATA PROCESSING

A proud team of professionals ...ICC

NEEDS: Project Manager, CICS Specialist, CPM Programmer

International Computaprint Corporation is the largest independent supplier of data base management services to the publishing, printing and telephone industries, and the undisputed leader in this highly specialized market.

We're looking for talented individuals to join our organization and grow with our success. Along with the qualifications needed for each position, we seek applicants who can bring with them the commitment and enthusiasm it takes to be part of our team.

Project Manager

Manage all phases of a large on-line database project involving distribution via public access networks. Responsible for Design, Implementation, Budget and directing a staff of approximately 20 employees. Position reports directly to Vice President.

Ideal candidate will possess excellent written and verbal skills; be technically sound and be able to effectively interact with all types of clients and all levels of management.

CICS Specialist

Position exists for a shirt-sleeved individual to assume control of CICS maintenance, installation, and BAL programming. Ideal candidate will assume all responsibility for CICS related functions in the distribution of an on-line Database and will design and direct efforts in interfacing application via CICS to Public Access Networks.

Strong BAL and CICS internals skills with previous experience in Public Access Networks such as Tymnet, Telenet, etc., a must. Experience in NATCICS will be considered as a PLUS.

Exposure to IBM 3083, MVS 1.3, ACF/VTAM 2.1, CICS 1.6 and COMTEN NCP 1.3 and familiarity in ADABAS, NATURAL, BAL, Airline interfaces a definite PLUS.

CPM Assembly Programmer

Responsible for maintenance and enhancements to existing airline interface applications written to a CPM micro. Person will take on all responsibilities involving both hardware and software, including maintenance, installation, and design.

Ideal candidate will possess strong CPM ASSEMBLY skills. Proficiency in IBM 327x and Airline 1006 protocols is considered a PLUS.

DATA PROCESSING MANAGER
Saudi Arabia

Are you looking for a new career opportunity—and a change of pace? You'll find both at Frank E. Basil. We have an immediate need for a qualified professional to manage a large data processing center at the Royal Saudi Naval Forces Supply Center in Jeddah, Saudi Arabia.

We are seeking a professional with a B.S. degree and a minimum ten years of experience (preferably in an IBM mainframe environment), as well as an extensive managerial background. The successful candidate will direct the activities of the ADP Department, evaluate new hardware and software technology, and interface with system users.

This position commands a base salary in the mid to high $40's, excellent benefits, bonuses, free housing, R&R, extensive home leave, and the potential for 100% U.S. Federal Income Tax exemption on foreign-earned income. Call Gloria Sanborn, Mon.-Fri., 8AM-4:30 PM (Eastern Time) at (800) 848-0023 or RUSH your resume to:

People Committed to the Future. We are AST!

Dynamic...Aggressive...Innovative...Exciting...Creative. That's the type of engineering environment you'll find at AST Research Inc. in Irvine, California. Our reputation for being a leader in the personal computer enhancement products industry is the direct result of the superior level of technology created by our people. As our commitment to furthering this success continues, we offer several outstanding **senior level** Engineering positions available for individuals who thrive in an environment of superior technology and creative approaches to the microcomputer industry. Consider these current openings:

GRAPHICS

- Project Manager
- Sr. Programmers
- Programmers
- Sr. Design Engineers

Developing hardware architecture designs/software interfaces between operating environments.

DATA COMMUNICATIONS

- Sr. Hardware Engineers
- Sr. Software Engineers

Hardware and software system architecture development for communications products such as: communication gateway, 3270 COAX, 5251, SNA/BSC 3270, SNA 3770, BSC 3780.

OEM

- Sr. Design Engineers
- Sr. Programmers

Design, develop, document new communications products. Specify and implement complex programs utilizing S/W languages such as "C" and "Assembly."

LOCAL AREA NETWORK

- Sr. Software Engineers
- Sr. Hardware Engineers

Hardware and software development of LAN and LAN-Gateway products.

DIAGNOSTICS

- Programmers

Developing diagnostic and troubleshooting programs for verification of product designs.

PROGRAMMERS

- Sr. Programmers

Software architects developing approaches for new products and enhancements.

ENGINEERING SERVICES

- Design Drafters
- Tech Writers

Positions of this caliber require appropriate educational credentials, along with a proven successful employment performance record in order to meet the challenges of these senior level positions.

Because of our status as an industry leader, AST Research is able to offer qualified candidates a comprehensive major medical/dental package, excellent salary, bonus, profit sharing and a quality work environment. For immediate consideration, resumes should be forwarded to: **AST Research Inc., Human Resources Dept. CW, 2121 Alton Avenue, Irvine, CA 92714.** We are an equal opportunity employer m/f/h/v.

AST RESEARCH INC.

BROADWAY & SEYMOUR. BROADWAY & SEYMOUR. BROADWAY & SEYMOUR. [illegible]

What puts Broadway & Seymour in a class by itself in the data processing consulting field? First, we treat the contributions of each of our highly qualified computer professionals with respect. Second, we are rapidly growing . . . through expansion and through acquisition. Now we are the largest company of our kind in North Carolina. The state-of-the-art services that we offer the nation's leading high-tech corporations include: applications software, hardware selection, training, documentation, systems management, and more.

If you'd like nothing better than to work on some rather sophisticated, very important projects, there may be a place for you in our Charlotte or Raleigh offices in one of these positions:

SENIOR CONSULTANTS

Experienced in planning, management consulting, design and analysis in IBM mainframe environment. Health care, banking or government experience preferred.

SYSTEMS PROGRAMMERS

Installation and maintenance of MVS/SP-XA system control programs. Experience preferred in JES 2 and 3, CICS-DC, IMS DB/DC, VTAM, NCP, SMP/E, VM/SP-XA, Assembler, TSO.

PROGRAMMERS, System 38

Experience in programming in System 38 or 36 with RPG 2 and 3.

PROGRAMMERS, CICS

CICS experience, command level for Raleigh, N.C. office.

Your expertise will earn you an excellent salary plus an incentive bonus plan. And we offer a comprehensive and company-paid benefits program that includes medical, dental, and life insurance. For prompt consideration, send your resume to: Fred Brilliante, Director of Human Resources.

NATIONAL UNIVERSITY OF SINGAPORE

DEPARTMENT OF INFORMATION SYSTEMS & COMPUTER SCIENCE

THE POSITIONS AND THE REMUNERATION

Applications are invited for teaching appointments in the Department of Information Systems and Computer Science. Candidates should have at least a Master's degree with either teaching experience in a tertiary institution or relevant industry experience. The commencing annual salary will depend on the appointee's qualifications and experience and the level of his appointment:

Lecturer	S$50,470 - 88,010 p.a.
Senior Lecturer	S$59,800 - 105,850 p.a.
Associate Professor	S$92,730 - 127,720 p.a.

(US$1 = S$2.21 approximately)

Benefits that will be provided include:

*Subsidised housing
*Return passage
*Education allowance for children's education
*Car loan
*Relocation allowance
*Leave and medical benefits
*Contribution by the University to a pension fund at the current rate of 25% of gross monthly emoluments, subject to a maximum of S$1750/-per month.
Amount standing in appointee's credit may be withdrawn on leaving the University's service.

The contract is normally for a period of three years and renewable.

Successful candidates will be required to lecture on courses in information systems which include the following:

*Information Analysis
*Structured Analysis and Design
*Software Engineering
*Data Base Management Systems
*Decision Support Systems
*Design of On-Line Systems
*Office Automation
*Information Systems Planning

They will also be required to supervise student projects and assist in on-going curriculum development.

The positions provide opportunities to engage in research activities to be undertaken jointly by the Department and industry, and/or approved industrial consultancy.

SINGAPORE

Singapore is the commercial, financial and industrial hub of South East Asia. With a per capita income second to Japan in Asia, Singapore has all the facilities of a modern city inclusive of foreign schools, hospitals, communication and air transportation.

It is striving to evolve into a high-technology centre for software research and development.

THE UNIVERSITY

The University which is highly regarded as one of the best centres for learning in Asia admits about 20% of its students from the surrounding countries to give it a cosmopolitan environment. With a student body of over 13,000 and a staff strength of 1300, it is one of the best staffed universities in Asia.

The campus occupies approximately 150 hectares of one of the most scenic areas in Singapore.

THE DEPARTMENT

The Department, which has an annual output of 200 graduates, offers courses leading to a BSc degree, a BSc (Honours) degree and an MSc degree. Since 1978, it has produced 626 graduates in Computer Science. Based on the curriculum recommendations of ACM, IEEE and BCS, and substantial input from the local computer industry, the undergraduate curriculum provides for two major streams of study: Information Systems and Computer Science.

Computing facilities include the Department's own VAX 11/780 and business mini-computer system. In addition, the Department is a major user of the 12-MIPS, 16 megabyte IBM 3081GX mainframe computer system of the University's Computer Centre. The Department is in the process of acquiring facilities which will at least quadruple the present computing power. These additional facilities, which will be installed in the next two to six months, are part and parcel of the Department's plans to continually upgrade its facilities. The office of each academic staff is equipped with an IBM PC-based workstation which is connected to both the IBM 3081GX and the VAX 11/780 systems.

There are four teaching laboratories in the Department: Logic Lab, Micro Lab, Information Systems Lab and Data Communication/Computer Networks Lab. A million-dollar teaching/research laboratory in expert systems is currently being set up. Current research interests include: artificial intelligence, local area networks, software engineering, database management, microcomputer applications, office automation and theoretical computer science. Other areas are being developed. Research grants for fundamentals as well as applied research are available.

The present academic staff strength of 47 will be increased to 64 by 1986.

DIRECTOR OF INFORMATION SERVICES

Saint Xavier College invites applications and nominations for an immediate opening for a key management position melding information and computer resources services. Reporting to the President, the Director serves on the central Administrative Council.

Principle responsibility consists of formulating and implementing plans to cover both administrative and academic computing hardware and software. Included would be the development and utilization of information processing technology in management, planning, and research systems, and the establishment of local and area communications networking.

Qualifications: proven organizational, communications and interpersonal skills; an awareness of current trends in information and computer technology; an ability to serve the needs of administrative, faculty and student users; and experience with DEC VAX 11/750 (VMS). Desired: experience with COMPASS or other administrative data base system and with integrating micro-processors into central computing resources; an advanced degree; and five or more years in a supervisory position.

Saint Xavier College currently operates a VAX/750 (VMS 4.1), with twelve academic and sixteen administrative terminals; seven DECmate word processors in both stand-a-lone and interactive mode; thirteen Apple and four IBM personal computers; and communications to off-campus sites.

Application: send letter of application, resume, and three names of references to: Office of Personnel Services, SAINT XAVIER COLLEGE, 3700 W. 103rd St., Chicago, IL 60655

Resumes will be accepted until the position is filled. Affirmative Action, Equal Opportunity Employer

VM SYSTEMS PROGRAMMER
35 Hour Week!
Easy Work!

If that's what you really want, this job isn't for you. But if you are looking for a tough job as part of a small team developing VM/SP system software products, if you want growth and recognition for your ideas and work— read on.

We need a Senior VM/SP Systems Programmer. He or she will be involved in just about everything: product support, system operation and maintenance, product planning, development, and documentation.

This position requires substantial VM/SP systems experience; good programming skills and CP internals knowledge is essential. Beyond that, however, what you can do is more important than what you have done—we want ability and the willingness to work hard rather than a great resume. If you think you'd fit, please write to:

CONTRACTS PROFESSIONALS

Take the Boeing Challenge!

Boeing Computer Services, a division of The Boeing Company and a leader in the information processing, software and services industry, is actively seeking experienced contracts professionals for our Commercial Services Group.

As part of a growing staff, your responsibilities will include drafting, interpreting, negotiating, and executing and administrating agreements for application software licenses and marketing rights, including remote computing service royalty arrangements. In this high visibility position, you will interact with top corporate management, assuring proper approvals and developing company negotiation positions.

These positions require 3-5 years computer-related contract drafting and negotiation experience in a commercial environment as well as a BA/BS degree. Familiarity with the nature of application software products and the remote computer service market also required.

Boeing offers a comprehensive compensation package as well as a sophisticated and stimulating work environment. To apply, send resume including salary history in strictest confidence to:

NCC 1985

The National Computer Conference is the biggest and most important conference in the world and it is going to be held July 15th-18th, in Chicago, Illinois this year! The NCC issues will have a readership of over 600,000 readers. With extra distribution at the show itself. This could be one of your smartest advertising moves of the year.

SHOW - July 15th
WRAP-UP - July 22nd

Our open line rate is $10.35 per line and the minimum ad size is 2 column inches (1 column x 2" at a price of $289.80). We are $144.90 per column inch. Send us camera-ready copy (negative or velox) or copy to be typeset by us at no extra charge. Enclose any logos, artwork, or borders that you want to use in your ad. We also have a team of ad takers that will accept simple copy over the telephone.

The above information is intended as a guideline for computer users on relative computer system instruction cycle times. All data have been derived from published documentation and represent reasonable estimates of average MIPS ratings. However, Randolph is not responsible for the accuracy of the MIPS data. Cycle times will vary based on hardware/software configurations, and system manufacturers continually modify computer models as design improvements in hardware and software arise.

TALK TO RANDOLPH NOW. Whatever your computer system needs, Randolph can deliver the hardware when you need it...and ease the pressure on your DP budget with low lease rates. Call William Rooney, Vice President, 800-243-5307, in CT (203) 661-4200.

ORDER FORM
COMPUTERWORLD BULLETIN BOARD

Issue Date: Ads can be accepted up until the Monday preceding the issue desired. Computerworld comes out every Monday.

Classifications: Most ads will be classified according to the brand of equipment that is being bought or sold. These classifications include Burroughs, Data General, Digital/DEC, Hewlett Packard, Honeywell, IBM, NCR, Sperry Univac, Salvage, Terminals, Misc. Systems and Miscellaneous.

Copy: Copy sent in via the mail or telecopier (telecopier extensions are 410 and 451) should be clearly typewritten. Ads may be given over the phone to our team of ad takers. The standard size is 1 column by 1 inch deep. These units may be combined to form larger sized ads. Describe the equipment very briefly, give the price and the name of the person to contact. All ads will be set up using a standard format. No borders or logos are allowed.

Cost: The price for each standard unit is $140.00 (One unit minimum and no fractional units allowed.) There are no agency commisions and no quantity discounts.

Billing: Once you've written your ad, send (or call) it in with your name and address for billing purposes and we'll run it. (If your company has never advertised with us before, we request a check with your order.)

The Bulletin Board

Our Low-Cost Way to Sell Your Equipment in Computerworld

What is The Bulletin Board?

We have a classified section designed to help you buy or sell individual software and hardware. It's especially suited to companies with a piece of used equipment for sale. For one low price, you can advertise to over half a million Computerworld readers nationwide.

How Does The Bulletin Board Work?

- The Bulletin Board is designed to advertise only one piece of equipment or software per unit.
- Units are one column wide by one inch deep at a cost of $ 140.00 per column inch. Although several units may be purchased for one advertisement, there will be no quantity discount.
- All ads are standard in format and typeface. No special typeface, borders or logos are allowed. Copy may be up to 25 words per unit.
- The Bulletin Board ads are listed by manufacturer or by product type under appropriate headlines.
- Ads are set on a six-column page in our classified section under "The Bulletin Board".

How to Place an Ad in the Bulletin Board:

- We suggest you prepare your ad before contacting us. Here are some guidelines:
  The first line is set in larger, bold type and should contain standard equipment identification.
  The body copy should describe the equipment and state the price.
  The closing should supply the seller's name and telephone number.
  This is all the information an interested buyer needs for follow up.
- Ads are accepted by mail, phone or by telecopier.
- Deadline is 7 days in advance of Monday issue.
- If you have never advertised with Computerworld, we request a check with your order.
- The Bulletin Board ads are not agency commissionable nor may they be applied to contract advertisers inch count.
- We assume no liability for errors beyond the price of the ad.

Here's the Address and Phone.

CLASSIFIED ADVERTISING ORDER FORM

Computerworld's Classifieds work.

Issue Date: Ad closing is every Friday, 10 days prior to issue date.

Sections: Please be sure to specify the section you want: Time and Services, Software for Sale, Position Announcements and Buy/Sell/Swap. (Available upon request: Software Wanted, Real Estate, and others).

Copy: We'll typeset your ad at no extra charge. Please attach CLEAN typewritten copy. Figure about 25 words to a column inch, not including headlines. Any special artwork should be enclosed with your ad also. Logos must be submitted on white bond paper for best reproduction.

Cost: Our rates are $144.90 per column inch. (Each column is 1 13/16") Minimum size is two column inches (1 13/16" wide by 2" deep) and costs $289.80 per insertion. Extra space is available in half-inch increments and costs $72.45. Box numbers are $15.00 extra per insertion.

Billing: If you're a first-time advertiser, (or if you have not established an account with us.) WE MUST HAVE YOUR PAYMENT IN ADVANCE, or a Purchase Order Number. Any extensions on this policy must be made through our Credit Department.

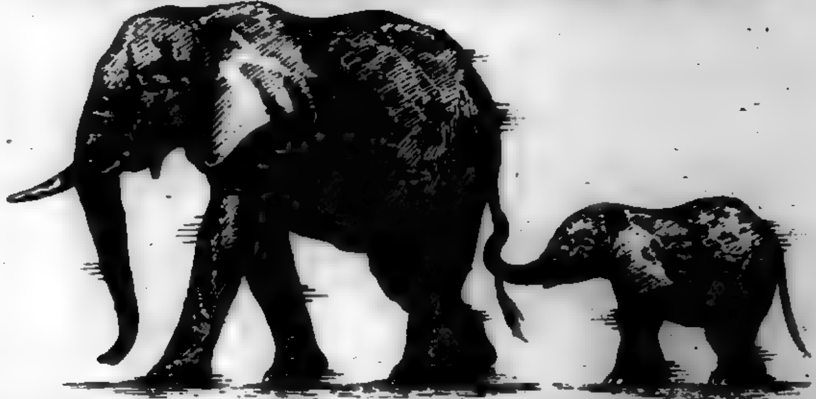
WHEN IT COMES TO LINKING PC's TO MAINFRAMES, ONE COMPANY IS A MILLENNIUM AHEAD.



You don't have to look hard to see why McCormack & Dodge has linked more PC's to more mainframes than any other business software vendor.

It's a classic case of a superior product leading to superior sales.

To begin with, our link does more than just link. It works like you do. Selectively. Analytically. And in real time—so that company decision-makers always have the freshest, latest data available. Current and accurate up to the second you display it on your PC screen.

If you've tried out other PC links, you'll notice the M&D difference the moment you start downloading information from the mainframe to your desk. For example, you'll see that you can access all applications, no matter who designed them—not just those designed by McCormack & Dodge. And you'll discover the ease of working with a system that lets you pinpoint and selectively summon exactly the portion of data you need.

Once you've called the data down to your PC, the Lotus 1-2-3 software in our link lets you crunch numbers backwards, forwards, up and down—anywhere your mind wants to take them. You can instantly construct detailed spreadsheets. You create brilliant color graphs.

And the moment you finish massaging the data to your liking, our link lets you shoot it back to the mainframe (assuming you have the proper security clearance). You do it yourself on the spot—in real time. Without keyboard operators or programmers. So the entire company has the benefit of the latest information immediately. Not days later.

The M&D PC link is one of several products in our highly acclaimed Millennium family of borderless business software. When you compare the entire Millennium concept to anything else claiming "total integration," you'll see that M&D isn't just out-linking the competition. We're out-thinking them.

Users divided on System/38 bug complaint

By John Desmond
CW Staff

KNOXVILLE, Tenn. — A power failure hit the Dataman, Inc. real-time service bureau here recently just after an IBM System/38 user had invoked the transfer control command, a feature that can improve CPU efficiency.

When the power returned, the user's terminal came back with a different screen. With a little fiddling, a technician learned the terminal had defaulted to a command-entry screen, which appeared to bypass the System/38's security systems and give the user more than his allowed authority. Dataman President Glen McCown said he believed his shop had accidently uncovered a bug in the System/38's CPF operating system.

"When you get on this command-entry screen, which is tragic enough, it has some bizarre authority," McCown said. "You can get into any user's source modules, change them and recompile them." McCown wants IBM to change its operating system to prevent this default to a higher authority. He maintained that IBM's documentation does not clearly state that a power fluctuation can bypass system security.

But the issue is a divisive one in the System/38 community. Members of two IBM users groups and IBM itself acknowledge that the system can default to a command-entry screen and bypass certain security measures. But the parties disagree on who should be responsible for preventing the default.

Reagan systems security directive under attack

By Mitch Betts
CW Washington Bureau

WASHINGTON, D.C. — U.S. Congress members and others warn that a little-noticed presidential directive on computer security may give U.S. military and intelligence officials too much control over computer security at civilian agencies and in the private sector.

The controversy concerns National Security Decision Directive 145, which President Reagan signed last September but which is only now getting congressional and public scrutiny.

"My concern is whether this directive concentrates too much power in the National Security Agency over civilian areas," Rep. Dan Glickman (D-Kan.) said recently as he opened the first congressional hearing on the directive.

NSA and U.S. Department of Defense officials said the security directive is needed to curb the flow of sensitive information — including U.S. business and economic data — from highly vulnerable U.S. computers to adversaries. They said the NSA's role is appropriate because of the agency's technical expertise in information security.

But critics, such as Rep. Jack Brooks (D-Texas), the Institute of Electrical and Electronics Engineers, Inc. and the American Civil Liberties Union, questioned the broad scope of the directive and the leading role given to the military and intelligence communities.

The stated objective of NSDD 145 is to ensure the security of telecommunications and computer systems that process classified and sensitive government information and to provide security assis-

Users, vendors facing up to break-ins

Agencies' hacker troubles blamed on bulletin board

By Paul Korzeniowski
CW Staff

Adolf Cecula's worst fears were realized one night last August when a hacker brought down a computer at the U.S. Geological Survey in Reston, Va.

Cecula, information security administrator at the agency, reported that a hacker accessed the computer through the agency's connection to the Arpanet network, a packet-switching network operated by the U.S. Department of Defense. "The hacker probably learned of the telephone number and an entry-level password from a bulletin board," Cecula said.

The USGS has experienced four such incidents in the last year. Those incidents — and a growing number of others in the private and public sectors — indicate that hackers and bulletin boards are a common problem for government and commercial security administrators.

What made the most recent USGS case distinctive was that the hacker disrupted a system. Once in the network, the hacker located and found a default account. A default account is set up

Product features reflect effort to enhance security

By Paul Korzeniowski
CW Staff

In reaction to threats from hackers or as part of evolving product lines, vendors have filled some security holes in their products.

"In our latest release of VMS, we incorporated a number of security features in response to hackers," said Peter Damon, VMS systems software marketer for Digital Equipment Corp. "After reading of cases from the newspaper or hearing from customers, we traced some cases and designed features to solve some problems."

One VMS item is an audit trail that tracks the number of times someone unsuccessfully tries to access a system. Most audit trails track only those resources users work with after they gain access to the system. The new trail serves as a red flag to security administrators. "A security administrator will notice a lot of activity at one account," Damon said. "It could be a hacker trying a random password method of cracking an account."

Another feature helps a security administrator confuse a

Users planning to dump 3080s

Will make room for Sierras soon to roll off IBM lines

By Tom Henkel
CW Staff

FRAMINGHAM, Mass. — Despite IBM's insistence that its 3080 series is not a dying line of mainframes, users do not appear to be buying either the notion or the processors.

A recent survey of 860 3080 mainframe sites by International Data Corp. (IDC), a market research firm here, revealed that the users planning to get rid of their 3080s strongly outnumber those planning to buy new ones. Most who said they will dispose of a 3080 seemed to be eyeing IBM's newer 3090 line as a replacement.

More than 40% of the users polled said they have already placed 3090 Model 200 orders for delivery in the next 20 months. However, IDC noted that, traditionally, not all users who place an order for IBM mainframes actually accept delivery of the machines.

The firm also pointed out that its survey did not take into consideration current users of IBM 4300 and 3030 series systems, who might influence overall 3080 sales. Furthermore, the survey did not explicitly ask 3080 users about their field-upgrade plans.

Users of 3081s most interested in 3090s

The group most interested in the 3090 are users of 3081 CPUs. Of the 365 3081 users polled, 110 said they have either ordered or plan to order a 3090. In terms of actual orders, IDC said 3081 users have placed 163 orders for 3090 Model 200s and 32 orders for Model 400s. The 3081 users polled said they plan on removing a total of 100 3081 CPUs to make way for 3090s. Some 3081 users, however, still intend to install additional 3080 processors. Of the group polled, 21 3081 orders have been placed, and 12 orders for the 3084 processors are planned.

There are a number of 3084 users who said they have placed orders for the 3090 Model 200. IBM, in its February introduction of the 3090 series, stated that the Model 200 offers roughly the same internal performance of the 3084 Model QX. But of the 135 3084 users polled by IDC, 71 said they have placed or plan to place a 3090 order. The survey said the 3084 users have placed 158 orders for 3090 Model 200 processors and 41 orders for the larger Model 400 processors.

Far fewer users of the smaller 3083 CPUs said they are planning to buy a 3090. Of the 293 3083 users polled, only 12 have either placed 3090 orders or indicated they were giving the idea serious thought.

In terms of orders, 3083 users accounted for a total of 16 3090 Model 200 processors, and none have placed orders for the Model 400. But 3083 users did not appear to want to buy larger 3080 series processors, either. Of the 3083 sites polled, only 15 3081 orders had been placed, and only one user will add a 3084. Orders have been placed for eight 3083s, according to the survey.

Market ripe for uniprocessor 3090

The sluggish demand for larger 3080 machines by 3083 users makes the market ripe for the introduction of a uniprocessor version of the 3090, a machine IDC assumes will be called the 3090 Model 100.

"But history suggests that deliveries [of the Model 100] won't begin until mid-year 1986 at the very earliest," IDC said, noting that 1987 will probably be the peak year for 3090 Model 100 shipments.

Aside from the increased deliveries of 3090 Model 200 processors planned for the fourth quarter, 1985 appears to be a wash for IBM in terms of mainframe sales, but 1986, especially the first half, will be much better, IDC predicted.

History repeating itself

The upshot of the survey, IDC said, is that history is repeating itself. IBM traditionally experiences slumps in current-model mainframe sales every time it introduces a new line. IDC said similar slumps have occurred in 1965, in 1970, from 1976 to 1977 and in 1981.

Furthermore, the firm said, the current slump does not appear any worse than those of the past but has been exacerbated because this time IBM does not have the huge base of users leasing hardware to help soften the blow.

Potentially bad news for IBM is the high number of used 3080 CPUs that are being dumped on the market. This imbalance, IDC said, could lead to a strong downward pressure on 3080 residual values.

Sortland Yard warns against "Raffles-type sort programs."

Call (201) 568-9700.

Ask for Inspector SyncSort!

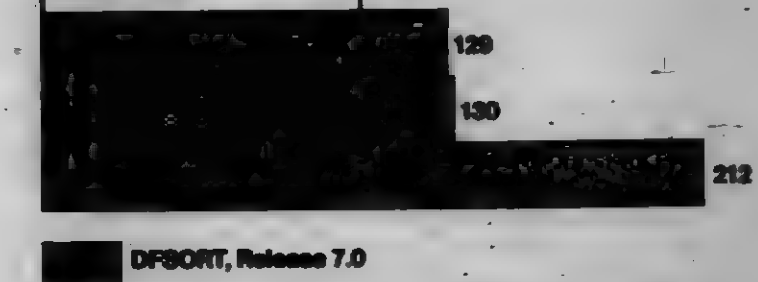
In an extraordinary move, Sortland Yard today warned data processors throughout the world to be on guard against what it termed "gentleman-bandit sort programs."

The warning was issued by one of the Yard's best known figures, Inspector SyncSort, who has sometimes been called "a legend in his own CPU time."

The inspector said, "One of the difficulties in apprehending these chaps is that they look so eminently respectable. They're members of a fine old hardware family. They've been to the right schools. And they invariably carry out their burglaries while wearing a dinner jacket from Saville Row."

EXPERT COMPUTER CRACKERS. "But once the party is underway," the inspector said, "these chaps head straight for the place where the family jewels are kept. They can crack open a computer and make off with a king's ransom in computer resources before you can say 'Hound of the Baskervilles.'"

To indicate "the true cost of this sort of misbehavior," the inspector released the following crime statistics:



SOMETIMES TAKE HOSTAGES. The inspector noted that these black-sheep programs often "take a dreadful toll" of programmers. "They are often tied up for days on end and forced to perform unnecessary coding, compiling and debugging. And they are heartlessly deprived of the labor-saving features that are taken for granted in most parts of the civilized sorting world."

Among these the inspector listed:

- **SORTWRITER**
- **MULTIPLE OUTPUT**
- **RECORD EDITING**
- **FAST FILE COPY**
- **MAXSORT**

TELEPHONE BEST DEFENSE. The inspector urged data processors to call the Yard immediately if they suspect their center is infested by a Raffles-type sort program. "The number is (201) 568-9700. We'll send over one of our highly trained sort detectives to track the culprit down."

Questioned as to what would be done with sort programs caught burglarizing computer centers, the inspector replied. "They will be given a just and speedy trial. If found guilty, they will immediately be transported to Iran!"

Syncsort Incorporated 560 Sylvan Ave., Englewood Cliffs, N.J. 07632

BUG

from page 1

The founder of the Northeastern System Thirty-Eight Users, Inc. (Nesta) said certain additional coding can prevent an ordinary user from obtaining higher level authority. The System/38 hot-line coordinator for Common, the IBM users group, believed that the user has discovered a fault in his own security and not in IBM's code. An IBM spokesman said, "The System/38 does not have a data security problem."

McCown said that while the authority of the command-entry screen was considerable, it was not equal to that of the security officer, who has the highest level of access on the system. McCown said he was not able to execute a command that displays all users' passwords, which the security officer is allowed to do. But McCown said he was able to recompile and delete a program from the command-entry screen. The user profile he accessed should not have been capable of such a deletion, he said.

"Clearly this is not what IBM intended. There is no way in the world that all the System/38 users around the world have spent the money and time to build security systems to have them mean absolutely nothing," McCown said.

IBM's customer service representatives here have told McCown to avoid the problem by not using the transfer control command. According to McCown, they said the problem was not unexpected after a power fluctuation and thus is not a bug. "That is patently absurd," McCown responded. "They're obviously avoiding the situation." McCown said IBM previously encouraged use of transfer control, both in the command language manual and in the programmer's guide.

Serious implications

The implications of the security breach are significant, in McCown's view. "We all know the capabilities of the so-called hackers all across the country and what they can pull off not knowing anything. This baby puts you halfway into the heart at first blush," he said.

The existence of the default to a command-entry screen was verified by Gary Keith, vice-president of Magnatron, Inc., a software firm based here specializing in System/34, 36 and 38. For the security breach to occur, Keith said, a user would have to time a fluctuation of the terminal's power just right.

Keith said System/38 programmers are not generally aware of the default procedure. For IBM to make systems programmers responsible for avoiding the potential breach is outside the philosophy of the System/38's CPF operating system, he said. "That type of responsibility is typically not put on us. In my opinion, the problem is a security breach of the command-entry screen. [IBM] has chosen to lay the responsibility on us as programmers to solve the problem. That's a typical response, but I don't think it's appropriate," Keith said.

The System/38 hot line coordinator for Common, Gene Gellman, director of information services for Cyro Industries of Sanford, Maine, said he finds the existence of the security breach hard to believe. "I maintain that what this person has found is a breach of his own security and not a problem with IBM's code. I see no reason why going to a command-entry screen is a problem from a security point of view."

William Petrone, founder of Nesta and director of technical services for Computer Software and Services, Inc. of Spencer, Mass., said it is possible for a user to obtain higher authority on a command-entry screen, but he does not consider that a bug. "I don't consider that a flaw, because transfer control is basically [there] to help the user. IBM is probably reluctant to change that, because no one has complained about it."

Error-handling program recommended

The IBM spokesman said the System/38's operating system, as delivered, will sign off a user after a power fluctuation. The system interprets the power fluctuation as an error. IBM recommends that users write an initial program to handle errors. But by doing so, the user can inadvertently revert to a command-entry screen after a power fluctuation, the spokesman said.

Nevertheless, IBM is reluctant to change the recommendation to write an initial program. "We don't want to preclude any of the user's options. But the user needs to be aware of what can happen if certain options are chosen," the spokesman said.

Gellman said he would not want the default sequence reported to IBM as a bug. "I don't want IBM to deal with it, because they take away your flexibility when they do," he said.

How To Triple The Speed Of Your 3270 Printer

Another Smart Solution From AVATAR

It's a sad sight. Seeing your IBM 3270 printer falling further behind every day. Outpaced by ASCII printers that deliver far greater performance at a much lower cost. ASCII printers that, until now, didn't link to your 3270 system.

Enter AVATAR's PA1500 protocol converter. It lets you attach virtually any ASCII printer directly to your 3270 network with a simple coax connection – including printers that are three times as fast as your IBM printer and cost half as much.

Now you can select the printer that matches your system needs. For greater speed, letter quality printing, better performance. Fast dot matrix or line printers. Bar code or graphics printers. Even the newest ink jet or laser printers can be a part of your 3270 network.

Together, the PA1500 and the printer of your choice give you all the capabilities of your IBM printer...and more.

So get yourself an AVATAR PA1500. And bring your 3270 printer up to speed.

Sale of Harvard Software set

MOUNTAIN VIEW, Calif. — Software Publishing Corp., the publisher of the PFS line of microcomputer software products, announced last week an agreement in principle to acquire Harvard Software, Inc. of Littleton, Mass. No price had been disclosed at press time.

The acquisition is subject to the approval of a definitive agreement by both boards of directors. Harvard Software developed and markets Harvard Project Manager and Harvard Total Project Manager.

Fred Gibbons, president of Software Publishing, which had revenue of $23 million and profits of $3.2 million in 1984, said the Harvard Software name is a leading brand in project management software.

Shakeel Mozaffar, vice-president of marketing for privately held Harvard Software, said the formal details under which the company will be acquired have not yet been finalized. He said Harvard Software had about 50,000 packages installed by the end of 1984.

According to Mozaffar, Harvard Software had captured about 50% of the market for project management software among Fortune 1,000 companies and needed "fundamental access to the low end of the market."

Reagan DP security mandate raises congressional ire

Measure said to usurp legislators' authority

WASHINGTON, D.C. — President Reagan's controversial directive on computer security created an elaborate policy-making organization to provide governmentwide direction on telecommunications and computer security.

National Security Decision Directive 145 (NSDD 145) established a four-part organization as follows:

- T Systems Security Steering Group, chaired by the president's national security adviser, to provide overall direction.
- The National Telecommunications and Information Systems Security Committee (Ntissc), a panel of 22 agency heads that considers technical questions and sets policy.
- The Executive Agent, who is the secretary of defense.
- The National Manager, who is the director of the National Security Agency (NSA) and who implements the Ntissc's policies.

Warren G. Reed, director of the information management and technology division of the U.S. General Accounting Office (GAO), said a positive feature of the organization is that it provides the central leadership on computer security previously lacking in the federal government.

On the other hand, Reed said, the directive may also create confusion over who has responsibility for information security in the federal government.

The Office of Management and Budget, the General Services Administration and the National Bureau of Standards (NBS) now have statutory authority to set policy and standards for government information systems.

Usurped congressional authority

Rep. Jack Brooks (D-Texas), chairman of the House Government Operations Committee, said the Reagan administration usurped congressional authority by issuing the directive, which he said conflicts with existing statutes.

Brooks said the directive should be withdrawn. "The corridors of the Pentagon and the offices of the East Wing of the White House are not places in which national policy should be established," Brooks said. "The importance of this issue demands public hearings and a full debate in the Congress before the national policy is set."

Brooks also suggested that implementation of the directive could be thwarted by the congressional appropriations committees, if they deny funds for its implementation.

Rep. Dan Glickman (D-Kan.) said he is troubled by the lack of public and congressional input in the formulation of the directive as well as by the apparent dominance of the organization by national security officials.

Glickman and Brooks recently sponsored legislation to enhance the computer security efforts of the NBS, suggesting that the NBS would be the more appropriate agency for government standards.

The bill, H.R. 2889, would provide the bureau with $1 million a year for research on computer security and would require federal agencies to provide training in computer security techniques for federal managers.

Jerry Berman, legislative counsel to the American Civil Liberties Union, said NSDD 145 raises important information and privacy policy issues that should receive more congressional oversight.

Consequently, Berman urged Congress to create a Select Committee on Information.

"Only the direct involvement of Congress can ensure that openness and personal privacy considerations are given their full due in the development of [telecommunications and computer] security policy," Berman said.

Critics also questioned the composition of the Ntissc, calling it a "military-dominated" committee. Ten of the 22 members of the Ntissc are from national security offices in the government, according to the GAO.

But Ntissc officials denied that the committee is dominated by the military, pointing out that civilian agency officials are quite vocal in committee meetings.

Furthermore, they said that the NSA is a service agency — providing both intelligence reports and security services — not a military one.

— Mitch Betts

'How To Delight Your Lotus With Mainframe Data

Another Smart Solution From AVATAR

The idea is simple. Make your PC spreadsheet even more powerful by giving it mainframe data. But getting that data out of your mainframe, into your PC and onto your spreadsheet isn't that simple.

Until now, you've had three choices. Transfer entire files from the host and risk choking your PC with data. Not very efficient. Or find the information in printed reports, then reenter and reformat it. Very tedious. And the alternative of asking your DP department to write special host software…well, they're overburdened already. Three choices, no real solution.

Now there's TURBO, the newest micro-to-mainframe link from AVATAR.

TURBO's Data Capture lets you select just the information you need from the mainframe. And use it immediately in any of your PC applications – Lotus, dBASE, you name it. Without re-keying, reformatting, re-anything.

And you can use TURBO's host-assisted File Transfer the way file transfer was meant to be used – for sharing data with other PC users on the 3270 network.

If that isn't enough, TURBO's exclusive Macro Language adds a whole new dimension to your micro-to-mainframe link. Use Macros to automate file transfer and data capture. Better yet, massage host data even before feeding it to your spreadsheet.

So give your PC a TURBO from AVATAR. And delight your Lotus with mainframe data.

DIRECTIVE

from page 1

tance to the private sector.

To accomplish this, it established an elaborate organization, including a 22-member National Telecommunications and Information Systems Security Committee (Ntissc) chaired by an assistant secretary of defense and a National Manager, who is also director of the NSA.

U.S. 'being bled to death'

Donald C. Latham, chairman of the Ntissc, defended the president's directive on the grounds that U.S. computer systems are extremely vulnerable to security breaches, and consequently, the U.S. is "being bled to death" by losses of technical information.

Walter G. Deeley, deputy director of NSA for communications security, said foreign countries such as the Soviet Union use on-line commercial data bases in the U.S. to obtain technical data and also to intercept the industrial communications of Fortune 1,000 companies, thus hurting the U.S. economy.

The directive also created a category of information below the traditional classifications and referred to it as "sensitive but unclassified government or government-derived information" whose loss could harm national security.

Big Brother really here

"It means that Big Brother is really here," Rep. Brooks said at the hearing. "I seriously question the wisdom of the president's decision to give [the] DOD the power to classify, hence control, information located in civilian agencies and even the private sector, which, in [the] DOD's opinion, may affect national security," he testified.

The U.S. General Accounting Office said the scope of the new computer security organization will depend on how broadly the Ntissc defines the new category of sensitive information, a category which could include government information on hazardous materials, flight safety and the Federal Reserve Board's monetary policy.

Asked how the Ntissc will define this sensitive, unclassified data, Latham responded that the committee is "heatedly debating that right now." He suggested the data might include banking transactions, medical records and Social Security records.

Mid-range security classes

These information systems would require a lower level of security than military computers, he said. For example, they might be assigned a security level of C-1 or C-2, which are mid-range security classes defined by the NSA [CW, Sept. 17].

John M. Richardson, testifying for the IEEE, said the society is concerned about the extent to which NSDD 145 "seems to reach into the operation of private sector activities and systems."

Richardson urged the government to exercise "extreme restraint" in this area and to limit its role simply to alerting the private sector to security problems and to encouraging remedies.

ORACLE:
The portable version of IBM's DB2 and SQL/DS.

COMPATIBILITY

The ORACLE relational database management system is fully compatible with IBM's SQL/DS and DB2. SQL/DS and DB2 represent IBM's latest generation of database management technology for IBM's largest computers. ORACLE's capabilities and user interface - the SQL language - are identical to those of SQL/DS and DB2. Programs written for SQL/DS and DB2 will run unmodified on ORACLE.

PORTABILITY

SQL/DS and DB2 run only on IBM mainframes; ORACLE runs on IBM mainframes, DEC, DG, AT&T, HP, STRATUS, and several other manufacturers' minicomputers, and on a wide range of microcomputers including the IBM PC/XT and PC/AT. All versions of ORACLE are identical and include a complete implementation of SQL – not a subset.

CONNECTABILITY

Having the same software running on your mainframe, minis, and micros greatly simplifies the task of connecting your machines into a network. ORACLE's network software allows microcomputer users to directly access data stored in the shared database on the mainframe or minicomputer, or copy that data into the database on their micros and operate independently.

Oracle introduced the first relational DBMS and the first implementation of SQL back in 1979. Today, eight of the ten largest U.S. companies use ORACLE. In fact, INC MAGAZINE ranks Oracle as the fastest-growing software company in the USA. Surprised? Don't be. ORACLE is the number one relational DBMS, with thousands of installations on IBM mainframes, DEC, DG, HP and most other vendors' minis and micros, including the IBM PC.

To attend the next free, half-day seminar in your area or receive additional information, write Oracle Corp., Dept. C4, 2710 Sand Hill Rd., Menlo Park, CA 94025, or call 415/854-7350 ext. 1060. Following is the ORACLE seminar schedule:

GM technical unit test-drives links in laboratory trials

By John Desmond
CW Staff

WARREN, Mich. — Before a micro-mainframe link is accepted by General Motors Corp.'s technical group here, the link must survive a communications gauntlet of emulation boards, data switches and multiple types of hardware.

In a laboratory setting at the GM Technical Center here, the Advanced Product and Manufacturing Engineering Staff (Apmes) subjects micro-mainframe link products to a rigorous series of tests. Most available micro-mainframe links fail to meet the company's need to send data along some labyrinthian paths. "The more diverse you are and the larger environment you have to work in, the more difficult it is to find one product to meet all your requirements," said John Crombe, Apmes personal computer liaison and technical engineer.

In the micro-mainframe arena, Apmes' goal is to allow its 341 current IBM Personal Computer XT and AT users to communicate with each other's personal computer and with processors from IBM and Digital Equipment Corp., according to Crombe. In an ambitious program, Apmes plans to add another 200 personal computer users by year's end, Crombe said.

Apmes, which receives computer services from GM's DP subsidiary, Electronic Data Systems Corp., is a technical staff of hundreds that develops and plans engineering systems for future use at GM.

Data follows many paths to and from Apmes end users. Over dial-up lines from the personal computers, the asynchronous data is routed to the mainframes through a Gandalf Data, Inc. data switch and an IBM Series/1 minicomputer used as a protocol converter. The Series/1 is the gateway through which all microcomputer data destined for mainframes must pass. Once the Series/1 performs the necessary protocol conversion, the data is passed on to an IBM 4381 or 4341 mainframe or to a Digital Equipment Corp. VAX-11/780 or an 11/750 supermini. The IBM mainframes work in both MVS/TSO and VM/CMS environments.

Data is also channeled from personal computers equipped with terminal emulation boards through coaxial cable into IBM controllers and then into the mainframes.

'Most links aren't smart enough'

Most available links support connections between one type of micro and a single manufacturer's processor — and do not support the code, protocol, file format and other conversions needed for a micro to access multiple types of hosts. Crombe said, for example, "Most asynchronous file-transfer micro-mainframe links do not allow you to link through a Series/1 protocol converter. You might say they aren't smart enough. There are a lot of characters that get translated and stripped out on the way through. It has to be a pretty smart protocol to get binary files transferred through there."

A key requirement is that the link provides for transmission of text and binary files. "It's pretty simple to send text only," Crombe said. Text requires Ascii characters representing uppercase and lowercase letters A to Z and punctuation marks. "That leaves a lot of Ascii characters to use as control code," such as the code needed to signal the end of a transmission, he said.

With binary data transfer, he said, "No characters are illegal. If you have a character that signals end of transmission, and your binary file uses that same character, it means you have to transform that character into something else, and the end program transforms it back to original state," he said. The encoding and decoding further complicates communication. "The more things you have to encode into a different format and decode on the other end, the more you have a delay in speed. Plus you have more data to be sent down the line. Those are factors to consider," Crombe added.

To meet these conversion demands, Crombe investigated some two dozen link products. The first-stage requirement was that the link had to support data transmitted through the Gandalf data switch and through various IBM 3270 emulation boards, including Forte Data Systems, Inc.'s Forte; CXI, Inc.'s Pcox/CXI; Digital Communications Associates, Inc.'s Irma; and IBM's 3270 board. "When you say you want to talk through Forte, Irma, Pcox and a modem at 9.6K [bit/sec.] directly to an IBM mainframe, that knocks half the list out. Then when you say you want to talk to Series/1, that knocks just about everyone else out. Then when you say you want to talk to a VAX and send for text and binary files, everybody's gone," Crombe said.

Slim micro-mainframe pickings

While the micro-mainframe pickings are slim from Apmes' point of view, the group is impressed with Linkware Information Service from Linkware Corp. of Waltham, Mass. "Linkware's product was the only one that fit the criteria," Crombe said. "There are individual products that may provide individual links superior to any one particular link that Linkware might give you, but none of them give you the whole picture."

Using Linkware, he said, "We personally did binary and text file transfers from the micros to the VAX and IBM mainframes through the Series/1. We did the coaxial connect file transfers up and down through the 3270 cards. We also evaluated the security access control, [which determines] who is allowed to read and write certain files in the central library." A list of 500 files was created by Apmes to test delays caused by making a large directory available to personal computer users.

To evaluate whether a transmission was successful with Linkware, Crombe performed a loop test. He sent data from the host to the personal computer, then back up to the host under a new file name. He then compared the two files on the host, bit for bit. He did the same loop test going from the personal computer to the mainframe, then back to the personal computer. He also examined text files from the personal computer to the mainframe, where Ascii code was converted to Ebcdic and vice versa. And he checked binary data from the personal computer to the mainframe for accuracy.

AT&T joins forces with Japanese consortium in net venture

NEW YORK — AT&T announced last week that it has formed a joint venture with a consortium of Japanese companies, including two mainframe vendors, to build a data communications network in Japan.

Announced in Tokyo, the agreement established Japan ENS Corp. for the purpose of developing a value-added network based on AT&T's Enhanced Network Services technology.

James S. Hubley, formerly director of international and network product management with AT&T Information Systems, will be the senior AT&T executive involved in the venture. AT&T's partner is Japan ENS, Inc., a consortium established in 1984 to investigate enhanced network services. Hajime Hirota, president of Japan ENS, Inc. and former managing director of the Industrial Bank of Japan, will also play a leading role in the venture, an AT&T spokesman said.

The spokesman said the equity holdings for AT&T and the 17 Japanese firms involved in the venture have not been finalized, and the details will be worked out during the summer. AT&T will provide the network technology and the resources to design, engineer and operate the network, along with management for network operations and product planning and development.

'Venture will compete with NTT'

The opportunity to develop value-added data nets in Japan is a result of the Japanese government's decision in April to allow competition in its domestic communications marts. Previously, Nippon Telegraph & Telephone Corp. (NTT) enjoyed a regulated monopoly over communications.

"In that prior to April NTT was the only company doing anything in this area, the venture will certainly compete with NTT," said AT&T's Barry Campbell.

Other companies, Campbell noted, are also seeking to establish data networks in Japan. According to the Framingham, Mass.-based market research firm, International Data Corp., IBM previously established two joint ventures to pursue value-added network opportunities. The two ventures, Advanced Systems Technology Development, Inc. and Advanced Systems Technology, Inc., were formed in partnership with Mitsubishi Corp., an electronics conglomerate that has previously worked on projects with IBM, and Cosmo Eighty Corp., a software development firm.

The members of the Japanese consortium in partnership with AT&T represent a wide range of Japan's leading industrial, financial and service companies. Included in the consortium are mainframe vendors Hitachi Ltd. and Fujitsu Ltd., along with Industrial Bank of Japan, the Asahi Shinbun press organization, Sony Corp., Mitsui & Co., Nissan Motor Co. Ltd. and Nippon Life Insurance Co.

AT&T said the planned network will enable Japanese industries to let dissimilar terminals and computers communicate over a shared intelligent public network.

Later this year, AT&T said, a wide-area packet network service will be implemented with network access provided through packet assemblers/disassemblers in nine cities. Early next year, the venture is expected to provide full value-added network services, with Net 1000 storage and processing technology available.

FACT: Your installed base will be worth 25% less in September.

IBM-MCI alliance to aid AT&T's deregulation quest

By Bryan Wilkins
CW Washington Bureau

WASHINGTON, D.C. — The proposed IBM-MCI Communications Corp. business alliance [CW, July 1] is adding fuel to AT&T's campaign to have regulations relaxed or dropped which bar AT&T's joint marketing of telecommunications with office equipment and computers.

Specifically, AT&T is using the alliance as proof that a highly competitive market exists, as it presses the Federal Communications Commission to slacken existing restrictions that bar AT&T from combining sales of its new minicomputer and microcomputer lines, local-area networks and enhanced data communications services with the regulated long-distance telephone service.

IBM and other large computer manufacturers, such as Digital Equipment Corp., have said they do not oppose the removal of the rules barring AT&T from joint marketing of regulated telephone service and nonregulated computers and equipment embodied in the Second Computer Inquiry decision as long as separate accounting is maintained to prevent cross-subsidy.

Forced to spend extra

AT&T is arguing that the restrictions are unnecessary in a highly competitive equipment market and are causing the company to spend an extra $10 billion to duplicate functions that are performed by AT&T Information Systems, the nonregulated equipment subsidiary, and by the regulated AT&T Communications.

The FCC will decide shortly on removing the Computer Decision II ban on AT&T's joint marketing as part of its overall shift away from the regulatory regime it had built around AT&T before divestiture. Earlier this year the commission granted permission to AT&T to shift $1.9 billion worth of plant and equipment from AT&T Technologies to AT&T Information Systems [CW, April 22].

Last week, a former architect of the separation policy and a former member of the Justice department's antitrust division, Phil Verveer, said, "The most interesting aspect of the IBM-MCI deal is what impact it will have on the FCC. I expect it will push them toward a more rapid deregulation of AT&T."

An FCC official working on the pending ruling to drop the Computer Decision II restrictions said last week, "To the extent that the IBM-MCI deal affects the market share for the equipment industry, I think it will affect the decision. The commission has said market share will be a factor in its decision."

While IBM and DEC are not opposing the joint marketing, they are asking the FCC to require information disclosure by AT&T as far as technical changes it makes to the network, especially as the network moves toward an Integrated Services Digital Network mode of transmission.

The companies point out in comments to the FCC that equipment interfaces to the network will be highly dependent on the protocols and standards adopted by AT&T. They assert that AT&T's network interconnect standards for equipment do not match those established by the International Standards Organization.

Other safeguards being pushed on the FCC by IBM and DEC would have AT&T continue to keep separate the revenue from the regulated basic transmission service from the nonregulated computer and equipment side and would require that AT&T pay the tariffed transmission rates for a joint service offering as others are currently forced to do. Additionally, they would require that an outside independent accounting review of the integrated services be conducted annually.

Verveer, commenting on the pressure the IBM-MCI deal is putting on the FCC as it considers its regulatory treatment of AT&T, added, "I expect the FCC will move toward more rapid deregulation. They are strongly inclined to relax the equipment separation rules, deregulate AT&T's long-distance business as well as the [divested] Bell operating companies and find any means of doing so. To that extent, the IBM-MCI deal will probably be cited as a factor."

Last week there were other evidences of the building pressure:

■ Recent comments emanating from the FCC have thrown the competitive long-distance industry into an uproar. Common Carrier Bureau Chief Bert Halprin remarked that the FCC is not disposed to continue preferential terms and conditions for hookups by AT&T's competitors to the local telephone exchanges.

■ GTE Sprint Communications Corp., Allnet Communications and other long-distance competitors have filed an emergency petition with the FCC citing the difficult business conditions they are faced with from added costs and pleaded for easier regulatory treatment while equal access is being implemented by the local-exchange telephone companies.

■ The FCC last week floated a trial balloon idea, according to telecommunications industry lawyers representing these principal long-distance competitors, about letting the regional holding companies into the interstate long-distance business, from which they are specifically barred by the terms of the AT&T divestiture.

Just published:

CICS for the COBOL Programmer
Part 2: An Advanced Course

This NEW book is for programmers who want to expand their CICS skills. It covers the advanced CICS features you'll use regularly, though you won't need all of them for every program.

That means you'll learn how to:

- use browse commands—STARTBR, READNEXT, READPREV, ENDBR, and RESETBR—to process a file sequentially
- use the browse commands to process VSAM alternate index files
- use temporary storage queues to store and retrieve small amounts of temporary data
- use transient data queues (transient data exists only from the time it's written to the time it's read)
- use interval control commands to start a task
- produce multi-page output using BMS page building
- use the ROUTE command to direct output to one or more terminals
- apply DL/I data base processing to CICS programming
- create an abend exit to keep your task from abending when an error occurs
- use 2 terminal control commands—SEND and RECEIVE—that let you communicate directly with a terminal, bypassing BMS
- write programs for terminals that support color and extended highlighting features, like blinking, underscoring, and reverse video

Plus, you'll learn how to use a variety of other CICS commands:

- ENQ and DEQ—to gain exclusive control of a resource
- SYNCPOINT—to control the recovery processing that occurs if your task abends
- LOAD—to load and establish addressability to a constant table
- JOURNAL and WAIT JOURNAL—to create journal records
- GETMAIN and FREEMAIN—to acquire and release main storage
- ABEND—to force your task to end abnormally

At the end of this book, then, you'll know a wide variety of advanced CICS features. You'll also know which features do similar things and when you should use each one.

140 examples for learning and reference

To make it easier for you to understand the advanced CICS features, this book is chock-full of examples. You'll find drawings that show how the CICS elements work and syntax for the CICS commands.

More important, you'll find complete documentation for 11 CICS programs. That includes screen layouts, mapset listing, symbolic map, design, and code for each program. What's more, all of the programs are designed and written in a way that makes them easier to read and understand. I think you'll find they make time-saving models for you to use for your own CICS programs.

Who this book is for

Although this book is *Part 2* in a series, you don't have to read *Part 1* first. But you do need to know the basics of writing CICS programs. Specifically, you should be able to do the following before you start *Part 2*:

1. Design, code, and test simple interactive programs using pseudo-conversational programming.
2. Define mapsets, use the SEND MAP, SEND TEXT, and RECEIVE MAP commands, position the cursor on the screen, and detect the use of PF keys, PA keys, and the clear key.
3. Use the following file control commands: READ, WRITE, REWRITE, DELETE, and UNLOCK.
4. Use the XCTL and LINK commands to manage the execution of programs within a task.

(All of these skills are taught in *CICS, Part 1*. To get a copy, simply mail the coupon below, or call us, toll-free.)

So why wait?

Expand your CICS skills right away. Get your copy of *CICS for the COBOL Programmer, Part 2: An Advanced Course* TODAY!

Our Unlimited Guarantee

You must be satisfied. Our books must work for you, or you can send them back for a full refund...no matter how many you buy, no matter how long you've had them.

To order by phone, call 1-800-221-5528 / In Calif., call 1-800-221-5527

OA system keeps firm's execs on top of business

By Donna Raimondi
CW Staff

BEDFORD, Mass. — The chief executive officer of a company here decreed that there was no better way for his corporation's executives to learn about technology than with hands-on experience. So he went out and bought them a Wang Laboratories, Inc. Wang Office system.

GCA Corp. became one of the first users of the Wang Office, said Glenn Fund, GCA's manager of end-user computing. The company manufactures automated production systems used for making integrated circuits for semiconductor makers. It also supplies integrated factory automation hardware and software systems for automotive, aerospace and electronics companies.

Fund credits the office automation system with speeding the work flow and giving GCA's executives the ability to react quickly to business situations, he said. When Milton Greenberg, GCA's CEO, gave Fund's group responsibility for finding an office system for the executives, the choices were somewhat limited. GCA already had IBM and Wang equipment and was committed to staying with those two vendors, and IBM had no OA system available at the time, Fund said. By the beginning of May, GCA had installed the Wang Office system for its executives and their secretaries, he said.

The company bought several standard Wang Office software modules and customized other functions that it wanted, Fund said. Standard modules that GCA purchased included Wang's word processing; the Reminder File; the Local Mail facility for sending and receiving memos and phone messages; the Personal Phone Directory; the daily, weekly and monthly Calendar module; and the List Management data base package.

Custom-developed functions include an on-line company telephone directory, which is downloaded from GCA's IBM 3083 mainframe, and a tie-in to Western Union Corp.'s Easylink electronic mail service, which provides access to information such as treasury, stock market, weather and news, Fund said. Telecommunications options such as the TTY asynchronous and 2780/3780/WPS bisynchronous Wang-to-Wang connection protocols were also developed. The customized portions were created by the GCA staff with Wang software specialists, he added.

User's needs surveyed

GCA arrived at its choices of features and functions by surveying the executives and secretaries who would be using the system to find out what they needed and wanted, Fund said. Fund discovered that personal information, including reminder files, message services and telephone information, and corporate information such as sales, bookings and financial data, were the two basic types of data that people wanted. Up to now, he has concentrated on developing the personal features of the system. The corporate information will come later as he brings mainframe applications to the Office system.

The company bought tutorial books from Ad Verbum in Acton, Mass., for teaching word processing and for creating glossaries, said Marge Snowdon, GCA's executive VS office system administrator. The glossaries allow the cataloging of documents that can then be called up and inserted in other documents, she said.

GCA acquired a 1M-byte Wang VS85 with two 75M-byte disk drives for the initial system, which is a pilot currently serving 26 users. Users of Wang Office Information Systems 50 and 60 word processing machines that the company already owned were linked to the VS so they could access the new functions.

Wang should have provided much more assistance and start-up help, Fund said. The system is more complex than many OA products and requires a sophisticated group of people to put it in, he added. "We know more than Wang knows about the system now," he said.

The initial 26 users do not all have the same functions available to them, Fund said. Security levels are set by the system administrator, and as soon as users enter their identification numbers, the system knows which menus the users are allowed to access and which peripherals they have access to.

Training users for the system was a challenge, Fund said. His staff pulled together a manual for the system in four to five weeks' time, he said. "Wang had terrible documentation," Fund said, and even the terrible documentation was not available when he bought the system. The staff wrote their own manual using pictures, examples and features such as program function keys and menus. They could not work on the manual until they had the system developed and ready to install, he said.

Because of GCA executives' busy schedules, no training sessions could be planned for them, Fund said. Secretaries were trained first so that they could help their bosses learn when they had time, he said.

Secretaries took two-hour training courses, Snowdon said. A few of the secretaries had prior experience with

ADR tightens micro line with link boost, integrated tool

By John Gallant
CW Staff

PRINCETON, N.J. — Applied Data Research, Inc. (ADR) last week bolstered its microcomputer software offerings with introductions of an enhanced release of its micro-mainframe link and a multifunction productivity package for IBM Personal Computers.

Unveiled here were PC Datacom 2.0 and PC Peer. PC Datacom 2.0 is an upgraded version of PC Datacom, which gives IBM Personal Computer users access to data residing in ADR's Datacom/DB relational data base management system for IBM mainframes.

The enhanced PC Datacom link now supports widely used micro software data formats, including comma-separated values, Data Interchange Format, Symbolic Link Format and ADR's own format for data reporting.

In addition, PC Datacom 2.0 now supports data exchange with Lotus Development Corp.'s 1-2-3 and Symphony and Ashton-Tate's Dbase II, Dbase III and Framework.

A spokesman said the link allows users to download mainframe data and invoke a menu option that automatically reformats the data for the supported micro formats and packages. Users can also update Datacom/DB from the micro through PC Datacom.

The spokesman said the enhanced release also features a report writing facility that is said to allow micro users to create standard and custom reports using mainframe- or micro-generated data.

All PC Datacom procedures are menu driven, and queries can be created on the micro through the menu or ADR's mainframe Dataquery language.

ADR's PC Peer is an integrated micro software package that combines spreadsheet, graphics, data and forms management and telecommunications capabilities. It can share data with mainframe Datacom/DB through PC Datacom 2.0. PC Peer offers split-screen capability that allows data and graphs to be displayed simultaneously.

The spokesman said the product's forms manager allows users to create invoices, mailing labels and form letters. Documents produced with the word processor can contain text, data tables or graphs copied from other PC Peer facilities.

PC Peer's telecommunications facility supports asynchronous communications using a serial port and a Hayes Microcomputer Products, Inc. Smartmodem or a Digital Communications Associates, Inc. Irma board for IBM 3270 communications.

The package runs under IBM's PC-DOS and requires 512K bytes of random-access memory on an IBM Personal Computer, Personal Computer XT or AT. It is available now at $595 per copy.

PC Datacom 2.0 costs $495 per copy and will be available in the third quarter.

ADR is located at CN-8, Rt. 206 and Orchard Road, Princeton, N.J. 08540.

WANG

from page 10

Wang word processing machines, but most of the secretaries and all of the executives were using computers for the first time, she said.

The staff is working with Wang to improve some of the system's features, Fund said. Wang recommends that the shared printers, for instance, be dedicated to either word processing or to office functions or else documents will appear to be hung up, which causes system administration problems.

The system is expensive, Fund said, so it may be a while before everyone in the organization has access to it. "If we are able to sign a multimillion-dollar contract because we could react quickly, it will pay for itself," he said. The benefits are in the ease and speed of automatically doing jobs that were previously done manually, he said.

"THERE ARE THOUSANDS OF THEM, AND THEY'RE ALL HEADED FOR CONCORD!"
"AND RIGHTLY SO. THEY'VE GOT THE BEST 2400bps MODEMS AROUND."

H. Pyle. Victory Parade, 1783. Courtesy The Bettmann Archive.

If you're ready to join the ranks of thousands who are saving time and money with 2400bps dial line communications, go with the leader—Concord Data Systems. Our CDS 224® is today's largest selling 2400bps modem, chosen by companies such as Tymnet,® ADP® Autonet,℠ Dysan and others. Surprising? Not when you realize that Concord Data was installing thousands of 2400bps modems throughout the world before most companies had their products off the drawing board.

Concord Data modems are built to give you years of trouble-free service. Based on *proven* VLSI designs and Concord ingenuity, our modems pack more high-performance features and time-saving options than any other 2400bps dial line modem on the market. You can choose automatic dialing, error protection, statistical multiplexing and more. We have stand-alone units, plug-in PC-compatible cards, and industry's only single-card rackmount modem that operates at 2400, 1200 and 300bps. With prices starting at $450,* Concord Data modems are not only your best bet, they're your best buy. To get in step with the communications leaders, call us at (617) 890-1394 or write 303 Bear Hill Road, Waltham, MA 02154, telex 951793.

IBM grant launches MIS program for University of Texas

By Clinton Wilder
CW Staff

> *'We believe there has been a void between the academic and business worlds.'*
>
> — Darwin Klingman
> University of Texas

AUSTIN, Texas — The Graduate School of Business building was not the most pleasing sight on the scenic campus of the University of Texas here this spring. Where other buildings were flanked by the green, well-trimmed lawns one expects at a large Sunbelt university, the business school was surrounded by freshly dug dark earth and stacks of cast-iron pipe. Inside, too, the ravages of renovation dominated the academic setting. It was apparent there was a transition going on.

By next fall, the university will open its "Classroom 2000" — an ultramodern, multitiered room decked out with what university officials say will be the world's largest IBM Personal Computer AT/370 collection in one room. The 64 AT workstations were purchased with part of a $2 million grant from IBM, funds that will allow the school, along with 12 other universities nationwide, to offer an MIS concentration in its MBA program for the first time.

"We believe there has been a void between the academic and business worlds," said Darwin Klingman, the management science and computer science professor who will direct the MIS concentration. "In the history of computers, the early machines were designed totally in universities, but now it's the vendors who are at the leading edge. The universities can't afford multibillion-dollar computer research, but the educational function can come back into it because business needs management expertise to manage those systems."

University of Texas professors will begin training an estimated 75 MIS concentration candidates next fall to fill what they said they believe is a corporate management gap between the computer science-trained DP manager and the corporate vice-president with an MBA. Their goal is to integrate all of the standard MBA topics — marketing, finance, accounting, management and general business — into a curriculum designed for the MIS environment.

"The 'of' in management of information systems is very important," said Associate Professor of Management Robert Sullivan. "We've identified a vacuum between top management and DP, and we hope to fill the void between managers and number crunchers with these people. They should have the ability to interact with vice-presidents, cost-out systems, be sensitive to user interfaces and behavioral aspects and be able to facilitate getting terminals on the desks of decision makers."

According to graduate school officials, ideal MIS candidates will enter the program with most of the required computer technology courses, such as Pascal programming and data structures, behind them. "The majority will be able to waive one or two courses by having backgrounds in data base management and several programming languages," Sullivan said. "The admissions standards for this concentration are distinctly separate from those for the regular MBA program."

The IBM grants, announced in April, were earmarked at 50% for hardware and 50% for faculty and curriculum development. The university claims to be the only grant recipient to spend the hardware component completely on end-user workstations rather than on a host processor. Thanks to a previous IBM grant to its engineering school, the University of Texas already had an IBM 4341 mainframe as well as an IBM 3081 Model D.

"We wanted to keep up with the latest technology on the micro-mainframe link and local-area networking," Klingman said. "We think that's a critical part of information system management today."

Want city's business sector involved

Business school officials also hope to see the MIS concentration grow along with Austin's high-technology private sector, which includes a move to a new University of Texas building next year by a corporate research consortium, Microelectronics and Computer Technology Corp. Committees of advisors from the business community will be established to maintain close contact between the new university program and business.

"We want to make sure we're not running behind industry's needs in terms of our training," Klingman said. "And we would like to get top business leaders to lecture or teach."

The business school's transition to

See TEXAS page 13

Every programmer should have one...

...a programming workbench on a PC

And if you think that's in the future, come to Booth 5521 at NCC where you will see a CICS application being maintained on a PC. Both the COBOL source and its screen maps.

You always knew PCs should do more than just word processing. Yet still you put up with the frustrations of mainframe-based development. Now from Micro Focus three products together make the programmers workstation complete:

VS COBOL Workbench, the integrated development environment for IBM™'s OS/VS and VS COBOL II languages; CO-MAPS, a utility for CICS and IMS screen mapping on a PC; and micro/SPF, a mainframe look-alike editor with file transfer to the PC.

VS COBOL Workbench continues the close integration of programming tools pioneered by Micro Focus in our well respected Professional COBOL product but brings them together with our new VS COBOL compiler.

No less than four COBOL language variants make up VS COBOL; IBM's OS/VS COBOL and VS COBOL II, Micro Focus' popular LEVEL II COBOL and features of the long awaited ANSI '85 specification.

You can take advantage of all these language features while immersing yourself in the unique Micro Focus programming productivity environment. The Workbench provides source code animation, screen painting, fast syntax checking with coupled editing, regression testing aids, and an improved code generator with application building tools for those applications resident on the PC itself.

Add **CO-MAPS** to Workbench and maintain a complete mainframe application on your PC. From screen images created inside CO-MAPS or by Workbench during prototyping you can quickly generate IMS/MFS or CICS/BMS macros and their associated COBOL source statements. Take existing macro definitions from the mainframe and modify them to produce new maps and map sets. You can even use CO-MAPS to convert your applications from CICS to IMS.

And if you love your mainframe editor then **micro/SPF** provides an exact equivalent but with the rapid response time of the personal computer. Micro/SPF supports micro to mainframe operations by transferring files between the PC and a host running TSO or CMS. And it invokes the VS COBOL syntax checker and Animator using the same commands as SPF on the mainframe. It's a very comfortable way to combine the advantages of a PC with the familiarity of the mainframe tools you are used to.

You can try the VS COBOL language by ordering just the compiler, an excellent product in its own right, or you can enjoy the full benefit of improved programming productivity and creativity by going straight to VS COBOL Workbench. And mainframe users, don't forget CO-MAPS and micro/SPF.

The PC workstation for programmers is available now and the productivity gains from Workbench tools such as VS COBOL Animator are phenomenal. Come see for yourself. Don't miss Booth 5521 Level 42 at McCormick Place, Chicago, July 15-18.

Our products operate on the IBM PC, XT,™ AT™ or 3270 PC.™ Micro Focus offers volume purchase agreements to large end user customers and dealer discounts to approved dealers.

...see it at NCC, Booth 5521.

Oil firm opts for limited use of IBM Cabling System

By John Desmond
CW Staff

NEW YORK — When IBM announced its Cabling System last year [CW, May 14, 1984], a major oil company in Ohio put a hold on twisted-pair cable orders for its new 45-story headquarters building, evaluated the IBM cable and decided to stick closely to its original plan.

Some twisted-pair cable, to be used in a private branch exchange (PBX) network, had already been shipped to Standard Oil Co. of Ohio (Sohio), and other orders were on loading docks when IBM made its announcement.

Les Duncan, manager of corporate telecommunications for Sohio, said that after the evaluation, his firm decided to make only a small investment in the IBM Cabling System for its headquarters, which he said will be the largest office building in Ohio.

"We question how universal the cable will really be for non-IBM products," Duncan said, addressing an office automation conference sponsored by the Boston-based Yankee Group here recently. Sohio decided on a limited role for IBM cable after company engineers inspected the product and talked to IBM engineers and beta users, he said.

"IBM type II cable [multiwire general type] would have cost 2¼ times more than standard telephone wiring," Duncan said. Moreover, standard IBM cable wire racks would not fit into the wiring closets in Sohio's building design. "And the cable is a space hog," requiring one-third of the horizontal distribution space allocated for wire in the building's design, Duncan said.

Finally, the large bend radius — related to the cable's flexibility — of IBM's type II cable makes its installation difficult, he said.

Notwithstanding these drawbacks, Sohio did decide to install the IBM Cabling System to supplement twisted-pair cable in those departments committed to IBM as a vendor. For example, the IBM cable is being used to connect IBM Personal Computers to IBM System/36 minicomputers.

Sohio required support for point-to-point asynchronous terminal-to-host communication, IBM 3270 and high-speed printer connection, departmental systems and video and other broadband services.

Three years ago, Sohio decided to meet its requirements with various devices. The company decided to use a digital PBX to connect terminals to 16 minicomputers with more than 600 ports. Sohio's equipment includes processors from Hewlett-Packard Co., Prime Computer, Inc., Digital Equipment Corp. and IBM.

The PBX provides three twisted-pair wires for every desk; one is for voice/data, and two are multipurpose. The cable connection summary of Sohio's headquarters is as follows: 3,000 twisted-pair connections, 300 IBM type I connections, 150 coaxial cable connections, 50 shielded twisted-pair connections and 32 fiber-optic connections.

A separate IBM 3270 network is used for departmental systems and special applications, Duncan said. A fiber-optic channel extender connects Sohio's headquarters to a nearby building housing host processors. For various video applications, the company uses a broadband local-area network backbone extending from the top to the bottom of the building, with limited horizontal distribution.

Duncan recommended adopting a cabling policy to manage resources. Sohio's cabling policy states that the digital PBX should be the primary data communications system for the building, that twisted-pair wiring is the primary data communications cabling and that departmental local-area networks should be installed where speed or connectivity dictate.

Duncan also stressed the importance of incorporating flexibility into a building's design. Sohio installed a cellular floor system, which Duncan described as having much of the flexibility of a raised floor but at a lower cost. The cellular floor paid off when Sohio acquired part of Gulf Oil Co. halfway through construction of its headquarters.

"We had a major reshuffling on 12 floors," Duncan said. "If we had installed conduit, we would have had significant rework. As it was, with the cellular floor, we rolled with the punches."

TEXAS

from page 12

the MIS concentration is also reflected in the direction of undergraduate computer science education at the university. While not specifically gearing up to train candidates for the MIS program, the undergraduate program now stresses a much broader range of organizational skills on which future DP employees can base their careers.

Data processing/analysis and computer science majors, for example, are now required to take more writing and communications courses than they were previously.

"A much larger percentage of recruiters are looking for broad problem-solving skills, not just Cobol programmers," said Associate Professor of Information Systems Eleanor Jordan, an associate director of the MIS concentration. "They want the person who can handle business and organizational issues and can still deal with technical problems. I think they've seen enough people who can read assembly but can't communicate with people. We've had some graduates who have been asked to evaluate micro purchases for their businesses just one year out of college."

In this environment of changing corporate needs for DP management, the university hopes to supply valuable personnel resources. "The MIS program was actually proposed without the IBM grant," Klingman said. "It's a direction [in which] we've been heading for some time because we knew it was needed."

Wang exhibit scheduled for October

BOSTON — Access '85, the first exhibition of Wang Laboratories, Inc. and Wang-compatible products, will be held Oct. 1-3 at the Bayside Exposition Center here.

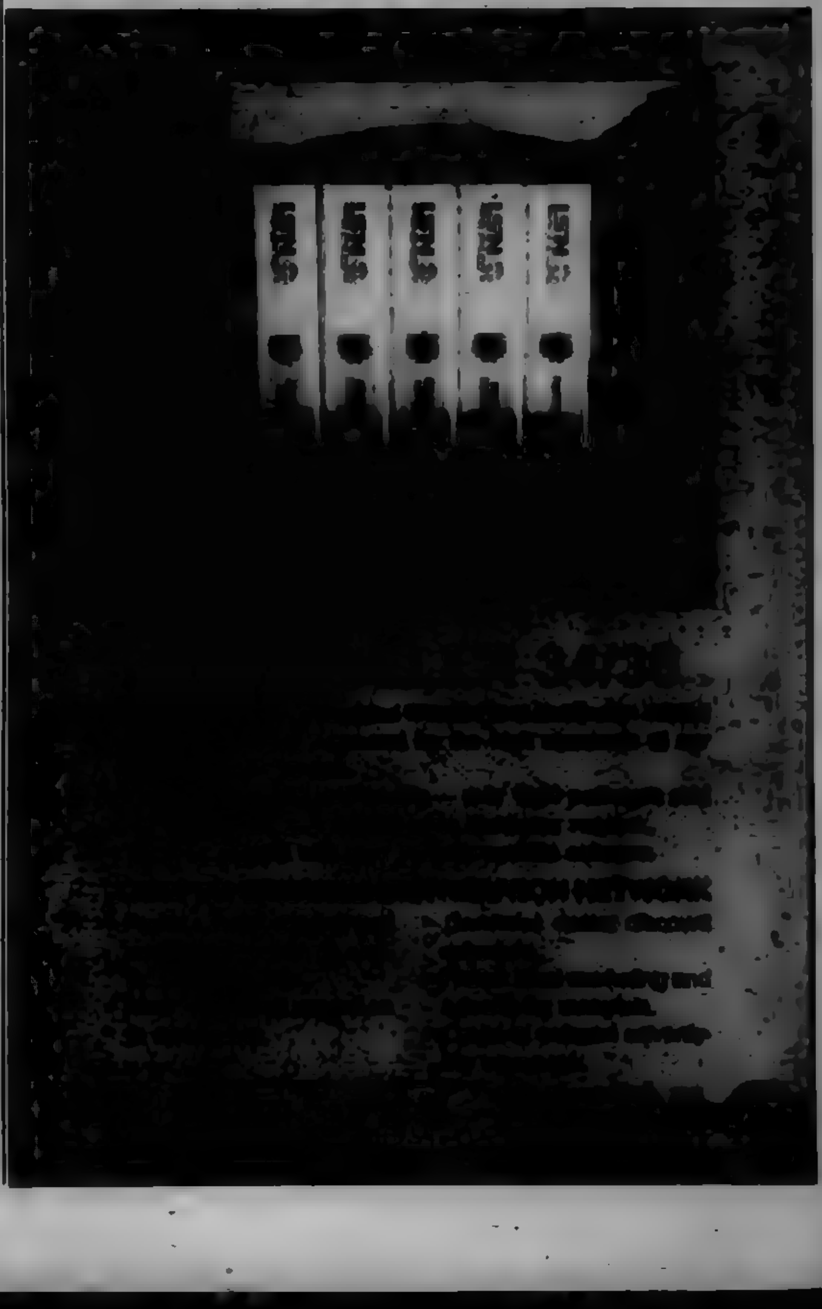
Exhibitors are expected to include vendors of applications and services that are available in the Wang marketplace.

Attendees will have the opportunity to compare and evaluate a variety of products from leading suppliers and manufacturers.

The exhibition is scheduled to run concurrently with the International Society of Wang Users Boston Conference.

Cost of the exhibition is $25.

More information on Access '85 is available from Data Base Publications, 11754 Jollyville Road, Austin, Texas 78759.



All-star teen hacker's team beat hundreds of systems

By Paul Korzeniowski
CW Staff

At 14, Bill Landreth was a major league hacker.

During a four-year career that began in 1979, he cracked between 90 and 100 corporate systems and was a member of a team that accessed approximately 800 computer systems. The team beat university, banking, insurance, newspaper and telephone company security systems. Landreth's exploits are the subject of *Out of the Inner Circle*, published by Microsoft Press, a division of Microsoft Corp. in Bellevue, Wash.

The career of Landreth, who became known as the "Cracker," began in the minor leagues. When he was a teenager, he and his parents split the cost of a $1,000 Tandy Corp. TRS-80 Model I Level II microcomputer. Once he had the machine, learning about computer systems became an adolescent obsession. First, he taught himself how to program in Basic; next he became fluent in Zilog, Inc. Z-80 microprocessor assembler language.

Landreth

To spur their son's interest, Landreth's parents purchased him an Apple Computer, Inc. Apple II. When Landreth borrowed a dumb terminal and a modem from a friend, his hacking moved out of his home and into computer networks.

With the new tools, he began to access a number of bulletin boards. Bulletin boards act as road maps for hackers. They include programming tips, public domain software and games. They also often include telephone numbers, account names and passwords to large computer systems. Such systems fascinated the Cracker, and he spent many nights and early mornings exploring them. "I was spending between $450 and $650 a month on telephone bills," he said. His parents sometimes questioned him, shook their heads and paid the bills.

Whenever the Cracker entered a large system, he tried and often succeeded in gaining operator-like authorization, information other hackers could use. Landreth started trading his information with other hackers.

Through such trading, he became a member of a team of elite hackers known as the "Inner Circle." Members of the group used a number of techniques to access a system and work their way up to the level of a system operator. Their techniques included entering random passwords, emulating a logon screen, manipulating computer memory, changing commands stored in a memory buffer, mimicking a system operator's terminal, locating programs to bypass security procedures and writing a program that a legitimate user might run, thereby unknowingly testing system security procedures.

Through these ruses, the Inner Circle gained access to approximately 800 systems. Landreth claimed the group did not damage any data. When it was learned that one member had altered data, he was blacklisted.

AT&T Unix easiest to access

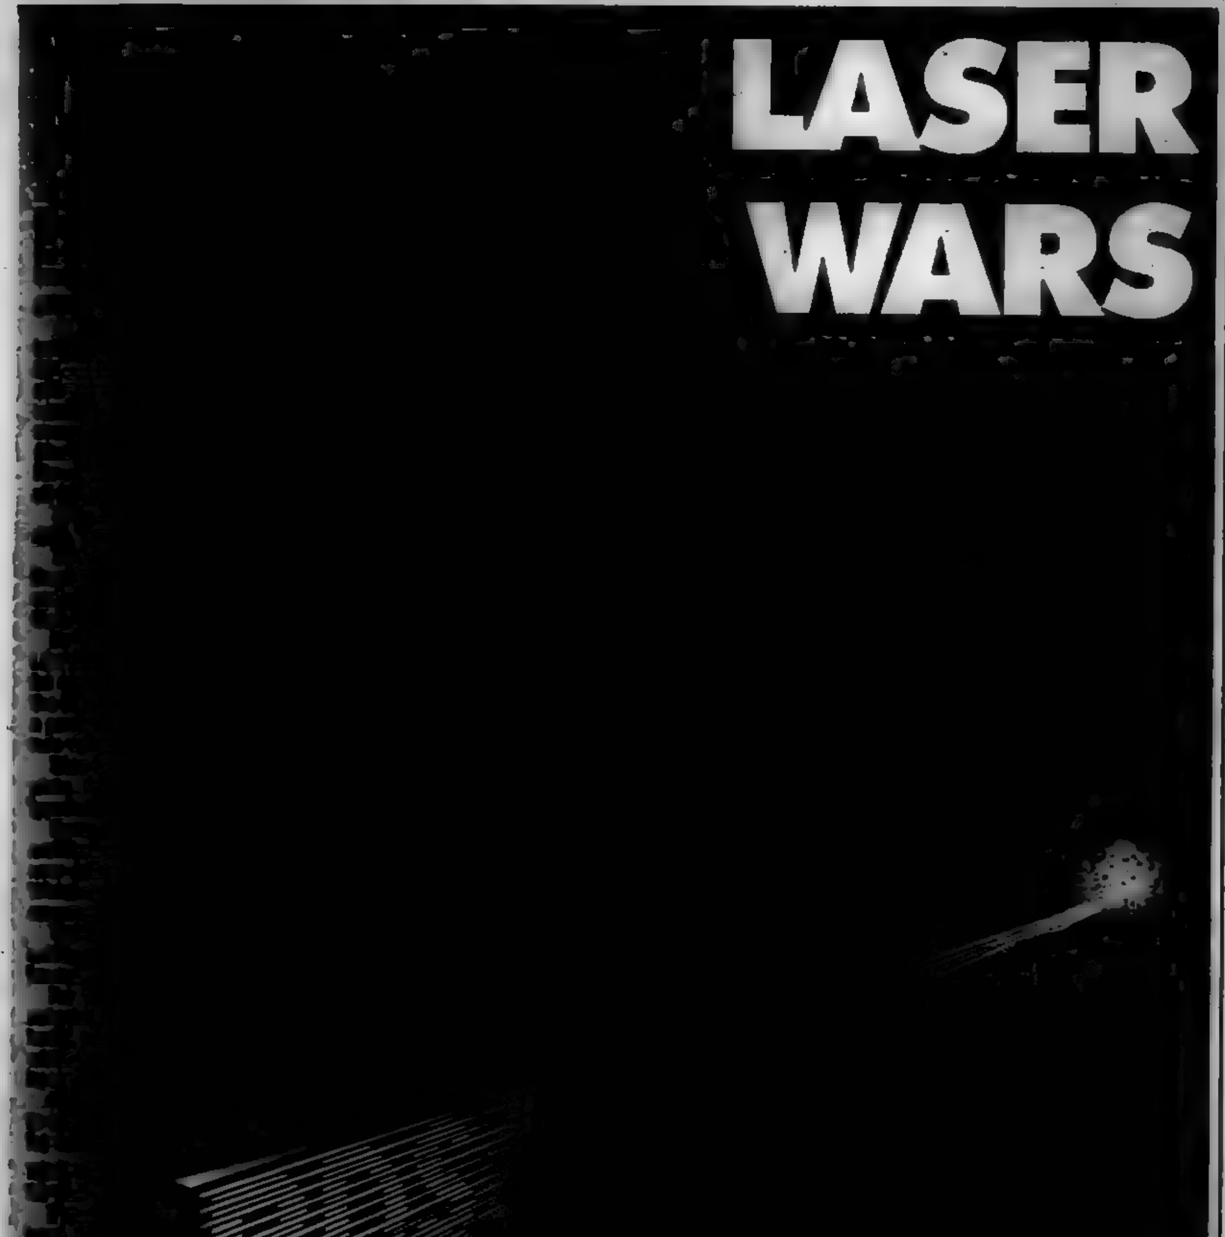
Some operating systems were easier to crack than others. The Cracker listed AT&T's Unix as the easiest operating system to access. Other operating systems that provided minimal security features, according to Landreth, were Digital Equipment Corp.'s Tops, RSTS and VMS. IBM's VM was one of the more difficult systems to crack. Prime Computer, Inc.'s Primos was once a hacker's dream, but the vendor strengthened its security features (see story page 1). Because hackers search for the easiest system to access, the group lost interest in Primos.

Universities are likely to have lax security, while banks tend to supply the most secure systems, according to the Cracker. Other than those two extremes, systems tend to defy classification. "There were some newspapers that had lax security and others that were quite secure," Landreth noted.

In the end, the Inner Circle became a victim of its own lack of security. The group accessed GTE Telenet Communications Corp.'s Telenet packet-switching network and set up a bulletin board. Inner Circle members thought they were not being observed and left a trail of clues that led to their arrests. One hacker member left his name and telephone number on the system; a second wrote GTE Telenet a letter and offered to solve the company's security problems.

In May 1984, the Cracker was indicted and charged with three counts of wire fraud. Through plea bargaining, Landreth was found guilty of one charge, fined $100 and given a sentence of 100 hours of community service.

Thus, the Cracker's career came to an end. "The judge realized that I may have a future in the computer field, so he let me keep an IBM [Personal Computer] and a modem," Landreth said.



Ex-hacker offers supplemental security checklist

In theory, every system is secure. In fact, every system has flaws. Flaws often are not apparent to an MIS manager and can be as simple as a user telling a friend a password.

Bill Landreth, a one-time hacker, estimated in his book *Out of the Inner Circle* that each month, up to 100 hackers attempt to crack a system with one dial-up line.

To prevent unauthorized access, Landreth recommended that companies supplement security measures.

He suggested that an encryption system works well with a good password system.

Landreth targeted three areas vulnerable to security breaches: telephone lines and modems, logon sequences and passwords.

TELEPHONE LINES AND MODEMS

- Companies should try to eliminate telephone line access or at least try to limit incoming calls to only those from a local area code.
- If a company must allow users to call in to a system, the company should move the main system off-line and let users access only a smaller front-end system.
- Do not publish modem numbers.
- From time to time, change modem numbers.
- If possible, keep modem numbers on a three-number exchange that is different from the company's main number.
- Have a modem ring two times before answering.
- Have a telephone operator answer the line, and require that a user ask for the computer.
- Change data lines to voice lines. Hackers have been known to search telephone company trash cans in search of data line lists.
- Be certain the system disconnects users who hang up the phone without properly logging off.

LOGGING ON

- Remove character storage memory buffers that store keystrokes from a logon phase.
- Have the system disconnect a user who makes more than two unsuccessful attempts to access a system.
- Have your modems disconnected if a user unsuccessfully attempts to access a system five to 10 times. A system operator can later reconnect the lines.
- Flash a warning message such as "Invalid Account — Notifying System Operator" whenever someone is unable to access the system.
- Limit the number of users for each account.
- Have a user verify the last time he used his account.
- Do not provide any information or power before a user is logged on. Help screens often provide a hacker with access to a system.

PASSWORDS

- Do not support default passwords — a password given to all first-time users. Users are supposed to change the password the first time they use the system, but often they do not.
- Use a random pattern when assigning passwords.
- Do not assign long random passwords, since users will change them to something they can remember.
- Have a system ask for a new password when a user logs on to a system for the first time.
- Make sure that users know how to change their passwords, but do not allow them to change them to one-letter passwords.

HACKER

from page 1

on a computer when it is first installed. The account is supposed to be deleted, but often it is not. Rather than being deleted, the account had been set to a privileged password.

"He changed information in a job queue and brought down the minicomputer," the security administrator noted.

The computer was running batch programs for a number of models used by geologists at the agency. Since the agency had backup tapes, no data was lost. However, the agency spent considerable time and money determining how the system was brought down. The culprit was never found.

Three other times the agency caught the hackers before they could damage the system. In one case, a college student accessed the network through a toll-free number.

In another, an adolescent tried to access the system through random dialing and random password techniques shown in the movie *War Games*. A second adolescent was given the system's modem number by a fellow hacker.

Response varied

The agency's response to its security problem has varied. One response has been to threaten the hackers with lawsuits. "Federal agents have informed the hackers that they could be prosecuted," Cecula said. "In some cases, the hackers did not know that they had accessed a mainframe."

The agency also has eliminated the toll-free number. "The hackers no longer are able to access the system at our expense," Cecula said. In addition, passwords have been reset or reassigned.

Because of the problems, Cecula's group wrote its own security package. "The package tracks the number of times someone tries to access a system," the security administrator noted. "Previously, there were no logs kept for the number of times access was attempted. Most packages track attempts made after someone has entered a system."

Forest Service incident

Last February, another government agency, the U.S. Department of Agriculture's Forest Service, caught a hacker accessing its Data General Corp. MV/4000 superminicomputer.

Lynn Vancil, assistant director of information systems at the Lake Wood, Colo., office of the Forest Service, reported that a Los Angeles system operator learned the company's identification and password to GTE Telenet Communications Corp.'s Telenet service from a bulletin board service.

"The hacker was familiar with our computer's operating system since he used the same type at work," Vancil said. "He built himself a user profile."

The hacker's access triggered GTE's security system, which noted the unusual 3 a.m. hour of access. The vendor notified the government agency of a possible problem. For a month, GTE, the Federal Bureau of Investigation and the Forest Service monitored the activity, tracing it to the hacker's home.

In March, Philip Gonzalez Fadriquela was arrested and charged with six crimes.

Fadriquela had not damaged any data. "He seemed more interested in experimenting with the system than in destroying any data," Vancil noted.

Following plea bargaining, the hacker pleaded guilty to three misdemeanors for wire fraud, and in return, the government dropped three felony charges. Fadriquela was sentenced to three years of probation, fined $1,000 for each misdemeanor and sentenced to 200 hours of community work, according to Cathy Goodwin, assistant to the U.S. attorney.

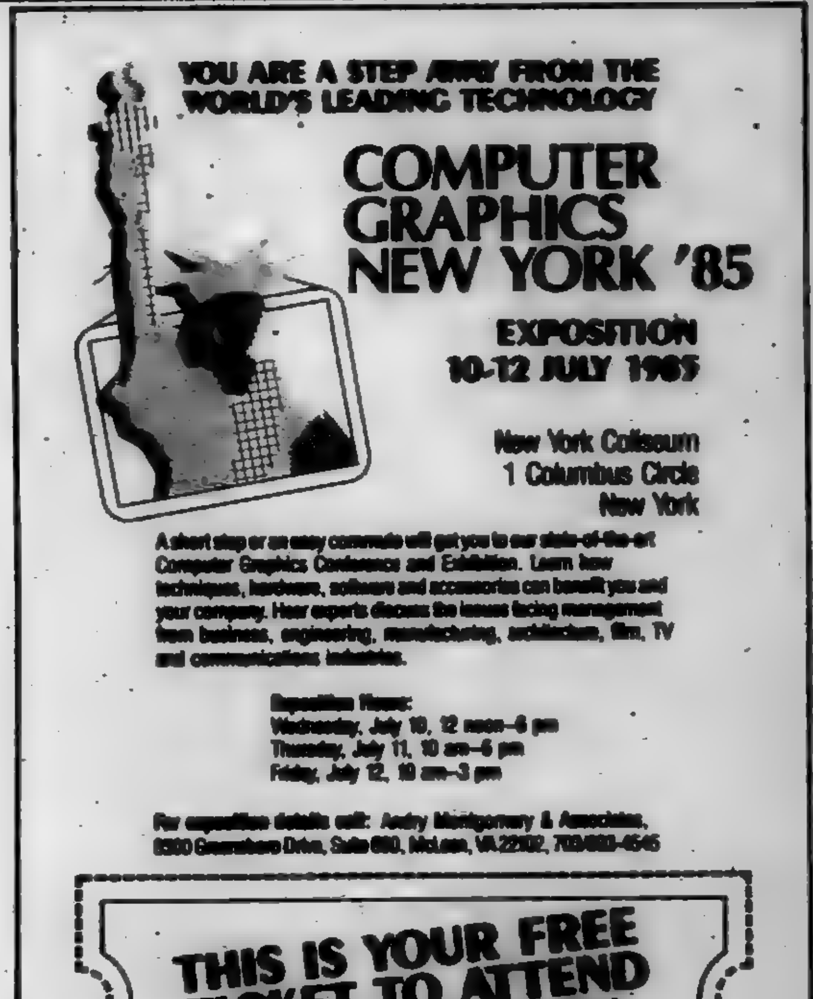
"The fine would have been higher — it carries a maximum of $5,000 — but the judge did not think that the defendent would be able to pay more," she said.

Goodwin estimated that tracking the unauthorized access cost the Forest Service at least $50,000, but the actual figure is probably closer to $100,000. "Since it cost the agency so much money, the judge wanted to make sure that he sent a message to other hackers," she said.

The Forest Service has taken a few preliminary steps to strengthen its security. "We changed all of our passwords to a random series of numbers and letters," Vancil said.

"The break-in has turned out to be a learning experience for us," he added.

Computerworld senior writer John Desmond contributed to this report.



YOU ARE A STEP AWAY FROM THE WORLD'S LEADING TECHNOLOGY

COMPUTER GRAPHICS NEW YORK '85

EXPOSITION
10-12 JULY 1985

New York Coliseum
1 Columbus Circle
New York

A short step or an easy commute will get you to our state-of-the-art Computer Graphics Conference and Exhibition. Learn how techniques, hardware, software and accessories can benefit you and your company. Hear experts discuss the issues facing management from business, engineering, manufacturing, architecture, film, TV and communications industries.

Exposition Hours:
Wednesday, July 10, 12 noon–6 pm
Thursday, July 11, 10 am–6 pm
Friday, July 12, 10 am–3 pm

For exposition details call: Andry Montgomery & Associates,
8300 Greensboro Drive, Suite [illegible], McLean, VA 22102, 703/[illegible]

Multimate to extend software to larger IBM systems

System/36 tool expected in '86

By Eric Bender
CW Staff

EAST HARTFORD, Conn. — Moving to meet the challenge posed by IBM's Displaywrite word processing software, Multimate International Corp. will port its Multimate personal computer software to larger IBM machines, aiming to ship versions for the System/36 and various mainframes running under IBM's VM/CMS and MVS/TSO by first-quarter 1986.

Multimate, which industry "hot lists" show as the best-selling word processing package for the IBM Personal Computer and which has made a particularly strong showing in Fortune 1,000 firms, received increased competition after IBM announced plans for Displaywrite/36 and Displaywrite/370 packages last October, company President Wilton Jones said.

Among corporate customers, "we began losing ground a bit when IBM came in and said [Displaywrite] will work on everything," Jones explained, emphasizing that corporations do not want to be forced to retrain employees for word processing on different machines.

One reason Multimate became the first major player in the microcomputer applications software arena to broaden its offerings to larger IBM systems is that among applications software, "word processing is the first generic product that IBM has taken seriously," he claimed.

Cost of the System/36 Multimate software will range from $1,800 to $2,200 per CPU, depending on how many add-on capabilities are supplied, Jones said. Mainframe package prices will be based on the number of terminals, ranging from $15,000 for an IBM 4331 to $30,000 for systems such as the 3083.

Wang-like style

Running on the larger IBM systems, the software packages, based on Multimate's new high-end Advantage micro software, will preserve the micro version's Wang Laboratories, Inc.-like style and conform to IBM standards such as Document Content Architecture, Jones said.

"In a Profs [IBM Professional Office System] VM environment, a user would see Multimate as one of the main menu items under Profs," he noted. "It would not replace Profs utilities or functions; it would add one editor."

Some functions, such as text centering, would be modified to conform more closely to standard IBM functions, he added.

The System/36 software, which will resemble current personal computer software more closely than will the mainframe packages, will run on all System/36 models. Like the mainframe versions, it will work with IBM's Personal Services software, Jones said.

Additionally, Multimate reportedly plans to guard its flanks in small to medium-size businesses by offering packages for several popular minicomputers. Based on the Multimate Just Write software, the packages will be available for $2,000 or less in first-quarter 1986.

While industry analysts generally approved of the company's plan, some noted that many Multimate customers bought the software to complement their existing Wang word processing equipment and do not plan to install significant numbers of System/36 machines.

Expansion a challenge

The rapid expansion of its product line represents a large challenge for Multimate, which posted sales of $22 million in the fiscal year ended in March and expects to see $30 million to $36 million in sales this fiscal year, Jones noted. In a well-publicized vote late last month, company employees approved the overall plan.

Multimate currently employs about 210 people. The word processing development staff numbers about 65, and the company expects to boost this quickly to approximately 110, Jones said.

This kind of sudden expansion in personnel brings "tremendous culture shock," Jones acknowledged, but he maintained that the shock is less than in the case of continual growth.

Multimate is located at 52 Oakland Ave. N., East Hartford, Conn. 06108.

SECURITY

from page 1

hacker. "Whenever someone can't access a system after three tries, the operating system will disengage the user," Damon said. The system operator has the option to design a system so that it disconnects a user or makes it appear like the hacker is getting into the system even though he is not, he explained. "A security administrator can monitor the line and trace the phone call," he added.

Security easy to crack

Passwords and account numbers are designed to provide a wall of security. That wall has proven to be easy to crack.

A few years ago, customers of GTE Telenet Communications Corp.'s Telenet network were able to set up universal accounts for first-time users. There were cases where customers set the accounts with a simple password, often only one letter. Experienced hackers can easily crack such a system.

"We changed the system so that it would require passwords of at least six alphanumeric characters," said Claudia Houston, a spokesman for GTE.

Other changes that vendors are making include additional lines of security. Rather than requiring one account and a password for everything, some operating systems require that a user first log on to the operating system. Only after that is completed can one access a specific application.

When a hacker cracks an account, he can use various programming tricks to search for accounts and passwords that will provide him with more ability to manipulate the system. He can write a routine that looks into main memory and checks lists of other accounts and passwords.

"We have a feature that partitions memory so that a user can look only at the portion where his application lies," noted David Habermehl, product marketing manager for Primos, Prime Computer, Inc.'s operating system.

Passwords stored in encrypted data

AT&T has enhanced its Unix operating systems so that passwords are stored in encrypted data. Even if the hacker could look at the data, it would not make any sense to him, AT&T claimed.

In Release 7 of the CPF operating system that runs on IBM's System/38, a security feature that prevents passwords from being intercepted over communications lines was included, a spokesman said. The software will not accept a password that is sent alone over a line; a password must be paired with code authorizing the user on the system.

Despite all the enhancements, system security is only as good as each company makes it. "We found that some companies had security measures that did not take full advantage of our system's security features," Prime's Habermehl said.

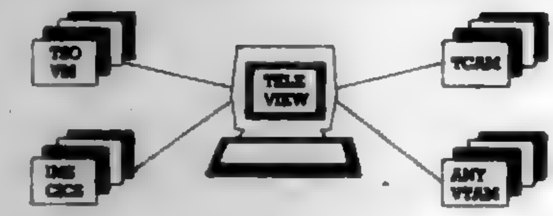
Niceco to hold September strategy meet

STONE MOUNTAIN, Ga. — The National Information Center and End-User Computing Organization (Niceco) will hold its Strategy Conference Sept. 17-19 at the Atlanta Hyatt Regency Hotel.

Shaku Atre, a consultant specializing in information center strategies, will give the keynote address. Other topics will include data control, micro-mainframe links, security and information center policy guidelines. The conference is sponsored by D&B Computing Services in conjunction with the Data Processing Application Consultants group.

Registration costs $375 before July 31, $475 thereafter. Niceco is located at 785 Martin Road, Stone Mountain, Ga. 30088.

VTAM + TELEVIEW™ =
16 CONCURRENT SESSIONS
FOR ANY 3270 TERMINAL !!



IT'S SIMPLE ARITHMETIC:

TELEVIEW™ MULTIPLIES NETWORK POWER WITH CONCURRENT SESSIONS AND INTEGRATED SESSION MANAGEMENT FOR MVS VTAM/TCAM NETWORKS!!

ADD UP THE BENEFITS:
- ELIMINATES UNNECESSARY LOGOFF/LOGONS
- AVOIDS COSTLY 3270/PC, 3290 UPGRADES
- SIMPLIFIES USER ACCESS TO APPLICATIONS
- ENFORCES GLOBAL NETWORK SECURITY
- EXTENDS NETWORKS WITH NON-VTAM GATEWAYS
- MAKES COMPLEX NETWORKS EASIER TO MANAGE
- INCREASES NETWORK USER PRODUCTIVITY

COUNT THE FEATURES AND OPTIONS:
- one-key SESSION SWITCHING, SCREEN REPLAY
- high-performance, lowest CPU/CSA/NAU usage
- supports BSC, SNA, MSNF, distributed networks
- table-driven ACCESS CONTROL, security exits
- SECURITY, HELP DESK, PERFORMANCE monitoring
- TCAM, local VM, non-IBM VTAM interfaces
- TRANSACTION ROUTING facility with user exits
- PC, emulation, non-IBM hardware support
- online CONFIGURATOR with VTAM synchronization
- adjustable for different user audiences
- installs in an hour, no MVS or VTAM mods

CHECK THE BOTTOM LINE!!
TELEVIEW™ configurations start at $9,500. Onsite installation support and customizations are available. Call (212) 605-0519 for more information or a free evaluation system.

VM Systems Programmers

New or Experienced . . .

Can you pass the VM Software, Inc. Career Quiz?

VM Software, Inc. Career Quiz

Yes	No	
☐	☐	Do you think VM is the wave of the future?
☐	☐	Do you think you know more about VM than anyone else on earth?
☐	☐	Do you like to program down to the bare metal?
☐	☐	Do you think UNIX is a four letter word?
☐	☐	Do you keep an IBM S370 Principles of Operations on your bedstand?
☐	☐	Do you wear out at least one IBM yellow card a year?
☐	☐	Are you a closet hacker?
☐	☐	Do you feel sorry for people who don't know assembler?
☐	☐	Do you think MVS bigots are nerds?
☐	☐	Do you know what control register 6 is used for?
☐	☐	Do you have a "Born to Code" tattoo on your arm?*
☐	☐	Have you ever programmed for 24 hours straight just for the fun of it?
☐	☐	When you talk to IBM, do you tell THEM how the system works?
☐	☐	Do you still remember the bugs you shot 10 years ago?
☐	☐	Do you discuss channel programming at parties?

*If you answered "NO" to this question, but "YES" to at least one other, we have a "Born to Code" tattoo kit waiting for you.

If you answered "YES" to any or all of the above (or wish you could), we have just the job you've been dreaming about. Call Lew Peters at (703) 821-6686 or send your resume to:

Long-distance cost savings key to Fortune 1,000 market

By Kathleen Burton
CW West Coast Bureau

SAN FRANCISCO — Users in Fortune 1,000 firms will reap cost benefits as long-distance carriers increasingly offer enhancements to their services.

So said Dixon R. Doll, president of the DMW Group, Inc., a telecommunications consulting firm based in Ann Arbor, Mich.

Addressing a seminar at the Competitive Telecommunications Association (Comtel) conference in San Francisco recently, Doll told the carriers that cost savings are the key to penetrating the untapped Fortune 1,000 market.

"If you let the corporate client know more about his long-distance usage patterns than he already knows and give him ways to save money, you've got a foot in the corporate door," Doll said. "In the Fortune 1,000, information equals power," he said.

Doll suggested a variety of ways carriers could help corporate users reduce their bills:

- Optimizing network services. Most Fortune 1,000 companies are not using effectively their long-distance networks, Doll said. However, recently developed software lets users project their future network usage needs and allows carriers to reallocate their excess networking capacity. This can result in a 5% to 7% cost savings, Doll said.
- Using emerging technologies. Speech compression, for example, will double the number of channels available to users without increasing their monthly circuit costs, Doll said.
- Offering long-distance services bundled with related data communications services to the shared-tenant market.
- Packaging private branch exchange rentals with long-distance service.

As carriers attempt to differentiate their long-distance services, they will offer other product enhancements during the next several years, Doll said.

These will include electronic document distribution services, which let users move pages through a network; nationwide paging services; and voice mail service bureaus, Doll said.

Doll warned the group that the recent trend in the Fortune 1,000 to install high-speed T1 networks and equipment is a double-edged sword.

On the positive side, Doll said, the use of this high-speed equipment creates more usable capacity. On the negative side, however, corporations will increasingly resell this excess capacity and compete directly with the carriers themselves, Doll said.

Eastman Kodak Co. in Rochester, N.Y., and Sears Roebuck & Co. in Chicago have already begun doing this, he said.

Irug conference set for July 17

CHICAGO — The Irmx User Group (Irug) is scheduled to hold its international users conference at the Palmer House Hotel here July 17.

Irmx is a real-time operating system that was developed by Intel Corp. in 1980. The theme of this year's conference is "The Future Direction of Real-Time Software Applications."

At the conference, Intel's Irmx 286 and Opennet, its Ethernet local-area network, will be discussed.

A demonstration room will enable attendees to test Irmx products from Intel and independent software vendors.

There is no charge for attending the conference.

Additional information can be obtained from Catherine Moon, Irug Coordinator, Mail Stop HF2-57, 5200 N.E. Elam Young Pkwy., Hillsboro, Ore. 97123.

Software/Expo speaker chosen

DALLAS — Thomas M. Nies, chief executive officer of Cincom Systems, Inc., will deliver the keynote address at the 1985 Software/Expo to be held here Sept. 17-19.

Nies, whose firm has a reported 6,000 customers worldwide, will speak on "The 'Musts' for Modern Systems Implementation." Other presentations set for the conference include a panel discussion on software systems for business graphics and an examination of the problems posed by artificial intelligence to MIS professionals.

The conference is sponsored by *Infosystems* magazine. Registration for the show only is free when accompanied by a form obtained in advance from the conference organizers, Software/Expo. Otherwise, show-only registration is $10. Registration for the conference and the show costs $325 for the entire event and $110 for one-day attendance.

Software/Expo's offices are located in Suite 205, 2400 E. Devon Ave., Des Plaines, Ill. 60018.

FINALLY. HELP FOR THE DATA CRAZED.

Introducing Cypress,® Cedar,™ and Juniper.™ Three fast, friendly, infinitely applicable desktop ideas from ROLM.

It comes as no surprise that people react to technology differently. Dyed-in-the-chip techies thrive on it. True nonbelievers avoid it instinctively.

Now you can please all of the people all of the time. Honest.

Say goodbye to complicated log-on codes. Just push a button and—whoosh!—travel all the way to a data base, talk to a mini or access your IBM mainframe.

Say hello to speakerphones, phone books, message takers and calculators. Built right in.

If you want to take snapshots of data in your mainframe, there's Cypress. It's as easy as Point & Shoot. It's a smart little ASCII terminal integrated with a fully-featured digital phone.

Study: N.Y.-area computer execs' salaries rose 20% in '84

By Clinton Wilder
CW Staff

NEW YORK — The salaries of top computer executives jumped by 20% in 1984, and the decentralization of data centers created many more software management jobs in large corporations, according to a recent survey of information management and data processing executive jobs in 28 large companies in the New York area.

The survey was the third annual salary study conducted by New York-based Edward Perlin Associates, Inc. The results showed only a 5% to 6% increase in the average total compensation (including stock options and deferred salary) of systems software department heads and software managers — a fact that research firm President Edward Perlin attributed to staff growth.

According to Perlin, the addition of many new management positions in decentralized data processing operations diluted the average salary figures when compared with the prior year. "What struck me most about the survey was that salaries didn't move more," he said.

"But we found that if a manager earning $60,000 [a year] got a raise to $70,000 but was joined in management by a $50,000 [a year] employee, the average salary in the department remained the same. There are a lot more people moving up the ranks into quasi-executive positions," he said.

Perlin's survey tracked 23 top computer executive positions, with area head — which refers to the company's top computer executive — the highest paid position and head of systems architecture and resource management the lowest paid positions.

Most of the firms surveyed were leading New York-based service companies — 11 were in banking, nine were in financial services, and two were in insurance.

Average salary increased

The average area head salary jumped from $183,500 a year in January 1984 to $221,600 one year later. An area head position is typically at the level of vice-president, executive vice-president or senior vice-president.

Perlin said the top job produces some of the survey's most accurate statistics because the turnover rate in those positions is so low. "With area heads, we're basically surveying the same guy year to year," he said.

The annual salaries for 19 area head positions surveyed this year ranged from $99,300 to $550,000, with the top salary showing a dramatic increase from $357,000, the highest salary reported among 27 area heads in 1984.

The decentralization of data centers among the surveyed firms shows up dramatically in the job classification of data center head. With 27 companies reporting in each year, the number of data center heads jumped 56% from 48 in 1984 to 75. But the average salary dropped from $73,500 to $73,000.

"We know that there are a number of facilities out there for many of the major companies," Perlin said. "Citicorp has 12 different DP centers, and we see the same trend with Chase Manhattan Bank and [Manufacturers Hanover Trust Co.]; what used to be centralized facilities now are spread out among half a dozen. In the three years of the survey, I can't think of one company that's gone the other way [to a more centralized DP operation]."

Figures evidencing staff growth

Other figures that evidence staff expansion include 20 companies reporting 63 salaries for manager of network operations jobs in 1985, compared with 16 firms reporting just 19 such positions in 1984. Systems design and development also showed marked growth in positions. The number of group heads reported for that department rose 25% from 60 in 1984 to 75 positions, with one fewer company reporting in 1985. Twenty-five companies reported 241 heads of systems design and development in 1985 — a 20.5% increase from 200 the previous year.

Among positions with comparable numbers of jobs reported in each year, the Perlin study found the following salary increases:

- Group head, computer services: Up 6% from $103,200 to $109,500.
- Telecommunications services head: Up 6% from $77,900 to $82,700.
- Manager, domestic communications networks: Up 15% from $56,600 to $65,000.
- Head, office automation: Up 9.5% from $64,000 to $70,100.

Edward Perlin Associates is located at 276 Fifth Ave., New York, N.Y. 10001.

Need a 512 KB, fully IBM-compatible PC that runs programs like pfs:graph,™ the IBM Assistant Series,™ 1-2-3,™ and lets you mini-network through your phone line? Cedar's the one.

Already in love with your IBM® PC or XT but crave the affections of Cypress? Ask for Juniper. Its one slot adaptor card lets your system keep growing. And growing.

Of course, only ROLM has Cypress, Cedar and Juniper. Because only ROLM has the system to run them on. At its heart is the ROLM® CBX II, a breakthrough communications controller that manages voice and data over standard telephone wire.

Simply, brilliantly and cost effectively.

And ROLM has the technical edge, the operational track record and the worldwide service and support organization to please even the toughest customer.

So phone ROLM. High tech. Not high anxiety.

Announcing Version 5

MRP pipeline helps firm cut lead time, inventory

BRADFORD, Pa. — In less than one year after it installed a software system, a Fortune 200 company's manufacturing division here cut its lead times in half and its inventory levels by a third and gained a number of other substantial benefits.

The manufacturing division of Dallas-based Dresser Industries, Inc. employs about 250 workers who manufacture products for the energy industry that include pipe couplings, pipe valves and pipe fittings.

When the division began considering automation in 1979, its methods were out of date and inaccurate. The firm used predominantly manual systems; only 20% of its products in inventory had part numbers, and its on-time delivery rate was only 30%.

Inventory up, accuracy down

Dresser set up a task force to make an assessment of the division's operations and pull it out of its rut. "Inventory was way up, and accuracy was terrible," said Rene Al, Dresser's vice-president of operations and head of the task force. "On-time delivery was worse. And we discovered the existence of 13 different bills of material for the same product. You can imagine the confusion that caused."

Without a common bill of materials that reflected the most current and accurate design information from Dresser's engineers, the firm had no way to guarantee that the materials production needed were the same ones the division's purchasing department was ordering.

The task force decided Dresser needed to implement a material requirements planning (MRP) software system. Under the direction of a new task force, the firm bought three modules of Management Science America, Inc.'s Manufacturing System — manufacturing standards, inventory record control and product costing — and installed them on a 24M-byte Amdahl Corp. 5860 in Dallas.

Dresser started bringing up the software in July 1982. "At the time, we were in an economy that was heading in the wrong direction," said James Yerdon, manager of materials management. "But management said, 'We'll endure the expense in the short term for gains over the long haul.' "

From the beginning, the software project helped Dresser hone its operations. During the installation, for example, the firm instituted an alphanumeric indentification system for inventory parts and reviewed its old parts list. After the review, 30,000 inactive parts numbers were eliminated.

Within a year after the installation, the division's productivity rose by 25%, and its on-time delivery improved by 65%. On-time delivery is now at 70%, and the division expects to reach on-time percentages in the high 90s within the next year.

According to Thomas Wilson, the second task force's team leader, the software module that provided the basis for many of the benefits was MSA's standards module, which ties together costing and scheduling functions. The module contains Dresser's bill of materials, standard routing, work center definitions, engineering change notices and an item master. The item master, which pegs each part of each manufactured product from raw material to finished product, was particularly beneficial, Yerdon said.

Another improvement the system brought was in operations engineering, the department responsible for developing routings between work centers. According to Lynn Allen, a product processor who designs routings, the software cut development time in half.

Allen said that with the system taking care of development tasks, product processors can be dedicated to more important work. "Instead of spending most of our time as clerks we can get more involved in solving problems on the shop floor [and] investigating better methods for doing things," he said.

Another important trend that emerged was a shift in Dresser's make-to-stock:make-to-order ratio. With increased control over inventory and production, Al said, Dresser has seen a slight but important reduction in its volume of make-to-stock work in favor of an increase in make-to-order business.

Continuing trend

By being able to process orders quickly, Dresser expects to continue this trend, which will reduce the level of finished goods inventory and therefore reduce the amount of capital tied up in material. Wilson said the manufacturing division has already shaved about $13 million from its inventory and within a month will have only 35% of its capital devoted to material.

He said the software has also improved Dresser's customer relations, both by improving delivery times and by allowing sales staff members to make immediate inquiries about when customers request information. As a result, Dresser has booked orders that it once lost to its competitors.

With the old system, customers sometimes had to wait days or weeks for information such as production and shipping schedules. As a rough gauge of the system's success, however, Wilson said customers have complimented Dresser on its ability to respond quickly to their requests.

On average, users make 6,000 inquiries to the system each day. Wilson said the inquiries come from every division in the manufacturing division.

In the next few months, Dresser plans to bring up two additional MSA software modules — master production scheduling and manufacturing resources planning.

INTELLIGENCE

The #1 3270 alternative for people who need an intelligent workstation to be more than a PC.

When you need to combine the resources of your host with the flexible processing of your workstation, there's a more intelligent choice than a PC.

The Telex 1186 is specifically designed for 3270 networks. And while it's PC compatible, the 1186 runs most programs two to three times faster than the IBM PC. Plus, Telex's host-based file transfer programs support high-speed data transfers to and from the mainframe. In fact, the 1186 performs more like an AT than a PC.

The Telex 1186 is more than a PC when it comes to options, too. Because Telex offers unique features like a 3270-style keyboard, a 3278 coax port, a 3276 port and a 3270 PC emulation mode. Color graphics capabilities, serial and parallel ports and date/time functions are all standard features on the 1186.

When you put all of this together with our on-site service option and over 2,000 Telex-dedicated service and support people worldwide, it's no wonder Telex has become the choice for 3270 Intelligent Workstations.

For information, contact John Hawkins, 6422 E. 41st Street, Tulsa, Oklahoma 74135/ 1-800-331-2623.

TELEX

TELEX COMPUTER PRODUCTS, INC.

MORE THAN 50,000 USERS HAVE PUT IN A PLUG FOR WANGNET.

When it comes to local area networking, Wang has all the business connections your company needs. In fact, Wang has been delivering their LAN system to businesses, both large and small, since 1981.

It's called WangNet. And today it's helping over 50,000 users keep pace with their ever-increasing communications needs.

WangNet ties your business together – today.

WangNet permits the concurrent exchange of text, data, graphics, electronic mail, and video at a rate of up to 10 megabits per second. And it can tie all of your organization's departments together, whether they're in one building or divided among several.

Because WangNet's dual broadband cable is installed much like electrical wiring, adding on new computer equipment is as easy as plugging in a lamp. So whatever networking needs arise, you'll be well prepared to meet them with WangNet.

The architecture is wide open.

Best of all, because WangNet is an open LAN, it allows you to tie most major office systems together. WangNet offers a transparent interconnection for over 300 switched or dedicated telecommunications channels, the IBM 3270 workstation-to-controller transport, and most video applications.

Considering all the information that's inundating today's office, there's no question that local area networking is a technology whose time has come. And with 50,000 people putting in a plug for WangNet already, the question is – isn't it time WangNet came into your business?

Get the facts.

To receive a copy of our latest WangNet brochure, call 1-800-225-9264. Or write to the Wang Business Executive Center, One Industrial Avenue, M/S 5413, Lowell, MA 01851.

WORLD DIGEST

CW International News Network

TOKYO — Fujitsu Ltd. here has introduced a third line of disk drives to rival IBM's 3380 disk drives. Fujitsu reportedly announced two models of large-capacity magnetic disk storage — one with 5.04G bytes of storage capacity and one with an expandable 2.52G-byte capacity.

Fujitsu follows Hitachi Ltd. and the financially troubled Storage Technology Corp. to this market.

The devices are available for monthly lease prices ranging from $1,720 to $3,580, according to the vendor.

BLACKBURN, Australia — Employees of Hewlett-Packard Australia Ltd. here will be asked to follow their U.S. counterparts and take a three-day holiday this month to use up accumulated vacation time by August. A spokesman said HP was not considering layoffs because it expects an economic recovery to begin in the fourth quarter.

BRUSSELS — What is being called the contract of the century has been awarded to ITT subsidiary Bell Telephone in Antwerp, Belgium, and Acec of Charleroi, Belgium. The $2 billion contract calls for Belgium to digitize its telephone networks. Other bidders for the contract included GTE-Atea, Siemens AG, the AT&T and N. V. Philips joint venture and the Swedish communications giant, L. M. Ericsson.

PARIS — Seventeen largely European high-tech manufacturers will join forces to develop an open architecture intended for industrial applications.

Called Open System Architecture (OSA), the system is the equivalent of Open Systems Interconnect, the model of the International Standards Organization.

The companies engaged in this development include Groupe Bull, IBM GmbH, Cap Sogeti, AEG Telefunken, Aerospatiale, Philips Telecommunications, British Aerospace, CGE and Siemens AG. Industry sources see this project as one aimed at General Motors Corp.'s Manufacturing Automation Protocol project.

TOKYO — Approximately 61% of Japan's leading companies have no computer security devices at all, according to the Metropolitan Police Department's recent survey. The police department surveyed the 1,451 companies listed on the Tokyo Stock Exchange and received 1,151 responses. In the survey, 62% of the respondents indicated that DP people can enter and leave corporate computer rooms without any identification or security check. In addition, 37% of the respondents said employees besides DP people can also access computer rooms without identification.

Widely used security procedures here include employee signatures and identification cards that unlock doors (20%), alarm systems (14%), television monitors (10%) and devices that record entrance and exit (6%).

To safeguard software programs, 21% surveyed claimed to have a backup plan for operating systems software, while 18% had contingency plans for applications programs. Approximately 46% said they had no specific protection plan.

RIJSWIJK, Netherlands — Control Data Corp. (CDC) has reorganized its Benelux operations, merging Control Data Belgium and Control Data BV here in the Netherlands. All Benelux operations are now reporting to Control Data BV here.

The reorganization follows similar CDC mergers, combining subsidiaries in Sweden and Finland and in Switzerland and Austria.

OSLO — Unlike American minicomputer makers, Norway's largest computer vendor is experiencing record sales, according to Roy Jensen, general manager of Norsk Data A/S domestic operations. Sales are expected to top $227 million, compared with last year's $155 million. Norsk's ND-500 series accounts for about 70% of the firm's revenue.

Announcing Masterpiece:™ A Powerful Mainframe Application Software Product Built Upon A Simple Idea Called Intelligent Architecture.™

What do you call a mainframe application software product designed with such patient attention to detail that it will register the effects of one transaction on every other business transaction in a company?

What do you call software architecture so artfully conceived it will someday enable a person using an application to move from one database management system to another, or from one teleprocessing monitor to another, without a single change in his work style?

What do you call query and reporting tools so simply and powerfully rendered that even a novice will find them no more difficult to work with than a personal computer spreadsheet?

Only one name fits…

Introducing Masterpiece.

The Masterpiece series is a family of mainframe business software products—a classification and a category which may lead you to conclude that it is like other mainframe software products.

Don't leap to that conclusion.

The Masterpiece design is so clean and uncluttered that it makes current and future applications efficient to develop and easy to use. Masterpiece comes with none of the excess baggage, inherent short-comings or system limitations that have traditionally plagued the people who need business information and the people who manage it.

Masterpiece is, in every aspect, a new family of software products.

And, in every aspect, an improvement over the software packages you may be used to.

Or are, in fact, now using.

Intelligent Architecture Design: The Fundamental Difference.

Previous software designs have been developed to better utilize the power of the computer.

Masterpiece was designed to mirror the methods and styles of the work place and to anticipate the inadequacies of the computer.

Masterpiece design is called Intelligent Architecture. It's a new term. And a new way to build software. Now, Intelligent Architecture brings new meaning to concepts like "modularity," "borderless integration" and "event-oriented processing."

Only application-specific code is contained in the application…other coding (system code, interfaces, code common to multiple applications) is separated out and coordinated by the Intelligent Architecture itself.

This means that ultimately a user can adopt a new database management system without the slightest change in either his way of working or in the application code itself.

Only software built in this manner, is software that will endure.

The Intelligent Architecture design means that all menus and screen prompts become common to all Masterpiece applications. It means that the way users interact with an application will be the same from application to application—a significant factor contributing to greater ease-of-learning and ease-of-use.

It is this capacity, present now in the Masterpiece Intelligent Architecture design, that lifts Masterpiece beyond the promise of other software products in its class.

And that is the fundamental difference.

Masterpiece is a trademark of Software International Corporation. Intelligent Architecture is a trademark of Software International Corporation. MasterQuery is a trademark of Software International Corporation. MasterSecurity is a trademark of Software International Corporation.

CALENDAR

WEEK OF AUG. 4

AUGUST 4-9, DALLAS — **Systems Development: Analysis Phase.** Contact: Arthur Young & Co., Education Center, 1950 Roland Clarke Place, Reston, Va. 22091.

AUGUST 5-6, MINNEAPOLIS — **Unix/Xenix.** Contact: Center for Advanced Professional Education, Suite 110, 1820 E. Garry St., Santa Ana, Calif. 92705.

AUGUST 5-7, PARSIPPANY, N.J. — **TSO/ISPF.** Contact: Chubb Institute, P.O. Box 342, 8 Sylvan Way, Parsippany, N.J. 07054.

AUGUST 5-7, JACKSON HOLE, WYO. — **EDP Audit Managers Roundup.** Contact: MIS Training Institute, Inc., 4 Brewster Road, Framingham, Mass. 01701.

AUGUST 5-7, BOSTON. — **1985 American Society of Mechanical Engineers (ASME) International Computers in Engineering Conference and Exhibition.** Contact: ASME, 345 E. 47th St., New York, N.Y. 10017.

AUGUST 5-7, WHITE PLAINS, N.Y. — **The IBM Personal Computer.** Contact: Center for Advanced Professional Education, Suite 110, 1820 E. Garry St., Santa Ana, Calif. 92705.

AUGUST 5-8, CHICAGO — **Vtam: From Start to Finish.** Contact: On-Line Software International, Inc., Fort Lee Executive Park, Two Executive Drive, Fort Lee, N.J. 07024.

AUGUST 5-8, HOT SPRINGS, ARK. — **The Seventeenth Annual Meeting of the National Association for State Information Systems (Nasis).** Contact: Nasis, P.O. Box 11910, Lexington, Ky. 40578.

AUGUST 5-8, FORT LEE, N.J. — **CICS/VS Application Design.** Contact: On-Line Software International, Inc., Fort Lee Executive Park, Two Executive Drive, Fort Lee, N.J. 07024.

AUGUST 5-8, WASHINGTON, D.C. — **Vsam: Its Structure and How to Use It.** Contact: On-Line Software International, Inc., Fort Lee Executive Park, Two Executive Drive, Fort Lee, N.J. 07024.

AUGUST 5-8, FORT LEE, N.J. — **CICS/VS Logic and Debugging.** Contact: On-Line Software International, Fort Lee Executive Park, Two Executive Drive, Fort Lee, N.J. 07024.

AUGUST 5-9, NEW YORK — **Basic Systems Analysis.** Contact: Thomas J. Bisacquino, Association for Systems Management, 24587 Bagley Road, Cleveland, Ohio 44138.

AUGUST 5-9, NEW YORK — **Structured Analysis and Design Techniques Workshop.** Contact: Elise Rabalais, Learmonth & Burchett Management Systems, Inc., Suite 405, 2800 N. Loop W., Houston, Texas 77092.

AUGUST 5-9, SAN ANTONIO — **CICS/VS Application Programming — Command-Level.** Contact: On-Line Software International, Inc., Fort Lee Executive Park, Two Executive Drive, Fort Lee, N.J. 07024.

AUGUST 5-9, ATLANTA — **Data Base Development Workshop.** Contact: Elise Rabalais, Learmonth & Burchett Management Systems, Inc., Suite 405, 2800 N. Loop W., Houston, Texas 77092.

AUGUST 5-9, MILWAUKEE — **How to Plan for Factory Automation.** Contact: University of Wisconsin Extension, Center for Continuing Engineering Education, Civic Center Campus, 929 N. Sixth St., Milwaukee, Wis. 53203.

AUGUST 7-8, ATLANTA — **Recovery/Restart.** Contact: On-Line Software International, Inc., Fort Lee Executive Park, Two Executive Drive, Fort Lee, N.J. 07024.

AUGUST 7-9, LONG ISLAND, N.Y. — **Data Communications Systems.** Contact: Center for Advanced Professional Education, Suite 110, 1820 E. Garry Street, Santa Ana, Calif. 92705.

AUGUST 7-9, RALEIGH, N.C. — **Local-Area Networks.** Contact: Center for Advanced Professional Education, Suite 110, 1820 E. Garry St., Santa Ana, Calif. 92705.

AUGUST 7-9, PALO ALTO, CALIF. — **PBX/CBX.** Contact: Center for Advanced Professional Education, Suite 110, 1820 E. Garry St., Santa Ana, Calif. 92705.

AUGUST 10-12, TORONTO — **Data Base: Technical Developments.** Contact: Software Institute of America, 8 Windsor St., Andover, Mass. 01810.

Masterpiece: Common Functions.

The reason Masterpiece works so well is because each of its pieces work so well together.

And apart.

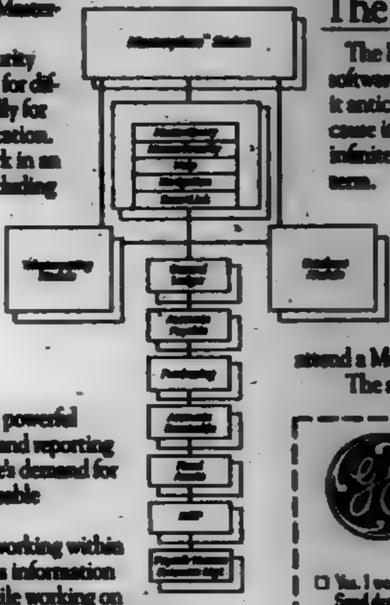
The MasterSecurity™ system, Online Help and Navigation features work across (and are common to) all Masterpiece applications.

But because they are separate from all applications, Online Help, for example, can be custom modified or even translated into different languages.

The Navigation feature lets you move from screen to screen with direct access from one Masterpiece application to another.

Levels within the MasterSecurity system can be determined not only for different applications but set specifically for transactions within the same application.

Everything is designed to work in an intelligent and modular fashion including what may now be the industry's most advanced query tool… MasterQuery.™



MasterQuery System.

The MasterQuery system is a powerful fourth generation borderless query and reporting tool designed to satisfy an executive's demand for instantly accessible and instantly usable information.

MasterQuery gives a person working within one application the ability to access information from another (accounts payable while working on general ledger, for instance) and to merge information from separate applications in a single report.

It also gives that person the ability to arrange his information in whatever form, format, or fashion he chooses. In whatever sequence or order. With whatever computations or projections he wants to make. With only the barest bit of computer know-how.

Masterpiece Integrated Applications.

The Masterpiece series will include these fully integrated, functionally rich business applications: General Ledger, Accounts Payable, Purchasing, Accounts Receivable, Fixed Asset Accounting, Human Resource Management and MRP software products.

Masterpiece: The Promise The Future Holds.

The Masterpiece series is truly "built from the ground up" software. Because its architecture is so well thought through it anticipates future enhancements and applications. Because it's a product designed to be completely modular and infinitely improvable it represents a real value over the long term.

It won't, in short, fall prey to technological or design shortcomings. Won't dead-end at some point. Won't fail to perform as your needs expand.

For a Masterpiece demonstration, clip the coupon below or call toll free 1-800-343-4133 (in Massachusetts, call 1-800-322-0491) and arrange to attend a Masterpiece executive briefing.

The sooner you call, the further ahead you'll be.

SOFTWARE INTERNATIONAL
One Tech Drive
Andover, MA 01810-2497

☐ Yes, I would like to attend a Masterpiece Executive Briefing. Send details.

☐ I am interested in a Masterpiece brochure.

"I WANT IT NOW."

VMS. WHEN THE ONLY THING YOUR USERS WANT IS EVERYTHING, NOW.

If "I want it now" seems like the only thing you ever hear from your users – and if your applications backlog is telling you that "now" is going to be a long way off – you need to know about our VMS™ Virtual Memory System software.

Our VMS software, which was designed exclusively with VAX™ computer systems, is far more than a mere operating system. It is a complete operating *environment*. One that can encompass all the ways you use computers. To get it done, now.

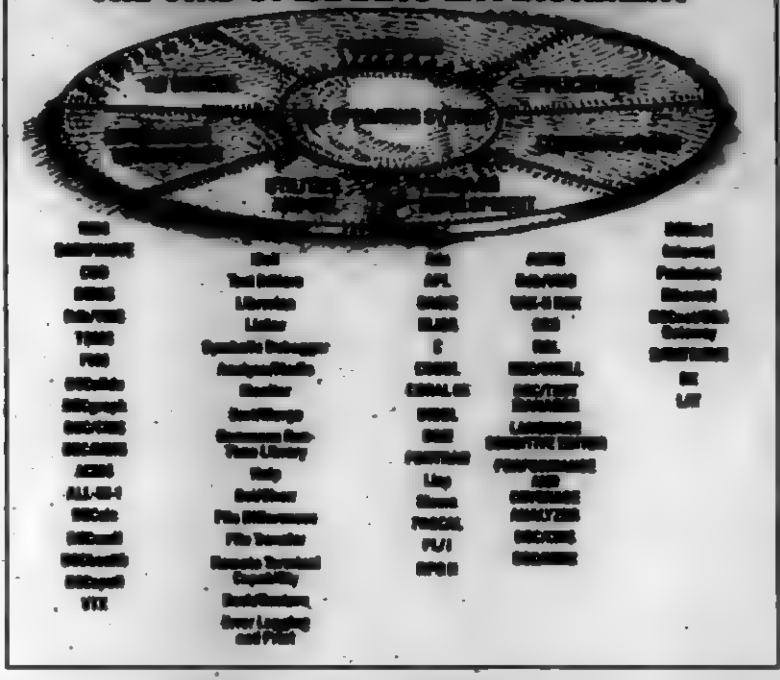
The VMS operating environment provides you with the industry's most complete set of utilities and software products for program development and system management. Interactive, realtime, even background batch applications can be developed with ease and speed.

Everything you need for corporate-level applications is included. Advanced office automation software. Proven transaction processing capabilities. Comprehensive CODASYL-compliant and relational database managers. User-friendly query tools and an integrated data dictionary. Plus the industry's most complete set of local and wide area networking facilities, allowing you to exchange data files and cooperate with systems made by IBM – via SNA gateway – as well as many other vendors.

VMS PUTS YOUR PROGRAMMERS IN THE FAST LANE.

You've heard a lot of promises about increasing programmer productivity over the years. After all, the application backlog in most companies has reached 18 months to 2 years. And the demand for new applications is increasing by some 50 percent a year. So there's hardly a more important subject.

THE VMS OPERATING ENVIRONMENT



Digital's VMS software does more to increase programmer productivity than any other system can. Because it combines everything you need for application design, development and maintenance into a single, integrated operating environment.

You'll have the industry's best symbolic debugger to work with. A command language so flexible it lets you stop application execution and enter new commands at any point, and even develop your own commands through its macro facility. A common runtime environment that lets you reuse code instead of rewriting it. And more advanced languages than any other system – some 16 in all, including Ada®, C, COBOL, FORTRAN, and Lisp – all of which you can combine in a single program through the common calling standard.

This gives you a distinct advantage in team development projects. Each developer can use the language best suited to his or her talents and to the task. Large, complex projects such as transaction processing applications can be designed, developed, maintained and managed easily.

The end result – better code in less time. And satisfied, productive users at every level, from the factory floor to the executive suite.

The point is, many other systems promise you ease of use, up to a certain point. The VMS environment simplifies development not only for small, ad hoc projects – but also when your applications reach highly sophisticated, complex levels.

WITH VMS, FLEXIBILITY IS BUILT IN.

You get another big advantage when you develop your applications with the VMS operating environment: the range of hardware you can run them on. Namely, our VAX computer family, the industry standard for 32-bit computing.

The VMS environment spans the entire VAX systems family, from the smallest MicroVAX™ system to the largest VAX 8600™ and multiprocessor VAXcluster™ systems. This is the biggest software-compatible growth path in the world. And with the data security mechanisms built into VMS software, increased access doesn't mean compromised security.

If you need UNIX® software capabilities, the VMS operating environment can readily provide them through the VNX™ option. And if you need the convenience of applications packages, you'll have over 2,000 to choose from – created for VMS software by Digital and independent vendors. Your choices are never limited when you start with the VMS environment.

BEST ENGINEERED MEANS ENGINEERED TO A PLAN.

Digital's VMS operating environment, like all Digital hardware and software products, is engineered to conform to an overall computing strategy. This means that our systems are engineered to work together easily and expand economically. Only Digital provides you with a single, integrated computing strategy direct from desktop to data center.

For more information about how our VMS operating environment can help you cut your applications backlog, contact your local Digital sales representative. Or call 1-800-DIGITAL, ext. 219.

THE BEST ENGINEERED COMPUTERS IN THE WORLD.

EDITORIAL

Write your congressman

It almost goes without saying that programmers, no matter how well trained and how deeply motivated, cannot perform to their potential without the right tools. Similarly, it appears that a growing number of federal prosecutors are feeling hamstrung in the execution of their duties by the vagueness of laws pertaining to computer crimes [CW, July 1].

On the one hand, it can be weakly argued that we are lucky to have any federal computer crime legislation at all and that the Computer Fraud and Abuse Act of 1984 is a good start toward a more complete law. But this type of thinking ignores the realities of the modern technological state, in which the security of data bases that contain highly sensitive information is not keeping pace with the abilities of crooks who want to break into them.

To understand the scope of the problem, one need only look at the data on computer crime. The most significant aspect of the data is that most of the computer crime within the private sector is not reported intentionally to preserve the public's trust.

Moreover, the dollar value of many illegal computer entries cannot be accurately gauged. That is, what is the dollar value of damage done when secret *information* is accessed? Who is willing or able to judge the extent of long-term harm done by such an intrusion?

To understand further the need for comprehensive computer crime laws, MIS people and others must fully recognize that breaking into almost any system can be a fairly simple task today. This week, *Computerworld* examines hacking — often considered a more benign form of illegal system entry — and reports disturbing findings (see stories beginning on page 1).

One of the more notable hackers, now a consultant and author on hacking, admitted to recreational breaks into nearly 100 corporate computer systems. He was also part of a team claiming to have broken into hundreds more — all for the fun of it.

Couple that sort of fun and games with breaks of more malicious intent [CW, July 1], and the more prudent MIS managers must conclude that just about any system can and will be accessed illicitly.

That leaves one viable means of combating the problem in the short term, and that is stiffer, enforceable laws prohibiting it. It is not the fear of getting caught, per se, that deters people from cheating on their taxes, but the fear of the government penalties when cheaters are caught. It should be the same for illegal entries into systems.

There is potentially much more at stake in the latter case, both to individuals and corporations. Why, then, don't we have clearer statutes relating to computer crime?

According to some prosecutors, the current federal law is an easy target for sharp defense attorneys. It is confining and ill-defined and may result more in plea-bargained punishments than in the full application of the law, the prosecutors contend.

Whether acting through their companies, professional organizations or individual initiative, MIS managers need to play a lead role in a lobbying effort to put more teeth into computer crime legislation. Now is as good a time as any, as a U.S. House Subcommittee on Crime is mulling a modified computer crime bill that would extend the arm of federal prosecution into illegal access of private sector computer, not covered under federal law. As the saying goes, "Write your congressman."

Closing the gap

LETTERS

Shared tenant services here to stay

I'm writing not so much to congratulate you on your treatment but to respond to the information that was developed in the article, "Demand low for smart buildings" [CW, June 17]. The market for shared tenant services is not dead, not dying and shouldn't be going away soon. It's here to stay.

Why will shared tenant services live a long and healthy life? Because it's driven by simple economics. A small firm with 50 telephones or fewer cannot afford to spend even the $30,000 required to purchase a decent, integrated voice-mail machine. A provider of shared tenant services, however, can purchase a bigger machine with even greater capabilities for that mid-size tenant to use. And it will prove to be less expensive than trying to buy a cheap, inferior system.

If the offering doesn't catch on, it's the fault of the marketers for not seizing an opportunity. It could also be the fault of many of the companies that have developed and installed these systems; their design and comprehension of what the total offering could be leaves much to be desired.

And last, if the service does not make it, its demise could be linked to naive analysts who perform skimpy surveys, obtain negative results and, subsequently, have the results published by reputable journals. Such articles might be the most damaging vehicles as far as the industry observers, analysts and gurus are concerned. Fortunately, though, developers don't read those journals.

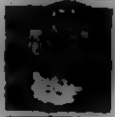
VIEWPOINT

Obtrusiveness in the age of automation



HUMAN CONNECTION
Jack Stone

The telephone rang last week, and the caller said, "Do not hang up, I am a computer. If you give me 30 seconds of your time, I will tell you how you can obtain a free oil change."

Click. I would have banged the handset down earlier when the word "computer" was mentioned, but I was paralyzed by surprise. Although this is an exaggerated, but true, example, it is certainly a dynamic case of how a computer system can intrude into one's personal life — and become thoroughly obtrusive.

There are similar situations in business, when the omnipresence of the computer interferes with a user's ability to adapt to systems operations.

One complaint about systems that I frequently hear is the continuing need for many users to focus on internal functionality rather than on the systems' uses. Obtrusiveness is related to the well-known systems characteristics and their ease of learning and operational simplicity. But it extends into the broader realm of how users relate to other, more established technologies in their everyday life, such as televisions and cars.

The following are comments from students after they reach the higher plane of amateurism:

"The terminal keyboard is a lot easier to use than I had previously thought, but I am disappointed that the systems are not as neatly packaged as I had hoped. Take spreadsheets, for example. Once the template is developed and macrocommands are implemented, the operation is straightforward. . . Presto! All done.

> **99**
>
> *'The way that operations start up is impressive. It's clear, clean and comprehensible. But when you call for the commands, splat! They come pouring onto the screen too quickly, and the presence of the computer becomes overbearing.'*

"The way that operations start up is impressive. It's clear, clean and comprehensible. But when you call for the commands, splat! They come pouring onto the screen too quickly, and the presence of the computer becomes overbearing.

"Spreadsheet development is downright intimidating. There's too much of the computer to deal with so that it gets in the way of my ability to construct the template in the first place.

'That's unobtrusive'

"The data base program falls into the same category. When the user starts off, there is nothing but a period to prompt the entry of a command — that's unobtrusive. But go beyond that — into the development of multiple file systems and the generation of command macros — and users find themselves unable to cope unless they become crackerjack programmers.

"Enormous strides have been made in keeping the complexities of computer technology away from the users. But there seems to be quite a way to go before the industry reaches the level of unobtrusiveness as automobile manufacturers.

"We appreciate that car buyers do not have to reprogram automobile engines. Technology is so well developed that, in spite of the complexity of the internal combustion engine, almost every citizen over the age of 16 can drive a car without understanding what's going on under the hood. Only when the nature of internally stored programs can be shielded from users to the same extent will computer systems be accepted by the entire business community."‡

Stone is a Washington, D.C.-based independent management consultant, educator and writer, specializing in DP human communications and personnel development.

Adopting a cost-of-quality metric for good measure

QUALITY
Wayne Smith

Data processing metrics have been a nagging disappointment to the industry for the last several years. Their almost total lack of acceptance by the commercial information management community stands in sharp contrast to the clear benefits that metrics appear to provide on paper or in journal articles.

One reason for this may be that metrics are often difficult to apply and don't appear to have an obvious correlation to the key business question: How do I better manage and organize my operation so that I can provide more effective services for the same cost?

Cost of quality may be the answer. Basically, cost of quality is a holistic metric that provides MIS with data on the total cost of producing DP quality systems for their users. Unlike many other local DP metrics, cost of quality is a global metric, measuring the full organizationwide DP costs.

Because it is a cost metric, it speaks the language of senior management. It becomes the definitive metric for MIS and provides both the initial motivation and ongoing performance measure for a quality program.

By using this metric, the MIS goal can be quantified quite easily: reduce the cost of quality by XX. Even if the goal is not met, the organization benefits by focusing management attention on relevant cost-of-quality factors.

Cost of quality as two components

If you think of MIS as a factory whose product is data and whose customers are the rest of the organization, then cost of quality can be thought of as comprising the two following components:

■ Cost of conformance.

The prevention and appraisal costs associated with ensuring that the delivered systems meet their requirements. Prevention costs are generally one-time costs or are characterized by relatively stable, predictable growth. Typical prevention costs are standards, quality assurance functions, training and education.

Appraisal costs are incurred by the organization in its attempt to uncover defects in work products before they are shipped to production. Typical appraisal costs are reviews, inspections and testing.

These costs are generally proportional to overall systems development costs and, as a consequence, are also relatively stable.

■ Cost of nonconformance.

The failure costs that the organization incurs when these systems don't meet their requirements.

Internal costs include project rework, corrective maintenance, reruns and excessive development costs. External costs include lost customers or lost business opportunities, unrealized or delayed systems benefits and lost MIS credibility within the organization.

> **99**
>
> *Unlike many other local DP metrics, cost of quality is a global metric, measuring the full organizationwide DP costs. Because it is a cost metric, it speaks the language of senior management. It becomes the definitive metric for MIS and provides both the initial motivation and ongoing performance measure for a quality program.*

The failure cost components are by far the largest and represent the biggest opportunity for information services management to reduce its total cost of quality.

These components are not stable, and in fact, failure costs, by their very nature are characterized by rapid, sometimes exponential, growth.

The earlier that defects are uncovered in any systems development, package acquisition or maintenance process, the less expensive they are to correct. Accordingly, the cheapest defect is the one uncovered in its planning stages before it has been manifested in an actual physical work product. This is the key to prevention.

To use the cost-of-quality metric in an overall quality program, one must establish the current cost-of-quality numbers for the organization and incorporate them into key program functions, based on where the highest return can be made.

Establishing cost-of quality measures and developing a set of factors or procedures are critical to the success of the effort. The approach consists of taking each of the components and determining the total cost for that component.

Developing factors

Quality Data Processing by Claude Burrill and Leon Ellsworth provides a good first clue at what these factors could be for each component. In addition, Guide, the IBM Users Group Association, is planning to publish its cost-of-quality report this summer.

Once the factors have been identified, a set of simple, straightforward definitions are developed. For each factor, a specific measurement method is then specified. This method must describe exactly how one can compute the costs for that factor.

With the cost-of-quality metric, information services has at its disposal a truly fundamental measure of the organization's actual performance. It also has a practical tool to effect the cultural changes required for a successful quality program.‡

Smith is vice-president, specializing in quality, at Applied Information Development, Inc. in Oak Brook, Ill.

VM Software is now offering a special 30-day introductory free trial so you can benchmark VMSORT in your own environment.

Save $2,500

And if VMSORT performs the way we bet it will ...you can also take advantage of our 50% introductory DISCOUNT...and save $2,500.

REXX Appeal

In addition to being fast on your CPU, VMSORT is also fast and easy for your end users...with the ability to be called interactively from a terminal as well as user exits that can be easily coded in REXX!

With more user exits (and no exit required for data introduction) VMSORT is more flexible and powerful for your end users. VMSORT can be invoked from most program languages including PL/1, Cobol and Assembler! It will even accept your existing OS and DOS sort statements without modification.

Fast in VM . . . Because It's The Only Race We Enter.

VMSORT is developed solely for the VM environment by VM Software, Inc.,...a recognized leader in software for the VM operating system. Because we concentrate 100% of our efforts in the VM environment (and not in OS or DOS)...all our software performs efficiently and dependably on your VM System...without modification.

Internal Documentation, Too!

VMSORT also takes the headaches out of reviewing and modifying sort statements with full control statement documentation ability...and statements can be kept in a file for easy retrieval.

Take Control of Your Data Center

VMSORT is available individually or as a component of VMCENTER, the most comprehensive data center management system for the VM environment.

Free 30 Day VMSORT Trial Run

Don't miss out on this exciting race. In fact, run it on your own course...and see for yourself how the new VMSORT is the ultimate sort utility...fast for you, and fast for the end user.

To take advantage of our 50% introductory discount, call or mail the coupon below—before July 31, 1985.

Run With A Leader

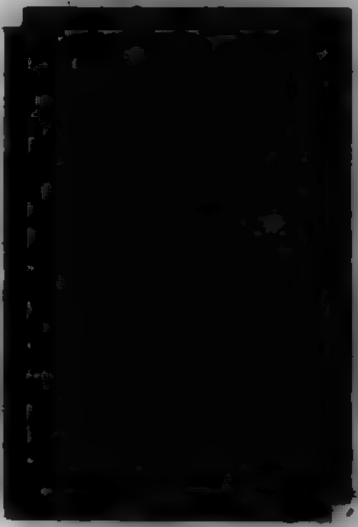
SOFTWARE & SERVICES

AN INTERVIEW



Ronald Kopeck

Microcomputer-to-mainframe links have been touted as the answer to boosting end-user productivity and adding flexibility to computing environments. But as they grow from their infancy, micro-mainframe link products are only beginning to meet the needs of MIS departments attempting to bring data down to the end-user. Some micro-mainframe products allow limited access to mainframe files; others permit only downloading; and some provide only screen capture capabilities. Nearly all succeed in stirring up confusion among MIS managers.

Ronald Kopeck, president of San Francisco-based Edgetech Associates, a consulting group specializing in micro-mainframe communications, recently discussed the issues involved in selecting a micro-to-mainframe link with Computerworld *staff writer Maura McEnaney.*

Describe the state of technology of micro-mainframe links today.
Quickly evolving. Customers and vendors are becoming more sophisticated. Companies are beginning to realize users need selective data extraction and data summarization capabilities. More sophisticated links are providing access to the data base without requiring a user to know anything about how the data is formatted or laid out. Vendors are realizing that basic hardware emulation links only do part of the job and are creating departmental nodes from the host, tying [personal computers] into the nodes.

Are micro-mainframe links selling well?
By our [Edgetech] estimates, the link market will reach almost $1 billion by 1988. In 1983, about $40 million [of link products were] shipped. In 1984, the figure reached about $250 million. [Digital Communications Associates, Inc.] claims it alone is going to ship $40 million this year with the Irma board. Other companies are right on the edge of survival. Vendors have to push really hard to make their revenue goals each month, because users are not buying in volume. They are buying five and 10 products at a time. We projected that the big volume buys would come in the second half of '85, and we're still holding to that.

What is holding users back?
Initially, users rushed into connecting their micros into the host, so they ran out and bought Irma cards. Then they realized

AT&T's Unix: the formula for revolution?

SOFTLINE
Thomas O'Flaherty

AT&T's Unix strategy is an exception to the general rule that the success of a software vendor's short-term strategy is not normally of interest to the broad data processing community.

AT&T's software strategy — specifically its Unix strategy — has major goals and, essentially, no software base to worry about disrupting. This is a formula for revolution. AT&T as a revolutionary is ironic. To understand why, look at Unix's history and the AT&T strategy.

- Stage 0 (prehistory). Unix is created serendipitously by Bell Laboratories workers. Since AT&T could not at the time sell software commercially, it licensed Unix to universities but without any support. The power and flexibility of Unix, coupled with the need for self-support, made Unix an academic cult object. It also created almost as many Unix variants as users.
- Stage 1 (standardization). AT&T is freed to compete and realizes that it has a diamond in the rough. Unix has a great name but it is not really a product, in that it is not standardized and, more importantly, not oriented to performing real work such as applications processing. Thus, AT&T begins to standardize. One part of the standardization strategy is for major chip makers to implement inexpensive firmware versions of Unix.

See UNIX page 36

O'Flaherty is a Wood-Ridge, N.J., consultant who helps corporations coordinate MIS planning and the development of computer-based products. He is a principal of Information Service Strategies.

Oracle announces portable version of IBM SQL/DS and DB2

Any application written for IBM's SQL/DS or DB2 relational database management systems will now run without modification on DEC, DG, AT&T, HP and several other manufacturers' minis; and a wide range of micros, including the IBM PC/XT and PC/AT.

Oracle Corporation introduced the first relational DBMS in 1979. Today ORACLE is the only relational database management system that is completely compatible with IBM's SQL/DS and DB2. Programs written for SQL/DS or DB2 will run unmodified on ORACLE.

Originally designed for IBM mainframes and DEC superminis, ORACLE is now available on a wide range of machines, from mainframes to PCs. And ORACLE includes an integrated set of 4th generation software tools not available with either SQL/DS or DB2.

- Why not Cullinet, ADR or Focus? There is a clearly defined standard for relational database systems. It's called SQL, and it's from IBM. Both ANSI and the US Government are in the process of adopting SQL as the standard database language. The Cullinet, ADR and FOCUS software packages each implement their own unique database language - each one painting the user into its own corner. Since its inception, Oracle Corporation has provided total IBM SQL compatibility.

Few shops nowadays run only IBM mainframes. Why, then, even consider a database solution that runs only on *IBM mainframes?* Applications written with ORACLE run identically on mainframes, minis, and PCs. Because all versions of ORACLE *are* identical.

FOCUS, Cullinet and ADR offer either a limited subset, a completely different product or nothing at all (respectively) for the PC. And none have minicomputer products.

- Why not just go with DB2 or SQL/DS? A relational DBMS simplifies but does not by itself eliminate application programming. Additional tools are necessary if users are to create and maintain their own applications.

DB2 and SQL/DS are relational systems, period. ORACLE is a relational DBMS plus integrated 4th generation software tools for application generation, report writing, color graphics and network communications.

Furthermore, SQL/DS and DB2 run only on IBM mainframes (and are somewhat unlikely ever to run on another vendor's system). ORACLE runs on more IBM hardware and operating systems than do IBM's relational products.

- What about Goldengate, dBase III, Symphony or Framework? PCs need more than PC software if they are to be usefully integrated with corporate data processing. Incompatibility with SQL, while serious, is not the only major problem with these micro packages. None provides an acceptable level of data security, integrity or recovery facilities. And their PC-to-mainframe links are functionally primitive and difficult to use.

To effectively link computers, all machines in the network should run the same software. Only ORACLE provides standard software on mainframes, minis and micros. Data and programs can then be shared among users of different machines, distributing the workload.

ORACLE is currently installed on over 1000 mainframe and supermini systems around the world, as well as on thousands of PCs. Oracle's customers include 8 out of the 10 largest U.S. corporations, as well as major foreign companies and government agencies.

For further information, contact Oracle Corp., Dept. C2, 2710 Sand Hill Rd., Menlo Park, CA 94025, or call 415/854-7350 ext. 1060.

SOFTSCOPE

Notes from the software industry front

Applied Data Research, Inc. (ADR) and Billerica, Mass.-based Data Language Corp. have joined forces through a $2 million licensing agreement that allows ADR, located in Princeton, N.J., to develop software incorporating Data Language's Progress technology. Progress is an AT&T Unix- and Microsoft Corp. MS-DOS-based application development system. An ADR spokesman said the Progress technology represents an important addition to the company's IBM micro and mainframe product lines.

■

Look for a 1983 release of a version of the widely installed Syncsort, Inc. Syncsort sorting utility for Prime Computer, Inc. 50 series processors. Prime, headquartered in Natick, Mass., has contracted with Englewood Cliffs, N.J.-based Syncsort for the development of the new version, which will be the first Syncsort offering for the 32-bit superminicomputers. The version, currently under development, reportedly will be compatible with Prime's current sort utility.

■

Software AG Systems, Inc., based in Reston, Va., inked a joint development and marketing pact with American Software, Inc. of Atlanta to make American Software's application products available to Software AG's Adabas data base management system users. Through the agreement, according to a spokesman, native versions of American Software's materials management, distribution and accounting systems will be integrated with the Adabas relational DBMS and its Predict data dictionary.

■

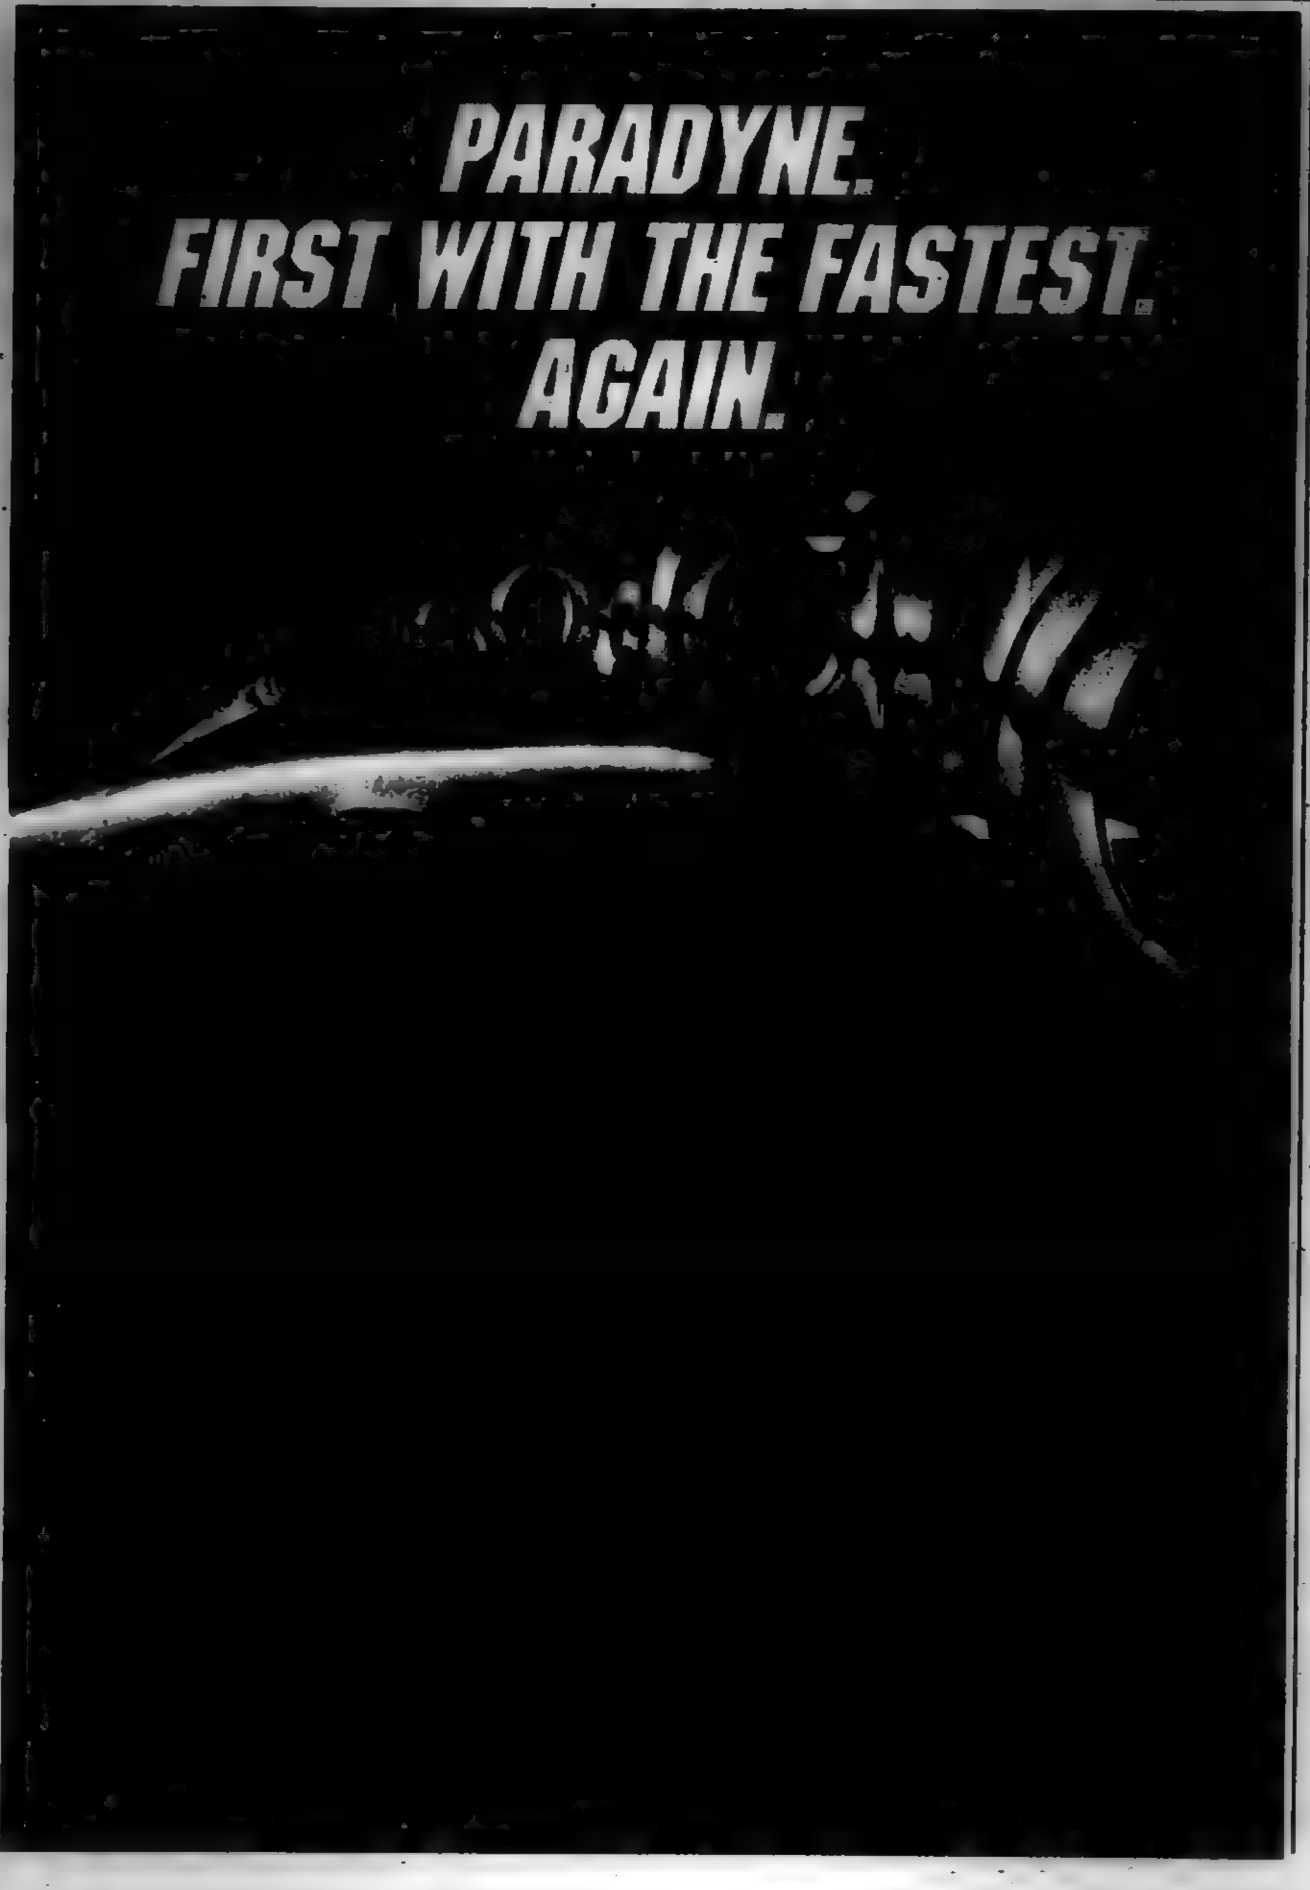
Gould, Inc.'s Compion Access software has been purchased by Internet Systems Corp. of Sunrise, Fla. Access provides users of Digital Equipment Corp.'s VAX minis under VMS with a communications interface to local-area networks, the Advanced Research Projects Agency Network and the U.S. Department of Defense's Milnet. Internet plans to integrate Access into its existing Hyper-Link communications software line.

■

Digital Equipment Corp. in Maynard, Mass., and Cognos Corp., of Peabody, Mass., have penned a cooperative marketing agreement for Cognos' Powerhouse fourth-generation language. DEC also linked up with Tektronix, Inc.'s Computer-Aided Engineering Systems Division, Sunnyvale, Calif., in a cooperative marketing agreement for the CAE 2000 integrated, hierarchically structured electronic design software. CAE 2000 capabilities reportedly include schematic capture, logic and circuit simulation and timing verification.

■

SAS Institute, Inc. of Cary, N.C., will begin marketing Lattice, Inc.'s C Native compiler for IBM 370 architecture systems as the result of an open-ended agreement signed by the two companies. SAS already markets Glen Ellyn, Ill.-based Lattice's IAPX 86 C cross-compiler.



Enhanced Primos boosts processor performance by 50%

NATICK, Mass. — Prime Computer, Inc. has introduced an enhanced release of its Primos operating system that is said to increase the performance rating of its current 50 series processors by nearly 50%.

According to a Prime spokesman, Primos Revision 19.4 increases the Whetstone performance rating of the 50 series machines by up to 45%. Whetstone ratings measure CPU performance in executing floating-point instructions used in applications such as finite element analysis, computer-aided design and simulation.

Revision 19.4 also features support for IBM's Systems Network Architecture and kernel support for Prime's recently announced Primix version of the AT&T Unix operating system. In addition, the enhanced version of Primos increases the number of asynchronous communications lines supported from 128 to 254 and roughly doubles the maximum program size supported from 32M bytes to almost 64M bytes.

The spokesman said the enhanced release employs a new run-file format called Executable Program Format that automatically shares programs and libraries among users. An additional improvement gives systems administrators increased control over the allocation of resources by allowing limitations to the number of segments and programs in each user's address space.

Revision 19.4 features improved security capabilities said to alert the system console to any logon attempt involving an incorrect user or project identification or password.

Revision 19.4 is available immediately. It is included in the pricing of the 50 series processors, which ranges from $30,000 to $500,000.

Prime Computer is located at Prime Park, Natick, Mass. 01760.

Firm's algorithm library out

BEAVERTON, Ore. — Quantitative Technology Corp. has announced Math Advantage, an extensive library of algorithms designed for use in numerically intensive scientific and engineering applications.

According to a company spokesman, Math Advantage was designed to improve the productivity of engineers and scientists who are developing high-speed applications that run on supercomputers and array processors.

The product operates on more than 20 different processors, ranging from the IBM Personal Computer to supercomputers, according to the vendor.

Math Advantage features nearly 180 coded and documented subroutines that can be called from programs written in either Fortran or C language using standard calling conventions used by computer manufacturers, according to the spokesman.

Routines can be tailored

For specific architectures, the spokesman said, Quantitative Technology will tailor the routines for performance.

For ease of use, the library is reportedly divided into categories containing groups of algorithms that provide a core for various applications.

Corporate and site licenses are available for multiple systems and multiple site installations.

Available immediately, Math Advantage is priced at $495 for micros, $2,000 for 32-bit workstations, $5,000 for superminicomputers, $7,500 for minisupercomputers and $10,000 for supercomputers.

More information is available from Quantitative Technology, which is located at Suite D, 8700 S.W. Creekside Place, Beaverton, Ore. 97005.

Yes, FLEE/XP® has been around for awhile. Ten years, in fact. That's a long time for a DOS/VSE linkage editor and librarian to remain current, but there's a very good reason why FLEE/XP is still so popular. FLEE/XP makes people feel secure. Folks love it, and go on loving it. In fact, FLEE/XP took first place in the most recent Data Decisions user survey, with the highest score ever recorded. After ten years, that's true love.

You can't find the kind of peace of mind you get from FLEE/XP with any other product. More than 1500 very happy and secure users will tell you so. If you're worried about the nightmare of unscheduled condenses, or corrupted libraries, FLEE/XP can be a real sweet dream.

So try FLEE/XP now, and for the first time in your life, believe that there's someone you can always count on; FLEE/XP from Goal Systems. And have a good night's sleep . . . because there *is* somebody you can trust.

Mega Group unwraps IBM mainframe WP package

Moves data to documents

IRVINE, Calif. — The Mega Group, Inc. has announced Megaword, a mainframe word processing package that enables users to move data from multiple spreadsheets into multiple documents. The Megaword package runs under IBM VM/CMS, MVS/TSO and MVS/XA environments.

Megaword's features include mail/merge facilities, printing support, menu systems, key sequences and editing capability, according to the vendor.

When a system has a microcomputer-to-mainframe link in place, Megaword on the mainframe enables users to read and write microcomputer and mainframe text files, according to a spokesman.

The product is said to be aimed at managers who wish to retrieve data from a central computer, create models and write reports.

Microcomputer users can use Megaword to store files on the CPU, enter or manipulate text and interact with other programs, Mega Group said.

Data reportedly can be transferred to Megaword from the company's other mainframe software, including the Megacalc spreadsheet, the Megafile file handling system, Megagraph decision support graphics and the Megastat statistical analysis package.

Megaword is priced from $4,000 to $6,500, depending on processor size, the vendor said.

Additional information is available from the Mega Group, which is located at 17701 Mitchell Ave. N., Irvine, Calif. 92714.

HP tool touts data base duplication

PALO ALTO, Calif. — Hewlett-Packard Co. has announced the HP Silhouette/3000 software for duplicating HP Turboimage and Image data bases on an HP 3000 superminicomputer.

The HP Silhouette/3000 is transparent to system users and duplicates the central HP 3000 data base on remote HP 3000 systems using network links. During a hardware or software failure, the primary data base shadow allows remote HP 3000 users to continue using data base applications, according to a spokesman.

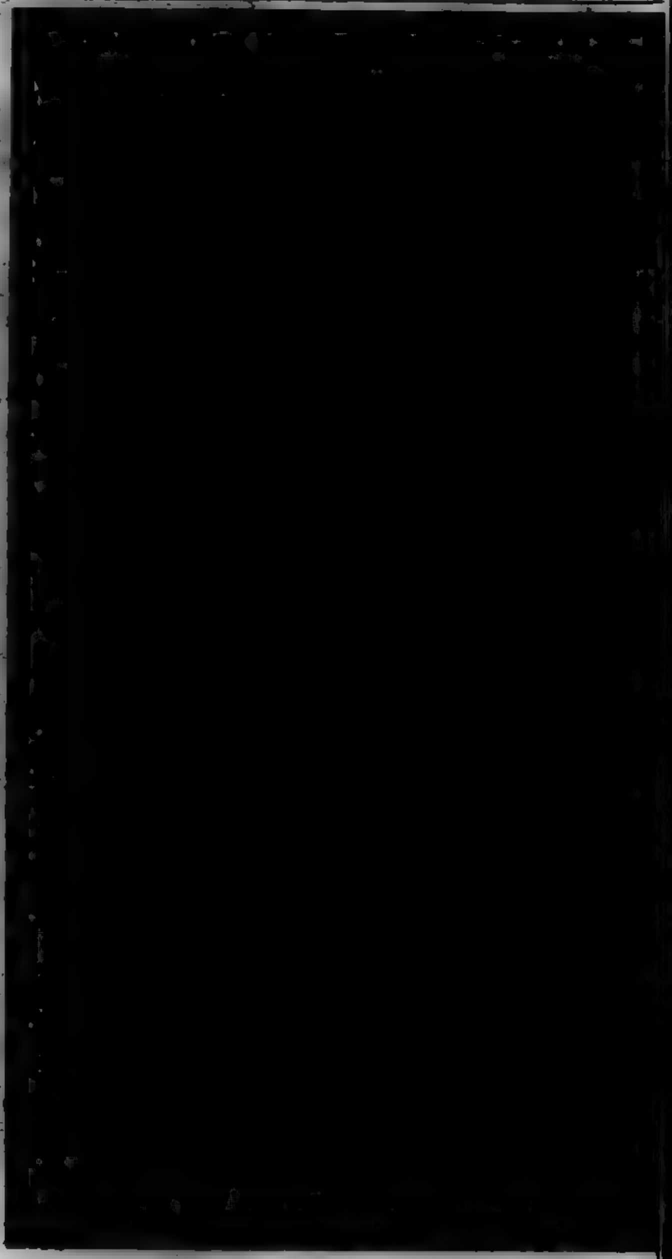
When system messages indicate a failure has occurred, an operator transfers production from the main HP 3000 to another HP 3000 in the network. Incomplete transactions are removed from the secondary data base when a failure occurs to ensure data integrity. Users who need only inquiry access to a data base on the main HP 3000 system can be permanently moved to a secondary system for improved performance.

HP Silhouette was developed by Carolian Systems International, Inc. under the name Shadow. Marketed by Carolian Systems since September 1984, HP Silhouette/3000 is now being marketed by HP under a licensing agreement.

HP Silhouette/3000 is priced at $22,000 for the first copy; additional copies cost $9,000.

HP is located at 3000 Hanover St., Palo Alto, Calif. 94304.

"Sure it talks. You understand jargon?"



We are the only people in the business who can, in fact, do it all for you. Regardless of what your networking requirements are. Regardless of which combination of networking media you go with. Regardless of the kind of equipment you're hooking up now or in the future. And regardless of how many sites, how many hundreds or thousands of nodes are involved.

NO MATTER WHERE YOU ARE
IN THE PROCESS RIGHT NOW,
WE CAN HELP.

Whether you're looking at blueprints, steel framing, or buildings full of data processing equipment, we can help you take an objective look at the whole range of local area networking options. Since Net/One® is vendor-independent and supports all major LAN technologies and standards, it's the one network that offers you complete independence in your decisions. And it's the one network broad enough in scope to handle virtually every connection in your plans, as well as those that aren't in your plans yet.

From PCs to mainframes. Async, Bisync, SNA or X.25. Standard industry I/O interfaces or intelligent network adaptors for high performance use with the major bus architectures. Any of the growing list of standards in physical media and network access techniques. It's all available from us.

UNIX

from page 31

- Stage 2 (hardware). AT&T produces Unix-based machines of its own and encourages other vendors to do the same. Many minicomputer makers and Bunch companies express support.
- Stage 3 (software). Enough Unix-based applications exist so that Unix becomes a self-contained world with families of Unix processors running a standardized Unix with all necessary applications modules.

Where is AT&T now? Stage 1 is almost successfully completed. AT&T's System V version of Unix will almost certainly triumph, and Unix microprocessors will soon be readily available.

Stage 2 has received good support, although the real test will be how many other hardware vendors give Unix wholehearted support. Stage 3 is a complete question mark.

The key to success in Stages 2 and 3 is successful partnerships.

Support two operating systems

First, consider what would happen to a computer manufacturer other than AT&T that gives Unix enthusiastic support. For some period of time — probably a lengthy one — the vendor would have to support at least two operating environments, its own proprietary operating system and Unix.

Vendor-supplied utilities and applications would have to be rewritten and then supported. The additional overhead would be significant. Sales of Unix-based systems would have to be large to justify such an investment. However, the more firms selling Unix-based systems, the less any one will benefit from the "Unix effect."

Even success with Unix would have its own pitfalls. A vendor's non-Unix customers would begin to wonder about the vendor's commitment to their needs. They might think, "As long as we have to make a conversion, we might as well go to IBM."

Unix success would have an even more disastrous effect for some manufacturers. Their hardware would become a commodity. Only low-cost producers would survive.

Thus, it appears against the interest of any established domestic hardware manufacturer — with the partial and ironic exception of IBM — to support Unix wholeheartedly.

Established independent software vendors would have at least as many problems as computer manufacturers. Those problems would include high development costs, duplicate support and enhancement costs and the obsolescence of existing products.

De facto standards

Unlike the hardware sector, Unix would not really introduce much in the way of software standardization since, at least for independent vendors, IBM's MVS and Microsoft Corp.'s MS-DOS have become de facto standards.

Would Unix-based software be inherently more desirable? The portability of Unix applicatons across different sizes of machines is a plus. So is its potential to be used in true distributed applications.

However, set against this is the increasing requirement for integrated, data base-driven applications. It would, for example, take many years to develop Unix equivalents to the Cullinet Software, Inc., McCormack & Dodge Corp. and Management Science America, Inc. families of products.

The flexibility of Unix is a two-edged sword. Unix applications buyers should not be allowed to get to the Unix core, since it takes systems programmer skills to deal with Unix. This is not a good advertisement for package flexibility or economy.

Given this set of issues, it is doubtful that many of the major producers of IBM-compatible software would see enough advantages to their customers and themselves to become Unix vendors. Only an attempt by IBM to reclaim large parts of the software market could force current software vendors into the Unix camp.

The essence of a partnership strategy is that both sides benefit. If the preceding analysis is on the mark, then many AT&T partners could find themselves disappointed; others could find themselves out of business.

What of AT&T itself? Certainly the widespread acceptance of Unix would benefit the company firm most iden-

See UNIX page 36

WITH NET/ONE, THE INFINITE IS NOT ONLY POSSIBLE, BUT MANAGEABLE.

Net/One's powerful enhanced Network Management services let you control, monitor, diagnose and reconfigure any node on the network. If your LAN installation is extensive, this capability will be one of your first considerations.

Another need we're in a unique position to fill is the management of your LAN project, from start to finish. Beginning with initial planning and design meetings, through supervision of phased installation, testing and certification, and training of your personnel.

With Net/One, you get not only the equipment to bring it all together, you get the dedicated intelligence and judgment of Ungermann-Bass Project Management to make it all work.

To keep it all working, you get the continuing support available from our experienced field service personnel, locally and regionally, as well as from our Santa Clara headquarters.

If you're exploring LAN possibilities, these are only a few of the reasons to include us in the loop. Give us a call, and let's talk about some of the others.

Ungermann-Bass, Inc., 2560 Mission College Blvd., Santa Clara, CA 95050, (408) 496-0111.

e, your LAN
are infinite.

UNIX

from page 35

tified with Unix.

It is not clear that AT&T can successfully produce commodity hardware. It is possible that AT&T could create a large amount of successful software in a short period of time. But no other firm has ever done so.

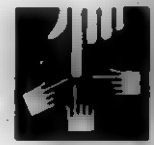
Hardware and software are coalescing around de facto IBM standards. The only flaw in this IBM world is the lack of good bridges between MVS and IBM's PC-DOS, but such bridges are now being built. Unix could never displace MVS applications inside large organizations. Consequently, a successful Unix would add complexity and costs.

However, AT&T is, at least implicitly, dedicated to just these goals. This puts AT&T, perhaps unconsciously, into the role of arch-revolutionary. Only revolutionaries benefit from damage to the existing — IBM — order.

Q&A

from page 31

they had to be more methodical in their integration strategy. Users didn't want [links] to grow out of control, and they became more sophisticated about the technology. Companies are now caught at the point between just buying emulation products and attempting to get a more sophisticated, more transparent [micro-mainframe] solution that runs at a capacity and performance level consistent with the rest of their data center.



What are the most important steps a company should take when selecting a link?

Users [should] sit down and prepare a needs assessment. That means knowing what applications are going to run where. You have to know what you are going to run on the [personal computer] and what you [are] going to run on the host. Second, you must know the applications you are planning to install over the next two years.

What are the most common mistakes firms make when selecting a micro-mainframe product?

Not looking at the type of applications they have. Some companies buy an [IBM] 3270 emulator for mainframe connection and then find out that it is insufficient for their transfer needs. Another common mistake is that products are selected in a vacuum. When companies rely only on a technician to select the products, electronics are emphasized, not business applications.

Others look at a link as something that will implement the application. A link simply helps you move the data. As soon as you tie the application to the link, it will be more difficult to change. What may be a good link solution today may have to be changed in 18 months.

How can companies best deal with security issues presented by micro-mainframe links?

Right now, we still believe in centralized host security. Basically, links today don't provide any security. If the host system doesn't have any security, you don't have any.

Try to maintain centralized host control if you can. Make sure that when the data comes back to the mainframe, you can refer to an audit trail. Make sure you know who updated it and when they updated it. One solution is to put the uploaded data into a temporary holding area and allow the systems administrator [to] take care of the updates by running a separate job.

What kinds of applications are most commonly used with micro-mainframe links?

Financial applications where departmental budgets have to be rolled up into one corporate budget. In the manufacturing sector, we're seeing users make inventory data available on micros to manage production lines. In the retail sector, buyers can enter data to the mainframe via the [personal computers].

What will IBM's micro-mainframe strategy be?

I'm not so sure that [it] will jump into the fray with micro-mainframe link products per se. I suspect [it is] going to get into it via a more integrated approach, very much like what [it is] doing with the System/36. IBM has a lot of work to do to make all [its] systems integrate cleanly. I think there is still a big window for companies to develop a better mousetrap.

Firm releases decision tool for IBM micros

NEW YORK — Announcing its merger with software vendor Management Decision Systems, Inc. late last month, Information Resources, Inc. a Chicago-based marketing research firm also unveiled PCexpress, a decision support system for the IBM Personal Computer, Personal Computer XT, AT and compatible machines.

The $1,495 PCexpress package is designed for decision support system applications in marketing and finance and combines data base management, query, modeling, statistical, reporting and graphics capabilities.

Graphics functions include capabilities for representing line plots, clustered and stacked bars, pie charts and scatter diagrams.

The product includes communications capabilities that allow users to access data from Information Resources' Express Decision Support System on IBM mainframes running VM/CMS and Prime Computer, Inc. systems running Primos, according to the vendor. Flat data files can be captured from any host computer that can communicate with an Ascii terminal, the vendor said.

The software reportedly permits a two-dimensional representation of business information, including different time periods, products, regions, customer types and distribution channels.

A menu interface, a mouse-driven interface, on-line documentation and user-defined Help screens are included.

PCexpress will be available during the fourth quarter.

As a result of Management Decision Systems' merger with Information Resources, all outstanding shares of Management Decision Systems common stock were converted into approximately 1.04 million shares of Information Resources common stock valued at approximately $26.1 million.

More information is available from Information Resources, 200 Fifth Ave., Waltham, Mass. 02254.

Designer aims to create more flexible software

By Eric Bender
CW Staff

"When I'm designing software I picture myself inside the computer, staring out at you," said Lotus Development Corp.'s principal technologist, framing his face with his hands to illustrate himself looking out through the screen of a microcomputer.

Kaplan

This perspective highlights the computer's raw speed, S. Jerrold Kaplan remarked in a recent interview. "Type a letter, and the program has all the time in the world to figure out what you need," he pointed out. Taking advantage of that time, "the program can adapt and become much more responsive — reach a higher level [of] activity."

Another way to describe the goal, according to Kaplan, is "creating new ways for people to instruct a computer which are vague. That allows the computer to interpret rather than execute commands; to be reactive, not passive." It also requires users to relinquish "the idea that the computer is always right."

Kaplan, 33, earned a doctorate in computer science from the University of Pennsylvania and did research at Stanford University before cofounding Teknowledge, Inc., a pioneer in artificial intelligence software, in 1981. At Teknowledge, he first handled marketing and sales and then moved into corporate development.

Finding himself investigating technology that was outside of Teknowledge's main business, he left the company this year, although he still acts as a consultant. Last spring Kaplan struck a deal to consult for Lotus on a variety of projects, and he also is contracted to develop a software product. He works at home in Portola Valley, Calif. "When appropriate I hop on a plane and come East," he said.

Who will buy System/36 PC?

SMALL TALK
By Eric Bender
CW Senior Editor

IBM's System/36 PC, a truly curious machine, answers some questions about how Big Blue will link Personal Computers with its low-end multiuser systems. But the hybrid's current incarnation does not look much like a mainstream product for large corporations.

The System/36 PC does underline IBM's commitment to distributed computing. Here is a machine with workstations that may offer significantly more power, in some applications, than does a central CPU supporting a single user.

IBM did not release performance specifications on the 16-bit machine, but the current maximum internal memory is 256K bytes, and only three workstations are supported if a system printer is attached.

That makes the System/36 PC's pricing competitive but unremarkable. While many analysts were initially suprised that IBM would offer any System/36 with a $5,995 sticker, that starting price rises sharply for any reasonable configuration. The directly attached Personal Computer is a requirement, as is the $995 operating system, so a single-user base configuration costs almost $10,000

See IBM page 42

WHO IS THE WORLD LEADER IN IBM/38-36 BACKLOG REDUCTION?

FUSION

The world's most successful companies have made Fusion Products International the leading supplier of query/report-processor, PC interface and spreadsheet software for the IBM System/34/36/38.

Why is Fusion number 1, worldwide? Because we fully support the PC. Because we're one of the few S/38-36 vendors who actually answer their customer-service telephones. Because we offer on-site training. Because *easy-to-use* means never having to read your manual. Because selected Fusion products are available in many languages. Even Japanese.

That's why the leading software company in Japan selected Fusion as their *only* S/38-36 report processor. The *best and brightest*, everywhere, choose to spend their valuable time on business issues, not on computer issues.

You probably know our name. Isn't it time you made a most important phone call? Isn't it time you used Fusion power to obliterate your backlog?

FUSION.

Software allows IBM micro to use mainframe graphics

ST. LOUIS — Enertronics Research, Inc. has introduced software for communication between mainframe graphics packages and the IBM Personal Computer.

The product, Enerconnect, runs on the Personal Computer and converts it into an IBM 3270-type graphics workstation that is able to communicate with a mainframe via an IBM 3274, 3276 or 3705 communications controller, according to Enertronics Research.

The software permits the Personal Computer to manipulate files downloaded from such mainframe graphics packages as Issco, Inc.'s Tell-a-Graf and Disspla.

Additionally, International Graphics Exchange Specification (Iges)-based mainframe computer-aided design files can be displayed and files from Enertronics' Energraphics graphics program can be merged with mainframe graphics files, the vendor said.

The latter feature permits data from such Personal Computer spreadsheet programs as Lotus Development Corp.'s 1-2-3 to be incorporated into a mainframe file.

Enerconnect is priced at $500 for use with IBM's Graphics Data Display Manager-based mainframe graphics software and at $650 for use with Iges-based mainframe graphics packages, according to the vendor.

The software requires 256K bytes of internal memory, IBM PC-DOS 2.0 or later, a graphics board such as the IBM Standard Graphics Adapter and a communications board.

For additional information, Enertronics Research is located in Suite 207, 150 North Meramec, St. Louis, Mo. 63105.

SCIENCE/SCOPE

The first full-scale development Amraam missile was fired successfully at the White Sands Missile Range in New Mexico. The missile was launched from a U.S. Air Force F-16 at 40,000 feet at a speed of Mach 1.2. It flew a preprogrammed course designed to evaluate the missile's control system and separation from the launch aircraft. It did not have a seeker but instead was programmed through its autopilot to fly a prescribed route. The advanced medium-range air-to-air missile is in full-scale development at Hughes Aircraft Company for the U.S. Air Force and Navy.

A new technique may expand the use of lasers in commercial and military applications. The approach, called optical phase conjugation, is considered a major advance in optics because it offers a solution to distortion problems that have limited the use of lasers. When a laser beam passes through a turbulent atmosphere or a severely strained optical component, the beam is distorted and the information it carries is degraded. The Hughes technique, however, forces the laser to retrace its path through the distorting medium so the beam emerges free of distortion. The method eliminates the need for complex electro-optical and mechanical components to correct the distortions.

A new process called vacuum brazing will soon help manufacture advanced radar components for U.S. fighter aircraft. Vacuum brazing forms extremely strong joints between lightweight metals, allowing engineers to design parts that previously could not be manufactured. The process involves treating parts with a special brazing alloy and a small amount of magnesium. The parts are placed inside the vacuum furnace, which normally operates at a pressure of one millionth of an atmosphere, and heated to temperatures of 1100°F. Because vacuum brazing requires no flux, it is far more economical than conventional flux dip brazing, in which components are dipped into molten salts. The process also eliminates corrosion caused by trapped or residual flux. Hughes engineers are investigating how vacuum brazing might be used to fabricate heat dissipators and other radar parts.

Acting as a kind of design and manufacturing prompter, a new artificial intelligence network increases productivity by automatically generating instructions for assembling complex electro-optical devices. The Hughes Integrated Classification System (HICLASS™) analyzes product design information to determine the best assembly techniques. It then selects the most efficient manufacturing processes available. Operators, on demand, are able to call up appropriate graphical and text instructions in color as they interact step by step with the system. As a result, workmanship improves substantially and products are made better.

Excellence in communications systems engineering has placed Hughes in a leading position in many of the major U.S. Air Force, Army, Navy, and Marine Corps communications programs, including PLRS, PJH, MILSTAR, and JTIDS. Our Communications Systems Division is committed to meeting the strategic and tactical communications requirements of the 1990s and beyond. We have a continuing need for qualified engineers in all communications systems disciplines at all levels. If your career goals include design of advanced antijam communications systems or HF through millimeter-wave radios, please send your resume to Hughes Ground Systems Group, Professional Employment, P.O. Box 4275, Dept. 53, Fullerton, CA 92634. Equal opportunity employer. U.S. citizenship required.

For more information write to: P.O. Box [illegible], Dept. [illegible], Los Angeles, CA [illegible]

HUGHES

Dataease enhanced

MILFORD, Conn. — Software Solutions, Inc. has announced enhancement of its Dataease data base management system for the IBM Personal Computer.

Dataease 2.5, priced at $600, reportedly offers a procedural language that does not require programming knowledge. It also requires fewer keystrokes to generate reports than needed in past versions and includes on-line transaction processing.

A relational data base manager, the software is also said to include such features as a library report template and expanded memory usage. Support for the Intel Corp. 8087 math coprocessor is included.

The software reportedly provides text-converted dollar amounts and complete date conversion functions.

Software Solutions is located at 305 Bic Drive, Milford, Conn. 06460.

NEC voice board out

MELVILLE, N.Y. — NEC America, Inc. has introduced its SAR-10 Voice Plus voice recognition board for the IBM Personal Computer.

The SAR-10 reportedly utilizes a custom large-scale integration chip set with a 250-word capability. Spoken words are digitized, and user-defined Ascii outputs are then transmitted to the Personal Computer.

The board comes with I/O jacks for attachment of microphones or speakers and with utility programs that reportedly allow voice I/O to be integrated into new and existing software applications. The SAR-10's menu reportedly lets the user create a vocabulary that defines spoken words.

The SAR-10 costs $895.

NEC America can be reached at 8 Old Sod Farm Road, Melville, N.Y. 11747.

Microstuf updates telecom software for IBM micro

ROSWELL, Ga. — Microstuf, Inc. has introduced Crosstalk Mark 4, a $245 telecommunications software package for use on the IBM Personal Computer.

Crosstalk Mark 4's features are said to include support for multiple concurrent communications, under which the software can accommodate 15 separate communications sessions simultaneously. Also supported are combinations of up to 15 local, modem and X.PC logical links, each occupying a page within the program. Crosstalk Mark 4 reportedly operates at up to 19.2K bit/sec. and emulates such terminals as the IBM 3101, in both page and character modes; the Digital Equipment Corp. VT100 series; the Televideo Systems, Inc. 912, 925 and 950 models; and the Applied Digital Data Systems, Inc. Regent and Viewpoint.

Crosstalk 4 permits the creation of macros that can automatically dial up and log in to remote systems.

All major file transfer protocols are supported, including Kermit, MNP, Xmodem and X.PC.

Microstuf is located at 1000 Holcomb Woods Pkwy., Roswell, Ga. 30076.

SIS unwraps Smart Ollie 1

NEW YORK — Strategic Intelligence Systems, Inc. (SIS) has announced a current economic information data base for strategic planners in corporations, research organizations and government.

Smart On-Line Linking of Intelligence for Executives (Smart Ollie 1) is stored on a floppy disk to run on the IBM Personal Computer XT and Personal Computer AT. The product reportedly is a data base of current business trends and issues and relevant written summaries that are accessible to the user by keyword searches.

Smart Ollie 1 is said to contain a cross-reference system that links current economic, social, political and technological trends to business issues, helping users focus their research on relevant connections within the data base.

The product uses a natural English language front end for user interaction. It requires 640K bytes of memory, PC-DOS 2.0 or later and a hard disk.

The cost of Smart Ollie 1 software is $7,500, and users receive updated diskettes monthly.

SIS is located at 575 Madison Ave., New York, N.Y. 10022.

SOFTWARE

■ **Computervision Corp. has introduced its Personal Architect software system for use on the IBM Personal Computer AT.**

Five software packages are available.

The packages include the following: architectural design and drafting ($9,200); advanced architectural drafting ($5,800); schematic/urban design ($3,500); architectural drafting ($2,500); and CV/CFMS, based on CFMS from Harper and Shuman, Inc., which includes modules for Project Control System ($1,995), Accounting System ($1,995), Payroll System ($395), Spreadsheet Interface ($95) and Billing System ($395).

A turnkey system is available at $13,200 for an IBM Personal Computer AT with architectural drafting

IBM offers law modules for its System/36 PC

WHITE PLAINS, N.Y. — IBM has introduced two families of software modules for the IBM System/36 PC in use in law offices.

The Series 700 grouping includes individual programs for client financial management, lawyer financial management, law firm financial management, accounts receivable collections, statutory dates (docket), conflict of interest, client/matter records management, client statements and a controller system.

The second family of software products, the Series 900, reportedly offers expanded features for larger law firms and includes such programs as client financial management, lawyer financial management, client statements, library management, litigation support, research and retrieval and accounts receivable collection, among others.

Packages in the Series 700 family are priced from $175 to $2,250. Cost of software in the Series 900 family ranges from $175 to $6,400.

For further information, the National Accounts Division of IBM's Information Systems Group is located at 1133 Westchester Ave., White Plains, N.Y. 10604.

and graphics capability; and at $19,900 for a turnkey system including all the capabilities of architectural design and drafting.

The software requires a minimum of 512K bytes of random-access memory and IBM's PC-DOS operating system.

Computervision, 15 Crosby Drive, Bedford, Mass. 01730.

■ Information Processing, Inc. (IPI) has announced a micro version of its Blis/Cobol operating system for minicomputers.

PC-Blis reportedly allows users to run multiuser Blis/Cobol programs on the IBM Personal Computer XT and Star Technologies, Inc. PC. The software is said to support up to three Blis/Cobol users or two Blis/Cobol users and one PC-DOS user concurrently.

Blis/Cobol applications can operate on the micro running PC-Blis with no changes to the applications or files, according to the vendor.

PC-Blis resides in 256K bytes of memory. It is priced at $2,190 for a single-user system and $190 for each additional user. A Blis-to-Blis communications option that allows micro-micro or micro-mini file communications is available for $230.

IPI, 401 Whooping Loop, Altamonte Springs, Fla. 32701.

■ Unisource Software Corp. has announced a version of the Connector utility software for the AT&T Personal Computer 6300. The product was previously available for the IBM Personal Computer, Personal Computer XT and Personal Computer AT.

The Connector reportedly allows users to run an IBM PC-DOS and an AT&T Unix application concurrently on the same machine. The software enables the user to switch between PC-DOS and Unix with a single command, combining the multiuser and multitasking capabilities of Unix with PC-DOS programs, the vendor said.

The Connector running with PC-DOS and Unix requires a minimum of 512K bytes of memory.

The software costs $350.

Unisource Software, 71 Bent St., Cambridge, Mass. 02141.

■ Koch Industries has announced a version of its Sweep utility software for use with the Microsoft Corp. MS-DOS operating system on the IBM Personal Computer. Sweep was previously available for the Digital Research, Inc. CP/M operating system.

PC Sweep reportedly allows for concurrent execution of several MS-DOS commands. It also reportedly allows users to search files stored in any memory device and monitors the total amount of memory currently being used.

PC Sweep requires 128K bytes of memory and costs $79.95.

Koch Industries, Building G, 11 W. College Drive, Arlington Heights, Ill. 60004.

■ Intel Corp. has announced Irmx 286, a real-time operating system for micros incorporating Intel's 80286 microprocessor, including the IBM Personal Computer AT.

The Irmx operating system is said to permit users to access expanded memory and hardware traps built into the 80286 chip. Those traps reportedly can detect up to 90% of typical programming errors.

Irmx can address up to 16M bytes of memory and can be tailored to the needs of the specific application with which it will run, Intel said.

Irmx is priced at $7,500, according to the vendor.

Intel, Literature Department W-232, 3065 Bowers Ave., Santa Clara, Calif. 95051.

■ Fox & Geller, Inc. has introduced Passkey, a work sheet security program for use with Lotus Development Corp.'s 1-2-3 spreadsheet on the IBM Personal Computer.

Passkey reportedly protects against unauthorized use by permitting users to give each work sheet a password, without which access by others is prohibited. It also prevents access by permitting a work sheet to be encrypted.

The software resides in memory alongside 1-2-3, according to the vendor. No interruption of the spreadsheet is required for Passkey to be invoked.

Passkey is priced at $49.

Fox & Geller, 604 Market St., Elmwood Park, N.J. 07407.

■ Online/Database, Inc. has introduced Application Builder, a fourth-generation applications development tool for the IBM Personal Computer.

Application Builder was designed for use in developing software compatible with Cullinet Software, Inc.'s IDMS data base and ADS/Online language.

Application Builder permits users to develop applications for the Personal Computer and compatible machines and for IBM mainframes, according to the vendor.

The package is priced at $3,500, the vendor said.

Online/Database, 350 Phillips Hill Road, New City, N.Y. 10956.

■ United Software Security, Inc. has announced an enhanced version of its Privacy Plus security software and introduced the Private Eye security package. Both programs run on the IBM Personal Computer, Personal Computer XT and AT and compatible micros.

KODAK INTRODUCES THE COM
AUTOMATIC
START TO

It's the COM you asked for: A completely integrated system, automated and in-line.

Now your mainframe output can be printed by laser on film, processed, duplicated, and intelligently collated—yet nobody has to lift a finger.

No clock watching. No shuffling fiche into a duplicator. And no chemicals, because processing is by heat only.

You're looking at a real system, not parts stuck together. A design that started with a blank sheet of paper and then took shape over the years as we listened to what you needed—and translated those needs into fresh ideas that are years ahead.

For instance, there's a systems manager. A powerful new business computer that actually runs the operation, and also provides instant system access when requested. One benefit is that less experience and training are required for operators.

There's also an exclusive buffer for fiche masters, automatic exposure adjustments triggered by bar codes, and a programmable

KAPLAN

from page 37

His position with Lotus began when Chairman Mitchell Kapor "approached me, we discussed what the effect of AI would be on the personal computer market, and I told him I think I know the answer," Kaplan said.

Kaplan, who describes AI as "a bad name for what I would call symbolic processing," sees three main routes by which AI or symbolic processing techniques can improve micro software. The most obvious, and hardest to discuss publicly in any detail, is in building new types of applications, he noted.

A second group of opportunities arises in enhancing existing applications, "altering the computer so that it becomes a partner in the problem," he said. Taking a spreadsheet program as an example, why not take all the information developers have about how spreadsheets are used and "design it, if I may anthropomorphize slightly, to know more about its anticipated use?" he asked.

'I'll show you a fool'

With this setup, users "must be tolerant of the system not always doing what they want," but this is acceptable as long as they know what's happening, he maintained. "People are accustomed to getting misinformation, and they know how to deal with it. Show me someone who trusts their computer output, and I'll show you a fool."

A third promising avenue of development lies in "improving the efficiency of the internal program," Kaplan said. "Typical architectures aren't flexible enough."

In one illustration from the AI world, Lisp machines often startle novice users by flashing a "disk-in-use" signal even when the system hasn't been asked to do anything recently, he said. "The computer knows you're just sitting there, and it's off cleaning itself up."

Kaplan has written prototype microcomputer software that bypasses the operating system so that "if it hasn't heard from you in 500 [msec], it will go off and do something," he said.

Today's personal computers offer plenty of power for this breed of software, he added. "I don't believe that special hardware or symbolic languages are required for this current generation of machines. The idea that we as software developers are waiting for a new generation of hardware is nonsense."

Continued from page 40

Privacy Plus Version 2 is said to offer ease-of-use enhancements such as resident code, improved displays, function keys and an on-line directory manager. Version 2 includes additional error protection, preconfigurable user options and an optional Master Key facility to recover from lost passwords. Version 2 requires 128K bytes of memory.

Private Eye reportedly allows the micro user to clear the screen at any time with a single keystroke without disturbing on-screen data. The software also blanks the screen automatically after a period of computer inactivity, preventing unauthorized people from viewing data and reducing screen wear.

Privacy Plus Version 2 costs $975 for a yearly site license and $2,925 for a corporate license. The Master Key option is priced at $300 and $900 for site and corporate license holders, respectively.

Private Eye is priced at $300 for an annual site license and $900 for an annual corporate license.

United Software Security, 6867 Elm St., McLean, Va. 22101.

■ Gracon Services, Inc. has announced a software package for Pascal programs on the IBM Personal Computer.

Turboref reportedly allows users to cross-reference a Pascal program and create a program listing. The software creates a list of each variable and constant reference in a given program, including the line number and type of use for each reference. The program listing includes boxes to indicate program control structures, underlines Pascal reserved words and highlights procedure names and comments.

Turboref requires an IBM Personal Computer with 128K bytes of main memory and PC-DOS Version 2 or higher.

The software costs $49.95.

Gracon Services, 4632 Okemos Road, Okemos, Mich. 48864.

INCREASE YOUR CICS PROGRAMMING PRODUCTIVITY BY 25% IN 5 DAYS.

Our CICS courses are tough, but they're worth it. Because Sys-Ed's challenging, "hands-on" training immediately increases CICS programming productivity by 25% or more—for both programmers new to CICS and experienced CICS programmers. And that's productivity you'll really need to make your conversion or implementation efforts successful.

How do we do it? With true-to-life case studies, especially prepared reference manuals recognized as the best in the field, and individual attention from highly qualified instructors. We invite students to bring in their own projects, and group courses can be tailored around specific case studies.

Sys-Ed's Courses include CICS Command level, Macro Level, Internals, Application Design, Debugging, Performance Design, Recovery and Restart and VSAM. Classes are held regularly at our classroom/computer facilities in major cities, or customized course offerings are available for on-site sessions at company installations.

For more information, call Dave Shapiro (212) 564-9147.

■ **JB Systems has announced six application modules for its Mainsaver business software on AT&T 3B2 supermicros, IBM Personal Computers and compatible machines.**

The modules include work order processing and scheduling, budgeting, maintenance history, inventory management, preventive maintenance and purchase order systems. They are designed for use by plant management and equipment maintenance personnel.

The software system reportedly can generate a series of daily, weekly and monthly management reports including equipment history and costs, work order backlog, work load forecast and summary, deferred maintenance and status information.

Prices range from $975 for one module to $27,800 for the full six-module system.

JB Systems, Suite 640, 21600 Oxnard St., Woodland Hills, Calif. 91367.

■ **The Onware Project has announced Ontime, a data base manager-driven project-scheduling system for microcomputers that run Ashton-Tate's Dbase II.**

Ontime supports fixed and variable time and costs, automatically calculates time budgets when job quantities are defined or varied and will not overcommit resources, the vendor claimed.

The scheduling system is said to interface to Dbase, Ashton-Tate's Framework and Lotus Development Corp.'s 1-2-3 and Symphony.

Ontime costs $495.

The Onware Project, 535 California Drive, Burlingame, Calif. 94010.

UNIX SYSTEM V. SOFTWARE THAT STACKS UP.

High-quality application software written for UNIX System V is available now. And new business programs are continually being developed.

That means increased market opportunities for VARs and ISVs. And end users can be certain their investment in a UNIX System V-based computing system is a smart, sound one.

Quantity and quality

The market for products that are based on UNIX System V has grown significantly over the last two years. There are now hundreds of packages written for UNIX System V. And this growth will continue.

Quality applications—general business packages and development tools—are now available for the AT&T UNIX PC. And AT&T is putting together even more hardworking, industry-specific software to run on AT&T 3B2 and 3B5 Computers.

With so many packages available, VARs can offer more turn key systems based on UNIX System V to an ever-growing customer base. ISVs can sell software to even more customers. And end users can invest in a UNIX System confident there is plenty of quality software available.

Software you can bank on

UNIX System V has gained acceptance as a powerful, versatile computing standard. More hardware vendors like NCR, Altos, Motorola, Perkin-Elmer and Sperry are joining AT&T in offering products based on UNIX System V.

And we've introduced the System V Interface Definition. Software written under the Interface Definition can run on current and future releases of AT&T's UNIX System V, as well as various System V derivatives offered by AT&T licensees. So there will be an even larger, more comprehensive base of portable software from which to choose.

Our comprehensive UNIX System V Software Catalog lists a full range of packages that run under UNIX System V. For end users it's a reference guide to the programs available. And for developers it's a smart way to ensure packages will have even greater exposure to the growing UNIX System V market.

To learn more about UNIX System V market opportunities, order the UNIX System V Software Catalog—at $19.95 plus tax. Call 1-800-432-6600 and ask for Operator 387.

UNIX System V. From AT&T. Consider it standard.

AT&T
The right choice.

IBM from page 37

without any applications software.

Hooking up an IBM terminal will cost slightly under $2,000. Each additional Personal Computer requires a $995 terminal emulation package. The three-workstation configuration displayed at the announcement, which included a Personal Computer AT, came to well over $20,000.

Overall, the System/36 line offers a lot of customer blessings — they are reliable beasts, they run 4,000 programs and more than 50,000 of the systems already are in place — which often are compelling reasons for small to medium-size businesses.

But at the low end of the multiuser market where IBM's name does not count for quite so much, where price/performance is critical and where others have strong offerings, the System/36 PC will hardly be a dominant player.

Since last October, Big Blue has promoted the System/36 line as the mid-range hardware of choice for a distributed office architecture scheme, although these waters were muddied last month when IBM announced System/38 support of Office Systems software as well.

As the software components of this grand scheme appear, IBM is promoting it with newspaper ads designed to produce warm fuzzy feelings. The ads picture the System/36 "routing information all over the office faster than you can say 'Gosh, I should route this all over the office.'

"On the other hand," the ads continue, "if you need access to the facts and figures stored in your company's big mainframe computer, the System/36 is a doorway. Your personal computer plugs in one end, your mainframe in the other. And the System/36 contentedly hums away, letting you amble through the main data base just as far as your clearance will take you."

Clouds in the scenario

However, the low-end model's shotgun marriage of two architectures clouds this cheery scenario. A lot of other functions shut down elsewhere on the system while you're ambling through that data base.

Most strikingly, the personal computer directly plugged into the System/36 PC is substantially crippled, running IBM PC-DOS applications only as "a casual or secondary use," according to product material.

But despite all this, offering a small, relatively inexpensive System/36 both directly and through resellers is a good move for IBM, and many expect IBM to fix those glitches fairly promptly.

JOHN CULLINANE

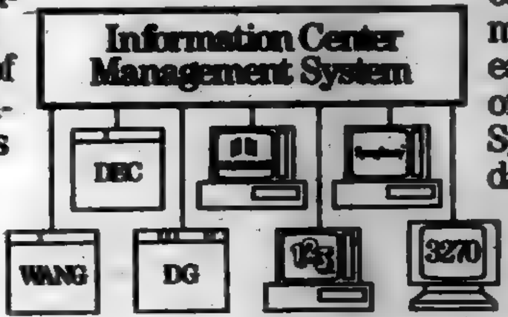
On the Information Center Strategy

Today, virtually every IBM mainframe user is attempting to implement an information center. Formulating a successful information system strategy for the 80's and 90's requires it.

However, one of the major problems many companies face is the variety of software and databases located on different mainframes, departmental minis and personal computers. The challenge is to create an environment that integrates this diversity, is responsive to the corporate user community in meeting its information needs and, most importantly, provides access that is consistent and transparent. This is why open system architecture is key in implementing an information center strategy.

> "Open system architecture is key in implementing an information center strategy."

It also makes particular sense for a software company like Cullinet to adopt a policy of open system architecture that allows corporations to standardize on Cullinet's products without losing a significant investment in other vendors' products—whether they are mainframe applications, microcomputer software such as Lotus 1-2-3, Symphony and other PC products or departmental minis from companies like Digital, Data General, Wang, Hewlett-Packard and others.



That's why Cullinet has introduced the Information Center Management System. It's one part of a strategy that makes it much easier for the VP of Information Systems to standardize on the full range of Cullinet software, including our proven mainframe database and applications and our integrated GOLDENGATE microcomputer software.

Our strategy makes sense not only because Cullinet products are designed to work together, now and in the future; but also because our open system architecture means that data processing management will be able to accommodate satisfied users of other software while anticipating the introduction of new products.

For more information about the Information Center Management System and the full range of Cullinet products, I encourage you to phone, toll-free, 1-800-225-9930. In Massachusetts, the number is 617-329-7700.

IBM, DEC, Wang and DG are registered trademarks of International Business Machines Corporation, Digital Equipment Corporation, Wang Laboratories, Inc., and Data General Corporation respectively. 1-2-3 and Symphony are trademarks of Lotus Development Corporation. GOLDENGATE is a trademark of Cullinet Software, Inc.

disassembler for IBM Personal Computers and Personal Computer XTs that converts object code to source assembly code for Intel Corp. 8088, 8086, 80186 and 80286 microprocessors and for 8087 and 80287 math coprocessors.

The source code can be reassembled because its format is compatible with IBM's Macro Assembler and Intel's ASM-86 assembler, the vendor said. Code can be output to the terminal, printer, diskette or hard disk drive. Inside also is said to create a cross-reference table that lists each instruction that uses a particular value.

Inside costs $34.95.

Blackridge, P.O. Box 385, Bettendorf, Iowa 52722.

■ **SSI Software has unwrapped a spreadsheet program that interfaces with its Wordperfect word processing package running on IBM Personal Computers and compatible machines.**

Called Mathplan, the spreadsheet can save and combine partial worksheets, the vendor said. It reportedly provides 60 statistical, trigonometric and financial functions for building formulas and saves graphs as text files that can be included in Wordperfect documents.

Graphs are said to include vertical, horizontal and stacked-bar charts. The worksheet measures 999 rows by 64 72-char. col., the vendor said.

Mathplan costs $295.

SSI Software, 288 W. Center St., Orem, Utah 84057.

■ **Thorn EMI Computer Software, Inc. has announced two utility programs that provide prestructured financial and statistical models for the firm's spreadsheet package, Perfect Calc. Both utilities run on the IBM Personal Computer, Personal Computer XT and AT.**

The financial utility, Perfect Finance, is said to include 30 prestructured spreadsheets for investment planning; financial statement items; capital budgeting; and cash flow, loan and personal investment analysis.

Perfect Stat, the statistical utility, offers 80 models that include parametric and nonparametric hypothesis tests and regression analyses, the vendor said.

Each package costs $50.

Thorn EMI Computer Software, 1881 Langley Ave., Irvine, Calif. 92714.

■ **Gemini Software has announced an automated hard disk drive backup program for the Wang Laboratories, Inc. Professional Computer and IBM Personal Computer.**

Called Gemini Backup, the program automatically backs up either files that have changed since the last backup or only user-designated files or directories, the vendor said.

The program is said to back up to regular or high-density floppy drives, removable hard disk cartridges or disk emulation tapes and to run in parallel with other applications packages.

Gemini Backup costs $95.

Gemini Software, 91 Sheldon St., Providence, R.I. 02906.

■ **Migent Software, Inc. has announced a business package that reportedly combines artificial intelligence functions, a relational data base manager, a file manager and a spreadsheet. The software runs on IBM Personal Computer, Personal Computer XT and compatible systems.**

Called Ad-Lib, the software automatically creates record layouts and defines fields, requires no file names and lets the user change spreadsheet size and format with cursor keys, the vendor said. Data input is said to be through forms that can be drawn free-form on the screen.

Ad-Lib costs $495.

Migent Software, Suite 203, 8300 N. Hayden Road, Scottsdale, Ariz. 85258.

■ **STSC, Inc. has announced that its Statgraphics statistical graphics system for the IBM Personal Computer line now supports IBM's Enhanced Graphics Adapter and Enhanced Color Display Monitor.**

This allows Statgraphics to provide high-resolution color graphics without giving up text and numeric display quality, according to the vendor.

The Enhanced Graphics Adapter is said to provide 640- by 350-pixel bit-mapped graphics on Personal Computer and compatible monochrome displays, 16-color support in 320- by 200-pixel and 640- by 350-pixel modes on the original IBM color display and 16-color 640- by 350-pixel resolution on the Enhanced Color Display.

Statgraphics costs $695.

STSC, 2115 E. Jefferson St., Rockville, Md. 20852.

■ **Consumers Software, Inc. has announced a utility program said to improve the reliability of spreadsheet programs.**

The Spreadsheet Auditor operates with Lotus Development Corp.'s 1-2-3 and Symphony and Sorcim/IUS Micro Software's Supercalc on IBM Personal Computers and compatible machines.

Features include a flowchart utility that lists all the places a formula appears in the spreadsheet, a facility to print and cross-reference all macros used and Sideprint, a utility that prints spreadsheets and other text files sideways, according to the vendor.

The program costs $149.

Consumers Software, Suite B, 8315 Monterey St., Gilroy, Calif. 95020.

BE A COMPUTER ENTREPRENEUR

"The AMI Agent Program absolutely met all our expectations."
Glen W. Gordon,
Computer Resources International, Inc.,
Monroe, LA

"We're an independent computer systems house, and over the past 20 years have evaluated just about every market and product for mini and microcomputers. Today's powerful microcomputers and the vertical market for accountants clearly hold the strongest potential for revenue. AMI's Agent Program lets us enter this lucrative market quickly and profitably."

AMI's Certified Agent Program is a unique opportunity for you to profit from the microcomputer revolution with only a small investment in the tools to get your business going. You'll sell powerful turnkey solutions including AMI's Software for Professionals™ and hardware like the IBM PC-AT. There's no franchise fee, inventory, nor accounts receivable to worry about. You're backed by extensive national advertising and AMI handles all customer support. Become a computer entrepreneur. Call or write today for your Opportunity for Professionals™ Pack.

NCC '85: A look into the future

Draws together business, academic realms: director

By Clinton Wilder
CW Staff

Among the changes one notices between the 1984 National Computer Conference (NCC) program and the NCC '85 agenda is that the "Hardware and Architecture" program track has been replaced by the more elegant-sounding "Future Architectures and Supercomputers." The difference is deliberate.

"The change was a conscious decision to go along with the conference theme of 'Technology's Expanding Horizons,' " NCC program director Anthony S. Wojcik said in a recent interview.

"It's an indication of my own interests but also of what I believe are very hot topics right now. To me, NCC has a tradition of giving the people who attend it ideas about the future. Part of the mission of setting up the program was to bring back into the industry mainstream some ideas about what's going on technically," he said.

Wojcik

Wojcik has spent the last 18 months on that mission, screening nearly 200 session proposals. His success will be evident from the beginning of the conference with keynote speaker retired U.S. Navy Adm. Bobby R. Inman, chairman of Microelectronics and Computer Corp.

Future-oriented speaker

Wojcik wanted a future-oriented industry figure, and few have been as well-publicized as Inman, who is at the forefront of fifth-generation computer research.

"He fits perfectly into our theme of the future, and we had hoped we could attract someone like him," Wojcik said. "Advanced computer research today is clearly an area that interests not just the academic world but the business world as well."

Wojcik's own background spans both worlds. A professor of computer science and electrical and computer engineering at the nearby Illinois Institute of Technology, Wojcik has also served as a consultant to industry research at AT&T Bell Laboratories and the Argonne National Laboratory in Argonne, Ill. A lifelong Illinois resident, Wojcik has specialized in the fields of digital systems, computer organization and design automation.

In setting up his committee to pull the ambitious program together, Wojcik tried to draw equally from the academic and business arenas.

"The idea of NCC is to try to bring everyone together for better perspective," he said. "But it is a challenge. I've worked on several NCCs in the past and could see some problems that you face, but you don't anticipate all of them."

The scourge of NCC chairmen is the last-minute business commitment that pulls a top-notch session leader, committed more than a year before, out of the NCC city a week before the show.

Such headaches are inevitable with an all-volunteer program, but Wojcik is especially proud that three of the most future-oriented program tracks — artificial intelligence, architecture and networking (also new this year) — have remained intact.

"It is like a shell game at times," Wojcik said, "but we're particularly happy the way those three held out. In AI, for example, someone who attended all 10 sessions would come away with something pretty in depth."

Wojcik is well aware of the industry trend away from the large all-things-to-all-people shows like NCC to smaller, specialized conferences. But he believes that NCC, even with its smaller attendance, must continue to offer what it always has.

"We're serving a potentially giant market; we can't gear things just for the MIS audience or the academic," Wojcik said. "NCC gives nonexperts a chance to hear from the experts on a variety of topics, while the specialists can go to all the sessions in one program track. Some people think our focus is too broad, but we have to do it."

Wojcik also predicted a very strong attendance at NCC '85, in part because of its location in his home state.

Boats traverse the lagoon at Lincoln Park on Chicago's North Side.

NCC: Still computing's greatest show on earth

By Edward Warner
CW Staff

CHICAGO — The theme of this year's National Computer Conference (NCC), "Technology's Expanding Horizons," pervades the activities and presentations scheduled for the four-day show.

The conference's July 15 keynote speech, for example, "Managing the Creation and Commercialization of Technology," will be given by retired U.S. Navy Adm. Bobby R. Inman, director of the Austin, Texas-based cooperative research and development venture known as Microelectronics and Computer Technology Corp.

The NCC conference theme is also reflected in the technical sessions. This year's conference sessions have titles that include "Future Architectures and Supercomputing" and "Artificial Intelligence."

The show's theme, according to conference chairman Karl Martersteck, reinforces the fact that the industry "is clearly a technology-driven industry, and it's critically dependent for our national success to maintain our technological leadership position." Martersteck is executive director of the Digital Switching Systems Division at Bell Laboratories in Naperville, Ill.

The show is expected to draw 80,000 people to the 400,000-sq-ft McCormick Place convention center, according to a spokesman for the American Federation of Information Processing Societies, Inc. (Afips), one of the conference's cosponsors. The following are among the special features of the conference:

- Approximately 84 technical sessions offered in nine tracks to permit attendees to focus on areas of interest such as personal computing and computer networks.
- Twenty-seven professional development seminars on topics ranging from "Cost-Effective System Support" to "Implementing a Methodology — Do's and Don't's."
- More than 600 exhibitors representing more than 320 product and service categories.
- A forum featuring films and videotapes on computer industry advances.

NCC's technical-session tracks will focus on specific aspects of computer technology. The "Future Architectures and Supercomputing" track, for example, will look at "innovative computer architectures for both numerical processing and knowledge engineering," according to that track's chairman, Kai Hwang of the University of Southern California. Within that track, sessions will be held on such topics as multiprocessor architecture, interconnection networks and supermicroprocessors.

The other tracks for the conference's technical sessions are AI, business applications, educational and societal issues, end-user computing, information systems management, networking, personal computers and software systems.

Among the more exciting technical sessions, NCC program chairman Anthony S. Wojcik said, will be IBM's presentation on Systems Network Architecture, marking that structure's 10th anniversary, and a personal computing track session on AI on the personal computer. Wojcik is a member of the computer science department at the University of Illinois.

PHOTO COURTESY OF [illegible]

Chicago's McCormick Place

The 27 professional development seminars, meanwhile, will focus on updating professionals on specific key issues such as AT&T's Unix operating system and the interface between DP and computer-aided design.

Registration for the seminars, to be presented at the McCormick Center Hotel across the street from the exhibit hall, costs $55 for a half-day session and $95 for a full-day session.

"Fault-Tolerant Systems" is among the seminars planned for July 15. Those for July 16 and July 17 will include "Computer Networking" and "Breakthroughs in Strategic Planning and Electronic Data Processing Management," respectively. Among the July 18 seminars will be "Information Modeling."

The conference's July 17 Pioneer Day will pay tribute to the researchers and engineers in computer science at several Midwestern research laboratories, including the Argonne National Laboratory in Argonne, Ill. Their work, a conference spokesman said, resulted in such machines as the Avida, Oracle, Ordvac and Illiac computers of the early 1950s.

At the July 15 keynote session the recipients of the Harry Goode Award and the Distinguished Service Award (DSA) will be honored. The Goode Award includes a medal, certificate and cash prize and is given to honor "outstanding contributions to the information processing services," an Afips spokeswoman said. The DSA, she said, honors the outstanding contribution of an individual to the information processing field.

Registration for NCC costs $125 in advance and $150 on-site. One-day registration is $50; student registration is $10; registration for exhibits only is $50.

Afips is located at 1899 Preston White Drive, Reston, Va. 22091.

Keynoter Inman to explore R&D's evolution into products

By Clinton Wilder
CW Staff

The process of encouraging computer research advances and turning those advances into successful products on the market will be the topic of the 1985 National Computer Conference's (NCC) keynote address by retired U.S. Navy Adm. Bobby R. Inman, chairman, president and chief executive officer of the Microelectronics and Computer Technology Corp. (MCC).

Inman will deliver the speech "Managing the Creation and Commercialization of Technology" at 9:30 a.m. July 15.

Inman, the former director of the National Security Agency and deputy director of the Central Intelligence Agency, was named MCC chairman in 1983. He is in charge of directing the flow of technology from Austin, Texas-based MCC to its 21 member companies for incorporation into their product lines.

Inman is expected to discuss the procedures by which MCC hopes to advance American computer technology, as well as to encourage cooperative joint ventures and other innovative approaches to computer research.

"The challenge is our ability to commercialize technology," Inman said in a recent interview. "In the area of defense, for example, the time period from [a new technology's] conception to commercialization used to be four to five years. Now, as a result of bureaucratic requirements and weaknesses in our support of basic research, that time period is 12 to 13 years."

Inman believes that Japan's greatest competitive edge lies not in technological superiority but in the speed with which Japanese high-tech companies have brought their technologies into the marketplace. Because MCC was formed in direct response to Japan's announced effort to build the first fifth-generation computers, its biggest challenge lies in translating research breakthroughs into products.

"The 1980s and 1990s find us in an increasingly competitive international marketplace," Inman said. "This worldwide competition, coupled with scarce resources, particularly intellectual resources, here in the U.S., have forced us to seek new ways to go about the process of creating technology."

Inman predicted that cooperative corporate ventures, of which MCC is the largest and one of the best-known, will become increasingly commonplace in the computer industry. "U.S. companies are increasingly turning to the tool of procompetitive joint research ventures," he said. "Such an approach allows an efficient use of scarce technological problems and passing the results of the research back to the individual partners, who then carry the technology competitively to the markets of their choice in products of their own conception."

PHOTO COURTESY OF [illegible]

Inman

Inman has spoken often of a national awareness of the need for technological innovation and is expected to stress the point again at NCC.

"As we revise our tax system, we must be careful not to damage the process of capital formation, vital to the supply of investment funds for new ventures," he said. "The 1981 research and development tax credit is due to expire this year. I believe that the existence of this credit was the major factor in the continued increase in R&D spending, even during the deep recession of 1982. We should not take actions that once again reduce the incentives for critical investment in research."

Microelectronics and telecommunications are two of six industries identified by the National Academy of Sciences as deserving attention to ensure the continuation of technological advancement. Inman agrees that those industries, along with aerospace, energy, materials and biotechnology, must continue to seek paths to create and commercialize new technologies.

"The viability of the cooperative approach depends on the characteristics of specific industries, and the approach is certainly not a panacea to all problems of innovation and commercialization," Inman said. "But our competitiveness in a variety of industries will depend on our ability to facilitate the emergence and merging of technology in these six industries."

The HP 3000 compu

However much you change, you're going to need both office automation *and* distributed data processing. Fortunately, one company gives you both in a single system.

Hewlett-Packard's HP 3000 is a fully compatible family of computers, ranging from a new system that handles as few as two users to a distributed mainframe that connects up to 400. You can run the same software right up the line.

And our systems can change and grow as you do. When you're ready for upgrades and additions, you simply plug your existing programs into the new systems. No recompiling. No time and money wasted on conversion.

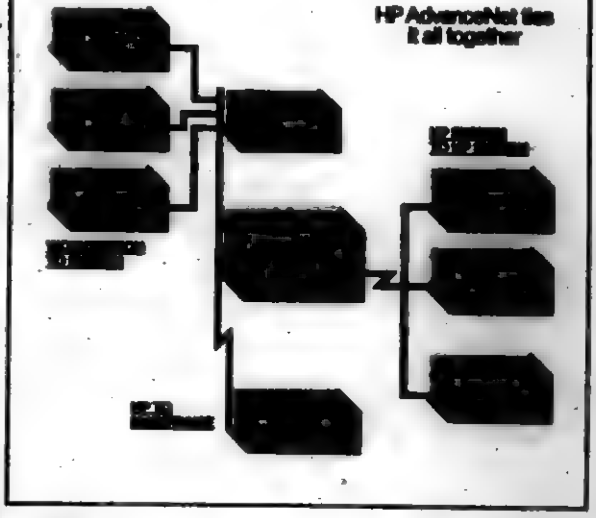
A small, but mighty, addition.

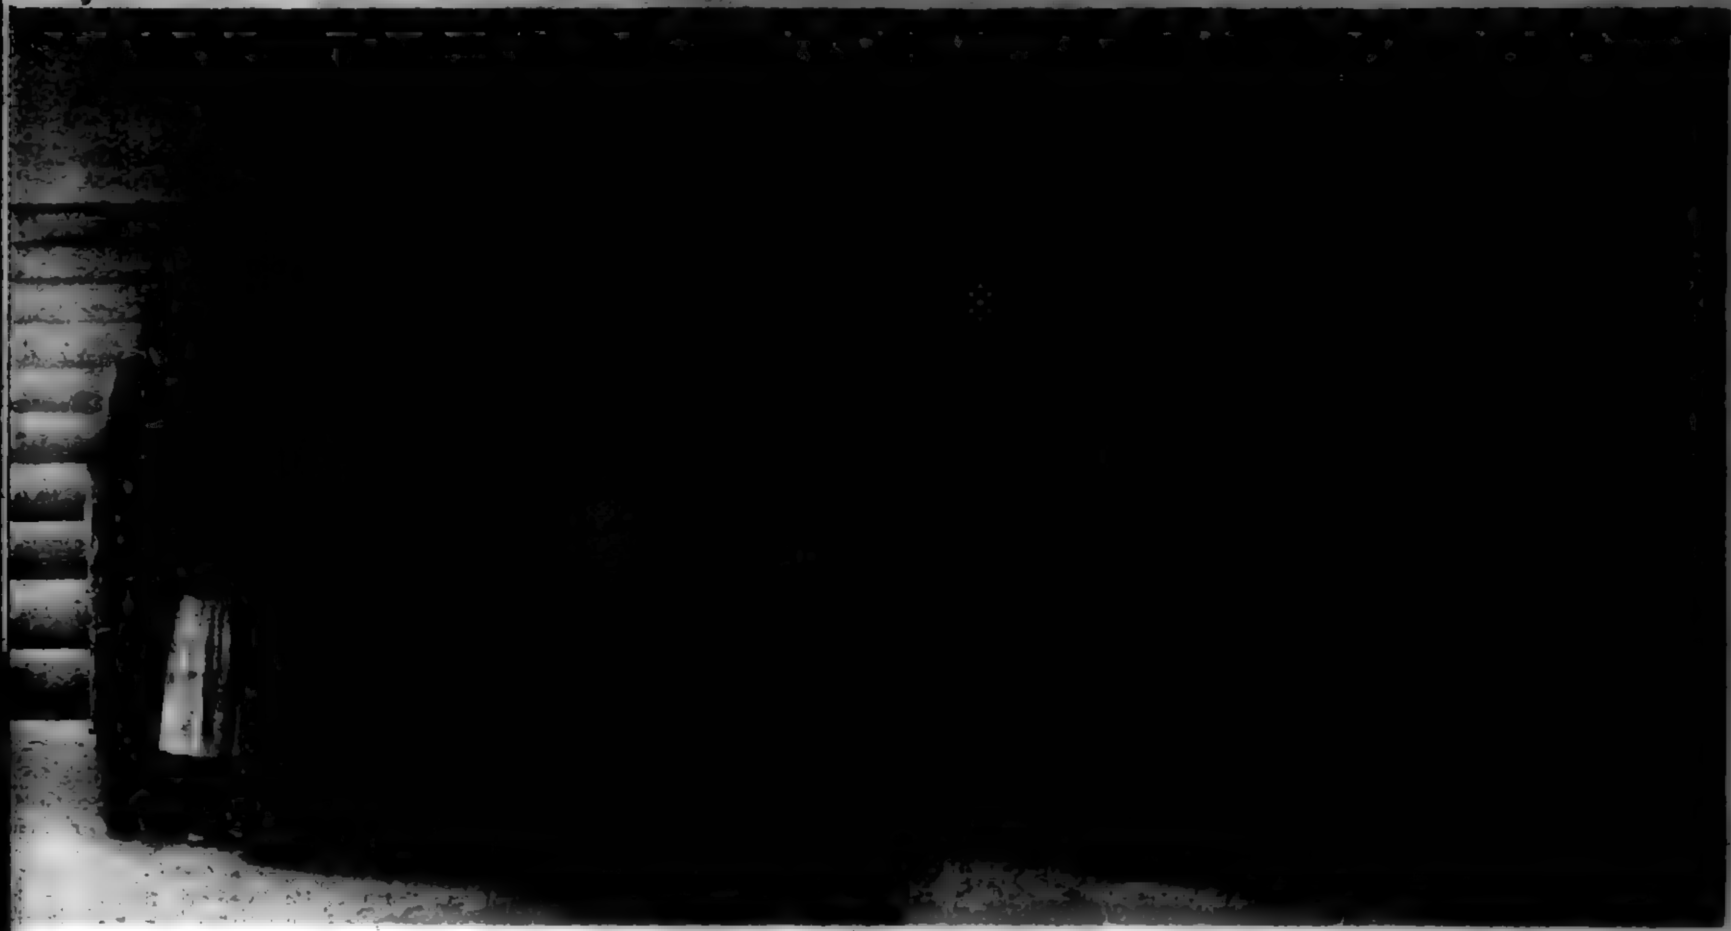
The new HP 3000 Series 37 Office Computer, the latest member of the family, puts the power of the HP 3000 within the reach of smaller budgets.

So now you can afford to give your branch offices and departments their own systems. And they'll still remain part of your overall DP picture with links to other systems.

In the office, the HP 3000 is the heart of our Personal Productivity Center. This integrates the information people need to get their jobs done more productively.

It provides an interface for a wide range of workstations, peripherals and personal computers, including our Touchscreen Personal Computer and The Portable, as well as IBM PCs. And it allows them to interact directly with





ter. One family fits all.

the HP 3000. So your people won't have to learn DP commands.

You'll communicate better with HP AdvanceNet.

Our communications go well beyond this office network. With HP AdvanceNet, they extend to links with other HP 3000s, in the same building or on the other side of the world. And to your mainframe computers, ours or IBM's.

Currently, more than 10,000 HP 3000 systems are working in networks so effectively that our communications were voted #1 in a national survey.

A Datapro poll also rated our service #1. So you get more than office automation and data processing in a single system. You get all the support you need from a single company.

To find out more about the single solution for both sides of your company, send us the coupon. (To make it easier, just attach your business card.) In Canada, call 1-800-387-3867.

We'll send you complete information, including our 12-page brochure. It shows how we can fit you no matter how much you change over the years.

☐ Send me a copy of The HP 3000 Business Computer Systems: *The Hewlett-Packard Approach to Selecting a Business Computer.*
☐ Have an HP representative call me to answer questions.

HEWLETT
PACKARD

NCC to host few large systems software vendors

But seek, and ye shall find

By [illegible]
CW Staff

You may have to search carefully through the maze of booths at the 1985 National Computer Conference (NCC), but if you are persistent, you will find the few large systems software vendors that plan to attend the annual computer industry gala.

Cincom Systems, Inc. will use its 20- by 30-ft booth to show off its major product lines, a spokeswoman said. In addition, the Cincinnati-based software vendor plans to hold a press conference to introduce products.

The spokeswoman declined to offer any specifics about the announcements but said they will involve applications software for IBM mainframes and Digital Equipment Corp. VAXs — Cincom's primary hardware environments.

Cincom was about the only mainframe software vendor to use NCC '84 as a product springboard.

Held press conference

The company staged a press conference in Las Vegas last year to introduce a Wang Laboratories, Inc. VS version of its Mantis applications development system and a set of AT&T Unix-based development tools.

Along with demonstrations of its existing products, Princeton, N.J.-based Applied Data Research, Inc. (ADR) is slated to exhibit a product that it plans to announce prior to the Chicago show.

ADR President Martin Goetz said the pre-NCC announcement will involve a micro-to-mainframe communications product and is related to the company's recent licensing agreement for Data Language Corp.'s micro-based Progress applications development system. Users can also get a look at ADR's recently unveiled [CW, May 6] DL1/Transparency migration aid at its NCC booth.

> *If you are persistent, you will find the few large systems software vendors that plan to attend the annual computer industry gala.*

An SAS Institute, Inc. spokeswoman said the Cary, N.C.-based software vendor will be exhibiting its line of software, with special emphasis on its new micro-based products.

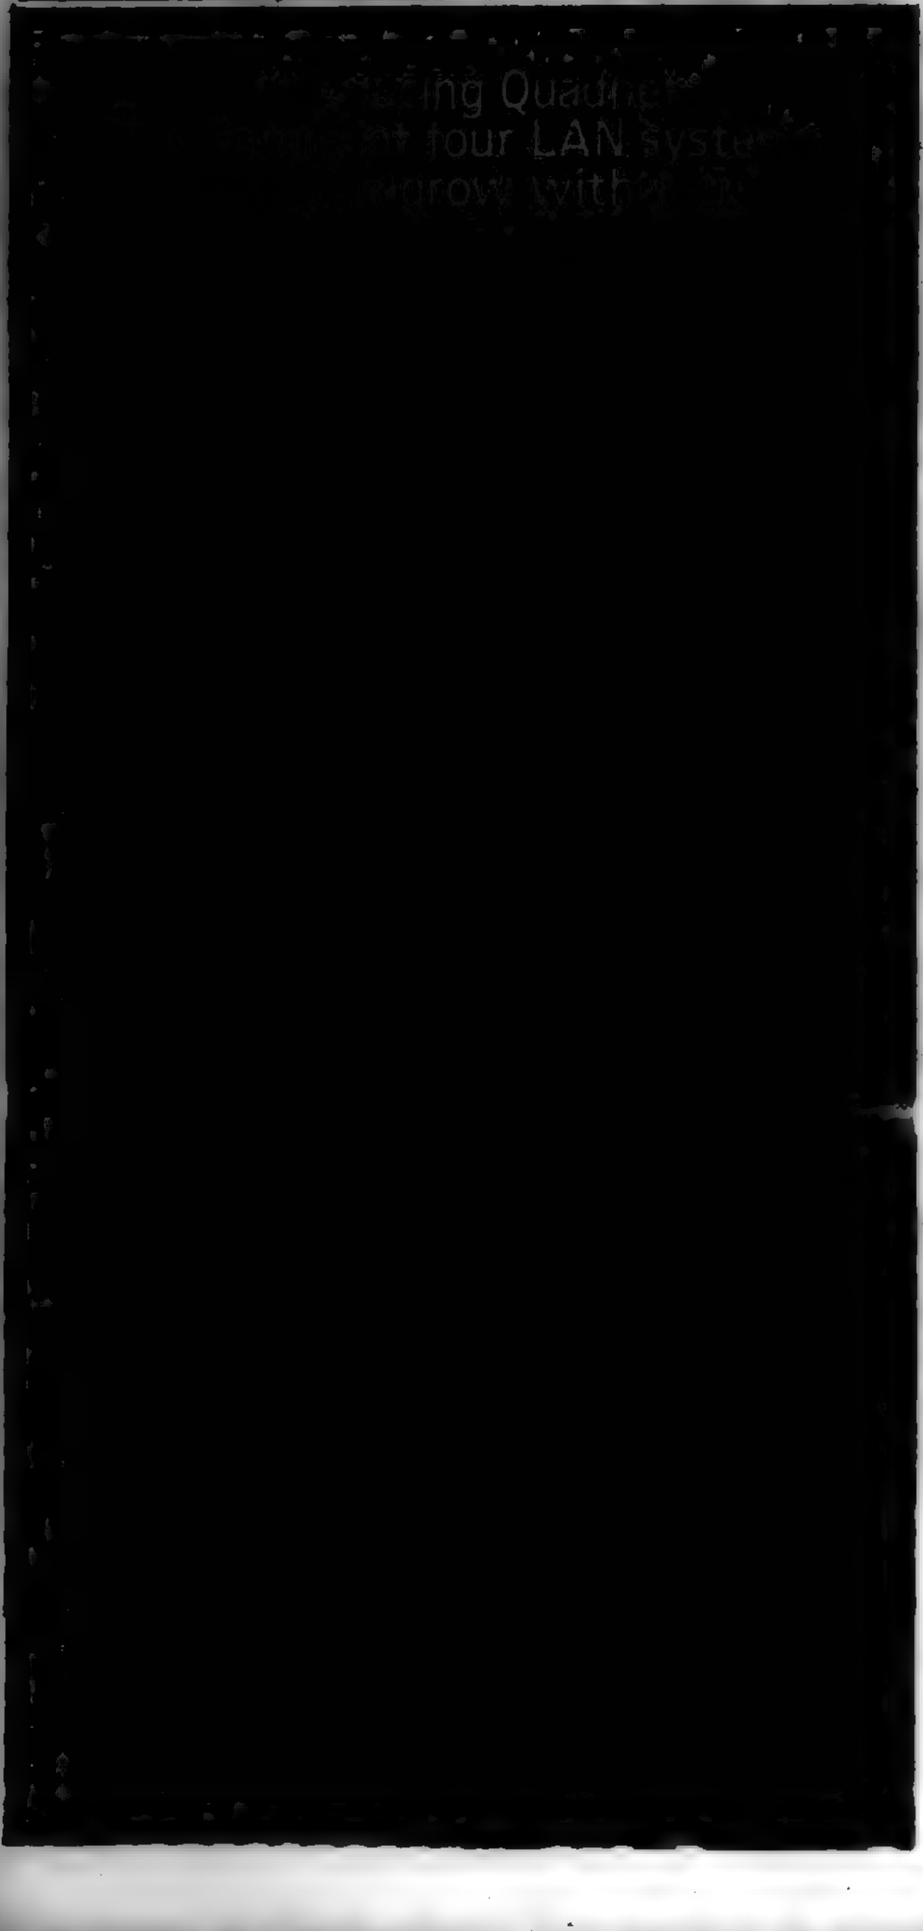
NCC visitors will be able to see the base SAS system for IBM's PC-DOS along with the recently introduced SAS/Stat statistical and SAS/Eterm terminal emulation packages designed for IBM Personal Computers [CW, June 24].

Attendees should also look for Los Gatos, Calif.-based Britton-Lee, Inc.'s announcement of a relational data base machine geared to PC-DOS-based multiuser micros. The machine, based on Britton-Lee's Intelligent Database Machine architecture, is expected to serve as many as 100 users on a network and be priced from $50,000.

Cullinet Software, Inc. will give users a look at its recently announced Information Center Management System (ICMS) products [CW, April 1] within the confines of its 30- by 40-ft booth at McCormick Place. The ICMS tools will be demonstrated along with the Westwood, Mass.-based vendor's other mainframe and micro software.

Computer Corp. of America will be at NCC for the first time, a spokeswoman said, to exhibit its complete product line.

Other companies scheduled to attend include Oracle Corp. and Relational Technology, Inc.



The family tie.

Each member of the Quadnet family of local area network systems has its own unique characteristics. Yet all four share one family trait. The same network software.

That means you can start with the LAN system that suits your needs today. And upgrade tomorrow without having to learn a whole new set of commands. It's the only LAN system for IBM PCs, XTs and compatibles that you won't outgrow.

Making the right match.

If you're not sure which Quadnet LAN system is right for you, your Quadram dealer and our SelectNet™ software can help. This easy-to-use software will ask you a variety of questions about your planned applications, number of users, operating system, and more. Then SelectNet will recommend the ideal Quadnet match.

Quadnet comes with its own powerful multi-user operating system. Perfectly compatible with PC-DOS, Quadnet software lets you keep your current software and add on exciting multi-user packages. And while some systems limit each user to about 360K worth of data (just enough for one floppy disk), Quadnet lets you segment your hard disk any way you like.

When you're ready to order, all the accessories are pre-packaged so you're sure to get everything you need to get your Quadnet system up and running. The master package includes hardware, software and documentation. A workstation kit contains hardware for one workstation. And the cabling kit comes complete in three workstation increments.

Quadram Quality.

Insist on the Quadram name. It's your assurance that you're getting a quality product from an established and reliable company. Ask your dealer about Quadram. We don't make personal computers, we make them better.

Lack of focus prompts software firms to skip NCC

By John Gallant
CW Staff

You have probably heard the old saw about the National Computer Conference (NCC) being primarily a hardware show.

The software community seems bent on proving that adage this year, as the majority of major large systems software vendors have elected to watch the Chicago extravaganza from the sidelines. Despite the health of the software industry — software vendors thus far seem immune from the forces plaguing their hardware brethren — and the impressive number of NCC '85 sessions focusing on software, the big players are, for the most part, staying home.

It seems NCC is just too vast and unfocused for software companies that are increasingly targeting their marketing resources to narrower, vertical markets or software-specific trade shows. In addition to perennial no-shows like Information Builders, Inc., Informatics General Corp., Hogan Systems, Inc. and Uccel Corp., powerhouses McCormack & Dodge Corp. and Management Science America, Inc. (MSA) decided to pass on this year's NCC. Both companies participated in the Las Vegas NCC gala last year.

As a M&D spokeswoman put it, "We canceled out this year because it is very expensive to attend and we found the results were not proportional. It's a very unfocused show and the payback is not big enough." An MSA spokeswoman said the Atlanta-based industry leader has become more selective about its trade show attendance, and NCC just did not fit the bill.

It is not that the software vendors have nothing to crow about. There have been plenty of major product announcements in recent months. But you will not get a demonstration of Uccel's Synova series or Computer Associates International, Inc.'s (CAI) CA-Unicenter software packages.

David Tory, senior vice-president at CAI, said the Jericho, N.Y.-based firm has backed off from NCC for a while. "NCC has become so enormous that we were not doing a level of business commensurate with the effort involved in trying to keep up with the Joneses, so to speak. There are a lot of tire kickers and students at NCC but not a lot of people making buying decisions."

Likewise, Software International Corp. will not be showing off its recently announced Masterpiece series products. A Software International spokesman said the company, which last attended NCC in 1983, has decided instead to introduce the products through a nationwide series of executive briefings and workshops.

If you want to learn about Software AG's planned Natural/Connection link to Ashton-Tate's microcomputer software, you will have to head to the company's Reston, Va., headquarters. Do not waste any time looking for Information Builders' booth or a demonstration of its Focus V.

IBM will be there with its System/36 PC, but a spokesman said there will be no demonstrations of the office software announced last month for the System/38. Informatics will not be showcasing its recent micro-mainframe link introductions either. An Informatics spokesman said NCC just does not offer "enough bang for the buck."

Other software companies that have chosen to sit out NCC '85 include Boole and Babbage, Inc.; Comshare, Inc.; Issco Graphics, Inc.; Martin Marietta Data Systems; On-Line Software International, Inc.; Execucom Systems Corp.; and Walker Interactive Products, Inc.

This year's NCC will not be totally sans software vendors. Applied Data Research, Inc.; Cullinet Software, Inc.; Computer Corp. of America; SAS Institute, Inc.; and Relational Technology, Inc. will erect booths in McCormack Place.

But Michael Gallagher, product marketing manager for Software AG, explained the views of many of his peers. "After the [Anaheim, Calif.] NCC in 1983, we said, 'No more.' It's too big. NCC is just not as productive as some of the smaller, more tightly focused shows. We're going to stick with them. We are part of a growing group of software vendors."

> *'We were not doing a level of business commensurate with the effort involved in trying to keep up with the Joneses, so to speak. There are a lot of tire kickers and students at NCC but not a lot of people making buying decisions.'*

NCC past to present: A barometer of industry progress

By Paul Korzeniowski
CW Staff

The rapid progress of the computer industry has been well documented. If the space program had moved as swiftly, one might now work from an office on the moon.

Since 1973, computer professionals have gathered at the National Computer Conference (NCC) and tried to keep pace with the industry's rapid movement. To illustrate this progress, examine some past highlights.

The first National Computer Conference was held at the New York Hilton and Americana hotels in June 1973. There, IBM made its first appearance at a national data processing show since 1970 and showed its System/3 Model 10 and 370/145. Sen. Philip Hart (D-Mich.), in his keynote address, warned that the computer industry must restructure itself or face government regulation.

In national news, John Dean, former White House counsel, told a U.S. Senate committee that President Nixon, his staff and campaign aides had conspired to cover up Watergate.

Watergate was a topic of discussion at the 1974 NCC in Chicago. Vice-President Gerald Ford, the keynote speaker, warned users that computers had raised issues concerning privacy that would not be easily solved. The week of the conference, impeachment proceedings against President Nixon were begun by the House Judiciary Committee.

Product highlights in 1974 included Control Data Corp.'s announcement of plotting capability for its Cybernet time-sharing service and American Information Services' introduction of an enhanced version of IBM's VMF.

Approximately 32,000 computer professionals traveled to Anaheim, Calif., in 1975, and a *Computerworld* story stated that there was no evidence of the recession at NCC where 278 vendors displayed their wares in 799 booths. The week of the show, the government opened its antitrust case against IBM.

> *If the space program had moved as swiftly as the computer industry, one might now work from an office on the moon.*

At the conference, CDC announced its 38500 storage system as a competitor to IBM's 3850 storage system. Other debuts centered on enhancements to the growing number of minis.

In the bicentennial year, computer enthusiasts traveled to the New York Coliseum. The show's highlight was Univac's 90/70, a mainframe which offered 542K bytes of random-access memory (RAM) that could be upgraded to 4.1M bytes of RAM. Also, Telenet Communications Corp. held the largest demonstration of a packet-switching network with 16 firms connected on its network.

When the 1977 show opened in Dallas, Billy Martin was manager of the New York Yankees ball club, which was destined to beat the Kansas City Royals and Los Angeles Dodgers on its way to a World Series victory. Personal computer manufacturers were invited to the show, but they were not allowed to demonstrate their wares on the show floor. Downstairs from the show, Mits, Inc., Cromemco Corp. and Imsai, Inc. showed their products to curious spectators.

As 51,000 spectators gathered in Anaheim in 1978, a topic of discussion was passage of Proposition 13, which would limit California government spending. During the conference, Electronic Memories and Magnetics Corp. announced memory add-ons for the IBM 3030 series of mainframes.

The 1979 NCC was held in New York one week after a DC-10 plane crashed in Chicago, and 275 people were killed in the worst disaster in U.S. aviation history. Sperry Univac introduced its 1100/60 mainframe to compete with IBM's 4300 series. A major software announcement was SAS Institute, Inc. adding support for structured programming to its statistical analysis package.

Mount St. Helen's rumblings were in the news as NCC attendees met in Anaheim in 1980. During the conference, Data General Corp. brought out its Eclipse MV/8000 line of minicomputers and Zilog, Inc. announced its Z-Net packet-switched architecture.

Systems Engineering Laboratories, Inc. demonstrated the most important product at the 1981 conference in a hotel suite and not on the show floor. The company claimed that its Concept 32/87 ran three times faster than a Digital Equipment Corp. VAX-11/780. Perkin-Elmer Corp. announced its 3230 superminicomputer that ran AT&T's Unix.

In 1982 the show was held for the first and probably the last time in Houston. The week of the conference, John Hinckley was found not guilty of shooting Ronald Reagan by reason of insanity. Microcomputer manufacturers such as Cromemco, Lobo Drives International, Jonos Ltd., Onyx Systems, Inc. and Morrow Decisions, Inc. displayed their wares.

The economy had taken a turn for the better as the 1983 NCC began in the Anaheim Convention Center. There, IBM unveiled its System/36 and NCR Corp. released seven models for its mainframe line.

In 1984, NCC moved to the Las Vegas Convention Center. A number of storage product vendors announced hard disks and tape drives. Cincom Systems, Inc. introduced a set of Unix software development tools and a version of Mantis, its fourth-generation applications development system for Wang Laboratories, Inc.'s VS line of minis.

DOS/VSE and CICS/VS Frustration?
BIM gets it out of your system.
BIM presents a line of proven programs that maximize your system's capabilities, saving you time, labor and expense. These program products help get the most out of your system and people.
BIM-EDIT — the editor with more than 35 significant features that ICCF can't match.
BIMSPOOL — Prints output in POWER/VSE spooling queue on local or remote 3270 terminal printers. (Received ICP Million Dollar Award 1983).
BIMSPOOM — On-Line to Batch Print Spooling. Prints data passed from CICS application programs into the POWER spooling queue.
BIM-PDQ — POWER Dynamic Queuing performance enhancement. Eliminates 80% of the I/O to heavily used POWER queues.
BIM-OCS — Comprehensive problem analysis and display of operational CICS system. DOS and OS.
BIMTEXT — Word processing, document composition system. Create formatted documents from free-form input.
BIMWINDOW — Multiple terminal sessions concurrently at CRT under DOS or OS VTAM.
BIMSWAP — Switch local 3270 BTAM terminals between multiple CICS partitions without special hardware or additional ports.
BIMCMPRS — CICS 3270 data compression system. Reduces response time for remote terminals significantly. Available for OS/VS1 and MVS also.
BIMECHO — Copies one CRT's output to another or printer for problem determination and demonstration.
BIMPRTS — Comprehensive CRT screen image print facility. Copy to terminal printers or spool queue for system printer.
BIMDIRV — On-line display of library directories and entries, VSAM Catalog entries, disk VTOC's, etc.
BIMCNSOL — Multiple/Remote System Console function for CICS. Display-only or full input/display versions available.
BIMMONTR — DOS/VSE System Status, Performance Measurement, and POWER Queue display.
BIMSUBMIT — On-line Job Edit and Submission facility.
BIM programs are cost-efficient, many less than $[illegible], highest $[illegible]. You can save even more with our group package offerings. Products are available on permanent, annual, or monthly license, and shipped on a 30-day free trial basis. Product documentation is available on request.
BIM also performs systems programming consulting, with consultants based in Minneapolis and Washington, D.C. Computer time services are also available on our 4381-2 system, on-site or remote.

Do you still think automatic configuration management is "pie in the sky"?

Think again.
It's here. Now. Proven.
Deliverable today!
With Softool's Change and Configuration Control (CCC™) tool, you will be in charge.
CCC Automates
• management of changes and configurations • control over who makes what type of changes and where • tracking of trouble reports • reconstruction of previous versions • document control • management reports • archiving • and, much more.
CCC is Interactive And Friendly.
It supports all programming languages, and comes with on-line tutorials.
CCC is a Proven Product.
Over 1,000 Softool products are installed worldwide. CCC is supported on the Apollo, DEC VAX,
DG MV, Gould S.E.L., Honeywell 6000 series (Level 66, DPS 8/88), HP 3000, IBM 370, 30XX & 43XX, and Sun computers.
CCC is the Solution for the 80's.
It resolves the most important problem facing the software industry today: configuration management. CCC offers true configuration control...where all components of a given release can be managed as a unit.
There is More.
CCC is a stand-alone component of Softool. An Integrated Programming Environment (PE™) is also available.
Call today for more details or a hands-on demonstration.

DEC, Wang top extensive list of NCC no-shows

By Peter Bartolik
CW Staff

CHICAGO — The National Computer Conference (NCC) has long been considered a hardware show, but some equipment vendors who showed up last year will not exhibit this year. Some have found better ways to spend their money, and some are faced with the need to cut costs as a result of adverse sales conditions.

Included in the list of no-shows are Apple Computer, Inc. and Wang Laboratories, Inc., both mired in consolidation efforts as a result of abrupt financial downturns. Digital Equipment Corp. also pulled out of the show at a late date.

Apple has pulled out of several shows in the past few months, most recently canceling an exhibit at Info last month, just seven days before it opened, and yanking a session speaker at the same show with just two days' notice. That came a week before the company announced it was laying off 21% of its work force.

Wang is in similar straits, recently announcing the layoff of 1,600 workers and pledging to cut expenses across the board. A Wang spokesman, however, said the company this year has found it more advantageous to exhibit at more targeted trade shows where it can more readily identify potential customers.

DEC spokesman Richard Berube also said his company has found it more advantageous to exhibit at more focused shows, particularly the company-sponsored DECworld, where customers may spend one or two days immersed in DEC products and seminars.

"We're looking hard at where we spend our resources," Berube said.

Targeting more focused shows

The desire to focus on more finely tuned shows was cited by several vendors as the reason for passing up this year's NCC.

Tandem Computers, Inc. spokeswoman Gina Burr said, "We find we get much better attendance at a number of other vertical industry shows."

Mike Cox, a spokesman for Gould, Inc.'s Computer Divisions, said, "We just feel that the show is way too broadly focused for the industries we're in."

Texas Instruments, Inc., which has been suffering in the depths of the semiconductor sales depression and has implemented two rounds of layoffs in less than a year, will not send its data systems group to NCC this year.

Ted Jernigen, spokesman for the group, said the company is not cutting back exhibits across the board, but, instead, seeking more targeted opportunities. "We're participating in more than 100 vertical market trade shows this year that reflect the targets of all of our programs," he said.

Canaan Computer Corp., which last year used NCC to launch a new product, this year has decided there are ways to get a bigger bang for the buck. Spokeswoman Sheree Parke said, "We have been doing a lot of media advertising, and that seems to be pulling in a lot more in terms of exposure and the quality of leads. We decided to take the money set aside for NCC and pump it back into the advertising budget."

Memorex Corp. earlier this year announced it was pulling out and would instead drive an exhibit trailer around the country.

Micro-oriented firms

A number of micro-oriented companies that are skipping this year's show, including several that are no longer in business, are operating on a greatly reduced scope compared with that of last year.

Gavilan Computer Corp. filed for bankruptcy two months after last year's show and later filed a liquidation petition with the court.

Fortune Systems Corp. is struggling along under reorganization protection.

Victor Technologies, Inc. fell on hard times and was sold to a Swedish company. And Visicorp lost the marketing rights to Visicalc and was absorbed by Paladin Software Co.

Compaq Computer Corp. is still booming along, yet it also will not repeat last year's show attendance. "It no longer fits our audience profile," according to Compaq spokesman Jeff Stives, who pointed out that Compaq sells through dealers and has no direct end-user sales. Compaq is attending shows that seem most meaningful to its sales efforts, he added.

Among the other micro vendors who attended last year but were not listed on the exhibitor list received last month include Sony Corp. of America, Sord Computer Corp. of America, North Star Computers, Inc., storage device manufacturer Tandon Corp. and Corona Data Systems, Inc.

Approximately 50 vendors from last year's show will not be here this year, according to information available prior to the show. Among the missing are the following: Beehive International, which is undergoing reorganization under Chapter 11 of the Federal Bankruptcy Act; Codex Corp.; Computer Consoles, Inc.; Dataproducts, Inc.; Digital Research, Inc.; Fairchild Camera and Instrument Corp.; NBI, Inc.; Pertec Computer Corp.; and Plexus Computers, Inc.

WHITESMITHS, LTD. 370 COMPILER

NOW YOU CAN RUN BOTH
C AND PASCAL ON IBM MAINFRAMES

FEATURES:

- Full implementation of the C programming language for the IBM 370/43XX/30XX
- Supports full ISO Level 0 Pascal, extended to support separate compilation
- Uses standard IBM tools to facilitate debugging in the standard IBM save area layout
- Compatible with the full range of Whitesmiths' compilers (PDP-11, VAX, 68000, 8080, and 8086)
- Provides optional cross support for MS/PC-DOS, CP/M-86, CP/M68k, and CP/M-80
- Runs under all versions of OS (VM, MVS, SVS, MVT, and MFT)
- Includes unlimited use of libraries in binary form
- Runs interactively under TSO and CMS
- Direct EBCIDIC support

Scientific 'gems' outshine drab hardware

By Tom Henkel
CW Staff

The continuing slump in computer sales and a round of mainframe announcements earlier this year may make it difficult to find many significant hardware announcements to savor at this year's National Computer Conference (NCC).

Vendors of scientific-oriented superminicomputers, which is one of the hot markets in a generally sluggish year, will announce a few gems, however.

Encore Computer Corp. will be showing, but not formally introducing, its Multimax multimicroprocessor mid-range system. Encore will be showing the Multimax as well as its recently introduced Hoststation 100 terminal at the National Semiconductor Corp. booth.

An Encore spokesman said the firm has yet to determine the final price and delivery dates for the National Semi 32032-based system; therefore, it is not making a formal announcement.

According to a spokesman for Pyramid Technologies Corp., it will unveil its answer to Digital Equipment Corp.'s VAX 8600, called the 90X. International Parallel Machines, Inc. will introduce another 8600 contender with what it claims is a parallel processing minicomputer, the IP-1, which is 1,000 times more powerful than DEC's VAX-11/780 in certain applications.

Some announcements early

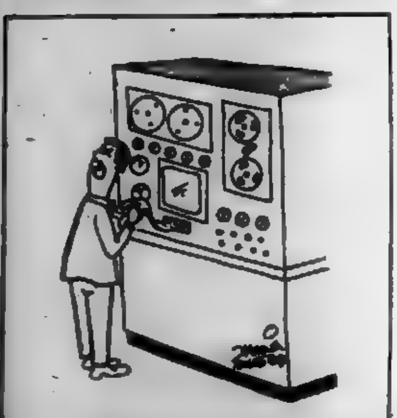
Other companies appear to have chosen to make product announcements just prior to NCC, rather than at the show itself.

NCR Corp., for example, which introduced a version of its Tower supermicrocomputer at last year's show, made a similar announcement again this year — but two weeks before the show.

IBM, which surprised industry watchers two years ago in Anaheim, Calif., with the introduction of its System/36, enhanced the System/36 product line in a voluminous late June product announcement that also included an enhanced Model 18 of the System/38 and six terminals.

New disk drives and tape drives, which in the past two years flowed freely at NCC, will be hard to find this year. The victims of the ongoing microcomputer washout and the overall slow market, relatively few disk and tape manufacturers said they will be showing new products.

Mitsubishi Electronics America, for example, said it would announce three 5¼-in. half-height Winchester drives, and Micro Technology, Inc. will unveil a line of DEC-compatible disk controllers.



"Who programmed the computer to ad-lib?"

Terminals, printers to be unveiled

There will be a fair number of printers and terminals unveiled this year. Chinon America, Inc. will introduce two letter-quality matrix printers, the 80-col. Model 101 24-pin matrix line printer that can print at 25 line/min in a letter-quality mode and 75 line/min in a draft mode.

The company will also introduce the Model 103, an 80-col. serial matrix thermal transfer printer that can operate at 105 char./sec. in a draft mode and 35 char./sec. in a letter-quality mode.

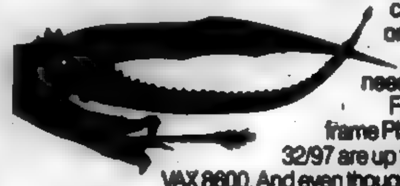
Bell & Howell, Co. will introduce the COM Print 6000, a microfiche printing system that the company claims occupies about half the floorspace of most automated COM systems. Designed for IBM and compatible mainframe environments, the unit uses special operating software resident in host processors. The software, called BH Writer, was developed by IBM under a contract with Bell & Howell.

The usual ample supply of board-level products and power supplies will also be on hand. For example, the Sola unit of General Signal will unveil a 3-kVA uninterruptable power supply that starts at $1,245.

A Barge on the Chicago River

The Firebreathers continue on the cutting edge of high performance computers.

The most powerful line of computer systems made. Gould PowerNodes™ and CONCEPT/32s.® Any way you slice it they beat VAX.™ Not just by a little. By a lot. Whether you're comparing power, price or availability, we've got just the edge you need to ax the VAX.



For starters, our mainframe PN9000 and CONCEPT 32/97 are up to twice as fast as the VAX 8600. And even though the mid-range PN6000 and CONCEPT 32/67 are 30-50% smaller than the VAX 11/780, they're still up to three times more powerful. Which means they'll run your applications faster, much faster, than VAX.

More power for a slice of the price.

Despite their superior power, Gould computers cost quite a bit less than the equivalent DEC computers. Just take a look at the chart on your right.

Our mid-range models cost 40% less than the VAX 11/780. Our mainframes cost about 30% less than the new VAX 8600.

In fact, all Gould computers come with a price that won't come to blows with your budget. The bottom line is more power for less money. You don't need a computer to figure out what an advantage that is.

Operating environments that are a cut above the rest.

There's also a choice of system software to consider. Gould offers a unique implementation of the UNIX* operating system – UTX/32.™ It's the first system to combine the UNIX standards of System V with Berkeley BSD 4.2. Which also makes it the only system that allows you to access virtually

Only Gould computers have a big enough edge to ax the VAX.

NCC Preview

Local net vendors to outnumber old guard at NCC

By [illegible]
CW Staff

CHICAGO — By rough count, local-area network vendors will outnumber any other group of communications-oriented companies at this year's National Computer Conference (NCC).

Local-area net vendors coming to the Windy City to hawk their wares include 3M Corp.; 3Com Corp.; Nestar Systems, Inc.; Network Systems Corp.; Bridge Communications, Inc.; and Interlan, Inc.

There will not be a repeat of last year's show-stealing demonstration of General Motors Corp.'s Manufacturing Automation Protocol (MAP), which intended to show how products from 15 vendors could communicate over a token-passing bus local network using international standard protocols.

> ”
>
> *Only a smattering of manufacturers of modems, multiplexers, protocol converters and PBXs will attend the show. Interestingly, vendors of matrix switches, network management and control systems and data switches will be few and far between, if any show up at all.*

The demonstration has been moved to a factory automation conference later in the year. Users can catch up on some of the latest MAP developments at the Interactive Systems/3M booth.

This company will demonstrate its recently announced LAN/II, a 10M bit/sec. net that conforms to Release 2.1 of MAP. The Interactive Systems/3M network reportedly supports multiple-rate synchronous and asynchronous data links and meets both the IEEE 802.3 baseband and 802.4 broadband network standards.

Only a smattering of manufacturers of modems, multiplexers, protocol converters and private branch exchanges will attend the show. Interestingly, vendors of matrix switches, network management and control systems and data switches will be few and far between, if any show up at all.

Communications service providers will be conspicuous in their absence. AT&T Communications will have a booth, but its two closest competitors — MCI Communications Corp. and GTE Sprint Communications Corp. — will not. Nor, for that matter, will most of the major data communications network carriers, including GTE Telenet Communications Corp., Tymnet, Inc. and Uninet, Inc.

None of the divested Bell operating companies will participate in the event, although one company, Ameritech, the local telephone holding company in Chicago, will sell a mobile telephone service at its booth.

Paradoxically, while many data communications vendors will sit out this information systems show, the three largest manufacturers of voice systems will be represented. This reflects the PBX vendors' increased marketing efforts to sell the switches as hubs for office automation and data communications tasks.

AT&T Information Systems will display its recently announced Premises Distribution System (PDS), a building wiring scheme for voice/data systems. The company will also show how PDS can be used in conjunction with its mainstream local-area network product, the Information Systems Network, and System 85 and System 75 PBXs to support IBM 3270-type peripherals.

Northern Telecom, Inc. will demonstrate its line of Merridian products, including the DV-1 Data Voice System, a voice/data processing system for branch and small offices; and the SL-1 Merridian, a version of Northern Telecom's main voice switch that has been upgraded to handle more data. Both products reportedly provide digital voice/data integration over a twisted-pair wire link operating at 2.56M bit/sec.

Rolm Corp. does not have a booth of its own, but expect to see it represented in IBM's booth. The companies will display how IBM and Rolm products can coexist and how Rolm's PBX can be used to interconnect IBM devices. IBM is also expected to show products that were announced in June, including models of the System/38, System/36 PC, 3270 Personal Computer AT and a couple of graphics versions of the 3270 Personal Computer AT.

The sparsely represented, old-guard data communications vendors include Codex Corp., which will be displaying in the booth of parent company Motorola, Inc., and Timeplex Inc. Both companies will show T1 and other multiplexer products.

Many of the vendors in data communications markets reported that they are passing up NCC for communications-oriented trade shows.

MODEL	[illegible]	[illegible]
VAX [illegible]	[illegible]	7.6
PowerNode [illegible]	[illegible]	11.7
CONCEPT [illegible]	[illegible]	11.7
VAX 11/780	[illegible]	4.0
PowerNode [illegible]	140	12.1
CONCEPT [illegible]	140	12.1

any command you want whenever you want.

Or if your application demands a real-time environment, Gould's MPX/32™ operating system offers performance that's unmatched in the industry. And that puts Gould far above the rest.

Delivery that's right on the mark.

Unlike the VAX 8600, that has up to a 12 month wait for delivery, when you order either a Gould PowerNode or a CONCEPT/32 system they will be shipped within 90 days ARO. And that's a schedule we'll go to any length to meet. Because we know how annoying it can be to wait months, and years, for something you've just agreed to pay a healthy sum of money for. Especially when the only thing you can do while waiting is watch your work pile up.

You can also be sure with Gould you're getting a computer that's backed by years of experience. It's the kind of experience we used to develop the first 32-bit real-time computer. The kind of experience that has the competition running to keep up.

If you need more information or just have a few questions, give us a call at 1-800-327-9716.

See for yourself why VAX no longer cuts it. Go with a Gould computer and ax the VAX.

CONCEPT/32 is a registered trademark and PowerNode, UTX/32 & MPX/32 are trademarks of Gould Inc. VAX is a trademark of Digital Equipment Corp. UNIX is a trademark of AT&T Bell Labs.

Major micro vendors to skip NCC; few debuts expected

By Eric Bender
CW Staff

Important microcomputer product announcements rarely occur at trade shows these days, and this year's National Computer Conference (NCC) is expected to see relatively few significant introductions.

Most of the major players in the personal computer industry (such as Apple Computer, Inc. and Compaq Computer Corp. on the systems side and Lotus Development Corp., Microsoft Corp. and Ashton-Tate on the software side) have decided to skip this year's NCC.

There's one big exception to this trend. IBM is expected to show the Personal Computer AT, announced the month after NCC '84, and a host of other members of the Personal Computer family, including the 3270 Personal Computer AT series, which debuted last month (CW, June 24). Related products, including the System/36 PC, also should be on display.

Televideo Systems, Inc. and Zenith Data Systems Corp. are among a handful of exhibitors planning to show Personal Computer AT-compatible systems. Other suppliers, such as Quadram Corp. and Tecmar, Inc., will highlight add-on products for the Personal Computer AT, ranging from tape backup systems to memory expansion boards.

NCC '85 also should see several debuts of laptop and portable computers, including the PC-7000 from Sharp Electronics, Inc., an upgraded model of Sharp's PC-5000 with a 25-line display.

Among supermicrocomputers on display will be the Universe 32 from Charles River Data Systems, Inc., a Versabus design said to be the first Motorola, Inc. 68020-based system to incorporate open architecture features.

Other multiuser systems based on the Intel Corp. 80286 microprocessor will be unveiled, including a version of the Compupro 286 system, built around an 8-MHz 80286 chip, from Viasyn, Inc.

Local-area network products from vendors such as Corvus Systems, Inc. and Nestar Systems, Inc. also will be much in evidence. Several software vendors like Samna Corp. will demonstrate personal computer applications tailored for network use.

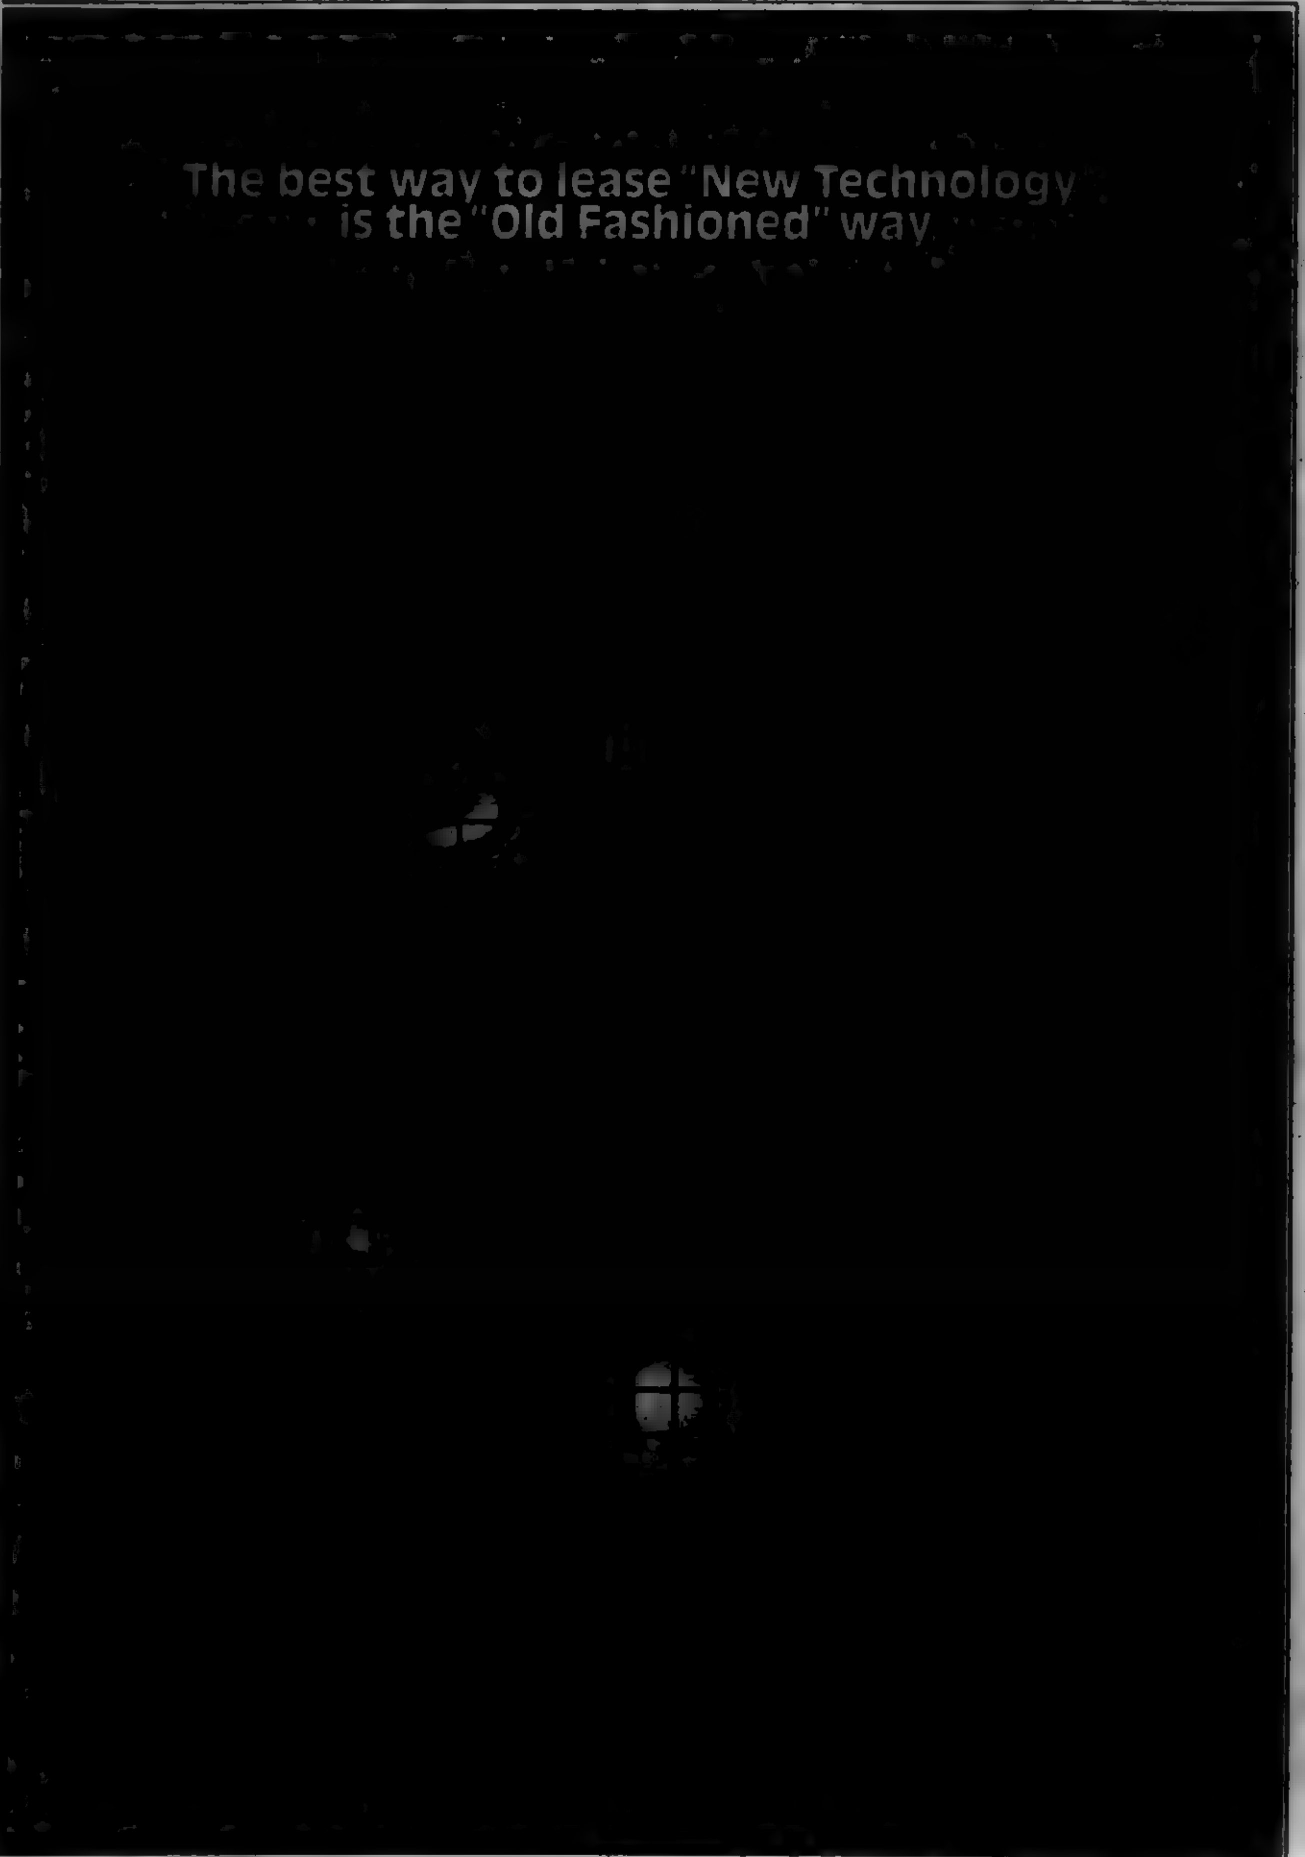
> **"**
>
> *Most of the major players in the personal computer industry have decided to skip this year's NCC.*

Also in communications offerings, NCC '85 should highlight ongoing moves toward tighter micro-to-minicomputer links, with an emphasis on products connecting personal computers with the IBM System/34, 36 and 38 series.

In other examples of the trend to connect personal computers with many other computer systems, several vendors of microcomputer applications software will emphasize their intentions to provide document interchange facilities, and Multimate International Corp. will discuss plans to move its word processing software onto the System/36 and other minicomputers.

The show also will provide an opportunity to examine much of the recent crop of microcomputer programming and applications-generation software, with products such as Micro Focus, Inc.'s VS Cobol on display.

As always, peripheral products will be out on the show floor in bewildering numbers and variations. Among these, NCC '85 should spotlight the continual improvements in price/performance for small hard disk drives. Additionally, a few optical disk drives that may be used with microcomputers will be present, early signs of a flood of optical storage products expected in the next year.



The best way to lease "New Technology"
is the "Old Fashioned" way.

System helps meat packer trim waste, beef up yield

By [illegible]
CW Staff

CHICAGO — In his poem characterizing this Midwestern city, poet Carl Sandburg labeled Chicago "hog butcher for the world."

But the days of the sprawling stockyards on Chicago's South Side have long since disappeared. High transportation costs forced slaughterhouses to abandon their operations in favor of locations closer to rural production areas. Today, the wooden corrals of the Chicago stockyards stand on vacant lots.

Few meat-packing and meat-processing companies remain in Sandburg's "city of the big shoulders." One that does is the Rose Packing Co., which counts on technology as a means of survival.

The food-processing industry operates on a slim profit margin of 2% or less, which requires companies to come up with innovative processes to reduce product waste, according to Jerry Murray, Rose Packing's MIS director.

Murray said Rose Packing is the world's largest processor of Canadian bacon. The $100 million company also processes ham, sausage and bacon, supplying pork products to companies like McDonald's Corp. for packaging under private labels. Throughout this process, technology plays a key role, Murray said.

Between its Chicago plant and its Barrington, Ill., headquarters 40 miles west of here, Rose Packing uses an IBM 4331 mainframe, a System/38 and a group of IBM Personal Computer XTs and ATs for gathering data for product yield control, Murray said.

When slaughtered pork is delivered to the processing plant, information about the product type is input to the Barrington mainframe via personal computers. Data is then transmitted to the corporate office via leased lines. Proprietary software programs help Rose Packing workers determine the best use of the product and determine how to maximize yield levels, he said. "We want to get as much out the front door as came in the back door," he said.

Technology also helps the meat-packing house with its adherence to federal government regulations. The U.S. Food and Drug Administration has stringent requirements pertaining to food classifications, including restrictions on the amount of fat that can legally be allowed in particular products, Murray noted. Laboratories at the Chicago plant use personal computers to help determine quality-control levels. This involves monitoring the meat's moisture and fat content and the smoking process. The laboratory computers are also used to compose spice and flavor formulas, he said. "It's not too difficult to enhance yield and lower quality, but what we're trying to do is enhance yield and increase quality."

To protect profit margins further, personal computers at the Rose Packing plant are used to formulate ways to reduce packaging expenses, Murray said. Just as a manufacturing department uses a materials planning and control division, Rose Packing uses the older IBM 5110 and 5120 systems and proprietary software to determine the best method of deboning the pork prior to processing.

Aside from its manufacturing applications, Rose Packing uses an array of business applications to keep a careful eye on its profit margins. "We have to close the books every seven days," he said.

With an MIS department of only six doing all the programming, development and systems operations for the Rose Packing plant, there is more than enough work to keep Murray and his staff busy. "This place spins like a top," he said.

Chicago exchange's systems keep pace with trading

By Mitch Betts
CW Washington Bureau

Down in the crowded trading pit of the Chicago Mercantile Exchange, arms are flailing and voices are shouting in a language of "buy and sell." This high-energy, fast-paced form of bedlam goes on from 7:30 a.m. to 3:15 p.m. each business day.

It results in an average 186,000 futures contracts being sold daily for a host of items, from pork bellies to foreign currencies. (A futures contract is an agreement to buy or sell something in the future at a price agreed upon today; the pork bellies almost never change hands.)

According to Vince Ambrose, a broker at the exchange for Heinold Commodities, Inc. of Chicago, millions of dollars can ride on a single transaction, and seconds count. Traders need quick access to price information, he said.

"The transmission needs to be almost instantaneous," Ambrose said. "And it is pretty good, pretty fast." Traders and brokers at the exchange can see the price data in a variety of ways: on the digital displays on the big board, on the 300 terminals on the trading floor, on the closed-circuit television system or from quotation vendors.

To keep up with the trading action, the exchange uses three IBM 4341-12 mainframes and nine Series/1 minicomputers, according to Don Serpico, the exchange's MIS vice-president.

"We have people in the pits who listen to the trading," Serpico explained. "They talk on walkie-talkies up to a balcony. And on the balcony we have about 80 terminals, where people [can key in the data] to the Series/1s." He said the Series/1s send their output to the big boards and the various localized video displays.

The 4341-12s are used by the exchange for administration and clearinghouse functions. After trading ends, the exchange's data (from the Series/1s) and data from the brokerage houses are transmitted to the 4341-12s to be reconciled, and the data base is updated.

Serpico said the floor terminals feature a system called Merc Quote, which enables traders to make queries of the trading system, such as "What were the prices from 9 a.m. to 9:30 a.m. today?"

The closed-circuit television system, with 28 stations, permits brokers in the exchange's 40-story office building to get trading information without having to be on the trading floor or buy expensive equipment, Serpico said.

"They can buy a black-and-white television, turn to a certain channel and see cattle prices," he said.

Serpico said his MIS staff of 91 is facing some major challenges, with a full plate of new projects. High on the list is a two-year project to migrate from the Series/1s to Tandem Computer, Inc. fault-tolerant units.

"We needed equipment for our very critical trading floor system that has to be up at all times," he explained. "Tandem offers a fault-tolerant concept that we felt was the best fit for us."

The exchange moved into its new building at 30 S. Wacker Drive just 18 months ago after outgrowing its 10-year home at 444 W. Jackson Blvd.

NCC telephone preregistration aims at reducing lines

CHICAGO — National Computer Conference (NCC) registration is just a phone call away in 1985.

The latest effort of the American Federation of Information Processing Societies, Inc. (Afips) to reduce the long lines that traditionally mark the beginning of NCC is to offer registration by telephone with a major credit card.

Prior to July 11, the number to call is toll-free, 1-800-NCC-1985, an Afips spokesman said. From July 9-13, from the hours of 9 a.m. to 8 p.m., conference-goers can register by calling 312-567-8000.

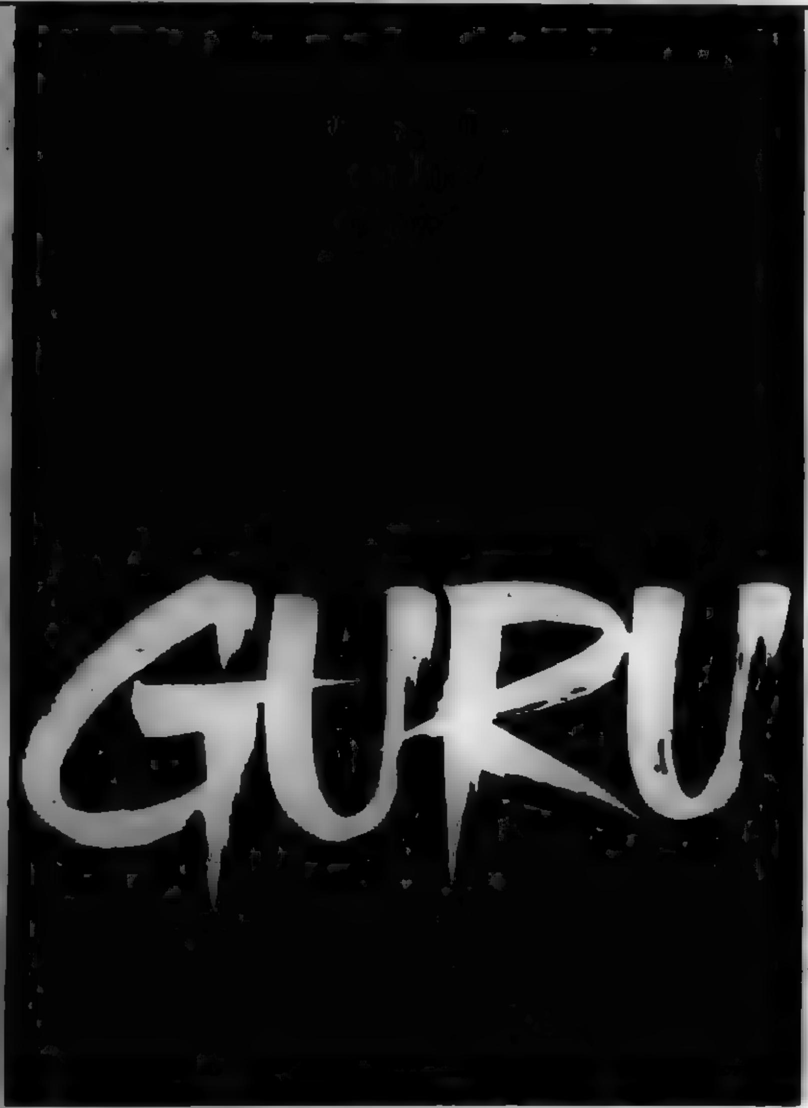
At the conference, early registration is offered on Sunday, July 14, from 10 a.m. to 8 p.m. From July 15-17, registration hours are from 7:30 a.m. to 6 p.m.; on July 18, registration is from 7:30 a.m. to 3 p.m. Those registering for Professional Development Seminars can make one stop for both conference and seminar registration, at Level 7 of McCormick Place or the McCormick Center Inn during registration hours.

A party for early-bird registrants is planned at Sauer's Restaurant, 311 E. 23rd St., from 2 p.m. to 6 p.m. on Sunday, July 14. Admission is with a conference badge.

While Afips is predicting a strong turnout of 80,000 at this year's conference, the spokesman said early registration has been heavy. Early registrants are sent through separate lines to pick up their conference materials and preprepared badges.

Color-coded signs will guide attendees to proper registration lines. Blue signs point to on-site registration; red signs point to exhibitor and guest registration; and grey signs are for those registered in advance.

The advance registration fee is $125; on-site registration costs $150.



Reach over 5,000 computer professionals in Venezuela.

Advertise in *Computerworld Venezuela* and sell your products directly to Venezuela's thriving computer community. According to International Data Corporation (IDC), the world's leading information industry research firm, Venezuela is the third largest computer market in Latin America. And, annual EDP expenditures in Venezuela are approximately $1 billion (U.S.).

Your ad in *Computerworld Venezuela* reaches 5,000 MIS/DP computer professionals throughout Venezuela, including MIS managers, DP staff and computer equipment suppliers. Published every other Monday, *Computerworld Venezuela* reports on the latest developments in hardware, software, terminals and supply products.

CW International Marketing Services makes advertising your products in Venezuela, and around the world, easy. We have over 50 publications in more than 25 countries. COMPAQ doesn't make compromises. That's why we're still making history.

COMPAQ®

ing the m

No other computer company has ever grown as fast as COMPAQ, because no computer company makes computers as powerful, as complete and as useful as COMPAQ. That's why the original COMPAQ Portable, COMPAQ PLUS,™ and COMPAQ DESKPRO™ became worldwide best sellers overnight. Now COMPAQ is introducing two new computers that advance the state of the art even further. While the original COMPAQ products remain cost-efficient cornerstones of business and professional use, especially for first-time buyers, the new products represent the utmost in performance for second-time buyers, or anyone who needs exceptional power and speed.

Triumphs of advanced technology

The new COMPAQ PORTABLE 286™ and COMPAQ DESKPRO 286.™ Advanced technology puts them in a class all their own. With power, performance, speed, and expandability that exceed even the IBM® Personal Computer-AT.™ They represent a new standard that makes others look like what they are—the products of compromise. In fact, the new COMPAQ 286 Personal Computers can be considered the most useful in the world.

The new 80286 "chip" in COMPAQ 286 Computers processes data faster.

Power with a bonus—portability

The COMPAQ PORTABLE 286 redefines portable computers. We gave it power to match IBM's most powerful desktop computer, the IBM PC-AT. Then we designed it to run all the popular programs and hardware designed for the IBM PC-AT. But we didn't stop there. COMPAQ pushed the technology further.

The COMPAQ PORTABLE 286 runs 30% *faster*. It can give you up to 20 Megabytes of internal fixed disk drive storage. And can come with features to make it even more useful. Like our *internal* fixed disk drive back-up system that protects 10 Megabytes of information on a single, pocket-sized tape cartridge.

But the most amazing thing about the COMPAQ PORTABLE 286 is that all these features come attached to a handle.

Our most advanced desktop computer

Like the COMPAQ PORTABLE 286, the new COMPAQ DESKPRO 286 runs all the popular programs designed for the IBM PC-AT, 30% *faster*. And it can also come with our convenient *internal* fixed disk drive back-up system for added data protection.

But we didn't stop there. We weren't content to compromise. We wanted to make the new COMPAQ DESKPRO 286 a more powerful, more efficient stand-alone personal

personal computers in the world.

computer, as well as a faster, more powerful, more useful file server. So we gave the COMPAQ DESKPRO 286 far more memory and storage capacity—over 8 Megabytes of RAM and 70 Megabytes of high-performance fixed disk storage.

The legends continue

Not everyone will need the extra performance of the newest COMPAQ Computers. That's why we built our original line to last a long time.

These workhorses—the COMPAQ Portable, COMPAQ PLUS and COMPAQ DESKPRO Computers—are essential to many professional and business users. They run thousands of industry-standard programs developed for the IBM PC and PC/*XT*.™ They're indispensable tools in use on all seven continents (yes, even the South Pole!).

Above all, no compromises

The unprecedented success of COMPAQ came as no accident. While others built limited computers, COMPAQ built expandable computers.

While others took two screens to display high-resolution text and graphics, COMPAQ was the first to do it on one.

While others were looking for ways to cut corners, COMPAQ looked for ways to eliminate downtime by building the most rugged, reliable computers in the world.

The COMPAQ commitment to a philosophy of "no compromise" made the COMPAQ Portable and COMPAQ PLUS the world's best-selling 16-bit portable personal computers. In 1983 COMPAQ sold $111 million worth of computers to achieve the most successful first-year sales of *any* company in American business history.

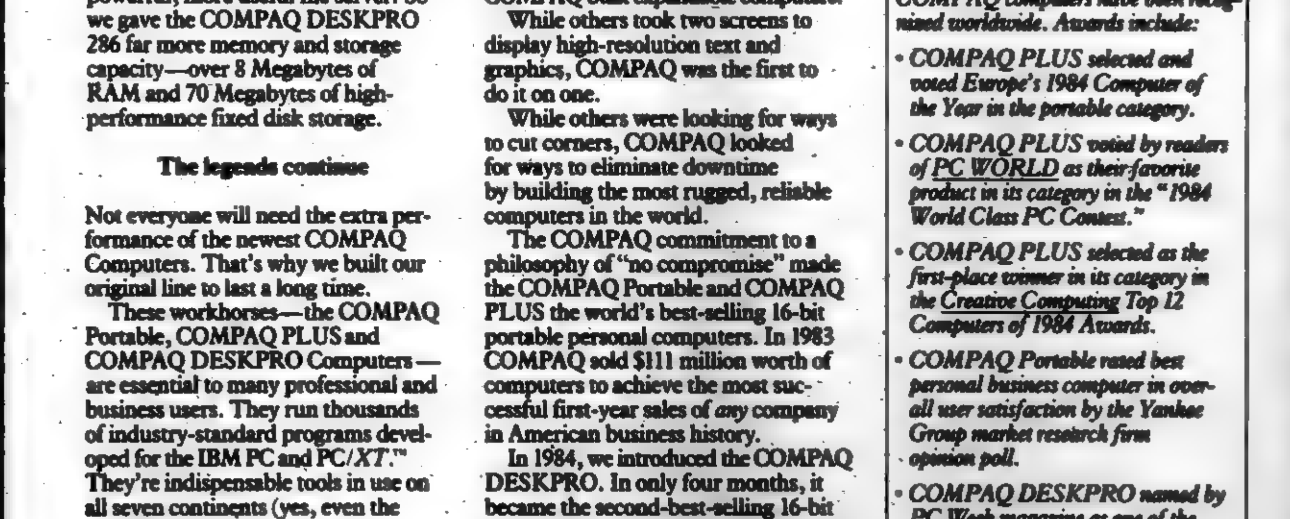
In 1984, we introduced the COMPAQ DESKPRO. In only four months, it became the second-best-selling 16-bit desktop business system in U.S. retail computer stores. And as a result, we've concluded the most successful second year of any computer company, with sales of $329 million.

The reason for this success is simple.

COMPAQ computers have been recognized worldwide. Awards include:

- *COMPAQ PLUS selected and voted Europe's 1984 Computer of the Year in the portable category.*
- *COMPAQ PLUS voted by readers of PC WORLD as their favorite product in its category in the "1984 World Class PC Contest."*
- *COMPAQ PLUS selected as the first-place winner in its category in the Creative Computing Top 12 Computers of 1984 Awards.*
- *COMPAQ Portable rated best personal business computer in overall user satisfaction by the Yankee Group market research firm opinion poll.*
- *COMPAQ DESKPRO named by PC Week magazine as one of the top ten products of 1984.*

We offer people personal computers that simply work better. And make no compromises doing so.



Introducing the new COMPAQ PORTABLE
computer helps you

Anyone can make a portable computer. But to make one that runs all the popular programs designed for the IBM PC-AT, 30% faster—in a package almost half the size—was no small challenge. But one COMPAQ welcomed.

Go faster, go further

The COMPAQ PORTABLE 286 is paced by the advanced technology of the 8-MHz, Intel 80286 microprocessor. This advanced technology has numerous advantages. One advantage is the flexibility to work with several different operating systems so you're not forced to choose a personal computer solely on that basis.

The advanced capabilities of this microprocessor become even more apparent when you run complex programs. You can operate as part of a network. Or you can operate more than one program at the same time using multi-tasking software like IBM TopView.™ And you can handle the most difficult problems with breathtaking speed.

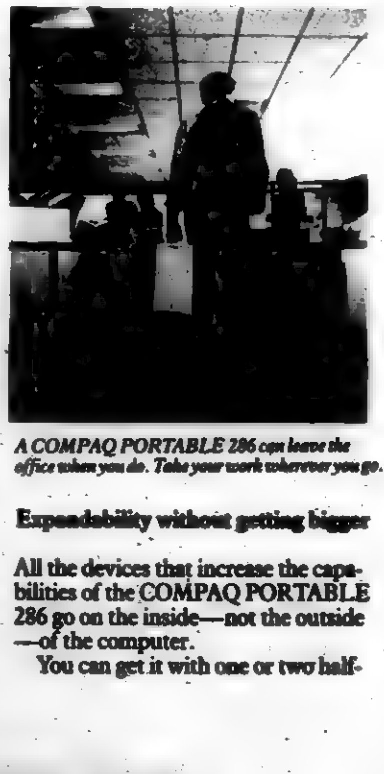
For many scientific and engineering programs you have the ability to add an 80287 coprocessor, which offers even more speed.

Both offer dramatic speed increases over earlier microprocessors. The faster response time means less waiting, and more productivity.

Power in a package

The COMPAQ PORTABLE 286 has the power of the IBM PC-AT. But the IBM PC-AT doesn't have a handle. Ours does. So it goes where you go. Works where you work. Whenever and wherever necessary. And it's easy to share with co-workers.

That's full-function portability, pure and simple.



A COMPAQ PORTABLE 286 can leave the office when you do. Take your work wherever you go.

Expandability without getting bigger

All the devices that increase the capabilities of the COMPAQ PORTABLE 286 go on the inside—not the outside—of the computer.

You can get it with one or two half-

286. Our fastest, most powerful portable
do more – anywhere.

height 1.2-Megabyte diskette drives. Although they can "read" diskettes formatted for 360-K byte diskette drives, they cannot "write" to them. Therefore, as an option, COMPAQ offers a 360-K byte diskette drive to let you exchange data with other industry-standard personal computers.

There's an additional slot for a 20-Megabyte fixed disk drive. All COMPAQ Portable Computers offer fixed disk drive systems that fit *inside* the computer.

Another of our options: An *internal* fixed disk drive back-up system keeps a safety copy of your work, reducing the chance of losing your data. COMPAQ pioneered the system first in desktop computers, and now in portables.

The COMPAQ PORTABLE 286 even comes with a security lock feature that locks "on" to prevent interruption of a file transfer, or "off" to deny access to confidential information.

Because it's a portable, self-contained unit, the computer can be easily stored away after use.

Two data protection features from COMPAQ: an internal fixed disk back-up system that stores data on tape cartridges, and a security lock for locking keyboard access to your system on or off.

Who can use it?

If you're an experienced user, you may be ready to upgrade your current equipment. The COMPAQ PORTABLE 286 gives you the latest technology.

For some, power is all-important: Speed, performance, and the ability to handle the most powerful software. All are leading qualities of the COMPAQ PORTABLE 286.

Starting a business? The COMPAQ PORTABLE 286 has tremendous data base capabilities to help you keep track of your inventory, your customers, your employees, your finances. Its exceptional storage capabilities make it ideal for the complexities of accounting. Its exceptional speed means greater networking ability. Its tremendous power enables you to get the edge on the competition.

In addition, large corporations can place several of these computers with field representatives to provide clients immediate information on current prices, product availability, even shipping dates and routing. So delivery shortages can be anticipated and avoided.

The COMPAQ PORTABLE 286 can also travel within the company. From office to office. Desk to desk. From accounting, to marketing, to research.

It's powerful and versatile enough to do almost any job. Light enough to carry. And tough enough to survive lots of users.

Established reliability

Despite its newness, the COMPAQ PORTABLE 286 is in many respects a proven product. It's based on the rugged, reliable design of the original COMPAQ Portable and COMPAQ PLUS. Many of the construction techniques like cross-bracing components and shock-mounting disk drives are identical. All of which goes to prove our point: No other portable computer can measure up to the advanced power and potential of the uncompromising COMPAQ PORTABLE 286.

The COMPAQ PORTABLE 286
Specifications

Processor: 16-bit 80286; 6 or 8 MHz clock speed. **Software:** Fully compatible with all major software applications written for the IBM PC-AT. **Expansion Slots:** 3 available slots in base configuration. **Memory:** 256-K bytes RAM, expandable to 2.6 Megabytes. **Storage Devices:** 360-K byte or 1.2-Megabyte diskette drives, 20-Megabyte fixed disk drive, fixed disk drive back-up (10 Megabytes per tape). **Interfaces:** RGB color monitor, RF modulator, composite video, parallel printer, and asynchronous communications interfaces. **Keyboard:** Standard IBM PC-AT layout (84-key). **Display:** 9-inch diagonal green monochrome dual-mode monitor, high-resolution text characters, high-resolution graphics. **Security:** Locks in operating and non-operating mode to prevent unauthorized keyboard access. **Physical Specifications:** 20"W x 8½"H x 16"D. **Options:** Technical reference guide, MS-DOS™/BASIC Version 3, 512/2048-K byte memory board.

Introducing the new COMPAQ DESKPRO 286.
offers more expansion,

The capabilities of the new COMPAQ DESKPRO 286 represent a personal desktop computer as practical as it is technically advanced. Plus, it maintains compatibility with the IBM PC-AT.

Utmost expandability

That's no exaggeration. The COMPAQ DESKPRO 286 can expand to give you massive storage and memory.

Without clutter. Expansion is *internal*.

It comes with a single, half-height, 1.2-Megabyte diskette drive You can add a second drive of the same capacity, or a 360-K byte diskette drive so you can exchange information with other personal computers.

For fixed disk storage, an internal 20-Megabyte system is available. You can also choose a 30- or 70-Megabyte high-performance internal fixed disk drive sytem. The storage capacity of each is equivalent to 10,240, 15,360, or 35,840 pages of double-spaced data.

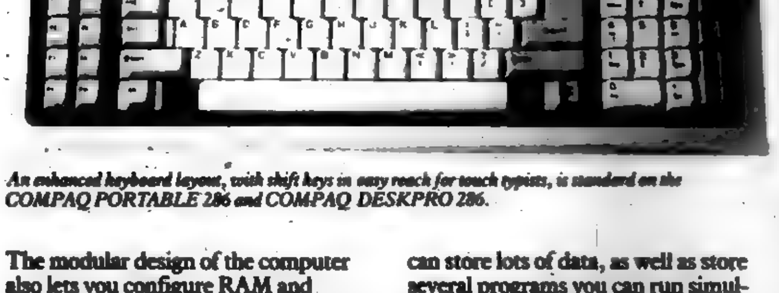
One expansion board works with all the fixed disk drives. When you upgrade to a larger fixed disk storage system, a new board is not required.

To back up data, use the COMPAQ internal fixed disk drive back-up system. It's also a safe and convenient way to store information for record keeping.

Hardworking, networking

Alone, the COMPAQ DESKPRO 286 is a tremendously useful computer. It doesn't limit you to using software under any one operating system. It runs all the popular programs designed for the IBM PC-AT. It can be configured for advanced color graphics display using a color monitor and the IBM Enhanced Graphics Adapter

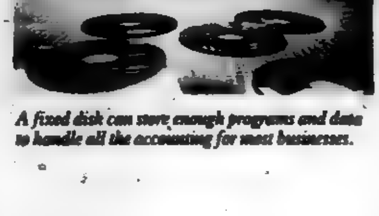
Our most powerful desktop personal computer
more speed and more flexibility.



An enhanced keyboard layout, with shift keys in easy reach for touch typists, is standard on the COMPAQ PORTABLE 286 and COMPAQ DESKPRO 286.

The modular design of the computer also lets you configure RAM and storage to the exact needs of any individual. So you never have to buy more computer than you need. Or worry about obsoleting your investment because you bought less computer than you need.

The COMPAQ DESKPRO 286 also makes the ideal hub of a local area network. Using networking packages, your computers (and your people) can share information and software, and can communicate with one another. With 70 Megabytes, the COMPAQ DESKPRO 286 becomes a powerful, high-performance file server. You can store lots of data, as well as store several programs you can run simultaneously when using software programs like IBM TopView. Your computer will perform at lightning speeds. And other configurations can make economical "nodes" of the network.



A fixed disk can store enough programs and data to handle all the accounting for most businesses.

Where to start

The flexibility of the COMPAQ DESKPRO 286 allows you to begin at any level of computing power and reach beyond the IBM PC-AT.

You can use your computer for writing extensive documents, preparing professional graphics for presentations, and for doing complicated financial studies. Chances are, however, you'll not want to stop there. You'll discover new ways for streamlining your work. You'll want to do customer lists, accounting tasks and business taxes, product inventory, annual sales projections on spreadsheets. You have the option of adding a second diskette drive, a fixed disk drive, more memory, even a fixed disk drive back-up system. All are available and can be added to the inside of your COMPAQ DESKPRO 286—easily, affordably, without losing your initial investment in hardware, software, or training.

A proven heritage

The COMPAQ DESKPRO 286 is of tested lineage. It has many of the reliable construction and design qualities of the COMPAQ DESKPRO. It has further conveniences like a dual-function security lock to prevent unauthorized access. As well as greater performance, power, and speed. The COMPAQ DESKPRO 286 stretches the limits of personal computing—with no compromises.

The COMPAQ DESKPRO 286
Specifications

Processor: 16-bit 80286; 6 or 8 MHz clock speed. **Software:** Fully compatible with all major software applications written for the IBM PC-AT. **Expansion Slots:** 5 slots available in base configuration. **Memory:** 256-K bytes RAM, expandable to 8.2 Megabytes. **Storage Devices:** 360-K byte or 1.2-Megabyte diskette drives; 20-(half-height), 30-, or 70-Megabyte fixed disk drives; fixed disk drive back-up (10 Megabytes per tape). **Interfaces:** RGB color monitor, RF modulator, composite video, parallel printer, and asynchronous communications interfaces. **Keyboard:** Standard IBM PC-AT layout (84-key). **Display:** 12-inch diagonal green or amber dual-mode monitor, high-resolution text characters, high-resolution graphics. **Security:** Locks in operating and non-operating mode to prevent unauthorized access; cover lock to protect internal components. **Physical Specifications:** System unit—19.8"W x 6.4"H x 16.5"D, Keyboard unit—18.0"W x 1.5"H x 7.0"D, Display unit—14.75"W x 10.25"H x 13.75"D, Weight—57–64 lbs., depending on configuration. **Options:** MS-DOS/BASIC Version 3, Tilt & Swivel Monitor Stand, Desk-Saver, Technical Reference Guide, 512/2048-K byte memory board.

COMPAQ makes full-function portability a full-fledged reality.

If you're anxious to put a computer to work for you, but don't need the extra power and added performance of our most advanced portable computer, we have the answer.

Lots of software, lots of uses

The COMPAQ Portable and COMPAQ PLUS are based on the 8088 microprocessor, one of the most popular computer technologies, so software is abundant. Integrated business programs, personal productivity, learning tools, even educational thoughtware to sharpen your business skills. Literally thousands of programs, compatible with the IBM PC and IBM PC/*XT*, will run on the COMPAQ Portable and COMPAQ PLUS.

Many businesses put the COMPAQ Portable or COMPAQ PLUS to work as a full-time computer for part-time users. Carry it from desk to desk. Office to office. Let several people use it for one or more hours a day. Or one person use it a few days a week.

Many companies use a COMPAQ Portable as a full-time computer for part-time users.

For heavy users, a COMPAQ Portable or COMPAQ PLUS can become a "second computer" for computing power away from the office.

With their rugged, uncompromising construction, they're built tough enough to pass around—something that's impractical to do with desktop computers. And because you stretch its use, you stretch your budget as well.

If you need more, it does more

How can one computer be so versatile?

One reason is the ability of the COMPAQ Portable to become a COMPAQ PLUS with the addition of a 10-Megabyte fixed disk drive. This expands storage capacity to the equivalent of 5,120 double-spaced pages of information.

Expansion boards let you add memory and extra functions inside, not out.

There are other ways to improve on your COMPAQ. Hundreds of industry-standard expansion boards are available. They fit neatly inside your COMPAQ. So you can run more advanced programs. Communicate over telephone lines. Network with other computers.

It's this kind of versatility and ease of use that makes COMPAQ Personal Computers second to none.

SPECIFICATIONS

The COMPAQ Portable

Processor: 16-bit 8088, 4.77 MHz clock speed. **Software:** Fully compatible with all major software applications written for the IBM PC/*XT*. **Storage Devices:** One or two 320-K byte diskette drives. **Expansion Slots:** 3 available slots. **Memory:** 128-K bytes RAM expandable to 640-K bytes. **Display:** 9-inch green diagonal monochrome dual-mode monitor, high-resolution text characters, high-resolution graphics. **Interfaces:** RGB color monitor, RF modulator, composite video, and parallel printer. **Keyboard:** Standard IBM PC layout (83-key). **Physical Specifications:** 20"W x 8½"H x 16"D.

The COMPAQ PLUS

Specifications the same with the exception of: One 360-K byte diskette drive, one 10-Megabyte fixed disk drive, 2 available expansion slots, and full compatibility with all major software applications written for the IBM PC and PC/*XT*.

Lasting value led to instant success for the COMPAQ DESKPRO.

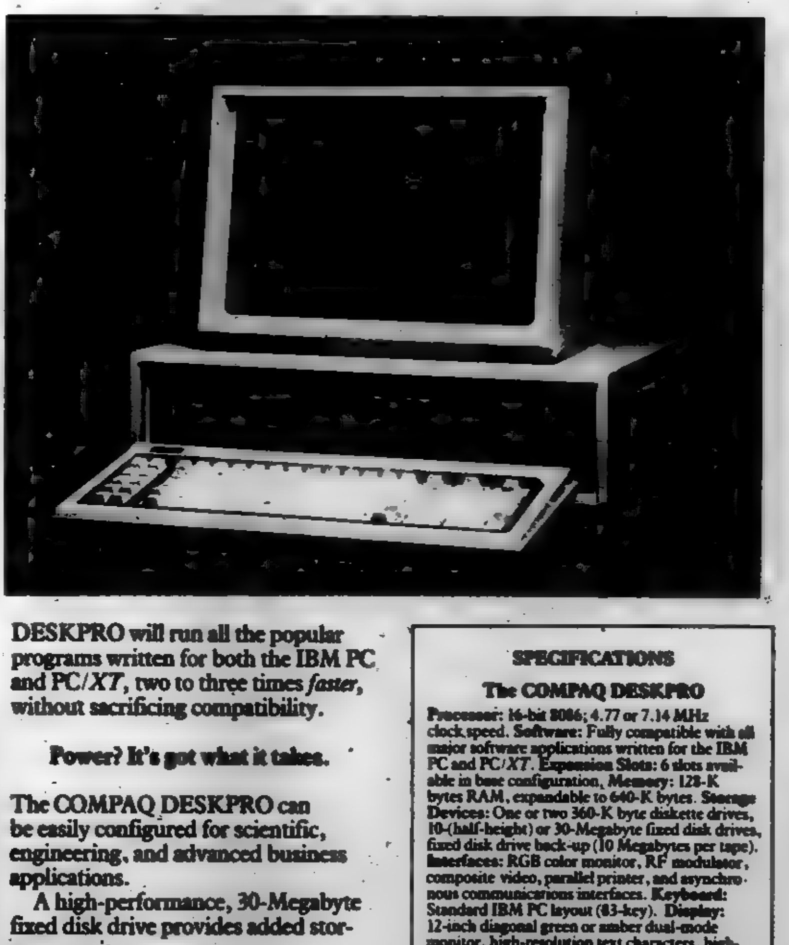
If you don't need all the extra performance of the COMPAQ DESKPRO 286, you can buy the popularly priced COMPAQ DESKPRO and still get many advanced features.

A command performance at every level

The COMPAQ DESKPRO Series allows you to buy as *much* computer as you need—not *more* computer than you need.

It's a polished performer, from entry level to advanced computing, in one totally expandable unit. Its plug-in, modular design accepts up to four separate storage devices. You select almost any combination of diskette or fixed disk drives you desire. And there's the practical, internal fixed disk drive back-up system to protect and store your data. So as your needs grow, the DESKPRO grows.

In fact it will grow from an IBM PC to far beyond the IBM PC/*XT* level of functionality. The COMPAQ DESKPRO will run all the popular programs written for both the IBM PC and PC/*XT*, two to three times *faster*, without sacrificing compatibility.



Internal expandability saves desk space.

Power? It's got what it takes.

The COMPAQ DESKPRO can be easily configured for scientific, engineering, and advanced business applications.

A high-performance, 30-Megabyte fixed disk drive provides added storage capacity.

The ability to add a high-speed 8087-2 coprocessor lets you deal with complex scientific calculations and economic models.

SPECIFICATIONS

The COMPAQ DESKPRO

Processor: 16-bit 8086; 4.77 or 7.14 MHz clock speed. **Software:** Fully compatible with all major software applications written for the IBM PC and PC/*XT*. **Expansion Slots:** 6 slots available in base configuration, **Memory:** 128-K bytes RAM, expandable to 640-K bytes. **Storage Devices:** One or two 360-K byte diskette drives, 10-(half-height) or 30-Megabyte fixed disk drives, fixed disk drive back-up (10 Megabytes per tape). **Interfaces:** RGB color monitor, RF modulator, composite video, parallel printer, and asynchronous communications interfaces. **Keyboard:** Standard IBM PC layout (83-key). **Display:** 12-inch diagonal green or amber dual-mode monitor, high-resolution text characters, high-resolution graphics. **Physical Specifications:** System unit—19.8"W x 5.8"H x 16.5"D, Keyboard unit—18.0"W x 1.5"H x 7.0"D.

Features common to COMPAQ in most other

It's been easy for COMPAQ to recognize the compromises other personal computer makers have been making.

It's been just as easy to avoid them.

That's why performance, expandability, compatibility, durability, and versatility are features you'll find in the entire COMPAQ family of computers.

How advanced technology affects the choice you make

There's an ever-growing library of fast, powerful programs designed for the IBM PC-AT and compatible with the COMPAQ PORTABLE 286 and COMPAQ DESKPRO 286. These programs will utilize the full potential of the computer "nerve center"—the Intel 80286 microprocessor.

If you own a COMPAQ Portable, COMPAQ PLUS, or COMPAQ DESKPRO, you may discover that these newer programs are simply too big to run on your computer.

Therefore you have a choice: the extra power and speed of the 80286 or the popular COMPAQ Personal Computers that use the 8088 and 8086 microprocessors. Remember that the COMPAQ PORTABLE 286 and COMPAQ DESKPRO 286 offer more power, speed and performance than any other personal computer. If your needs don't require the advanced technology, or you need a second computer to complement the one you have now, consider the COMPAQ Portable, COMPAQ PLUS, or COMPAQ DESKPRO. All three are hardware and software compatible with the IBM PC and PC/*XT*. Our intention is to give you a choice without forcing you to invest in more, or less, computing power than you think you need.

Of course, COMPAQ Personal Computers maintain compatibility with the add-on devices and expansion boards available for industry-standard personal computers, without any alteration or modification.

Increased power without increased size

All COMPAQ Personal Computers can take on more memory and storage without taking up more space. The COMPAQ Portable becomes a COMPAQ PLUS when you add a 10-Megabyte fixed disk drive. The COMPAQ PORTABLE 286 can accept a 20-Megabyte fixed disk drive. The fixed disk drive fits neatly beside the diskette drive inside the unit.

Internal add-on devices add greatly to the capabilities of a COMPAQ Computer.

With the COMPAQ DESKPRO and COMPAQ DESKPRO 286, you can install almost any available combination of diskette or fixed disk drives you desire to achieve the level of performance you need. The COMPAQ DESKPRO and COMPAQ DESKPRO 286, along with the COMPAQ PORTABLE 286, can accept the fixed disk drive back-up system as one of the internal storage devices.

There are slots inside each COMPAQ Computer for optional expansion boards. These boards greatly enhance the functionality and versatility of your computer. Literally hundreds are available to plug right in. Each lets you do something different. Like expanding the amount of memory in your computer. Or communicating with other personal computers. Or

[illegible] are features uncommon [illegible] personal computers.

even communicating with mainframe computers.

Built tough to take it

COMPAQ Portable Computers are expected to take some hard knocks. A specially designed shock isolation system protects the diskette drives from jolts and vibration.

Their inner components are surrounded by a cross-braced aluminum frame. Those equipped with fixed disk drives are protected by a triple shock mount system. Plus, the outer case is molded from high-impact plastic, the same kind used to make bulletproof windows and space helmet faceplates. COMPAQ Portable Computers are tough, protecting your data from every angle.

COMPAQ DESKPRO Computers are no pushovers, either. They're surrounded by a protective steel shell.

They're the only desktop computers made with protective shock mounts, isolating the disk drive compartments from those unexpected but inevitable bumps and knocks that can cause downtime.

Even our monitors do more

COMPAQ Computers display data on high-quality monitors. All models can display high-resolution text and graphics on the same screen. The dual-mode display saves you the cost and clutter of a second monitor. COMPAQ DESKPRO Computers give you a choice of an amber or green display.

High-resolution text and graphics on one screen eliminates the need for a second monitor.

From pinstripe suits to flight jumpsuits

The structure and design of COMPAQ Computers best characterize their widespread usefulness and respected capabilities. COMPAQ attentiveness to construction details and concern for functionality under stressful conditions are why these computers have received worldwide acceptance.

That's why you'll find a COMPAQ Computer on the bench of a major league baseball team tracking player performance.

At the South Pole monitoring weather conditions for the research team of a major university.

On tour with famous rock stars to help plan concerts, keep up with the finances, and receive electronic mail.

On motion picture sound stages scheduling production and maintaining equipment inventory.

On military surveillance planes logging information five miles aboveground.

In the halls of the Supreme Court answering complex questions on environmental issues.

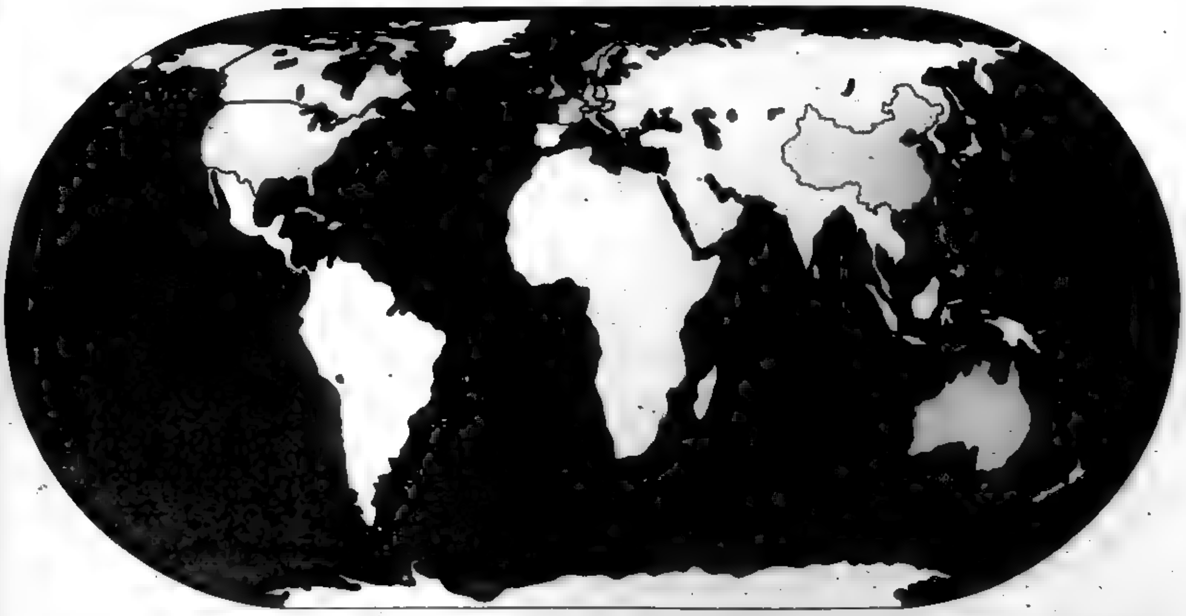
Computers people believe in

It didn't take long for the public to recognize COMPAQ Computer quality. No one builds them the way we do. Which is why no other computer company has grown the way we have.

As personal computers become more and more commonplace, more and more people have come to appreciate that quality. Our commitment to providing a product that's beyond compromise assures a product beyond compare. We like to think of it in a simple phrase that bears repeating: It simply works better.

COMPAQ Portable Computers have the ruggedness and durability for almost any work environment.

The Authorized COMPAQ Computer Dealer Network. For sales and service, there are over 2,200 worldwide.



Authorized COMPAQ Computer Dealers are carefully selected by a special review process. We make sure they are established business professionals with the expertise to provide technical service for every COMPAQ Computer they sell. Dealer technicians receive rigorous training by COMPAQ engineers.

No matter whether you're a professional on the move, or an international corporation with branch offices in dozens of states and countries, you'll find help readily available.

When you purchase your COMPAQ Computer, you'll be buying from the best in the business. Authorized COMPAQ Computer Dealers work hard to earn your respect. Because they had to work even harder to earn ours.

Local network market making steady progress in U.S.

By Kathleen Sullivan
CW West Coast Bureau

Although they have not yet taken U.S. businesses by storm, local-area networks are "going in at a steady rate," said Harvey Freeman, vice-president of engineering at Architecture Technology Corp., a Minneapolis, Minn.-based consulting firm that specializes in networks.

Growth in the local-area network market is continuing, Freeman said, and eventually, networks will be as commonplace as personal computers. But a number of important issues remain to be addressed before they gain widespread acceptance.

Some of those issues will be discussed in seminar sessions in the local-area network track, which Freeman organized. "In choosing topics, I tried to stress practical issues in networks and distributed communications," he said.

"Since this is the 10th anniversary of IBM's announcement on Systems Network Architecture [SNA], I solicited speakers from IBM and from its main competitors, the companies that support the International Standards Organization/Open Systems Interconnect model," he said.

A number of software topics will be covered in the seminars, including the impact of communications software on networks, the arrival of network operating systems and the development of applications software tailored for networks, Freeman said. Networking in the factory will also be discussed.

In addition, a variety of panelists will explore the effect of industry standards on innovation in the market, as well as the practical impact of standards. "Standards are really becoming more important," Freeman noted.

In one session, a group of speakers from IBM will discuss SNA, its history and future direction. In another seminar, panelists will explore the impact of IBM's PC Net on the market.

"We've gotten past the point of talking about baseband, broadband, token-ring and [carrier-sense multiple access with collision detection], to talking about the real issues," Freeman said. Now users are raising questions, he said.

What impact will IBM have on standards in the network market?. What applications programs are available for networks? What are companies trying to do in factory environments? What about individual site locations? What cables will be used?

The impact of fiber optics on local-area networks will be the focus of another session. Freeman said he expects this nascent market to take off in the future. "With IBM and AT&T announcing fiber-optic cables, there will probably be a lot more happening in this market," Freeman said.

In another session, a group of panelists will explore some of the alternative communications systems for IBM personal computers. Presenting different perspectives on the issue will be representatives from a personal computer firm, a local-area network vendor, a vendor of microcomputer-to-mainframe software links and a user.

In the concluding session, panelists will talk about the future direction of networks. Topics to be addressed include the following: network costs vs. user budgets, functionality, network independence, "supernetworks," and gateways and bridges to other networks.

Goode, Afips prizes slated for keynote day

By Charles Babcock
CW New York Bureau

CHICAGO — The Harry Goode Memorial Award and American Federation of Information Processing Societies, Inc. (Afips) Distinguished Service Award will be presented to recipients Monday morning during the National Computer Conference's keynote address.

The awards recognize professional contributions by individuals to the development of the computer industry.

Harry H. Goode was the former chairman of the National Joint Computer Committee and has been described as a moving force behind the early cooperation of professional computer societies. Goode was killed in an automobile accident before the formal chartering of Afips, which created the award in his memory in 1964.

This award is given to an individual each year. Previous recipients have been Kenneth E. Iverson, Herman H. Goldstine, J. Presper Eckert and Grace Murray Hopper. Last year the prize was given to Ralph E. Gomory, director of research at IBM since 1970.

The Afips Distinguished Service Award has been given out seven times.

The award was established in 1970 to recognize outstanding service to the information processing community.

How to advertise in every major computer market in the world as easily as you advertise in the U.S.

CW INTERNATIONAL Marketing Services will help you penetrate the most profitable computer markets worldwide — easily, effectively, and economically.

Your ads will receive the attention they deserve. Our network of more than 55 computer publications in over 25 countries is the largest in existence. Over 9,000,000 computer-involved people around the world rely on our publications for the information they need to stay ahead.

With more than 10 years experience in international marketing, we're the only service of our kind. We can help you make your ads more effective. Our local offices can translate your ads for a 15% surcharge on the space you purchase.

We'll help you increase your market penetration. We're also available to advise you on your campaign strategy — such as when to advertise in order to coincide with special-focus issues and trade shows. And you'll be able to advertise in even more markets when you take advantage of our corporate discounts.

All you need to do is send us your advertising materials. We'll handle all the transactions. And we'll bill you in U.S. dollars so you won't have to worry about exchange rates.

Call Diana La Muraglia today if you want to reach the computer buyers in any of the following countries: Argentina, Australia, Brazil, Canada, Chile, Denmark, Finland, France, Greece, India, Israel, Italy, Japan, Korea, Mexico, Norway, People's Republic of China, Saudi Arabia, South Africa, Southeast Asia, Spain, Sweden, The Netherlands, United Kingdom, Venezuela and West Germany.

You can reach her toll-free at (800) 343-6474. In Massachusetts call (617) 879-0700. Or you can reach her through Telex, at number 95-1153. Or, if you prefer, fill out the coupon below and return it today. Do it now. The sooner we hear from you, the sooner you'll hear from our readers.

Micro track agenda tackles wide spectrum of issues

By Kathleen Sullivan
CW West Coast Bureau

Under the rubric of personal computing, a variety of issues — from the continuing shakeout in the personal computer industry to the use of artificial intelligence on microcomputers — will be addressed at National Computer Conference (NCC) '85 sessions.

In a recent interview, James R. Gerdes, a senior information systems analyst with the Argonne National Laboratory in Argonne, Ill., who is the chairman of the personal computing track, said the sessions will cover general industry trends as well as the practical application of new technologies.

The track will feature a number of panel discussions. In one session, a trio of financial analysts will present a look at the current state of the industry, Gerdes said. The first half of 1985 has been a difficult one for most players in the personal computer industry; many companies have predicted reduced earnings and announced cutbacks, layoffs and plant closings. The panelists will discuss the shakeout and its implications for the future.

Another session will promote a panel discussion on the industry from a different point of view, that of the top executive, Gerdes said. A group of executives, representing a bank, a manufacturing concern, a hospital and a financial institution, will discuss their perspectives on data processing.

Panel of trade press reporters

Offering yet another outlook on the personal computer industry and its players will be a session featuring a panel of reporters from the trade press, Gerdes said.

In addition, Gerdes stated that the personal computing track will include sessions geared toward more technically oriented audiences.

In a session titled "Window Management Systems: Fact or Fiction," a speaker from the University of Arizona will take a hard look at windowing systems. The question that will be explored, according to Gerdes, is whether window management systems are gimmicks, or whether they serve a useful function in personal computer programs.

The application of artificial intelligence techniques to personal computer programs will be the focus of another session in the personal computing track. In this seminar, speakers will present an overview of the AI field. A survey of currently available programs will be presented, Gerdes said.

The session, titled "Microcomputer Software Testing," will address several questions, according to the track chairman. Questions to be addressed include the following: Will the personal computer industry adopt the equivalent of a "Good Housekeeping Seal of Approval" for software programs? What techniques are currently used to test software programs before they are shipped?

Another panel, which will include an industry analyst and representatives from two computer companies, will review the current crop of briefcase-size computers and discuss market trends affecting these "truly portable" systems, Gerdes said. The session is titled "Popular Portable Computers."

A trio of speakers will discuss keyless data entry techniques, such as bar code entry and optical character reading, Gerdes said. A representative of the U.S. Department of Defense will relate the agency's experiences with bar code readers, and a manufacturer will talk about what products are available.

Microcomputers contribute more when they have mainframe power.

Compatibility between mainframes and micros has continually challenged experts in information services. But now Boeing makes this dynamic combination of power and convenience and everyday fact of computing life. The result: unprecedented productivity.

We call this powerful breakthrough MAINSTREAM® Distributed Services. For example, our Business Management Workstation combines the new IBM® PC XT/370 with our EIS® (Executive Information Services) Decision Support Software. You can perform functions like modeling and report generation on the PC XT/370, which simulates a System 370 mainframe. And you can switch instantly to your multi-dimensional data base via MAINSTREAM teleprocessing.

For those not requiring the full functionality of the EIS software at the desktop, we also offer the EIS Micro Workstation, which lets you download, manipulate and upload data between your IBM PC or PC XT and the MAINSTREAM service.

Because both workstations have Value Added Dealership (VAD) agreements with IBM, Boeing is your single source for hardware, software, host processing, education and training, and support.

Our Micro/8410 brings this powerful micro-mainframe combination to structural engineering. The Micro/8410 lets engineers formulate and reformulate on the MDX 11 microcomputer. And then quickly upload to IBM, CYBER or CRAY mainframes for detailed calculations using any of the most popular design packages.

These distributed services are all part of Boeing's approach to complete, integrated information services. Enhanced remote computing services. Distributed processing and micro/mainframe links. Office information systems. Software solutions. Education and training. And a variety of professional support services. For more information or the location of the sales office nearest you, call toll-free 1-800-447-4700. Or write BOEING COMPUTER SERVICES, M.S. CV-26-17B, 7980 Gallows Court, Vienna, Virginia 22180.

BOEING COMPUTER SERVICES A Division of The Boeing Company

Boeing is an authorized Value Added Dealer for the IBM Personal Computer, Personal Computer XT and Personal Computer XT/370.
IBM is a registered trademark of International Business Machines • EIS and MAINSTREAM are registered service marks of The Boeing Company.

Visitors lounge offers services to foreign guests

CHICAGO — The International Visitors Lounge at the National Computer Conference (NCC) will be located in Lobby 8, Level 20, at McCormick Place.

Conference attendees from foreign lands are invited to take advantage of the various services available in the lounge. The room can be used as a place to relax or to exchange information with fellow international attendees.

Special services available to foreign visitors include translation, registration assistance, traveler's aid, local information and refreshments.

Available languages

Translation services will be made available in French, Spanish, Japanese, Chinese and German. Translation services for other languages can be arranged, if needed.

The International Visitors Lounge will be open during regular conference hours: Monday through Wednesday from 8 a.m. until 6 p.m. and on Thursday from 8 a.m. until 4 p.m.

Foreign visitors may register for NCC by sending registration forms and checks to NCC '85 Registration, 1970 Chain Bridge Road, McLean, Va. 22109.

Take the 2-volume Unix™ Programmer's Manuals, a $69.90 value, for only $2.95...

when you join The Library of Computer and Information Sciences.

You simply agree to buy three more books — at handsome discounts — within the next 12 months.

Since Bell Laboratories first developed the UNIX Time-Sharing System about 1970, thousands of users have come to rely on its speed, power and flexibility. And with today's explosion of new applications for small computers and distributed processing, UNIX is fast becoming even more popular. But until now, UNIX users have had no adequate documentation on the system. Thousands of programmers have had to work from time-worn reproductions of the original manual, errors and all.

This completely revised and expanded, two-volume edition of the UNIX Time-Sharing System Programmer's Manual, Seventh Edition, is an indispensable resource for the computer professional who needs up-to-date information on the commands, powers and restrictions of UNIX.

In these two new volumes, Bell Laboratories, Inc. provides comprehensive "how to" documentation for this popular and productive operating system. Dozens of errors have been corrected, a new index has been constructed and a quick reference section has been incorporated. And both volumes can be yours for just $2.95, with your trial membership in The Library of Computer and Information Sciences.

Contents of Volume I

Volume One is a comprehensive, 424-page reference manual on the features and functions of UNIX. Designed for clarity and day-to-day usefulness, it is organized by UNIX terminology and based on a common format. Each entry provides: the name of the command or subroutine...a synopsis and detailed description of the command and its use...a list of files built into the program...and the various condition codes you may encounter. There's even a helpful section that alerts you to known bugs in the command and sometimes suggests an appropriate fix.

Here is a sample of the topics covered:

Commands: These are general purpose programs which can be invoked directly by the user. You'll see how to use commands like adb to debug programs in a controlled environment...and bas, the UNIX BASIC dialect.

System Calls: You get a thorough list of entries into the UNIX supervisor, both error return codes and user instructions.

Subroutines: Here is a detailed introduction to the variety of subroutines available in the UNIX libraries. The functions are described in terms of C, but most will work with Fortran as well.

Special Files: The manual gives you a complete description of the UNIX "files" that actually reference system I/O devices.

File Formats: Here is full documentation on file structure for link editor output, special accounting information, archive data, core image files, and more.

Games: You also get a listing of computer games available in UNIX, including backgammon, blackjack, checkers and chess.

Plus details on macro packages, special functions and much more. Here in one volume is exactly what you need to know about UNIX. The pages are even perforated and punched for easy transfer into a three-ring binder.

Contents of Volume II

The UNIX Programmer's Manual: Volume II, Seventh Edition, is the ideal companion volume for UNIX programmers who want comprehensive, detailed information on all the many capabilities of the UNIX Time-Sharing System. Here is a vast collection of articles and tutorials on a wide range of specialized topics:

- how to log onto UNIX from a variety of system terminals
- an introduction to the powerful UNIX Shell command language interpreter and its use in running programs
- manipulation of directories and file names
- a computer-aided instruction program that walks you through the basics of UNIX files, the editor, and more
- an extensive series of papers on document preparation programs...basic formatting tools, how to typeset mathematics, plus NROFF/TROFF and TBL programming
- a "manual within a manual" on the C Programming Language, its syntax and semantics, tutorials on C and detailed examples
- detailed articles on supporting tools and languages for UNIX...the YACC compiler...a portable Fortran 77 compiler...the SED non-interactive text editor...AWK pattern scanning and processing language...a reference manual for UNIX Assembler...and much more.

There's also detailed information on system implementation and maintenance...how to regenerate system software...the inner workings of the UNIX I/O system...UNIX networks...and UNIX password security.

And you get both volumes, 1,040 pages in all, for $2.95, when you join *The Library of Computer and Information Sciences.*

About the Club

Join *The Library of Computer and Information Sciences* to keep up to date on the developments, theories and applications important to your job.

The Library of Computer and Information Sciences offers an unmatched data bank for any computer professional. As the oldest, largest and most respected club of its kind, it brings you the finest publications from the most authoritative writers in the field...*at significant savings!*

As a member, you won't have to spend time sorting through hundreds of books to find the ones worth reading. The club's editors do it for you. Reviewing the hundreds of books submitted monthly, they select only those books that offer the critical, hands-on information you need. Books that give you an in-depth knowledge on a variety of exciting subjects — from systems design to applications, from software engineering to personal computing. You'll regularly be offered critically important books you might otherwise have missed.

Take Advantage of Our 10-Day, No-Risk Examination Period.

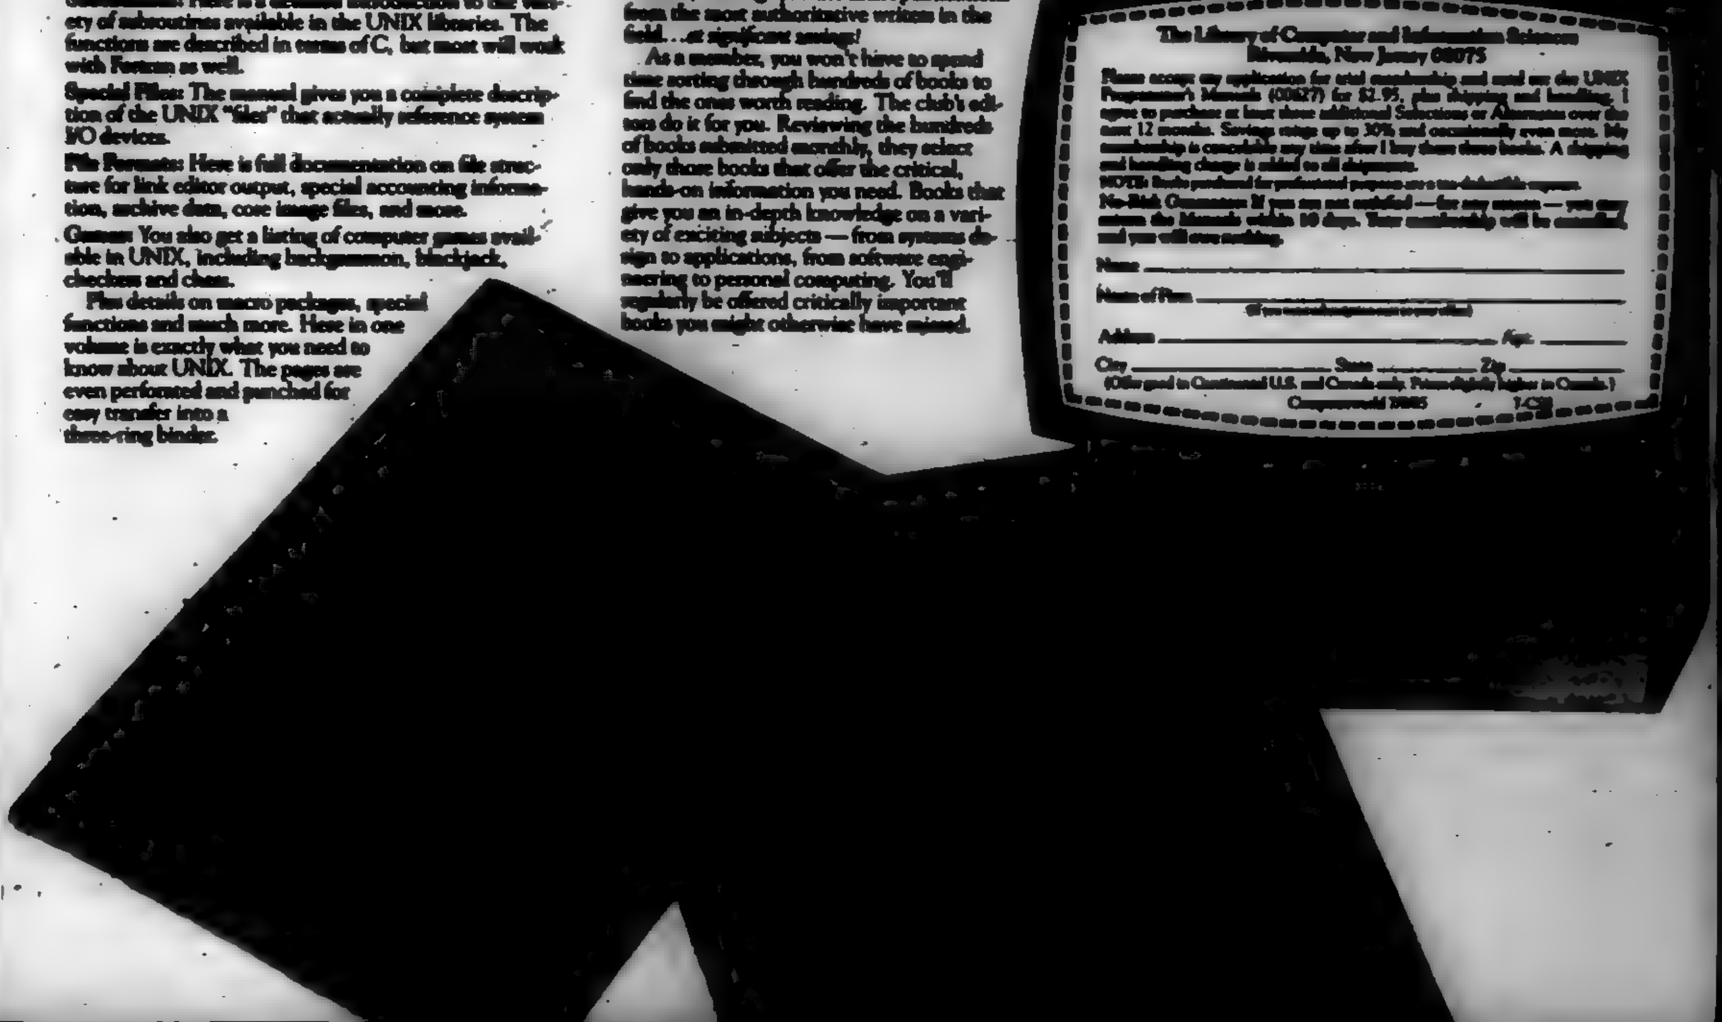
Join the club risk-free, simply by sending for the UNIX Programmer's Manuals now. When they arrive, examine them for 10 days. If you are not satisfied, return the books and owe nothing. Otherwise, just pay the invoice for $2.95, plus shipping and handling.

Simply complete and mail the attached coupon.

4 Good Reasons to Join

1. **The Finest Books.** Of the hundreds and hundreds of books submitted to us each year, only the very finest are selected and offered. Moreover, our books are always of equal quality to publishers' editions, never economy editions.
2. **Big Savings.** In addition to getting the UNIX PROGRAMMER'S MANUALS for only $2.95 when you join, you keep saving substantially — up to 30% and occasionally even more. (For example, your total savings as a trial member — including this introductory offer — can easily be over 50%. That's like getting every other book free!)
3. **Bonus Books.** Also, you will immediately become eligible to participate in our Bonus Book Plan, with savings up to 70% off the publishers' prices.
4. **Convenient Service.** At 3-4 week intervals (16 times per year), you will receive The Library of Computer and Information Sciences News, describing the Main Selection and Alternate Selections, together with a dated reply card. If you want the Main Selection, do nothing, and it will be sent to you automatically. If you prefer another selection, or no book at all, simply indicate your choice on the card and return it by the date specified. You will have at least 10 days to decide. If, because of late mail delivery of the News, you should receive a book you do not want, we guarantee return postage.

UNIX is a Trademark of Bell Laboratories, Inc.



The Library of Computer and Information Sciences
Riverside, New Jersey 08075

Please accept my application for trial membership and send me the UNIX Programmer's Manuals (00827) for $2.95, plus shipping and handling. I agree to purchase at least three additional Selections or Alternates over the next 12 months. Savings range up to 30% and occasionally even more. My membership is cancelable any time after I buy these three books. A shipping and handling charge is added to all shipments.

NOTE: Books purchased for professional purposes are a tax-deductible expense.

No-Risk Guarantee: If you are not satisfied — for any reason — you may return the Manuals within 10 days. Your membership will be canceled, and you will owe nothing.

Management system propels O'Hare airport operations

Assorted modules handle varied tasks

By Donna Raimondi
CW Staff

CHICAGO — O'Hare International Airport — said to be the world's busiest — serves 120,000 travelers a day and an equal number of visitors.

The airport, which is handling 15 million more passengers a year than it was designed to accommodate, is using a computer-based management system to track a $1.5 billion eight-year development program that will add to and upgrade facilities.

The computer-based management system allows managers of the Chicago O'Hare International Airport Development Program to highlight future problems and to provide information to run the program on a daily basis.

The airport's development program comprises 100 projects, including airfield improvements such as runways and grading for cargo and service complexes, new terminals, additional roads and access areas, a $100 million people-mover system and a taxiway for airplanes in the central core of the airport, said James Stevenson, general manager of O'Hare Associates, a consulting group that supervises and does consulting for the development program.

The system that tracks the airport's development program is Metier Management Systems, Inc.'s Artemis, which runs on a Hewlett-Packard Co. HP 1000 minicomputer, said Paul Dembovich, cost and schedule engineer for Envirodyne Engineers, Inc., one of the joint venture partners in O'Hare Associates. Dembovich and his staff perform critical path analysis for each of the 100 projects using one module of Artemis, he said.

The critical path module calculates and predicts end dates for projects based on monthly information updates, Dembovich said. It associates the information fed into it with labor data, such as workers' days off because of holidays and extra work-shift information, he said.

A relational data base module allows the creation of data bases that link schedules with cost information and allow the staff to calculate cash flows, to project commitment curves and to perform trend analysis, he said.

Three graphics modules

Three different graphics modules allow Dembovich to present end-of-month reports in three large charts, instead of in the report — the size of the city phone book — that the system generates, he said. The management graphics module allows bar, pie and line charts, histograms, curves and profiles, he said.

It is used to compare budgets to current estimates, and it allows a breakout of major categories of accounting for jobs in question, Dembovich said. Curves compare where money was actually spent with where it was projected to be spent.

Accumulated year-to-date information and yearly budget information is shown in a vertical box. There is a cash flow graph to the end of a project, and a graph for cash commitments and their amounts to the end of the project, he said.

A bar-chart drawing package links to the critical path program schedules so it can automatically draw charts for use in presentations, Dembovich said. "We can summarize 100 projects on one page, with a calendar across the top," he said. This helps management to see where each project is in terms of construction, design or completion, he said. Dembovich produces critical path schedules for each project separately as well.

Graphics reports for a variety of people, including Chicago Mayor Harold Washington, the directors of O'Hare's development program, bond holders, project managers and field staff, are customized to give each person what he needs, he said.

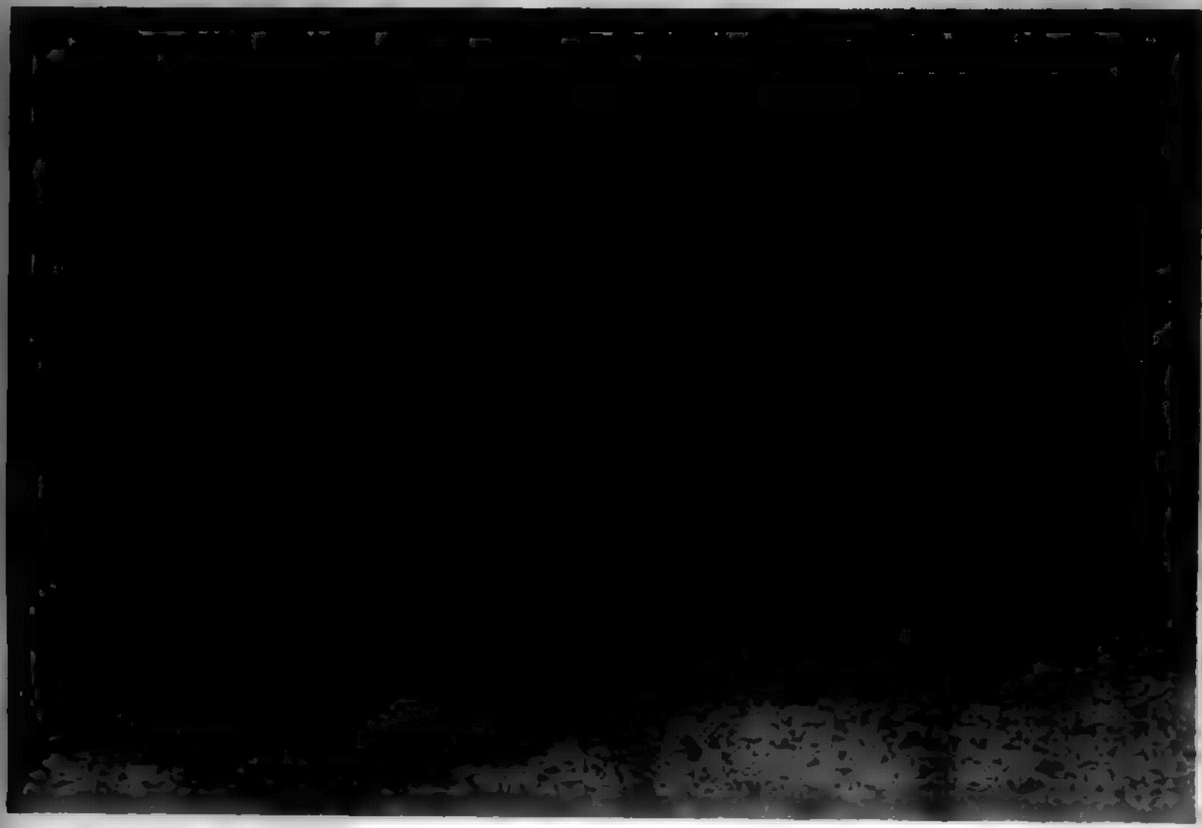
A linked bar chart package draws bars and shows the relationship between projects, Dembovich said. It can show the status of separate jobs within a project, he added.

A report-generating module of Artemis uses data from the critical path and the data base modules to create tabular reports, Dembovich said. It has a free format, so he can change headings and columns for particular needs, he said. The module has five or six sorts, but Dembovich claims he rarely uses more than three of them. He uses this tabular report to show schedule dates and the dollars associated with dates and activities.

When the company bought the system, "we loaded data for three months to be productive and for six months to be proficient," Dembovich said.

Dembovich stated that the collection and loading of data is a full-time job for four people. There are hundreds of people to collect data from or give reports to, he said. There are often time lags in getting needed information from city personnel, he said, and sometimes information gets lost.

The system has 1M byte of main memory, 520M bytes of disk storage, four text-only terminals, two text and graphics terminals, three dot matrix printers and two eight-pen plotters.



Keep your hands to yourself.

Let the Ven-Tel EC212 PLUS Modem re-dial instead — automatically.

With Ven-Tel's "Dial Forever" feature, you've got your hands free to do other things. This modem even beeps just before going on-line, once it gets a free line — and it won't quit till it does.

It's wonderfully easy to get along with, too. It offers both 300 and 1200 bps high-performance, full duplex data communication and is compatible with all industry-standard 212A, 103 and 113 series modems.

And what a memory: it retains nine forty-digit numbers, as well as the last number dialed. It's also got a HELP list of simple operator instructions.

What could be easier? Why, renting the Ven-Tel EC212 from Leasametric.

Rent from us and get service you just can't buy. Before we ship any piece, we put it through its paces. So when it's in hand, it's ready to work, complete with operator's manuals, cables and the like. Plus, you can call us on a toll-free number for on-line diagnostics. And behind every Leasametric piece, this iron-clad guarantee: if it doesn't work as it should, we'll replace it — immediately.

Yet, there's more. Stretch your budget with these handy financing options: standard rental agreements, volume pricing, rentals with options to buy, leasing and even used-equipment purchases.

To learn more about this or any of thousands of quality items in our current catalogue, better take matters in hand today. And call Leasametric.

In California, call 800-528-6891. Outside California, call 800-228-6314.

Ven-Tel Inc.

Rent the best from the best.

Systems tracking NCC events get the show on the road

By [illegible]
CW West Coast Bureau

CHICAGO — A variety of computers, terminals and videotex systems will keep National Computer Conference (NCC) activities on track at Chicago's McCormack Place this year.

Without this equipment, show operations would be paralyzed, said Gerald Roper, director of marketing and sales for the Chicago Convention Bureau, which rents space at McCormack Place.

On the show floor, for example, videotex systems will be used to help attendees locate more than 600 exhibitor booths spread out over 25,000 square feet of cavernous floor space.

Behind the scenes, show sponsors will use computer systems to bill exhibitors and keep track of thousands of hotel reservations, Roper added. The equipment will be supplied by McCormack Place, the Chicago Convention Bureau, contractors and manufacturers' donations.

The following computer systems will form the backbone of NCC's 1985 operations:

■ McCormack Place will use an IBM System/36 minicomputer, running a customized version of IBM's SSP operating system, to store a show status calendar and to bill exhibitors for electricity and plumbing services used during the show, Roper claimed.

Ten IBM Model 68 terminals will be used by McCormack Place staff to access the system, which runs customized data base, accounting and word processing software.

> *Without this equipment, show operations would be paralyzed.*
>
> — Gerald Roper, Chicago Convention Bureau

■ The Chicago Convention Bureau will use an IBM Series/1 minicomputer, running under IBM's EDX operating system, and five IBM Model 5 terminals to make hotel reservations for many of NCC's 80,000 attendees. Up to 100,000 hotel reservations can be maintained on the system using the bureau's proprietary Bold Pack Housing Systems software package.

In addition to hotel information, Roper said, exhibitor booking records and data on exhibit space and NCC seminars will be stored on the Series/1 using customized data base management system (DBMS) software.

Other computer systems at NCC will be donated by manufacturers and contractors hired by the show's cosponsor, the American Federation of Information Processing Societies, Inc. in Reston, Va. These systems will include the following:

■ Seventeen Sperry Corp. Model 500 personal computers donated by the Blue Bell, Pa.-based vendor to the NCC pressroom. About 1,000 journalists are expected to attend NCC and use the computers, which will be equipped with high-resolution color monitors, 10M-byte disk drives and a 256K-byte memory, a Sperry spokesman said.

The computers will be networked to two Sperry User-Net local-area networks.

Sperry will also provide four Epson America, Inc. Model 5 dot matrix printers, four Hayes Microcomputer Products, Inc. Smartmodems and Wordstar 2000 from Micropro International Corp. in San Rafael, Calif., the spokesman said.

■ On the show floor, public-access videotex will be provided by Chicago-based Convention Communications, Inc. (CCI). Each of CCI's 18 videotex Touchscreen terminals will function as an electronic message center, an exhibitor locator and an entertainment guide for showgoers, said CCI President Tony Stenkis. Attendees can switch modes on the terminal by touching the screen and following the directions of icon-oriented menus.

At the heart of the system is a 32-user microcomputer from Molecular Computer Corp. in San Jose, Calif., running under Digital Research, Inc.'s CP/M operating system. The microcomputer, at CCI's Chicago headquarters, will receive data from the show floor via proprietary communications software inside the terminals, Stenkis said. CCI will also use 18 modems from CTS Corp. in Elkhart, Ind., to transmit data, Stenkis said.

■ The Ventura, Calif.-based Contractor Registration Control Systems Corp. (CRCS) will provide computerized, on-site registration for show attendees using a Data General Corp. Model 30 minicomputer linked to 40 Liberty terminals from Liberty Electronics Corp. in San Francisco. Sixty percent of NCC's attendees will register at the show, and CRCS' staff will enter the registration data and make badges on an automatic embosser interfaced with the computer, said Gary Palmer, CRCS director of research.

CRCS' proprietary operating system, data entry, DBMS and communications software will reside on the Model 30, according to Palmer. A customized version of DG's Star-Lan local-area network will also be used, he said.

Realia COBOL.
Migration without migraines.

Until recently, you had to abandon the business computer language when you developed microcomputer application software. The available micro COBOLs were inadequate—too limited, too slow. The best alternative—the XT/370 or AT/370 using IBM's COBOL—was very expensive and still too slow. To get acceptable performance, you had to retrain your programmers in Pascal or C.

Realia COBOL is the cure for such headaches.

Realia's compiler supports most IBM VS/COBOL and VS/COBOL II features, such as:

- COMP and COMP-3 data
- SELECT assignment names
- Multiple entry points
- GOBACK, EJECT, and SKIP statements
- Structured programming extensions of VS/COBOL II

You can download mainframe systems for development, maintenance, and testing. Productivity will soar.

You can compile faster with Realia COBOL than in most mainframe environments, even on floppy-based systems. Compile-time options allow cross-reference, brief and full code listings, and helpful features like subscript and decimal value checks.

Our interactive debugger lets you follow the program source, display and modify data, and set breakpoints using the normal optimized machine code.

The results are startling.

Our users report that their systems run up to 20 times faster when compiled by Realia COBOL. That's compared to our nearest micro competitor. The ratio is up to 100 times faster when compared to any of the others.

On the IBM PC AT, your programs can run at 370/148 to 370/158 speed. Realia's file system really makes your machine deliver, giving it a distinct edge over Pascal or C. Our indexed file system even has full key compression and buffer controls just like VSAM. The generated code is pure MS-DOS, so it can be run on most of the 8088/8086 machine family.

And you can sell your programs without paying us a royalty fee.

Realia COBOL is priced at $995, including one year of maintenance and upgrades. Subsequent maintenance and upgrade contracts are currently priced at $125/year/copy. Available for the IBM PC, PC XT, 3270 PC, PC AT, PC-compatibles, and the TANDY 2000.

Realia COBOL. What a relief.

Fresh views expected on end-user computing topics

By Kathleen Sullivan
CW West Coast Bureau

> *Many MIS departments are struggling to find the best way to manage new end-user computing tools.*

When organizing the sessions that fall under the umbrella of end-user computing, track organizer Marvin Ehlers, an assistant vice-president at Lombard, Ill.-based Natural Gas Pipeline Co., said he recruited speakers who would be able to provide "a new and different view of existing topics."

A number of the topics to be discussed have more to do with economics — how to provide end users with the necessary tools to do their work efficiently — than with the technology itself, Ehlers said.

A wide range of issues will be covered, from designing ergonomic workplaces, to selecting the software that will facilitate end-user computing, to planning the intelligent buildings that will house the workers and technologies of the '80s.

With the growing number of workers sitting in front of computer screens, ergonomics — the science of designing equipment and workplaces to suit the worker — has become an increasingly important topic. Panelists will discuss the ergonomic requirements of the modern office. The speakers will also talk about legal issues related to the use of VDTs, including pending state legislation regarding worker safety.

Many MIS departments are struggling to find the best way to manage new end-user computing tools. With the advent of data bases, fourth-generation languages and other user-friendly tools, many MIS professionals are asking the question: What is the best way to get these tools into the hands of end users, Ehlers said. A group of speakers will explore this topic, presenting their ideas for managing these technologies.

Micro-to-mainframe links

An assessment of the state of the art in the micro-to-mainframe link market will be the focus of another panel discussion. The speakers will explore the problems and privileges associated with gaining access to the mainframe, Ehlers said. The presentation will include a user's perspective on the planning required to implement a micro-to-mainframe link strategy.

Another group of speakers will provide a look at electronic mail systems, bringing the audience up to date on recent developments in the market, Ehlers said. What is available today? What have we learned since last year? What can be expected in the future? These and other questions will be discussed, Ehlers said.

Managing the information center will be the focus of another session in the end-user computing track, Ehlers said. "Information centers are fairly widespread," he noted. As a result, managers can now look to each other for advice on how to run them. "There are many general management principles that can be applied to information centers," Ehlers said. A group of speakers will share their experiences in running information centers.

Within the MIS department, staff members are looking for the easiest, fastest and most economical way to develop programs, Ehlers said. Prototyping methods, for example, are generating interest. One panel will discuss the challenge of managing the development center.

The selection of the appropriate applications software package, which Ehlers described as an ongoing problem for many users, will be the subject of another presentation in the end-user computing track.

First aid facility available at NCC

CHICAGO — For National Computer Conference attendees needing medical assistance, a four-room first aid facility is located just south of the main lobby on the concourse of McCormick Place. A registered nurse will staff the station during show hours.

Lorin Tomaszewski, McCormick Place fire warden, said five security officers and two fire inspection officers trained in first aid assistance will be on duty on the showroom floor throughout the conference.

In case of emergency, Chicago Fire Department ambulances will be available for transportation to one of two local hospitals: Michael Reese Hospital, 292 S. Ellis Ave., or Mercy Hospital, Stevenson Expwy. at King Drive. Both are less than 1 mile south of McCormick Place.

Ancient idea reborn in computer-based learning aids

AI at forefront of systems R&D

By Kathleen Sullivan
CW West Coast Bureau

The concept of an expert system is a relatively new one in the computer industry, but according to Prof. David Rine, interest in "expert tutors" dates back to the ancient Greeks, when Socrates used dialogue as a teaching tool.

"Interactive questioning and dialogue has always been a very popular way of teaching," said Rine, a professor of computer and information sciences at George Mason University in Fairfax, Va. Those interested in modern-day expert tutoring systems can find out more at a panel discussion Rine organized for this year's education and social issues track.

The speakers will focus on recent developments in artificial intelligence and the impact of that work on the development of educational systems. "There is a great deal of development and interest in designing high-quality, computer-based learning systems for business and training programs," Rine said.

> "*Interactive questioning and dialogue has always been a very popular way of teaching.*"
>
> — Prof. David Rine
> George Mason University

In another panel discussion, "Computers and the Handicapped," a group of speakers will explore two major questions, Rine said: How can systems be designed for use by severely handicapped students? What tools are available for developing systems to aid the handicapped person?

A speaker from Johns Hopkins University in Baltimore will discuss its multisensory authoring package, a tool that allows developers to create lessons geared for students with specific disabilities. In addition, a speaker will present a look at how one system is being used by physically and mentally handicapped children in an experimental classroom.

Another set of seminars will focus on legislative and legal issues regarding computers and society, Rine said. A variety of topics will be addressed, including the legality of employment agreements, privacy and the protection of individual rights, copyright agreements and software piracy.

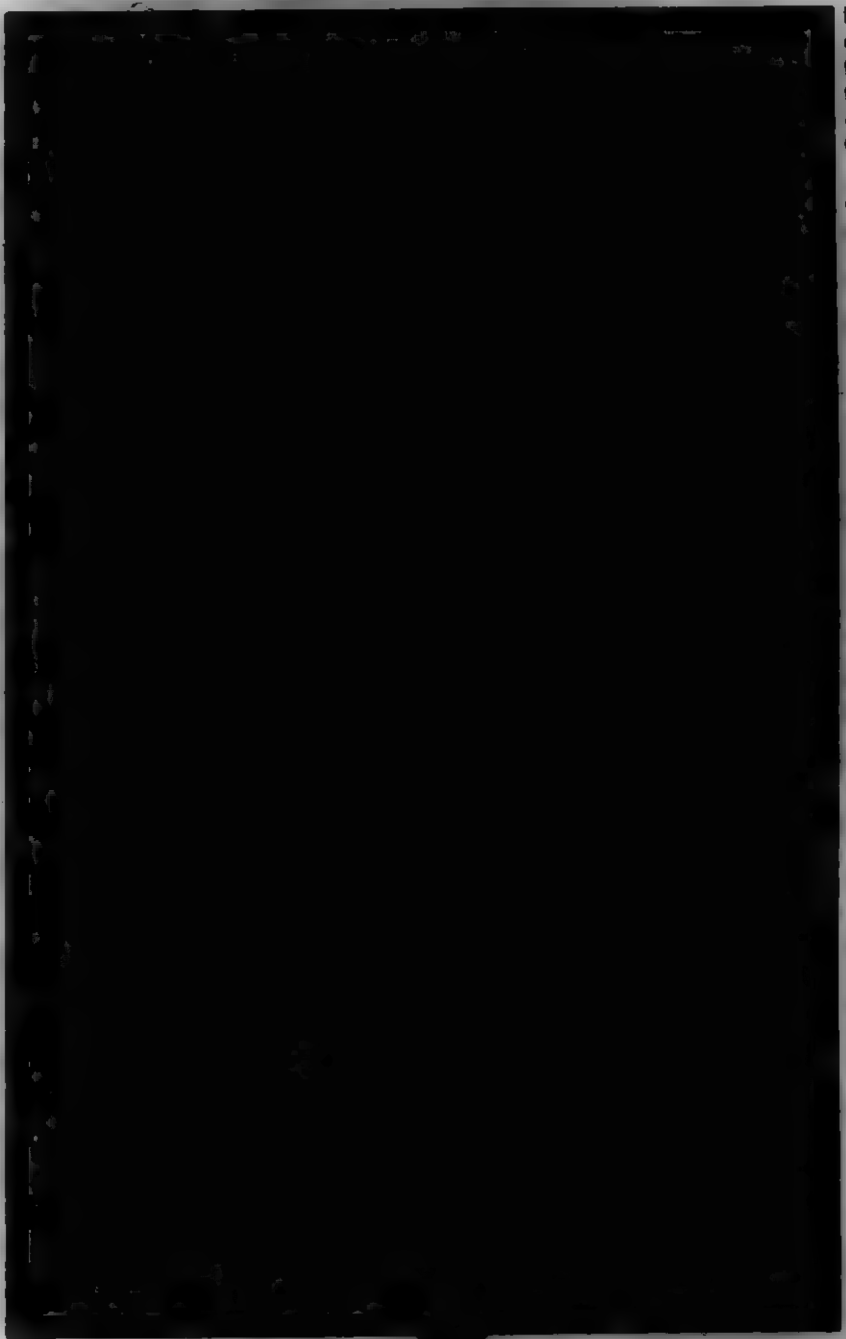
The tax benefits of philanthropic giving will also be addressed, Rine said. "The speakers will discuss how companies can get the best tax write-off when they give hardware to educational institutions," Rine said.

Selling computers to developing nations will be explored in another seminar. "A lot of companies want to get involved with Third World countries," Rine explained. "The speakers will discuss what firms need to know, in terms of social and cultural concepts, to most effectively introduce new technology into developing countries."

For others, recent developments in instructional delivery systems are an important topic, Rine said. A panel will discuss the advantages of satellite-based computer networks that can send instructional materials from a central location to training centers around the world.

A tutorial seminar on structured editing will also be offered. The audience will get a demonstration on how to use structured editors to develop programs, Rine said. The advantages of structured editing will be discussed. "One of the nice things about structured editing is that it speeds up the development and understanding of programs," Rine said. "Another side effect is more reliable data entry."

Looking for a way to develop CICS applications in everyday COBOL even under CMS?



Introducing the most effective way yet to optimize both your programming and mainframe resources: COBOL/XE.™ Because now, for the very first time, you can actually develop on-line CICS applications in everyday COBOL with CICS/VS, VM/CMS and VM/PC.

Since COBOL/XE uses standard ANSI COBOL, all your COBOL programmers can learn to write programs with it in hours. Which means no drain on your Command Level resources. Yet the programs are just as mainframe-efficient as those written in Command Level.

And COBOL/XE makes another contribution to mainframe efficiency: it can operate under CMS. Which means a complete separation between the development and production environments. With no "real time" waiting or effect on CICS response time. And since it can also operate under VM/PC, CICS applications can be developed off-line on IBM PC XT/370's or AT/370's.

COBOL/XE is another fine product resulting from the combined resources and experience of Oxford Software and Martin Marietta. For more information, send in the coupon or call 800-257-5171. If you thought you'd have to wait years for a CICS applications development system this effective, you're in for a nice surprise.

It's ready now.

Call 1-800-257-5171 today!

Martin Marietta COBOL/XE Information
P.O. Box 2392, Princeton, NJ 08540

☐ I'd like a Representative to call.

MARTIN MARIETTA

**Martin Marietta's COBOL/XE.
We're ready now.**

Honeywell's new DPS 90 information sy

Introducing the DPS 90

Honeywell's latest very large scale information system.

It's ideal for companies with growing information management needs. The DPS 90 was designed to be the core of a modern company's mainstream information network. Capable of giving you enough control to meet challenges for years to come.

Power

The DPS 90's advanced technology and multiple processor configurations make it possible for the system to handle a company's central workload and thousands of remote users as well.

The DPS 90 provides a range of power and performance significantly above that of our newly expanded DPS 88 family. And DPS 90 is fully compatible with other Honeywell large systems.

DPS 90 can support a full spectrum of general business functions. In addition, it is capable of very high performance for large scientific and engineering applications, often executed on array processors and "super" computers.

Reliability, Availability, and Service

Operating under control of the highly interactive GCOS 8 system, the DPS 90 is engineered for maximum availability. And maximum reliability.

The DPS 90 is built to be fault-tolerant. Diagnostic capabilities have been designed into the system's hardware, firmware, and software to make fault detection easier.

And because Honeywell understands how important uptime is to customers, the DPS 90 can be configured as a completely

stem can widen your company's horizons.

redundant system—making it one of the first information systems ever created offering so much performance and availability.

And like all our large systems, the DPS 90 is backed by Honeywell's worldwide service network. Available 24 hours a day and able to be tailored to your specific needs.

Managing Your Most Important Asset

Honeywell is proud to introduce the DPS 90. With 30 years experience in the computer business, we understand how vital a company's information system is. In fact, information may be your most valuable asset. How well you manage and control that asset will play a large role in how well your business meets future productivity and competitive challenges.

Honeywell is committed to helping your company widen its horizons. The new DPS 90 is a key element of that commitment.

For more information on how the DPS 90 can help your company meet the future in full control, call 1-800-328-5111 extension 2758.

Years

Together, we can find the answers.

Honeywell

Software at NCC

THE SOFTWARE GROUP
Booth 1120

The Software Group will exhibit Enable, an integrated software system that provides a spreadsheet, word processing capability, graphics, a data base manager and telecommunications for the 256K-byte dual-floppy IBM Personal Computer and compatible computers.

In that configuration, the spreadsheet provides up to 136K bytes of work space and the data base manager holds 1.3G bytes of data, according to the vendor.

Enable reportedly provides windows to view spreadsheet, graphics and documents at the same time. Data can be transferred from window to window.

The menu-driven integrated package also offers concurrency, allowing users to continue their work session while documents print out or data comes in from a remote computer, the vendor said.

Enable sells for $695. Site licenses are also available.

The Software Group, Northway 10 Executive Park, Ballston Lake, N.Y. 12019.

SAMNA CORP.
Booth 2364

Samna Corp. will showcase word processing and office automation software for local-area networks and updates to its stand-alone personal computer software at its booth.

Initial releases of Samna software for local nets will support Novell, Inc. and 3COM Corp. local-area networks; releases later this year will support the IBM PC Network, the vendor said.

Local net versions are available for Samna Word III and Samna+.

Release 3.0 of Samna Word III and Samna+ support IBM's Document Content Architecture revisable form text format.

Samna Word III costs $550; Samna+ sells for $695.

Samna, Suite C-700, 2700 N. E. Expwy., Atlanta, Ga. 30345.

MICRO FOCUS, INC.
Booth 5631

Micro Focus, Inc. will demonstrate software that reportedly generates IMS/MFS and CICS/BMS macros and associated Cobol source statements for the IBM Personal Computer, Personal Computer XT, AT, 3270 Personal Computer and compatible microcomputers.

Called Co-Maps, the software lets users load and modify BMS macro definitions to produce maps and map sets. This capability allows users to convert CICS application screens to IMS, and images produced by Micro Focus Forms to MFS and BMS maps.

Other features include single keystroke map set, map and field definition and Help, directory and copy facilities.

Co-Maps costs $500.

Micro Focus, 2465 E. Bayshore Road, Palo Alto, Calif. 94303.

LEXEME CORP.
Booths 2867, 2868

Lexeme Corp. will present its computer language translation service.

The firm develops software to translate one high-level language to another from among C, Fortran, Cobol, Bliss, Pascal, PL/I, Ada and other languages, a spokesman said.

Lexeme software is also said to translate between dialects of the same language.

Prices vary according to the number of lines of code.

Lexeme, Suite 250, Commerce Court, Four Station Square, Pittsburgh, Pa. 15219.

BBJ COMPUTER SERVICES, INC.
Booth 2144

An AT&T Unix application development system will be the highlight of BBJ Computer Services, Inc.'s exhibit.

Called Today, the software is said to provide recursive logic and decision tables; synonyms, menus, prompts, Help and default facilities for streamlined definitions; screen painter; report generator; push-button self-documentation; audit trails; and source code security.

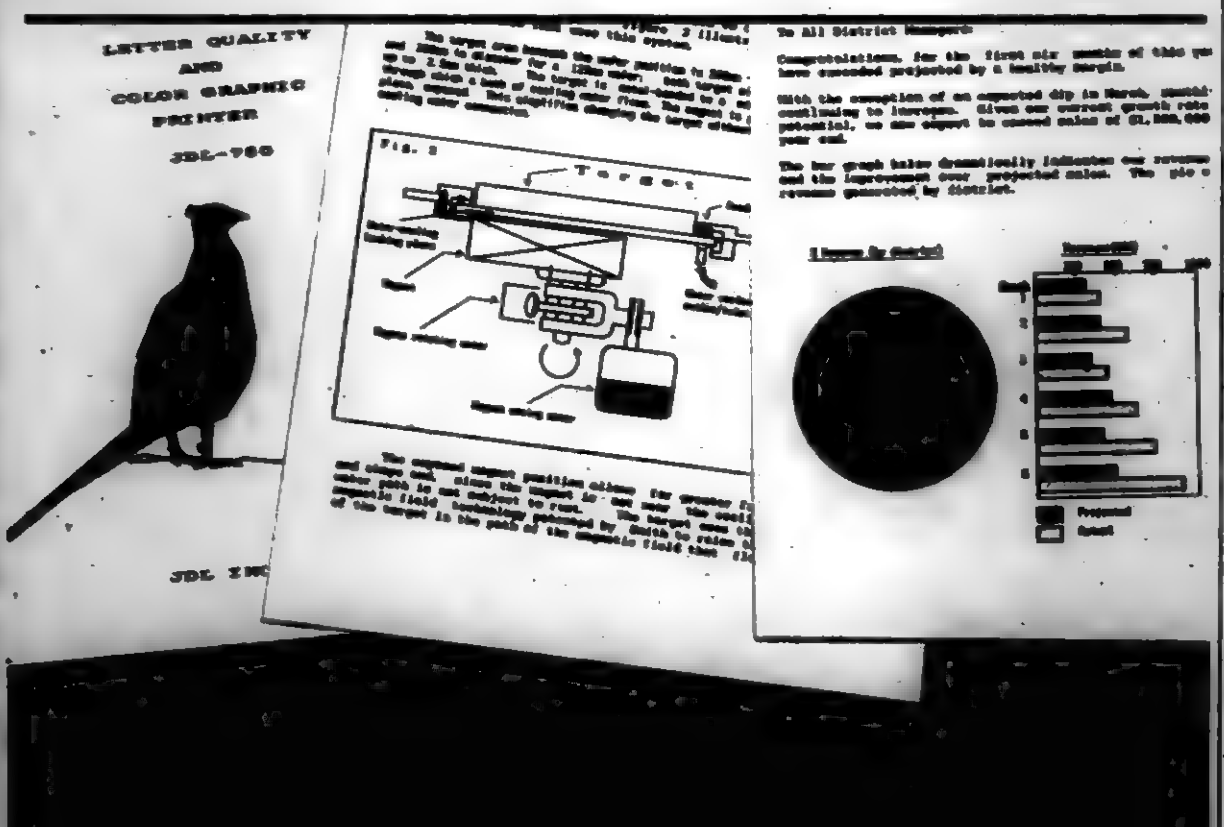
Today creates applications that are portable across Unix-based minicomputers and micros.

For an IBM Personal Computer AT, Today costs $1,500.

BBJ Computer Services, 2946 Scott Blvd., Santa Clara, Calif. 95054.

LAWSON ASSOCIATES, INC.
Booth 1254

Lawson Associates, Inc. will show an accounts payable package upgraded to include distribution default codes.



Continued on Preview/42

INQUIRE®/Text:

Helps you find what's buried in your database.

No matter what new worlds you're trying to discover, you'll get there more easily if your software includes text management as well as the ability to combine numeric and textual data. Because as often as not, the information you need consists not of numbers, but of a few key phrases buried inside a mountain of written documents.

Until recently, accessing this information was a nightmarish task, largely dependent on paper filing systems and relatively fallible human memory.

But with INQUIRE/Text, the solution is easy. Powerful search commands zip through everything from research reports to correspondence—extracting vital information faster and more accurately than ever before.

The result is a major discovery for most users—and a significant breakthrough in decision support. For the first time, textual information can be retrieved and manipulated as easily as numeric data, then output into up-to-date, integrated management reports.

No wonder INQUIRE/Text users include people on the frontiers of scientific exploration—not to mention lawyers, records managers, engineers, and librarians.

And no wonder more and more organizations are seeing text management as an indispensable element in information systems design, especially considering IBM's directions regarding DISOSS and PROFS.

INQUIRE/Text. It'll broaden your horizons. And just possibly help you conquer a new world.

For more information call or write Infodata Systems Inc., 5205 Leesburg Pike, Falls Church, Virginia 22041. (800) 336-4939. In Virginia and Canada call (703) 578-3430. Telex 899125.

European agents: Software Engineering Benelux Inc., The Netherlands, Telex 84431117; Thorn EMI Computer Software, U.K., Telex 851858015.

IBM, DISOSS and PROFS are registered trademarks of International Business Machines Corporation.

Now, Symphony sounds better than

The software that does more, now does more for everyone.

Current users will find Symphony,™ release 1.1 provides the basic functions of spreadsheet, word processing, database, graphics and communications, in a far more powerful package. New users will find Symphony far easier to learn. And you'll find it more valuable because it offers additional options for customization and applications development on personal computers.

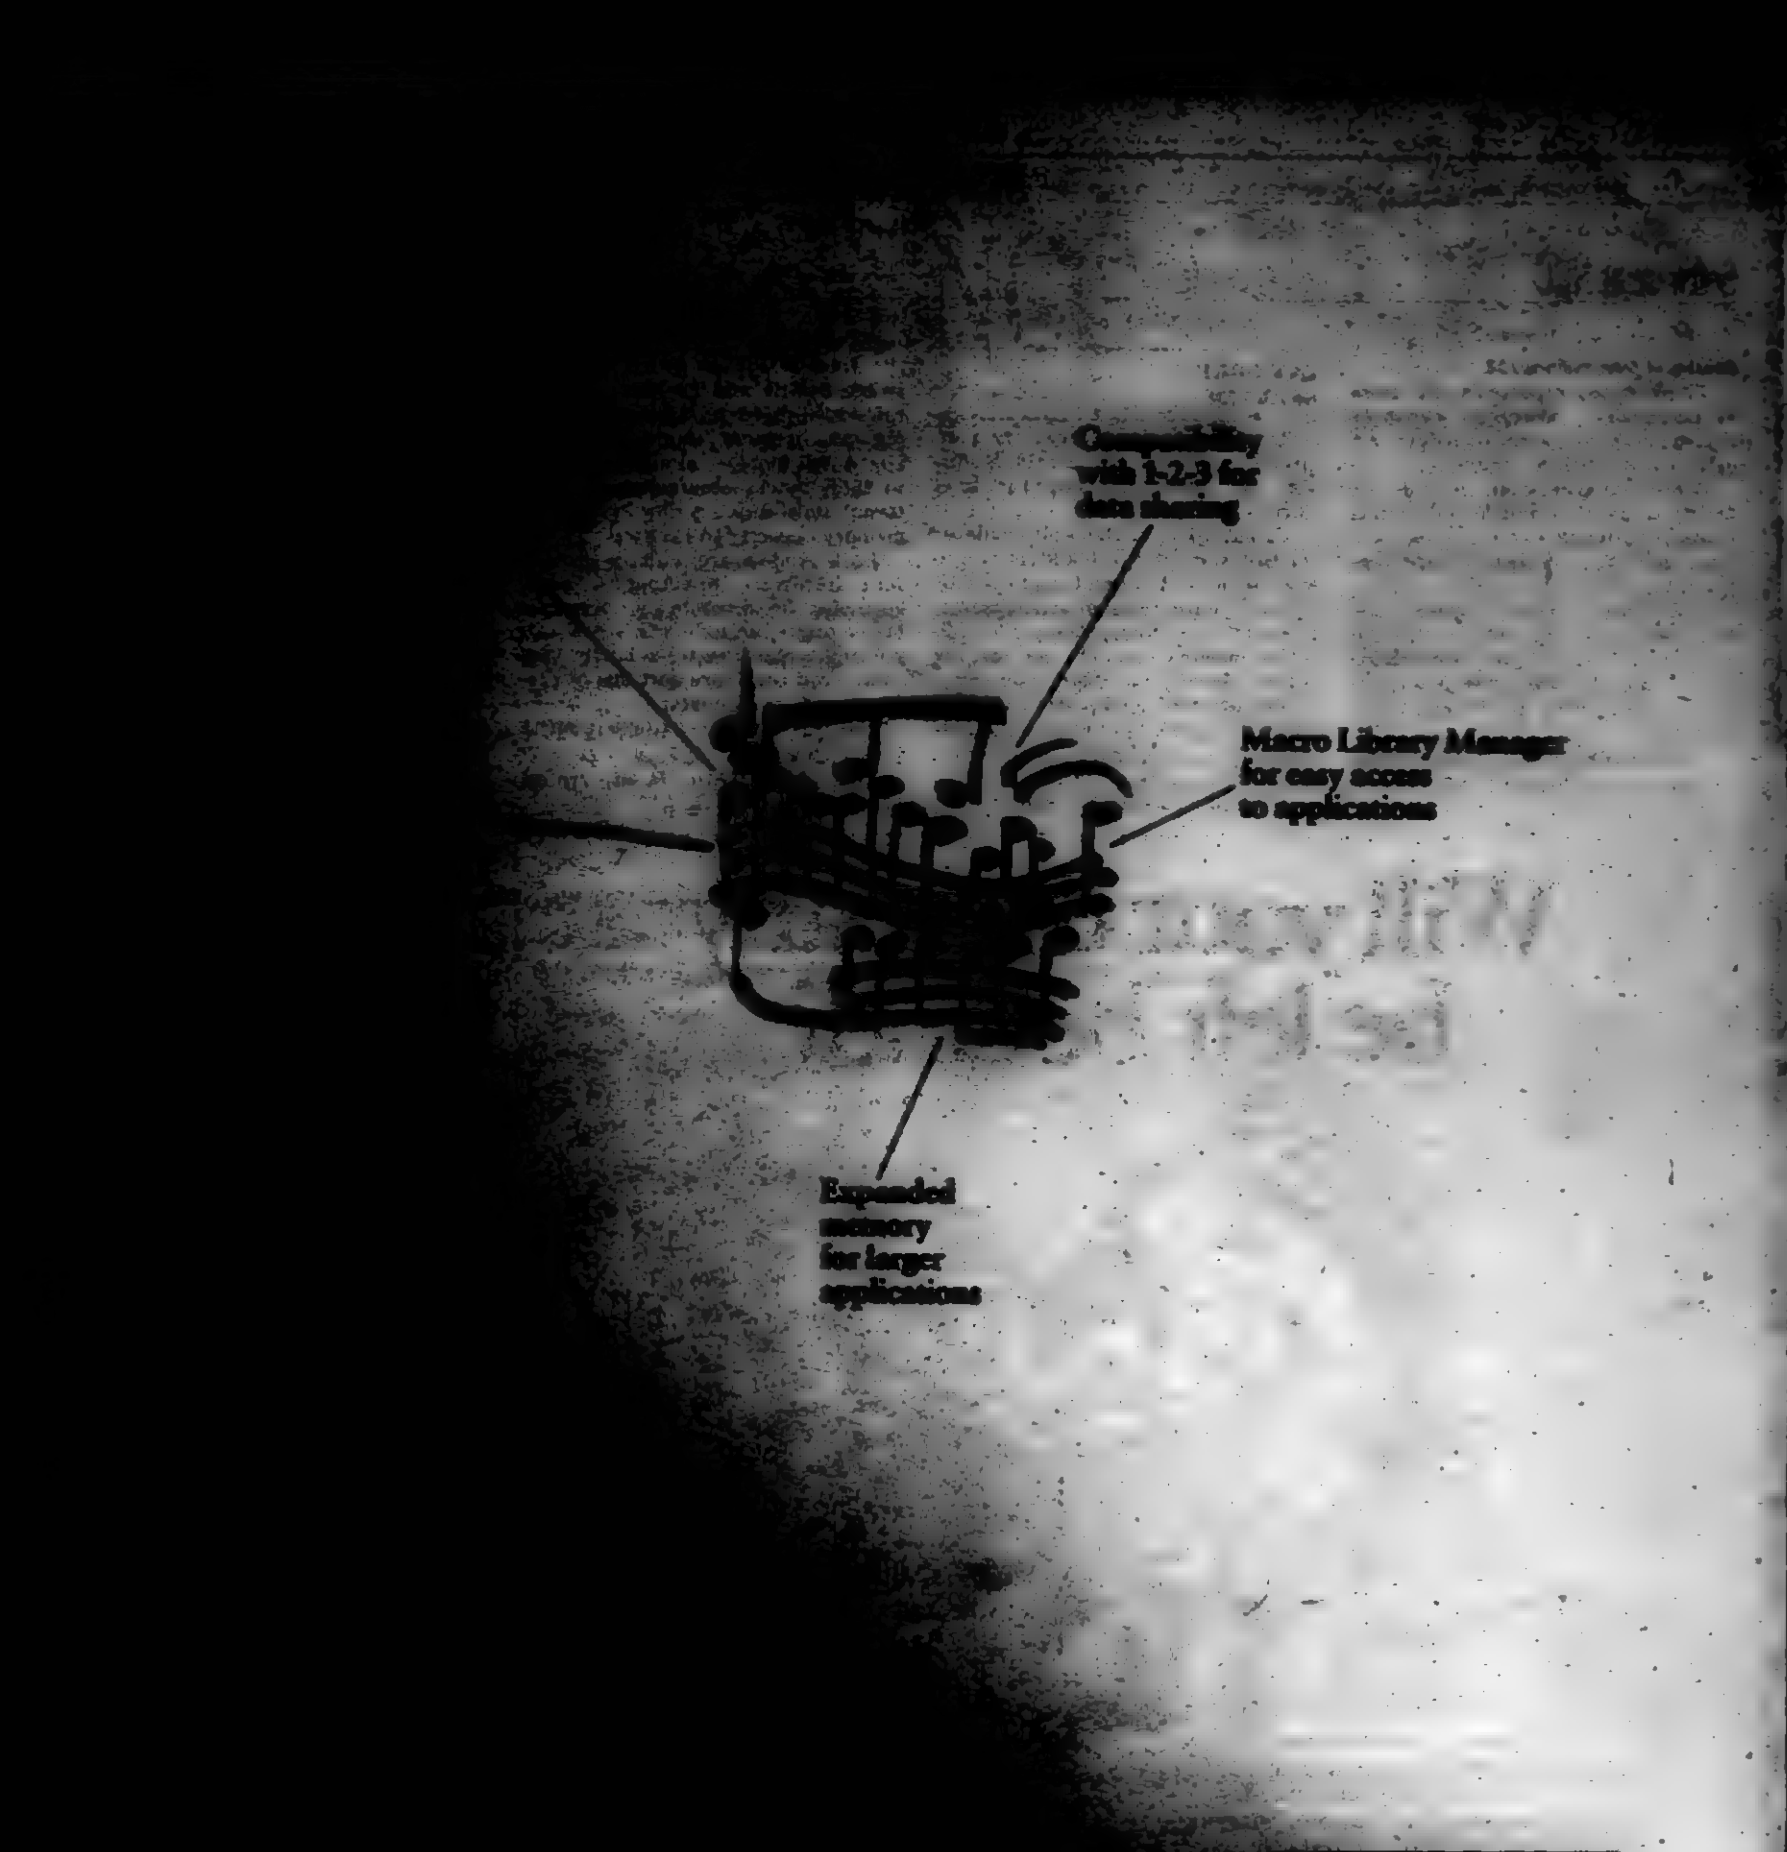
It makes your people more effective.

We've enhanced Symphony's functionality with a Macro Library Manager, so users can now access an unlimited variety of turnkey applications from any file. These applications can also be larger, because Symphony now manages memory more efficiently and can address up to 4 megabytes of additional memory. And Symphony now supports the 8087/80287 microprocessor chips, so users can now process their work up to 60 times faster.

New Symphony fits your existing environment.

Symphony now works with 1-2-3,® so all Lotus® users will be

© 1985, Lotus Development Corporation. Lotus and 1-2-3 are registered trademarks of Lotus Development Corporation. Symphony and Symphony Link are



Compatibility with 1-2-3 for data sharing
Macro Library Manager for easy access to applications
Expanded memory for larger applications

ever.

able to share data. And Symphony also permits remote file access on the IBM® PC Network.

Add our new micro-to-mainframe Symphony Link,™* and users will be able to access mainframe data. And because Symphony Link fits into the 3270 network, you can continue to take advantage of the investment you've already made.

New Symphony and Symphony Link, will help you to meet the information needs of your company.

Symphony, like all Lotus products, is supported by the industry standard in service and support.

If you'd like to see how new Symphony can enhance your operation, contact your Lotus marketing representative or your local authorized Lotus dealer.

Today's new Symphony sounds, and works, better than ever.

Software at NCC

Continued from Preview/38

These codes reportedly let users automatically allocate expenses across multiple general ledger accounts and multiple companies.

Other enhancements include the ability to track, reconcile and control employee advances and expenses and track due and payable taxes, the vendor said.

Prices, which include source code and training, are $14,000 for the IBM System/38, $19,000 for IBM mainframes and $24,000 for large-, medium- or small-scale Burroughs Corp. systems.

Lawson Associates, 2021 E. Hennepin Ave., Minneapolis, Minn. 55413.

ZAX CORP.
Booth 1736

Zax Corp. will showcase two in-circuit emulators, one for the Motorola, Inc. 6809 and one for Intel Corp.'s 80186.

Called ICD-178, the 8-bit emulator for Motorola 6809 or 6809E is said to operate at 2 MHz and contain 64K bytes of static random-access memory (RAM) for downloading files, altering memory contents and loading future memory into a target system.

Memory can be mapped to selected addresses in 1K-byte blocks and designated as read-only, read/write, user and no memory, Zax said.

The ICD-278, a 16-bit emulator for the Intel 80186 or 80188 runs between 8 MHz and 12 MHz and contains 128K bytes of static RAM. Adding an optional internal memory board will increase available storage to 256K bytes; interfacing to an external hard-disk facility will boost memory capacity to 1M byte.

Both models are said to provide four hardware breakpoints, eight software breakpoints, an external break probe, an external break output and a real-time trace buffer that can record and store portions of program memory contents.

The ICD-178 costs $4,995; the ICD-278 is priced at $7,995.

Zax, 2572 White Road, Irvine, Calif. 92714.

ORACLE CORP.
Booth 2624

Oracle Corp. will present the SQL-based Oracle relational data base management system and Oracle Link.

The data base manager is said to include an application generator, report writer and color graphics capability.

Through question-and-answer dialogues, the applications generator helps users build multiuser data entry, query and update applications.

A report writer creates production and ad hoc reports and automatically formats SQL query results into reports with column headings and data formats taken from the data dictionary. Oracle graphics reportedly lets users display data in color as pie charts, bar charts or multiline plots, according to the vendor.

The Oracle Link program provides connections among Oracle data bases to upload and download both data and applications between a personal computer and any other Oracle system in any host environment.

Oracle costs $30,000 for an initial systemwide license.

Oracle, 2710 Sand Hill Road, Menlo Park, Calif. 94025.

IMSL, INC.
Booths [illegible]

IMSL, Inc. will show the IMSL Library, now available for Hewlett-Packard Co. Series 9000 computers.

The IMSL Library contains over 600 Fortran subroutines for mathematical and statistical applications. It is compatible with the HP Series 9000 Models 520, 530 and 540 running the Fortran 77 compiler under the HP-UX operating system. A first-year license is priced at $1,200.

IMSL, NBC Building, 7500 Bellaire Blvd., Houston, Texas 77036.

SEASIDE SOFTWARE
Booth 2838

Seaside Software will exhibit a text-oriented data base management system for the IBM Personal Computer, PCjr, Personal Computer XT, AT and compatible processors under DOS 2.0 or higher.

Called Asksam, the software supports free-form, variable-length records. Keyword retrievals can include logical operators and wildcards and can be routed to screen, printer or disk and sorted on any field.

The software costs $149.95.

Seaside Software, 536 Parade Drive, Corpus Christi, Texas 78412.

WINTEK CORP.
Booth 1727

Wintek Corp. will show Smartwork software, a tool for creating printed circuit board artwork running on the IBM Personal Computer, Personal Computer XT and AT.

Smartwork produces single-sided or double-sided printed circuit boards up to 10 by 16 in. Prototype quality 2X plots can be made on a dot matrix printer and production-quality artwork can be produced with a pen-and-ink plotter.

The program sells for $895.

Wintek, 1801 South St., Lafayette, Ind. 47904.

Introducing Lessons on Ada on VAX.

VAX Ada compilers are ready. VAX Ada cross-compilers are ready. The Ada market is ready. And now, the most complete, tested, authoritative course on Ada programming—designed with the help of the developers of the Ada language itself—is ready... on the VAX!

Will you be left out? Left out of the huge military and commercial markets which are, and surely will be, reserved for Ada? Left out of the world of modern software engineering? Left out of all the programs which will increasingly emphasize reliability, maintainability, and portability for which Ada was designed?

LESSONS ON ADA is a first course in Ada programming designed for those with some previous programming experience. It is a 2-volume, 27-lesson, 50-hour, interactive, computer-aided instruction course, previously hosted only on the IBM PC and now, hosted on the VAX!

LESSONS ON ADA: *Superior* training in a language becoming more important every day; *Economical* training of multiple programmers; *Necessary* training to participate in the multi-BILLION Ada markets.

Training managers... Ada program managers... this is THE course for rapidly implementing Ada in your company. From the premier Ada company in the world. Write, call, telex for more information. But do it NOW.

Microcomputers at NCC

ITT INFORMATION SYSTEMS
Booth 4315

ITT Information Systems will exhibit ITT Xtra XP, its IBM Personal Computer XT-compatible personal computer.

The Xtra XP is based on an Intel Corp. 80286 processor and incorporates a zero wait state architecture.

The product uses 512K bytes of random-access memory that is expandable to 640K bytes. An additional 1M byte of memory is available through an expansion board, the vendor said. The Xtra XP also includes five Personal Computer XT expansion adapter slots and read-only-memory-based diagnostics said to be capable of analyzing faults to chip level.

The ITT Xtra XP is priced from $3,995 to $4,595.

ITT Information Systems, 2350 Qume Drive, San Jose, Calif. 95131.

VIASYN CORP.
Booth 2117

Viasyn Corp. will demonstrate an enhanced version of its Compupro 286 multiuser microcomputer that is said to include an Intel Corp. 8-MHz 80286 processor supported by an upgraded version of Concurrent DOS 8/16 with PC-DOS Version 2 compatibility.

Other features are a multitasking slave processor for simultaneous execution of 8-bit tasks and electronic mail software for data file transfers between workstations.

Viasyn, 3506 Breakwater Court, Hayward, Calif. 94545.

PYRAMID TECHNOLOGY CORP.
Booth 5163

Pyramid Technology Corp. will exhibit the AT&T Unix-based Model 90X 32-bit computer, Model 90MX dual-processor version and the OSX version of Unix.

The 90X is said to provide a 120-nsec cycle time on three boards plus up to 128 user connections.

A three-tiered memory hierarchy consisting of virtual address space, physical memory and cache offers 4G bytes of user address space, the vendor said.

The 90MX reportedly offers 1.70 to 1.85 times the throughput of the 90X plus a maximum of 256 user connections.

OSX Unix derives from the University of California at Berkeley Unix 4.2 and AT&T's Unix System V. Features include virtual paging supported by demand paging, shared code and data during process creation and local-area networking.

Pyramid Technology, P.O. Box 1295, 1295 Charleston Road, Mountain View, Calif. 94039.

QUADRAM CORP.
Booth 2821

Quadram Corp. will showcase its line of microcomputer enhancement products, including the Quadscreen monochrome monitor, Quadlaser printer, Asher enhancement boards for integrating voice and data communications and Quadnet networks.

The Quadscreen monitor is designed for computer-assisted design and manufacturing applications and compatible with such programs as Autocad II and Cadmaster. A 17-in. screen reportedly provides a resolution of 968 horizontal dots by 512 vertical lines.

The monitor also includes dot addressability, spreadsheet and split-screen functions, according to the vendor.

The Quadlaser printer uses diode laser technology and electrophotographic imaging techniques. Print speeds run up to 8 page/min or about 330 char./sec., the vendor said.

A 300 by 300 dot/in. resolution is said to allow users to mix multiple font styles and graphics on one page.

Asher C1200 and C2400 voice/data communications cards can be installed inside a personal computer. The keyboard then controls all communications commands. Voice and data communications can occur simultaneously, according to the vendor.

Quadram will also display local network products including Quadnet II, a baseband network that reportedly links up to 32 IBM Personal Computer and compatible processors.

Quadscreen costs $1,995; Quadlaser sells for $3,795; the Asher C1200 is priced at $695; the C2400 costs $995.

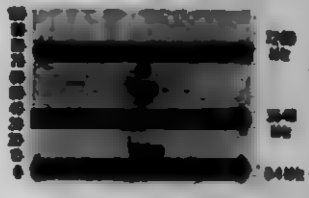
A Quadnet II Master Kit, which consists of a network interface card, manual, software and key card, costs $1,095. The User Kit, containing only an interface card, costs $395, while a Starter Kit with cabling to interconnect three network stations sells for $95.

Quadram, 4355 International Blvd., Norcross, Ga. 30093.

Continued on Preview/44

Can you picture a local voice/data network that is powerful, practical and priced right ...even for very small groups of users? It's real. And we've installed more than 40,000 channels.

That's right. At Teltone, we've been showing companies large and small how to manage growing voice and data networks for years, and "cost-effective" is our middle name. Right now, for example, our Data Carrier Systems are helping more than 500 companies extend the useful lives of their telephone systems by letting them double as local data networks. For as little as $450 per channel, DCS enables users to route synchronous/asynchronous data, at up to 9600 bps, to virtually any existing telephone jack. This makes adding or moving a terminal as easy as plugging in a phone—no modems, no cable, and no disruption of voice traffic at any time. We also offer a full line of high-performance multiplexers and other networking products, but most of all we provide expertise. When you do business with Teltone, you deal with our own applications experts—people who know networking inside out, and share your concern about controlling costs. If this sounds like a good idea to you, let's talk. We have offices nationwide, and we'd welcome a chance to communicate with you.



"Piggy-Backing" on the PBX Line

Microcomputers at NCC

Continued from Preview/43

SHARP ELECTRONICS CORP.
Booth 4265

Sharp Electronics Corp. will showcase the PC-1350 pocket computer that includes a four-line display and 16K-byte expansion random-access memory (RAM) card.

The computer comes with 5K bytes of RAM plus 40K bytes of read-only memory that contains Sharp's Basic language, Help function, graphics, machine language support as well as 810 software.

The PC-1350 costs $195, the vendor said.

Sharp Electronics, 10 Sharp Plaza, Paramus, N.J.

JUKI OFFICE MACHINE CORP.
Booth 6965

Juki Office Machine Corp. will be displaying five printers for micros and a software package that allows the Apple Computer, Inc. Macintosh to use Juki printers.

The 5510 dot matrix printer prints 180 char./sec. in draft mode and 30 char./sec. in near-letter quality mode. It is IBM and Epson America, Inc. compatible and has a 3K-byte buffer memory. The 5510 costs $582 for a serial ported version and $499 for a parallel port.

The 6000 letter-quality daisywheel printer prints 10 char./sec. and comes with either a Centronics Data Computer Corp. parallel or an RS-232C serial interface. It costs $296.

The 6100 letter-quality daisywheel printer reportedly performs word processing functions such as underscoring, boldface, superscript and subscript. It comes with a parallel interface for $599 or with a serial interface for $658.

Another daisywheel printer, the 6200, has a maximum print speed of 30 char./sec. and also comes with either serial or parallel interfaces. The serial version costs $804, and the parallel version costs $745.

The 6300 letter-quality daisywheel printer has word processing functions and graphics. The unit prints at 40 char./sec. and costs $995.

The company will also exhibit its Letterprint software that allows the Macintosh computer to work in conjunction with Juki's 6100 or 6300 printers. The Letterprint kit costs $75, or $95 with cable included.

Jeff Einstein, author of "Einstein's Computer Guides," will be at the Juki booth July 15 from 1 p.m. to 4 p.m. and July 16 from 2 p.m. to 4 p.m. giving away copies of his various computer guides.

Juki Office Machine, 299 Market St., Saddle Brook, N.J. 07662.

VERBATIM CORP.
Booth 5465

Verbatim Corp. will show prototypes of an erasable read/write optical disk and a disk drive, which are currently in the development phase. The demonstrations will take place on all four days of the National Computer Conference.

The 3½-in., thermomagneto-optical disk is said to store a minimum of 40M bytes of formatted information.

The Monday and Tuesday demonstrations will be hosted by Geoff Bate, Verbatim's senior vice-president of engineering. Ingolf Sander, chief scientist of the company's new storage technology department, will host demonstrations Wednesday and Thursday.

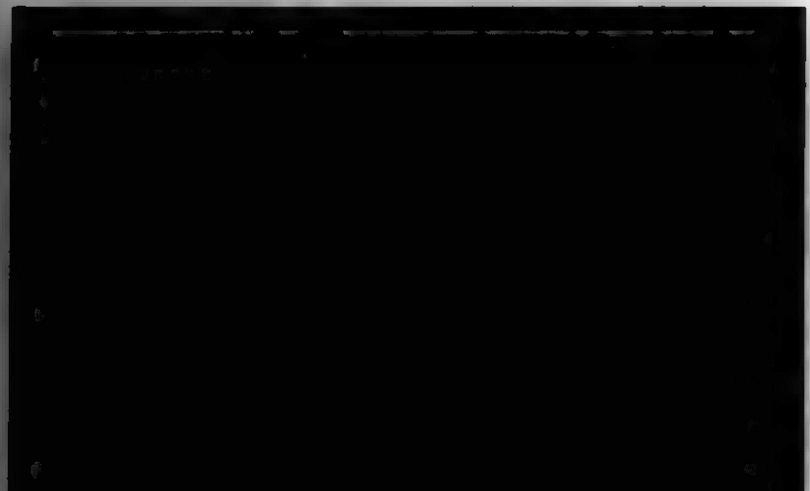
Demonstrations will take place all four days at 10:30 a.m. and 1 p.m. and at 3 p.m. Monday, Tuesday and Wednesday.

Verbatim, P.O. Box 3477, 323 Soquel Way, Sunnyvale, Calif. 94088.

MEGADATA CORP.
Booth 4411

Megadata Corp. will exhibit its 8300 series of Unix processors including the Model 7 stand-alone data

Continued on Preview/46



The future.

Very few data communications managers have the time to think about it. And even fewer data communications companies want to discuss it.

While we at Codex don't claim to have a crystal ball, we feel that not knowing what the future holds is no reason to be unprepared for it.

Which is why everything we do centers around one objective: putting you in the position to solve your organization's information needs. No matter how large, how complex, or how much they change.

This is evident not only in our dedicated central site control systems, but with our modems, multiplexers, network processors, switches and local area networks which deliver monitoring and control capabilities, enhancing network performance and flexibility.

It's also evident in our people, who can help you interconnect devices with various protocols, speeds, even dissimilar architectures.

The fact is this: for more than 20 years we've been helping people solve the future everyday. To the point where today Codex equipment can be found in 90 of the Fortune 100 companies.

See how far Codex can take you. Call 1-800-426-1212, ext. 204. Or write Codex Corporation, Dept. 707-204, 20 Cabot Boulevard, Mansfield, MA 02048.

At NCC, see us at the Motorola Information Systems booth #5541.

The Right Information at the Right Time... at No Charge to You from Comdisco

Now Available On Cassettes!

Our Comline Reports have proved so popular, we put the latest issues on cassettes. Now you can keep current at your convenience. . .at home, in the car, or wherever your busy schedule takes you. On tape or in print, Comline Reports will keep you up-to-date on the issues that impact your company, your data center, and your equipment planning decisions.

The Information Crunch

Today's data processing professionals are required to be practiced technicians, inspiring managers, and masters of all that's new and current. Responsible for day-to-day operations as well as keeping management informed of the big picture, it's no wonder that DP managers have little time for in-depth analyses of critical industry issues.

The "COMLINE" Solution

Comdisco's Comline Reports are a means through which industry professionals can take advantage of the experience and information which flows through our technical, financial, and marketing channels. Authored by Comdisco's Professional Resource Team, Comline Reports are loaded with valuable insights to help you manage your operation more successfully in today's changing DP environment.

Why Comdisco?

Comdisco is the world's largest remarketer of IBM computers and peripherals, and has consistently set the standard of excellence in the computer leasing industry since 1969. Today, our role in the industry as authorities and advisors on data processing topics has expanded dramatically. From financial issues . . .to capacity requirements. . . to compelling disaster recovery obligations. . .

Comdisco professionals are making the effort to keep you informed of the issues. To thousands of Comdisco customers, our name and our standard of quality service is second nature. To those of you who would like to learn more about the expanding scope of our services, as well as subscribe to our Comline Reports, we invite you to clip the coupon below.

NCC Preview

Microcomputers at NCC

Continued from Preview/44

processing system for one to eight users.

The basic system is said to contain two RS-232 ports, a 26M-byte Winchester disk, a 360K-byte floppy disk, 512K-bytes of random-access memory (RAM) and the Unisoft System Corp. Uniplus+ operating system, derived from AT&T Unix Systems III and V.

A two-port Unix-based system costs less than $5,000 and can be expanded to eight ports and 2M bytes of RAM for under $6,000.

Megadata, 35 Orville Drive, Bohemia, N.Y. 11716.

KEY TRONIC CORP.
Booth 5606

Key Tronic Corp. will exhibit the KB5153 touch-pad keyboard for the IBM Personal Computer, Personal Computer AT and compatibles.

Three printing modes, including cursor key, mouse and graphics and a function key mode, are standard, according to the vendor.

Cursor key mode is said to convert finger or stylus motion into cursor key codes identical to keyboard input. In mouse mode, stylus or finger movement reportedly sends position changes to the host, where they are interpreted by a software driver as if they came from a mouse.

Graphics mode sends a digitized point-of-touch to the host where driver software translates the data and moves a screen pointer to the corresponding monitor location. Function key mode divides the touch-pad surface into areas that each represent an operator-selected string of characters.

The KB5153 lists for $399.95.

Key Tronic, P.O. Box 14687, Spokane, Wash. 99214.

PREH ELECTRONICS INDUSTRIES, INC.
Booth 1227

Preh Electronics Industries, Inc. will show keyboards and graphics tablets.

Graphic Commander 106, a combination keyboard and graphics tablet, costs $550; Commander PC-I, an IBM Personal Computer-compatible keyboard, costs $195; and Bitmap 12, a graphics tablet with zoom functions, costs $350.

Preh Electronics Industries, 5665 Howard St., Niles, Ill. 60648.

ENTER COMPUTER, INC.
Booth 2996

Plotters, a mouse and lettering software will highlight Enter Computer, Inc.'s booth.

The six-pen Sweet-P Model 600 plotter includes 14 in./sec. plotting speed, RS-232 and parallel interfaces, 18 internal English and foreign language character sets and 1.5K-byte buffer memory storage.

Like its single-pen predecessor, the Sweet-P Model 100, the Model 600 can be used with many systems compatible with Apple Computer, Inc., IBM Personal Computer and CP/M machines. The Model 600 also is compatible with the Hewlett-Packard Co. Graphics Language.

The Sweet-P mouse reportedly uses an independent suspension system and leaf springs that keep a constant load on the X-Y drive wheels. It is available for the IBM Personal Computer, Personal Computer XT and AT, 3270 Personal Computer and compatible processors.

Typ-Set, a high-resolution, presentation-graphics-quality lettering system, is said to provide six fonts and let users place 100 lines and save all data for each job file. It runs with a 192K-byte, dual-floppy IBM Personal Computer and compatible computers.

Prices are $1,095 for the Model 600 plotter, $395 for the Model 100, $179 for the mouse and $299 for Typ-Set.

Enter Computer, 6867 Nancy Ridge Drive, San Diego, Calif. 92121.

HOUSTON INSTRUMENT
Booth 5063

Houston Instrument will exhibit digital plotters and graphics digitizers.

The PC Plotter, a four-pen plotter for personal computers, uses the vendor's DM/PL plotting language. The PC Plotter 595 lets users produce 8½- by 11-in. graphics; the PC Plotter 695 produces both 8½- by 11-in. and 11- by 17-in. graphics.

The DMP single-pen plotter reportedly offers speeds up to 4.2 in./sec., and 8½- by 11-in. and 11- by 17-in. graphics plotting. It is said to generate circles, arcs, ellipses and general curves automatically as well as clip, window, viewport and scale to size.

SERIES/1 EDUCATION
EDX AND CF

For the benefit of those users who are unable to attend the standard Series/1 courses provided by IBM, SSCP is now offering a complete curriculum of Event Driven Executive (EDX) and Communications Facility (CF) education. The classes are conducted at our education center, located in the San Francisco Bay Area. For the convenience of the larger user, we also provide onsite education at the customer's location.

SSCP offers:

- Curriculum prepared by former IBM Series/1 education specialist
- Small class size for individualized attention
- Courses ranging from basic operator training through advanced programming and systems internals workshops
- Hands-on labs designed to help your Series/1 staff reach a high level of EDX and CF expertise quickly
- Classes conducted at SSCP Education Center or at customer location
- Excellent availability
- Reasonable prices

Small Systems Communications Products—Specializing in products and services for the IBM Series/1 and Personal Computers.

The Solution.

Dial-Up 3270

LineMaster An intelligent device for dial-in access to your mainframe 3270 Bisync line. LineMaster is a communications watchdog which keeps a line in service until a user dials in.

- For any remote 3271/4/6 line—up to 19.2K baud.
- Compatible with any 3270 BiSync emulator including microcomputers.
- Connects between modem and mainframe.
- Installs in minutes.

$795.

BUILDING A COMPUTER CENTER?

If you're planning a new, expanded or remodeled DP facility, you need Datasphere's help.

Since 1968 Datasphere's unique combination of services has saved dollars, frustration and time for large and small firms around the world.

From turnkey—design/build computer rooms to consultation on the smallest project, we'll do all or part—on schedule, within budget! Datasphere is unique—we're engineers, consultants, planners and builders specializing in computer facilities.

Datasphere's engineers are expert in all computer support systems including:

- *Uninterruptible Power Systems*
- *Computer Power Centers*
- *Computer Fire Protection Systems*
- *Computer Type Air Conditioning*
- *Gas Turbines/Diesel Generators*
- *Operation Command Centers*
- *Elevated Flooring*
- *Frequency Converters*
- *Line Filters*
- *Security Systems*
- *Systems Monitors*
- *Voltage Regulators*

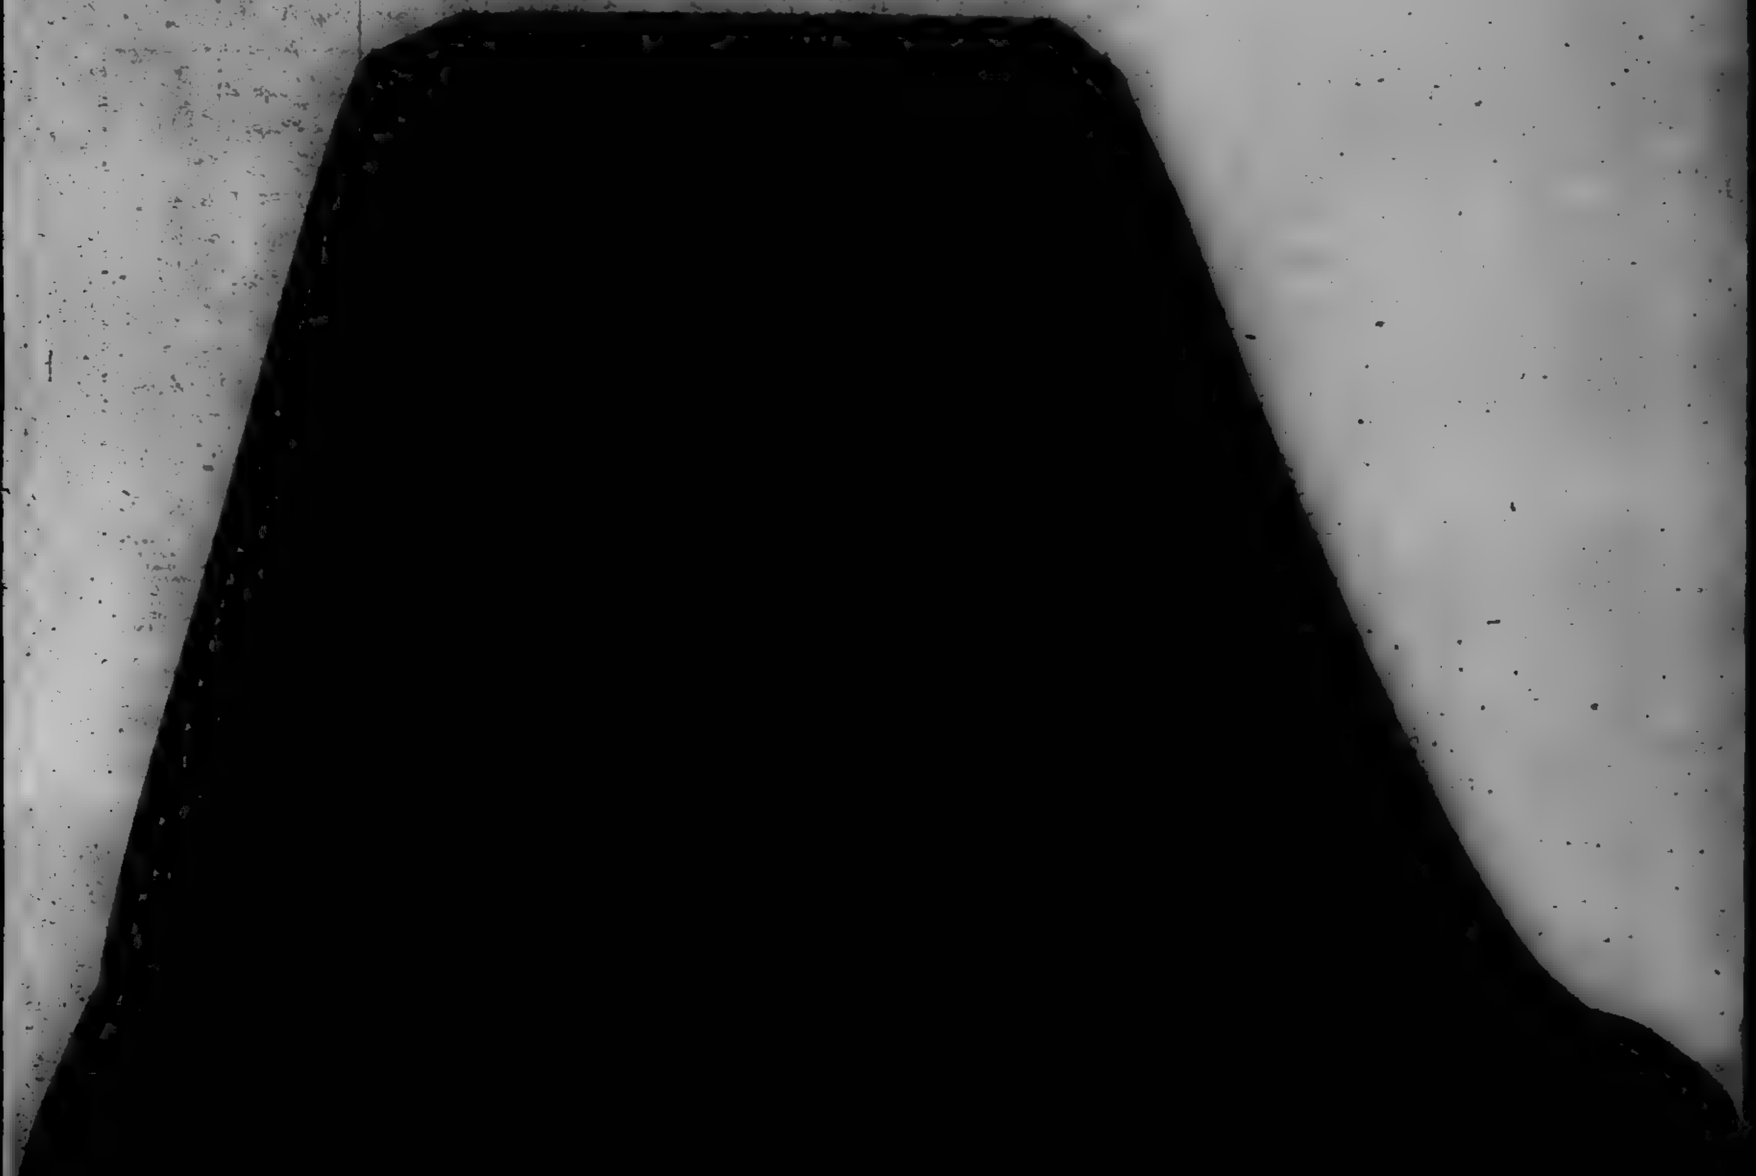
datasphere,Inc. *1233 Westfield Avenue, Clark, New Jersey 07066*

Introducing seven different ASCII displays...



The new IBM 3161 ASCII Display Station is really seven different ASCII displays in one.

In addition to its own function-rich native mode, the new IBM 3161 can emulate:

- IBM 3101 Model 881
- ADDS Viewpoint*
- Hazeltine 1500*
- Lear Siegler ADM-3A*
- Lear Siegler ADM-5*
- TeleVideo 910*

Besides fitting nicely into existing systems, the IBM 3161 also offers impressive improvements in ergonomics.

Improved Ergonomics For Improved Productivity

Take the 102-key ASCII-style keyboard, for example. Its low profile, gentle contour and typewriter touch make for faster keying with fewer errors. The keyboard has programmable function and editing keys so it can be custom-tailored to meet your application needs.

Then, for comfortable viewing, there's the tilt and swivel of the 12" display. And the sharp, clear 8 x 16 character matrix for easy reading. Plus cursor, character and field attributes (blink, reverse video, underscore, dual intensity, etc.). And scrolling. And partitioning. And lots more.

The IBM 3163 with Plug-in Cartridge

The sharp 8 x 16 character matrix helps make for easier reading and fewer operator errors.

And, as if that weren't enough, we're also announcing a second new ASCII display station with even higher function—the IBM 3163.

Outwardly, these two new displays look alike. But the 3163, in addition to its built-in emulation of the IBM 3101 Model 881, also offers the ability to emulate the DEC VT 52 and VT 100* by means of a unique plug-in cartridge.

And while you'll like the power and flexibility of the 3161, for your high-function applications the 3163 goes even further. For example, a 7,680-character buffer and up to three windows enable you to view and modify portions of different host data bases. The 3163 lets you redefine and even recap the keys.

On both displays the setup is menu-guided and written in plain English, so it can be done easily and quickly. The point is, both are designed to improve your user productivity.

Very Attractive Prices

The price per terminal is $695 for the 3161 and $1,095 for the 3163. Quantity discounts are available. What's more, IBM maintenance offerings start as low as $35 per year per terminal for customer carry-in repair.

Now there's a new family of ASCII displays with the quality, service and support IBM is famous for. Both displays are available through IBM Authorized Distributors and IBM marketing representatives.

FEATURES	3161	3163
Lines x Characters	25 x 80	25 x 80
Double-sized chars	No	Yes
Line drawing chars	24	24
Vertical scroll	Jump	Jump/Smooth
Definable function keys	24	24
Windowing	No	Yes
Partitioning	Horiz	Vert/Horiz

in one.

The IBM 3161 ASCII Display Station

Microcomputers at NCC

Continued from Preview/46

The intelligent DMP-41/42 cut-sheet plotters automatically generate circles, ellipses and curves, the vendor said. The 14-pen DMP-51/52 MP series plotters reportedly provide 0.001-in. resolution, maximum plotting speed of 22 in./sec. and constant velocity control to ensure uniform inking regardless of pen movement angle.

PC Pad is said to function as a digitizer and mouse under software control and interface via an RS-232C port.

Providing 0.005-in. resolution, the PC Pad can address more than one million points on a computer screen, according to the vendor.

Hipad desktop digitizers reportedly can send up to 100 coordinates in one second.

Prices are $695 for PC Plotter 695, $995 for the DMP-40 plotter, $2,995 for the DMP-41/42 series plotters, $5,995 for the 51/52 MP series plotters, $495 for PC Pad, $840 for the Hipad DT-11 and $920 for the four-button cursor version of Hipad DT-114.

Houston Instrument, 8500 Cameron Road, Austin, Texas 78753.

DIGITRAN
Booths 1657, 1658

Digitran will exhibit an IBM Personal Computer AT keyboard that reportedly is also compatible with the Personal Computer and Personal Computer XT.

The keyboard is available with tactile or linear keys, a curved design and 0.15-in. travel.

The single-quantity price is $195 for keyboard, enclosure and cable.

Digitran, 3100 New York Drive, Pasadena, Calif. 91107.

COMPSOL CORP.
Booths 4060, 4061

Compsol Corp. will present a solid-state disk emulator for the IBM Personal Computer, Personal Computer XT and AT that is said to transfer data at 5M byte/sec.

Called Quick Byte, the system reportedly can be expanded from 1M byte to 4G bytes of random-access memory using one bus slot and can host up to four computers.

Quick Byte with 1M byte of RAM costs $1,495.

Compsol, 318 Montgomery St., Alexandria, Va. 22314.

MINISCRIBE CORP.
Booth 2217

Miniscribe Corp. will display its 8000 series of 3½-in. disk drives plus its 3000 and 6000 series of 5¼-in. drives.

Model 8425 reportedly provides 25.6M bytes of storage; Model 8212 offers 12.8M bytes. Both models reportedly feature 68-msec access times and 5M bit/sec. data transfer rates.

Miniscribe, 1861 Lefthand Circle, Longmont, Colo. 80501.

MOTOROLA SEMICONDUCTOR PRODUCTS, INC.
Booth 6329

Motorola Semiconductor Products, Inc. will show the VMESystem 1000 family of rack-mounted OEM microcomputer systems.

The systems provide a VME chassis with card cage, 400W power supply, 15M-byte or 40M-byte hard disk drive and 1M-byte floppy disk drive.

Other features reportedly include multiuser capability and Motorola's Versados and System V/68 support.

Motorola Semiconductor Products, 725 S. Madison Drive, Tempe, Ariz. 85281.

KUSTOM ELECTRONICS, INC.
Booth 3457

Kustom Electronics, Inc. will present the Sunflower MS 10/10 removable hard-disk system.

A dual 10M-byte unit, the MS 10/10 is said to be compatible with the IBM Personal Computer and the Novell, Inc. and 3Com Corp. networks. MS 10/10 is priced at $3,395.

Kustom Electronics, 8320 Nieman Road, Lenexa, Kan. 66214.

ALPS ELECTRIC (USA), INC.
Booth 6415

Alps Electric (USA), Inc. will exhibit 3½- and 5¼-in. disk drives and data input devices.

The 3½-in. rigid disk drives provide 10M- or 20M-byte storage capacities; the 3½-in. flexible drives have 512K-byte and 1M-byte storage capacities; 5¼-in. rigid disk drives offer 10M-, 20M- and 40M-byte capacities.

Alps Electric, 3553 N. First St., San Jose, Calif. 95134.

VIDEX, INC.
Booths 4169, 4171

Videx, Inc. will display the Mail Center, an information transfer program for the Apple Computer, Inc. Appletalk personal computer network.

Mail Center software for two Macintosh computers costs $299; the price is $499 for use with six Macintosh systems.

Videx, 897 N.W. Grant Ave., Corvallis, Ore. 97330.

Communications at NCC

M/A-COM LINKABIT, INC.
Booth 2921

M/A-Com Linkabit, Inc. will display its IDX-3000 local networking products.

The IDX-3000 local communications network allows users to switch between computer resources automatically, providing nonblocking, full-duplex asynchronous communication for up to 3,072 lines at rates of up to 19.2K bit/sec.

Other features include logical addressing of lines and resources and the ability to queue and hold user connection requests, establish a second connection and return to the first connection.

An IDX-3000 local communications network system costs between $150 and $200 per port; multiplexers range from $3,000 to $4,900; and TMX144 trunkmasters cost between $2,500 and $3,500.

M/A-Com Linkabit, 3033 Science Park Road, San Diego, Calif. 92121.

CODEX CORP.
Booth 5541

Codex Corp. will present the 6240 Digital Transmission Multiplexer (DTMX), said to integrate voice, data and digital image applications for transmission over a single link at rates from 56K bit/sec. to 2.04M bit/sec.

The time-division multiplexer will accommodate up to 64 data channels or 64 voice channels. It can be programmed to reconfigure networks from a central site; users can redefine parameters and reallocate aggregate bandwidth, the vendor said.

Prices begin at $14,000 per unit.

Codex 20 Cabot Blvd., Mansfield, Mass. 02048.

INTERPRETER, INC.
Booth 5315

Interpreter, Inc. will exhibit its Interpreter CCU line of devices that reportedly allows dissimilar office automation equipment to communicate with 100% data integrity.

The CCU-4 is a four-port interpreter that provides two floppy disks with 256K bytes of store and forward capabilities. Up to four dissimilar asynchronous or synchronous systems can communicate with one another and retain the integrity of documents being exchanged. The CCU-W is a six-port interpreter with a Winchester disk providing 10M bytes of store and forward capabilities.

Other features include password protection for screen access and a menu access control facility that tells the operator what documents are queued. Prices are $12,490 for the CCU-4 and $18,990 for CCU-W.

Interpreter, 11455 W. 48th Ave., Wheat Ridge, Colo. 80033.

EXTEL CORP.
Booths 3187, 3188

Extel Corp. will exhibit the Comwriter Jr. message communications terminal that reportedly lets users send messages over ordinary telephone lines, dedicated Telex or private-wire networks.

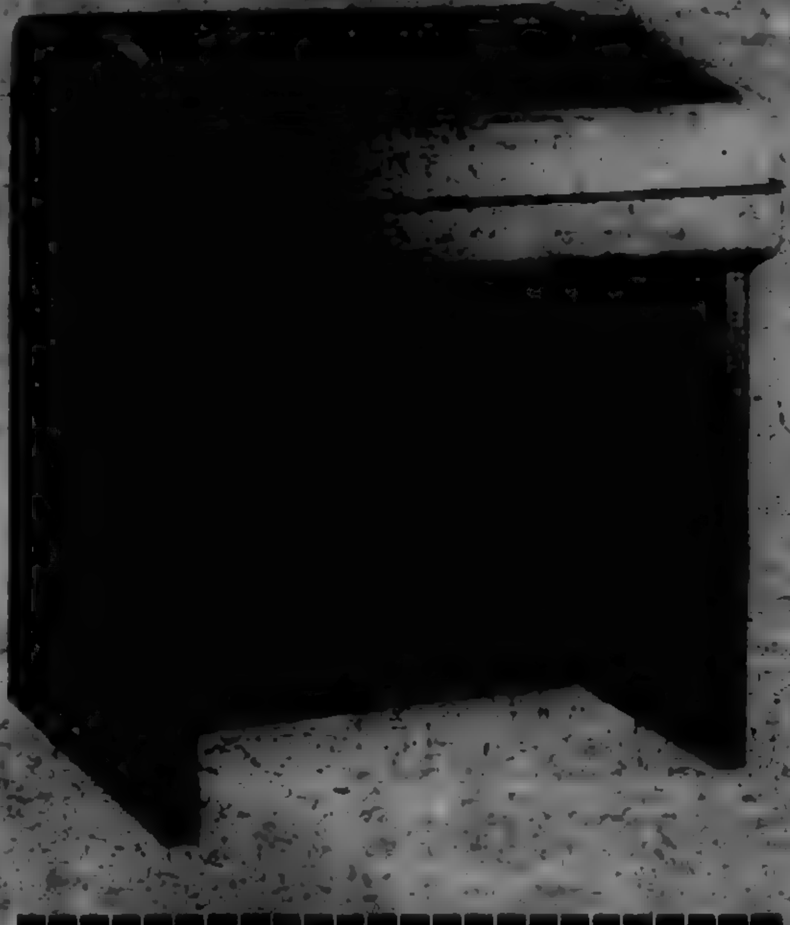
According to the vendor, the terminal also can access Telex, TWX and other message communications services for electronic mail applications.

Comriter Jr. comes with a printer, modem, text editor and autodial keys that are said to allow single-key message transmission over common carrier services.

Prices start at $1,300.

Extel 4065 Commercial Ave., Northbrook, Ill. 60062.

Continued on Preview/62



Low-cost, tough and quiet. ST Series printers from SSI.

A small, quiet printer system with more output for the dollar. Printer users have been waiting for this perfect combination of ideal qualities. Now Southern Systems has it. The ST Series — in either 450 or 900 lpm speeds — says YES to many user criteria.

YES

- ☑ Do the ST printer systems offer a choice of speeds . . . 450 or 900 lpm?
- ☑ Are the ST printers quiet and small enough for my office environment?
- ☑ Are they reliable (tough) enough to *eliminate preventive maintenance?*
- ☑ Do they offer operator-friendly features such as easily changed bands, membrane touch controls, form length select switch?
- ☑ Is the printing near letter-quality?
- ☑ Diagnostic display? Internal self-test?
- ☑ Long-life ribbon cartridge?
- ☑ Does SSI guarantee compatibility with my computer? (Whether it's IBM, PC LANs, DEC, DG, TI, HP, etcetera.)
- ☑ Is nationwide service available?
- ☑ Are the ST printer systems the most cost-effective on the market today?

Delivery in 30 days? Just another user need to which SSI says "YES."

Sounds like the ST says "Yes" to my special needs.
Tell me more about the:

LOCAL DATA, INC.
Booth 2957

Three stand-alone protocol converters will be displayed at the Local Data, Inc. exhibit.

The Versalynx Rack is a rack-mount configuration of the Versalynx 3278 coaxial deconverter. The rack-mount version contains up to 16 6- by 12-in. cards, individually fused and designed to enable insertion or removal while the rack is under power.

Trulynx/3270 software is said to execute as an application program under Microsoft Corp.'s MS-DOS or IBM's PC-DOS, emulating the file-transfer mode of IBM's 3278 or 3270 Personal Computer control program.

Barelynx/3287, Barelynx/3278 and Barelynx/VL 78 are board-only versions of the Interlynx/3287 NP printer controller converter, the Interlynx/3278 deluxe coaxial controller converter and the Versalynx Model 3 coaxial deconverter, the vendor said.

The Versalynx Rack costs $2,150. Other prices are not available.

Local Data, 2771 Toledo St., Torrance, Calif. 90503.

DIGITAL COMMUNICATIONS ASSOCIATES, INC.
Booth 5000

Digital Communications Associates, Inc. (DCA) will exhibit data communications networking systems and microcomputer-to-mainframe communications products including Netlink high-speed time-division multiplexers, the Irma micro-to-mainframe interface board and the Network Management System software package.

There are three Netlink multiplexers.

Netlink I is a bit-synchronous time-division multiplexer that is said to provide voice, data and compressed video transmission at speeds of up to 1.544M bit/sec.

Switching Netlink adds the ability to assign individual channels or groups of channels to various network destinations.

Netlink II adds support for traditional drop-and-insert and bypass applications, redundancy of power, logic and T-carrier modems, support of independent trunk clocks and D4 framing capability.

The Irma board reportedly provides communications facilities between a personal computer and a mainframe.

The Network Management System is a package that lets an IBM Personal Computer XT or AT serve as an intelligent monitoring and reporting device when attached to DCA's Series/300 network processors.

Prices are $4,195 each for Netlink I and II; $1,195 for Irma and $9,995 for the Network Management System.

DCA, 303 Technology Park, Norcross, Ga. 30092.

AMP, INC.
Booth 1119

Amp, Inc. will show a four-position data connector that includes self-shorting contacts required for IEEE 802.5 token-passing ring networks.

The hermaphroditic connector permits axial, right-angle or 45-degree cable entry and contains a locking device to prevent accidental disengagement.

Selectively plated gold contacts are rated for 1A, maximum, at 30V ac.

Shielding performance is specified to 1 GHz, according to the vendor.

Amp, P.O. Box 3608, Harrisburg, Pa. 17105.

TELENEX CORP.
Booth 4505

Data communications diagnostic and performance analysis devices will highlight Telenex Corp.'s exhibit.

Autoscope monitors and interprets line activity, detects line and protocol errors automatically, monitors and provides graphic statistical analyses of performance and emulates any network element, according to Telenex.

Portascope 1000 reportedly provides removable, interchangeable test application cartridges. These cartridges allow the device to adapt modularly and specialize on any protocol, in turn letting the service engineer change from one interface and break out to another, the vendor said.

Autonex is said to extend the 50-ft limitation of the RS-232 data set cable to over 1,000 ft.

A cable converter unit passes all control, clock and data leads of the RS-232 interface to distances of more than 1,000 ft at speeds of up to 19.2K bit/sec., the vendor said.

Telenex, P.O. Box 249, 503 Pleasant Valley Ave., Moorestown, N.J. 08057.

TELTONE CORP.
Booths 1557, 1558, 1559

Teltone Corp. will display the DCS-2SE data communications system said to eliminate the need for cables between terminals, peripherals and the host computer.

The system sends either synchronous or asynchronous data over existing phone pairs for up to four miles.

Voice and data can be transmitted simultaneously, according to a spokesman.

Asynchronous speeds reportedly can reach 9.6K bit/sec.; synchronous speeds range from 300 bit/sec. to 9.6K bit/sec.

Teltone, P.O. Box 657, 10801 120th Ave. N. E., Kirkland, Wash. 98033.

Systems & Peripherals at NCC

FLEXIBLE COMPUTER CORP.
Booth [illegible]

A demonstration of the Flex/32 multicomputer will highlight Flexible Computer Corp.'s booth.

The Flex/32 consists of two to 20 32-bit superminicomputers, each with its own memory, operating system and I/O (VMEbus).

Each 32-bit computer can be programmed by the user, the vendor said. Software includes AT&T Unix System V, a concurrency simulator for testing parallel systems, the Multicomputing Multitasking Operating System, Concurrent C, Concurrent Fortran and Ada.

The aggregate bus bandwidth of the 36 buses in each Flex/32 cabinet is 696M bytes per second, according to the vendor.

The basic system, which consists of two computers, costs $126,000.

Flexible Computer, Building 2, 1801 Royal Lane, Dallas, Texas 75229.

BELL & HOWELL CO.
Booth 1696

Bell & Howell Co. will exhibit COM Print 6000, a computer output microfilm print and duplicating system.

COM Print 6000 is an on-line system that reportedly produces complete master and duplicate fiche printouts in one step.

Compatible with IBM and plug-compatible mainframes, the system can generate a 1,000 page report for less than $1 in fewer than 22½ minutes, a spokesman said.

Bell & Howell, 16901 Hale Ave., Irvine, Calif. 92714.

VOTAN
Booth 2317

Voice terminals and a voice management system will highlight Votan's exhibit.

The VTR 3270 is said to allow 3278 terminal users to add voice control to their applications.

The VTR 6050 terminal provides local 3½-in. floppy disk storage that can be controlled by the host or a locally connected terminal. Each floppy provides 320K bytes of storage for saving messages and other voice files.

This terminal also offers continuous speaker-dependent recognition to allow individuals to speak to a computer in a normal conversational flow, the vendor said.

The Voice Management System (VMS) is said to provide continuous voice recognition, voice store and forward and telephone interfacing capabilities for up to eight independent voice channels running simultaneously.

VMS also includes 5¼-in. Winchester and floppy drives for storing voice messages and voice applications programs.

Votan, 4487 Technology Drive, Fremont, Calif. 94538.

DATAGRAPHIX, INC.
Booth 5552

Datagraphix, Inc. will demonstrate Computer Output Management (COM) systems including the Mini-Autocom Model III recorder, Autocom XR microfilm recorder, Aris II microfiche recorder and Datagraphix laser printer.

The Mini-Autocom Model III recorder includes an IBM Personal Computer that provides operator interface, message display and diskette storage features.

The recorder reportedly converts computer-generated tapes into cut, dry nonreversal or optional reversal microfiche for immediate diazo or vesicular duplication.

The on-line Autocom XR is configured as a 3211 line printer that interfaces directly with IBM Series 370, Series 303, 308 or 43 computers plus plug-compatible mainframes.

Autocom XR processes data into 105mm, 82½mm or 16mm roll microfilm for off-line processing. The 105mm film is titled and indexed at an average speed of one fiche per minute, according to the vendor.

Aris II reportedly uses raster scan laser-imaging and dry heat development processing to produce titled and indexed microfiche at speeds of up to 12,000 line/min.

The system is configured as a 3211 printer and interfaces with IBM 360/25 and higher models, Series 370, 303 and 43 computers plus Amdahl Corp. V6 and other IBM plug-compatibles.

An Interlink transport option to cut-fiche COM systems connects the recorder to the duplicator and automatically carries cut silver original microfiche from the Aris II or Autocom for duplication.

The 9800 series laser printer reportedly outputs characters at speeds of up to 21,000 line/min.

Datagraphix, P.O. Box 82449, San Diego, Calif. 92138.

Continued on Peripherals/[illegible]

The first DBMS designed for online systems from the start, finishes first.

Compared to any other DBMS, CCA's MODEL 204 software is faster in a VM, OS, or DOS environment.

And, its productivity stays ahead of the pack even as you add more and more users. Incredibly, the MODEL 204 can support any size network from 30 to 30,000 terminals.

Like the cheetah's speed compared to other animals, the MODEL 204 was designed to be fast from the start. Because instead of being designed for batch, then retrofitted, this DBMS was specifically designed for online systems right from the start.

Impressive as its speed, is capacity. It can handle a few hundred records, or as many as 523 billion! With no limit on each record's size.

Because of its fourth generation tools, tough applications are easy to create, test, or change without affecting the database. And unlike any other DBMS, as your business data tracking requirements change, you can add or change new or existing fields without unloading, recompiling and reloading the database. A dramatic savings of time and manpower.

Very quickly, let us tell you more about MODEL 204's speed and superiority. Send the coupon for more information fast. Or, call 1-800-258-4100.

Send more MODEL 204 DBMS facts fast.

Systems & Peripherals at NCC

Continued from Preview/53

XYLOGICS, INC.
Booth C4175

Xylogics, Inc. will exhibit the 451 disk controller for IEEE 796 multibus applications and two 32-bit bus products, the 751 VME-bus storage module drive (SMD) disk controller and 772 VME-bus ½-in. tape controller.

The Model 451 disk controller can address up to 16M bytes of memory and control up to four enhanced SMD disk drives per board at data transfer speeds up to 2.4M byte/sec., the vendor said.

The 751 disk controller supports an industry-standard SMD interface disk drive. The controller also provides VME address and data support, allowing users to select in 8-, 16- or 32-bit modes, the vendor said.

The 772 tape controller is said to handle industry-standard, formatted ½-in. tape interfaces and support tapes ranging from start/stop models at 12½ in./sec. to group-coded recording streaming models up to 200 in./sec.

The 451 peripheral controller costs approximately $1,500. Prices for the 751 disk controller range from $1,600 to $2,700 and for the 772 tape controller from $1,300 to $2,000.

Xylogics, 144 Middlesex Tupk., Burlington, Mass. 01803.

C. ITOH ELECTRONICS, INC.
Booth 4421

C. Itoh Electronics, Inc. has added a 22 char./sec. print mode to its Model 8510 80 char./line and Model 1550 136 char./line serial dot matrix printers.

This print speed provides near-letter-quality output, the vendor said. The three print modes can be selected from the front panel or by software.

The single-unit price for the 8510T is $550; the 1550T is priced at $769. The color models are priced at $650 for the 8510TC and $869 for the 1550TC.

C. Itoh Electronics, 5301 Beethoven St., Los Angeles, Calif. 90066.

GENERAL OPTRONICS CORP.
Booths 2244, 2245

General Optronics Corp. will exhibit the Holoscan 40, a 40 page/min nonimpact laser printer said to support up to 25 workstations in a multitask environment.

The printer provides 300 by 300 dot/in. resolution and a volume range of 45,000 to 60,000 print/mo, a spokesman said. A plain paper and dry toner xerographic system is said to allow printing on most standard bond and letterhead, label stock and transparencies in portrait and landscape modes.

Multiple downloadable fonts can be interspersed on a single page, according to the spokesman.

Single-unit prices start at $22,500.

General Optronics, 275 Park Ave., New York, N.Y. 10152.

CENTRONICS DATA COMPUTER CORP.
Booth 4[illegible]

Centronics Data Computer Corp. will exhibit dot matrix and line printers.

The dot matrix printers include the Great Little Printer for micros, priced at $299; the Horizon series for IBM Personal Computers and compatible processors, priced from $699 to $899; the Model 240 Printstation letter-quality printer, priced at $1,495; the Model 250 Printstation for workstations and micros, priced at $1,295; and the Printstation 350 series letter-quality printers, priced between $2,195 and $3,150, the vendor said.

Centronics will also show line printers like the TIP series dot matrix line printers, ranging in price from $5,400 to $6,900; the E-Series Model III band line printer, priced at $16,800; and the Linewriter series, priced between $4,885 and $6,595.

Centronics, 1 Wall St., Hudson, N.H. 03051.

ANN ARBOR TERMINALS, INC.
Booth 2228, 2230

Ann Arbor Terminals, Inc. will showcase the VXL multihost, multiwindow terminal that can work with up to four hosts simultaneously.

Users reportedly can switch from one host to another with one keystroke, even while receiving results from other hosts in other windows.

The VXL provides 20K bytes of local display memory, which reportedly can be divided into up to eight pages, each of arbitrary width and height, to a maximum of 255 columns and 512 lines. Users can dynamically connect and disconnect any page to any host and switch the keyboard from host to host, according to the vendor.

Windows may be positioned so all are visible or are fully or partially overlapped. Each window is a view port into its underlying page and may be moved or changed in size and shape without affecting underlying data, the vendor said.

VXL screen density is dynamically variable from 80 to 160 col. and from 36 to 60 lines, according to the vendor.

The VXL lists for $2,795.

Ann Arbor Terminals, 6175 Jackson Road, Ann Arbor, Mich. 48103.

MAN SAVED FROM A SEA OF PAPER...

Huge oceans of information can be standardized into computer output microfiche (COM) that takes up less than 5% of equivalent paper space.

And it's simply the most cost-effective storage/reproduction medium available.

For example, a 1,000-page report using old reproduction methods would cost $[illegible] and take 1 hour to reproduce. An NCR COM can perform the equivalent task in 15 minutes for $[illegible]

NCR's COM systems can be a real life saver.

Systems & Peripherals at NCC

Continued from Preview/84

PRINTEK, INC.
Booth 2126

A demonstration of the Model 930/DD forms printer will highlight Printek, Inc.'s booth.

The Model 930/DD contains a bottom-entrance vertical feed of up to six-part continuous forms. Tractors beneath the printer reportedly provide a positive paper feed without delamination between copies for accurate print positioning.

Print speed is 200 char./sec. for data processing applications, 80 char./sec. for letter-quality printing.

No prices have been established yet, the spokesman said.

Printek, 1517 Townline Road, Benton Harbor, Mich. 49022.

ELECTRONIC INFORMATION TECHNOLOGY, INC.
Booths 1660, 1662

Electronic Information Technology, Inc. (EIT) will exhibit a monochrome image processing device that converts hard-copy materials into electronic files that can be used on personal computers.

The EIT Personal Scanner (EIT-PS) automatic graphics digitizer and text input device reportedly provides optical character recognition and image processing capabilities.

EIT-PS hardware consists of a desktop scanner and cable, plus interfaces to IBM Personal Computers and Personal Computer XTs and Apple Computer, Inc. and Motorola, Inc. 68000-based microcomputers.

The single unit price is $2,487.

EIT, 373 Rte. 46 W., Fairfield, N.J. 07006.

TATUNG CO.
Booths 6377, 6380

An IBM-compatible color monitor for text and graphics displays will debut at Tatung Co.'s exhibit.

The CM-1380 monitor reportedly provides a resolution of 640 horizontal dots by 200 or 350 vertical lines, with scan frequency at 21.85 KHz or 15.75 KHz.

The unit offers 16 colors at 15.75 KHz and 64 colors at 21.85 KHz. The display is switch selectable from color screen to an all-green screen for word processing, according to the vendor.

Designed for use with the IBM Enhanced Graphics Adapter, the CM-1380 costs $849.

Tatung, 2850 El Presidio St., Long Beach, Calif. 90810.

COMPUTER MEMORIES, INC.
Booth 6871

Computer Memories, Inc. will display the CM 4000 series of disk drives, including the 26.6M-byte CM 4426 drive.

The CM-4426 is said to provide a typical access time of 40 msec and to use high-output Winchester-type read/write heads.

In OEM quantities, the half-height CM 4426 costs $650. A delayed motor start option is available, according to the vendor.

Computer Memories, P.O. Box 2740, 9216 Eton Ave., Chatsworth, Calif. 91311.

TRUE DATA CORP.
Booths 3708, 3710

A wall-mount version of the Source Data Terminal (SDT) for shop floor data collection and TDC Perform, a manufacturing software package, will bow at True Data Corp.'s exhibit.

The wall-mount SDT can be used in environments with limited work space. It reportedly provides an employee identification badge reader, an optical card scanner, 32-col. LCD and 16-key data input touch pad.

SDT is built around a Rockwell International Corp. 6502A microprocessor with 4K bytes each of random-access memory and erasable, programmable read-only memory. Up to 64 user-defined prompts and 30 transactions for later communications to the computer may be stored, according to the vendor.

TDC Perform is said to offer communications polling, file editing, reporting and forms design.

Designed to run on IBM Personal Computer XTs and ATs operating under Microsoft Corp.'s MS-DOS, TDC Perform lets users define up to 32 relational data bases with up to 32 different forms within each data base.

SDT costs $1,995. TDC Perform sells for $8,295, with individual modules priced separately.

True Data, 17092 Pullman St., Irvine, Calif. 92714.

MICRO TECHNOLOGY, INC.
Booth 2944

Micro Technology, Inc. will show Digital Equipment Corp.-compatible disk controllers and subsystems, including the Microsafe streaming-tape cartridge upgrade kit and the MD4000 series of subsystems.

Microsafe addresses the backup deficiencies in DEC's MicroPDP-11, MicroPDP-11/73 and Microvax by replacing those systems' dual floppy drives with a half-height streaming-tape cartridge drive and half-height floppy drive, according to the vendor.

The MD4260 is a 40M-byte Winchester subsystem that includes a

NOW THERE'S A NEW 1200 BPS
2400 BPS AND FALLS BACK

For companies already populated by 300 and 1200 bps modems, the new generation of 2400 bps modems does not always offer welcome relief.

Unless those new modems are Rixon 1224s from CASE.

The new Rixon 1224 modem communicates equally well at 300, 1200 and 2400 bps.

To say the least.

The Rixon 1224 also boasts full autodial capabilities, complete with a speaker and front panel volume control. It even allows switching between DDD and private lines.

It features 11 indicators, 9 switches and synch selection, all conveniently located right on the front panel.

It expresses a CASE design so advanced and compact that you can fit

USA CASE RIXON Communications, Inc., Columbia, MD, Telephone: (301) 381-2300, TLX: 89-6847

Systems & Peripherals at NCC

60M-byte tape for backup and the firm's Mavo5 ¼-in. streaming tape cartridge controller with QIC-02 interface.

A combination 40M-byte fixed and 10M-byte removable Winchester drive, the MD4110 emulates four RL02 drives, thereby providing 41.6M bytes of storage, the vendor said.

The MD4910 integrates two 10M-byte Winchester drives.

OEM quantity prices are $2,450 for Microsafe, $4,626 for the MD4260, $4,100 for the MD4110 and $3,365 for the MD4910, according to the vendor.

Micro Technology, 1620 Miraloma Ave., Placentia, Calif. 92670.

APPLIED INFORMATION MEMORIES
Booths 2795, 2796

Demonstrations of the Dart-130, Dart-250 and Dart-170 5¼-in. disk drives will highlight Applied Information Memories' exhibit.

The Dart-130 is said to provide 129.27M bytes of storage capacity, 18-msec average positioning time and a 9.68M bit/sec. data transfer rate.

A 250.4M-byte device, the Dart-250 reportedly offers 18-msec average positioning time and a data transfer rate of 14.5M bit/sec.

The Dart-170 is a 166M-byte disk drive that provides 18-msec average positioning time. Data transfer occurs at 9.68M bit/sec.

Applied Information Memories, 776 Sycamore Drive, Milpitas, Calif. 95035.

OPTOTECH, INC.
Booth 2924

Optotech, Inc. will show its Model 5984 optical disk drive, a 5¼-in. write-once-read-mostly storage system for personal and small business computers and workstations.

Double-sided, 400M-byte removable cartridges offer more than 200M bytes of on-line storage, the vendor said.

Other features include pregrooved media, a pointer field that links previously stored information with new data, direct-read-during-write techniques for verifying data and read/write and tracking servo systems.

Error rate is said to be better than 1 in 10 to the 13th power; mean time between failure is 20,000 hours.

Optotech, Suite 109, 770 Wooten Road, Colorado Springs, Colo. 80915.

ANRITSUI AMERICA, INC.
Booth 2742

Tape drives and subsystems for backing up hard disks will be on display at Anritsu America, Inc.'s exhibit.

Product features include power-on diagnostics, automatic tape loading and threading, Ansi/IBM compatibility, rack mounting and cache memory. The DMT 730 series consists of ¼-in. cartridge tape drives in streaming or start/stop models that retrofit to identical ½-in. drives without modifying existing tape handlers, the vendor said.

The DMT 2500 series includes ½-in. streaming drives that reportedly offer up to 138M bytes of storage at 3.2K bit/in. and 64K bytes of cache memory.

For mainframes, the DMR 3000 series provides ½-in. start/stop drives that accommodate up to 10½-in.reels.

Anritsui America, 128 Bauer Drive, Oakland, N.J. 04736.

CHINON AMERICA, INC.
Booths 1944, 1946

Chinon America, Inc.'s Information Equipment division will showcase matrix line printers and multicolor thermal printers.

The 80-col. Model 101 24-pin dot matrix line printer reportedly offers letter-quality speeds of 25 line/min, with draft-quality speeds measuring 75 line/min. The diameter of each dot is .02mm.

The Model 108 is an 80-col. serial matrix thermal transfer device that can print bidirectionally in up to four colors, the firm said.

Draft mode speed prints 105 char./sec.; near-letter-quality mode prints at 45 char./sec.; and true letter-quality mode runs at 35 char./sec. This printer also uses 24 pins and a dot diameter of .02mm, according to the vendor.

Chinon will also show 5¼-in. and 3½-in. single- and double-sided floppies.

Chinon America, Suite 350, 11340 W. Olympic Blvd., Los Angeles, Calif. 90064.

DENNISON KYBE CORP.
Booth 5363

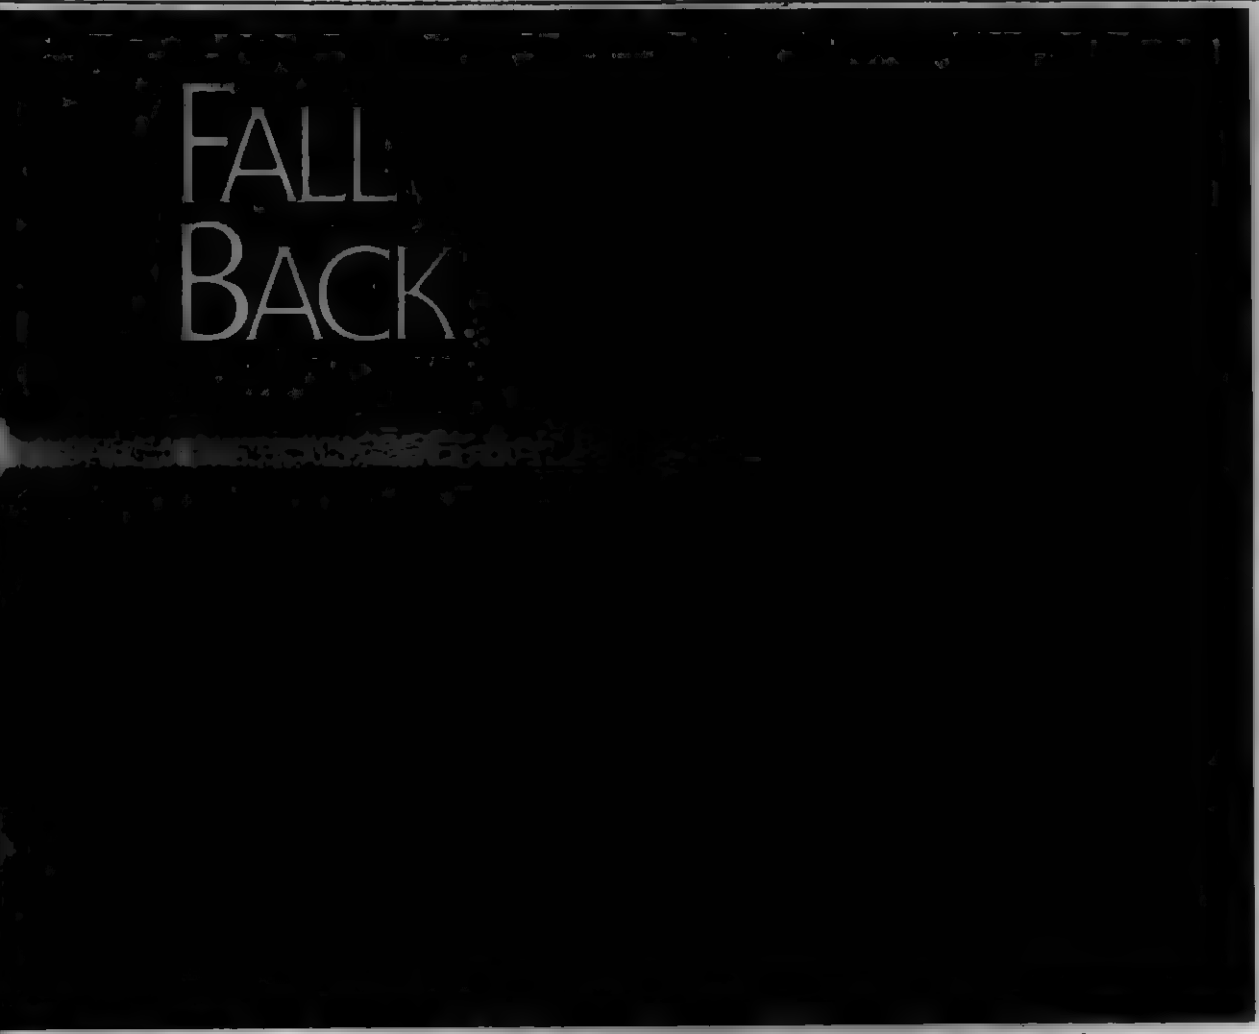
Dennison Kybe Corp. will showcase the Series 6000 system for maintaining and evaluating computer tapes used on 800-, 1,600- and 6.25K-bit/in. drives.

The tape maintenance system is said to provide dual RS-232C ports for communication with CRTs, printers and computers.

It can also reportedly rewind a 2,400-ft reel of tape in less than two minutes.

Prices range from $9,995 to $16,995, depending on configuration, the vendor said.

Dennison Kybe, P.O. Box 472, 132 Calvary St., Waltham, Mass. 02254.



MODEM THAT SPRINGS FORWARD TO
TO 300 BPS WITH EQUAL EASE

16 Rixon 1224s in a single rack.

And it lists for just $799.

Which is quite a bargain for a modem that opens future opportunities while it protects past investments.

It's what *future-proof data communications* is all about. And why CASE is already an international leader in the field.

We've got thousands of micro communications problems your solutions can fix.

Micro communications is one of the biggest challenges that MIS/DP professionals face today. And that's the problem we'll be addressing in the September 25th Computerworld Extra!

We'll be dealing with all the issues corporate buyers must face. And answering their questions. On micro-to-mainframe links. PC networks and networking software. Gateway software for SNA and Ethernet. Service and support.

We'll take a look at how PCs can function as dumb terminals and intelligent terminals. And help the reader make an intelligent choice.

We'll have a global overview of how micros are fitting into the big picture.

And right in the middle of all this critically-needed information, you can place your ad. Where it will be seen by our 128,000 paid Computerworld subscribers. Plus all our extra pass-along readership.

So if you've got a micro communications solution, our Extra! can supply the people with the problem. And the money to buy a solution. The September 25th Computerworld Extra! on Micro Communications. But hurry, the closing is August 16th.

Call Ed Marecki, Vice President/Sales, at (617) 879-0700 or your local sales representative to reserve your space today.

Power systems at NCC

SOLA ELECTRIC CO.
Booths 6077, 6177, 6178, 6179

Sola Electric Co., a unit of General Signal Corp., will display a 1200VA standby power source (SPS), a power line monitor with printer and a 3-kVA uninterruptible power supply (UPS).

The SPS switches from line to battery/inverter power within four to 10 msec when line voltage drops below -15% of nominal, the vendor said. When ac voltage returns to within 10% of nominal, retransfer reportedly occurs within two to four msec.

The power line monitor is said to enable continuous, unattended analysis of power line quality and provide user-adjustable disturbance thresholds plus printouts of date, time and value of disturbances.

The 3-kVA UPS includes on-line battery reserve to supply the load with uninterrupted power automatically.

The 120V, 60Hz SPS costs $1,245; the 220/240V, 50Hz model sells for $1,340. The power monitor is priced at $1,595. Prices for the 3-kVA UPS with one battery pack start at $7,500.

Sola Electric, 1717 Busse Road, Elk Grove Village, Ill. 60007.

INSTRUMENTATION AND CONTROL SYSTEMS, INC.
Booth 6444

Instrumentation and Control Systems, Inc. will present uninterruptible power supplies (UPS) for large systems and microcomputers.

The ICS Electro-Pac Model E UPS reportedly provides stable output, high overload capabilities and a range of alarms. If a total loss of incoming power occurs, the system transfers to the battery backup.

The Lifeline UPS for microcomputers is said to provide voltage regulation and line filtering at all times plus an inverter that supplies power only during power outages.

Prices for the ICS Electro-Pac Model E UPS range from $7,000 to $23,000. The Lifeline UPS runs from $1,040 to $2,300.

Instrumentation and Control Systems, 520 Interstate Road, Addison, Ill. 60101.

IMUNELEC, INC.
Booth 3045

Imunelec, Inc. will exhibit its Star Series 01 uninterruptible power supplies (UPS) that reportedly protect microcomputers against blackouts, brownouts, surges, noise and other power line disturbances.

The UPS units feature an audible alarm, automatic temperature- and battery-protection circuits and a sealed battery.

The 250VA UPS sells for $1,360; the 500VA unit costs $1,595; and the 1,000VA UPS is priced at $2,180.

Imunelec, 517 G Acorn St., Deer Park, N.Y. 11729.

SOLIDSTATE CONTROLS, INC.
Booth 2336

Solidstate Controls, Inc. will exhibit uninterruptible power supplies (UPS) for DP applications.

The Powerbase 1000 UPS series models are said to provide automatic power protection against blackouts, and brownouts, among other things.

It costs $2,500 for the 750VA model, $5,100 for the 1.5-kVA model and $6,200 for the 3-kVA model.

Solidstate Controls, P.O. Box 1216, Columbus, Ohio 43216.

ACRAN, INC.
Booths 4410, 4412

Acran, Inc. will display a relocatable uninterruptible computer power backup system.

Called a Critical Power Module (CPM), the system reportedly includes an insulated enclosure, an uninterruptible power supply (UPS), battery, switch gear and air-conditioning, heat, acid neutralization pits, eyewash, drench shower, dielectric flooring, halon fire suppression and internal and external lighting.

The cost of engineering a UPS installation by a consulting engineer runs is said to be approximately $25,000.

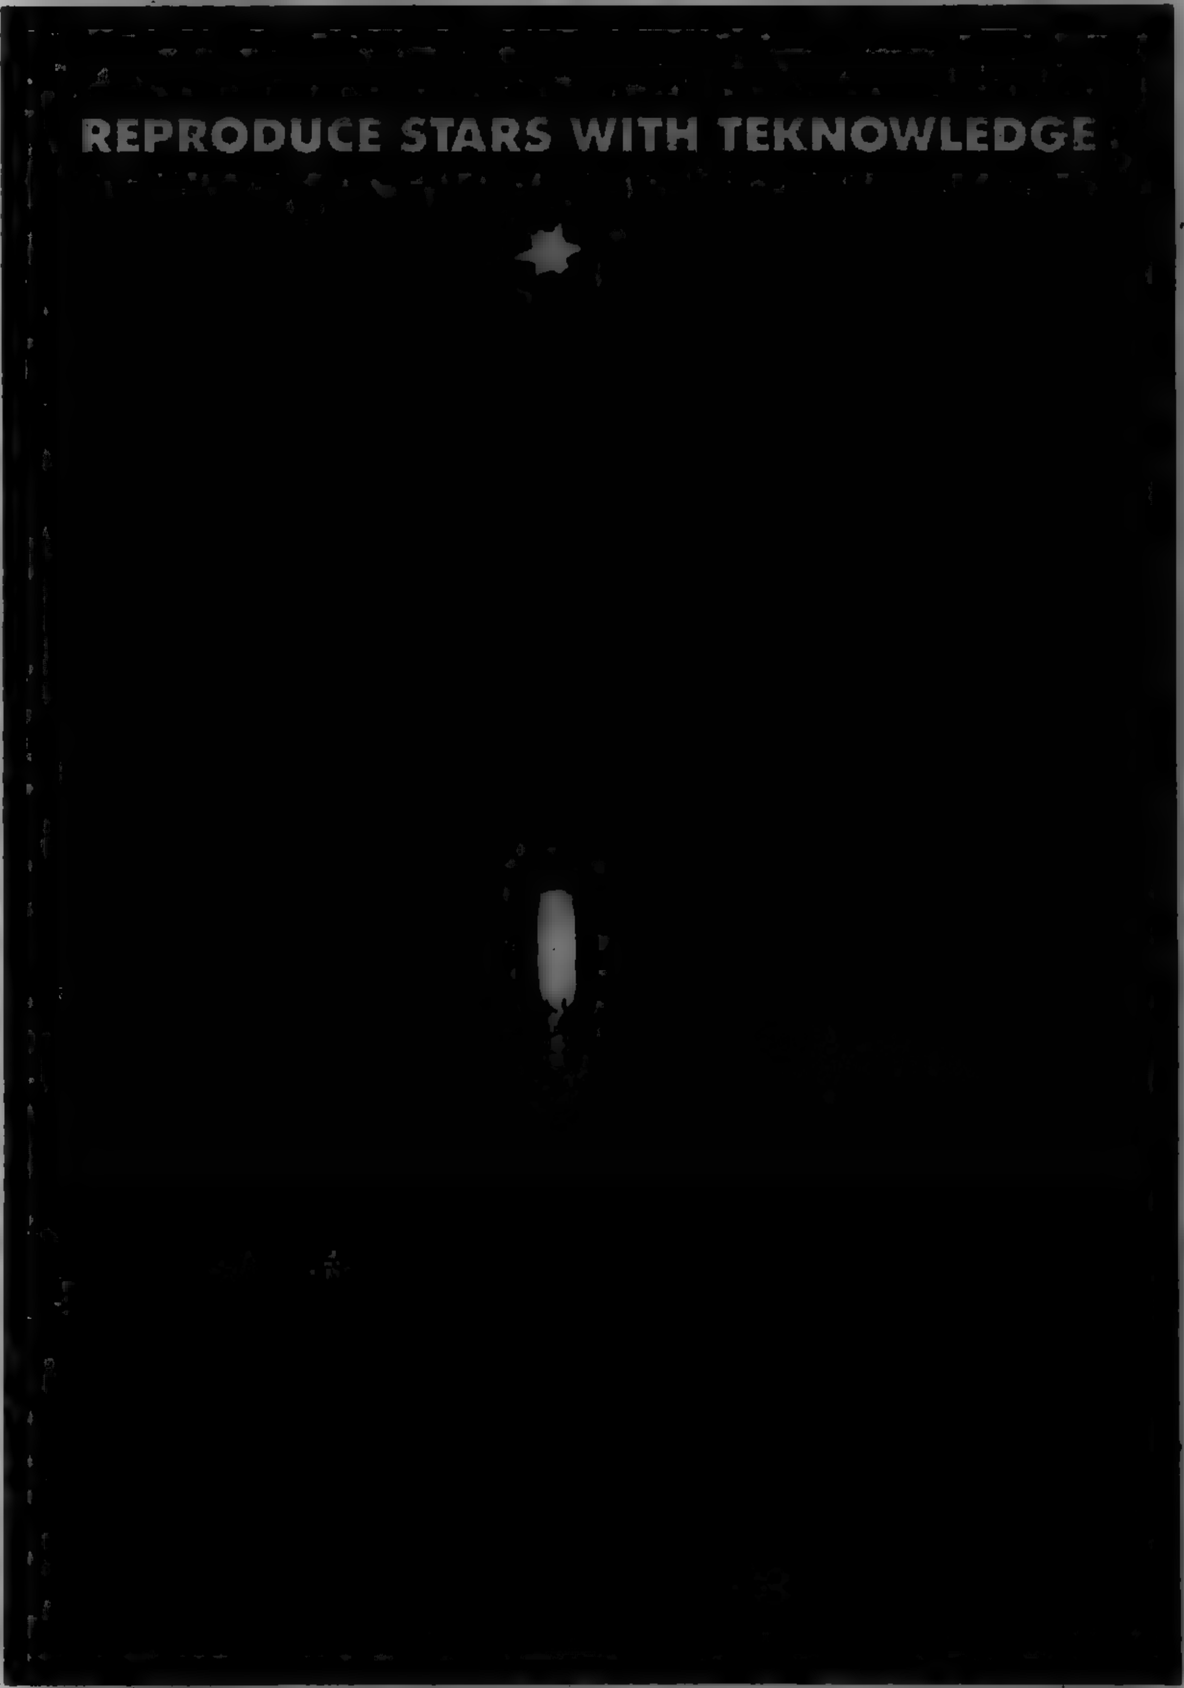
Acran, P.O. Box 18328, Austin, Texas 78760.

TRIAD POWER SYSTEMS
Booth 2514

Triad Power Systems will show its TRI-UPS 300+600 uninterruptible power supply (UPS) for the IBM Personal Computer, Personal Computer XT and compatible micro-based systems.

The TRI-UPS is said to provide uninterruptible power, conditioned power, power distribution, and requires no transfer time when commercial ac power fails. It costs $995.

Triad Power Systems, 10362 Miller Road, Dallas, Texas 75238.



NCC Preview

Other things to see at NCC

MICRO SECURITY SYSTEMS, INC.
Booth 2810

Micro Security Systems, Inc. will present a software security device that runs on IBM Personal Computer and compatible processors.

Called Securikey, the device has a key that is said to interface with the computer's microprocessor. This allows a vendor to place a serial number in his software that the computer compares to the key's serial number.

Securikey costs $100.

Micro Security Systems, 3706 W. 2100 South, Salt Lake City, Utah 84120.

ALPHA AUDIO ACOUSTICS
Booth 5079

Alpha Audio Acoustics will exhibit Soundtex, an acoustical fabric wall treatment said to filter noise in the computerized office.

Soundtex costs $25 a linear yard. A 54-in. by 35-yard piece sells for $729.

Alpha Audio Acoustics, 2049 W. Broad Street, Richmond, Va. 23220.

ADE, INC.
Booths 1942, 1943

ADE, Inc. will display its Caddy-Pack C-D Transporter, a static-free electronic component protection system said to provide EMI/RFI attenuation.

A two-part protective system, the Caddy-Pack C-D consists of a component-holding transporter and a mated shipping sleeve.

ADE, 1560 E. 96th St., Chicago, Ill. 60628.

DATAPRO RESEARCH CORP.
Booth 5068

Datapro Research Corp. will show an information service that is said to help businesses cut down on data loss from computer downtime.

Called "Datapro Reports on Information Security," the two-volume publication contains management reports, evaluations of security hardware and software plus reports on the latest standards, policies and regulations adopted by the U.S. Department of Defense.

Subscriptions cost $455. Presubscription is $395.

Datapro Research, 1221 Avenue of the Americas, New York, N.Y. 10020.

ROYAL SEATING CORP.
Booth 2145

Royal Seating Corp. will display computer accessories including a mobile data rack, printer-paper basket, paper caddy and furniture for the IBM Personal Computer and PCjr.

The Model 0840 adjustable mobile data rack is said to accommodate 9½- by 11-in. or standard 14⅞-in.-wide hanging data binders.

The Model 0890 H&M Gravity Master Universal Basket reportedly allows smooth flow and refold of printed forms for all types of printers and can accommodate up to 25 lb of large standard forms.

The Model 0865 H&M Forms Flow Paper Caddy provides a cantilevered slant of the retrieval basket that forces printed forms to force fold automatically on impact.

The Model 5800 series computer furniture for IBM Personal Computers includes data drawers, data boards and facility compartments.

The 0840 data rack costs $71; the 0890 basket sells for $32.60; the 0865 paper caddy is priced at $68.80; and starting prices for 5800 series furniture start at $346.40.

Royal Seating, P.O. Box 753, Cameron, Texas 76520.

THE RIGHT NETWORK. At Network Systems Corporation, our products are designed for a total networking strategy. With the right network, you can interconnect computer hardware from different manufacturers: super computers, mini and personal computers, workstations and terminals.

You've probably been told that a local area network lets you hook-up all types of computers and terminals, and everybody can then talk to each other. In the real world, it just isn't that simple. We offer what it really takes; hardware, software and system integration.

HYPERbus®, our 10 megabit network, will serve your user areas, providing the interconnection of minicomputers, PCs, workstations and terminals. Next, the user area should be linked to your larger mainframes to give users direct access to your integrated data bases. This is where HYPERchannel, our 50 megabit network, comes in. HYPERchannel gives you the power to move vast amounts of data between mainframes. The result is a truly responsive access path to the user area, which is the key to increased employee productivity. Finally, the different computers and terminals must be able to talk to each other. NETEX® is our software product that lets them communicate in a common language.

With HYPERchannel, HYPERbus and NETEX applied to your total networking strategy, users can access and manipulate data like never before. Your data processing systems will work harder, faster and in unison.

THE RIGHT COMPANY WITH THE RIGHT STRATEGY. Networking is our only business and we want to be your networking company. We have the products, the experience and a field service organization that's there when you need them.

There are over 400 customers using our systems. If you are planning a network, call or write Network Systems Corporation. You'll see how our strategy can help you with your strategy.

COMMUNICATIONS

AT&T: Waking up to market but still not awake

DATA STREAM
Paul Korzeniowski
CW Senior Writer

AT&T executives have been reading the newspaper. For almost a year, stories concerning the communications company's haphazard transition from regulated monopoly to nonregulated competitor in the computer field have appeared in numerous publications.

These publicized problems have changed the AT&T brass' thinking, as was evident when the company released products at a press conference held last month. When AT&T first entered the computer field, it boldly talked about taking on IBM. Talk has now shifted to coexistence with IBM and even acknowledgment of the stranglehold that IBM has on many market segments.

IBM's strong grip has left few markets open for AT&T. The communications giant has been forced to recognize that only the regional operating companies were interested in its hardware. It has acknowledged that sales to other market segments have to be made for it to become a major player in the computer market. By year's end, AT&T expects that one-third of its sales will come from other markets. New sales will hopefully be secured from two areas: niche markets and departmental processors.

In its latest product announcement, AT&T emphasized vertical market software and vertical marketing. Marketing does not sell systems. Software does, but there is still very little vertical market software that runs on the 3B line. Also, AT&T had already introduced some packages that it included in its recent announcement.

Another problem stems from the fact that the departmental computing market is quickly becoming saturated. Recent woes at Wang Laboratories, Inc. and Data General Corp. mirror problems many firms are having in this arena.

The communications links to the IBM world AT&T announced will help it compete in this market. However, the communications company is still a few steps behind its chief competitors. Companies such as Digital Equipment Corp., DG and Wang have more extensive gateways into IBM systems than AT&T does. AT&T said it intended to supply links to IBM's Document Content Architecture, Document Interchange Architecture and LU6.2 in the next 12 months. Whether it can deliver on that intention remains to be seen.

Since these firms are a few steps ahead of AT&T, gossip has centered on an AT&T buy-out of one of these companies, specifically Wang. AT&T has denied interest in a deal. In many respects, the deal might not make sense.

The path to good network design

To implement a trouble-free network smoothly, it helps to ask and answer key questions beforehand. Presented here is a set of design factors whose consideration will facilitate network implementation.

These principles can be used whether one is adding a network component such as a centralized diagnostic system, expanding a network into a new geographic area or replacing a network with a new, more sophisticated network.

The word component is used to encompass anything from a modem or multiplexer to a major packet-switched network.

- *Reliability*. What is the reliability of the new component measured in terms of mean time between failures and in mean time to repair? How will this additional component affect networkwide reliability?
- *Availability*. What availability, measured in terms of uptime, can be expected of the new component and its systemwide effect?
- *Restorability*. How easy will it be to restore the network before and after the new addition?
- *Fault tolerancy*. Is the component fault tolerant? Does it compromise existing fault tolerancy?
- *Security*. Is the new component secure under all pertinent measures? How does it mesh with existing security measures?
- *Grade of service*. Is the grade of service of the existing network — in terms of things such as delay, blocking noise and so on — compromised by the new addition? What performance targets are being sought?
- *Operability*. How does the new component fit in with existing operation issues? Must new procedures be instituted?
- *Business risk while in transition*. Does the

HP offers SNA analysis software

PALO ALTO, Calif. — Hewlett-Packard Co. has announced IBM Systems Network Architecture (SNA) analysis software for the portable HP 4951A and the high-performance HP 4953 protocol analyzers. The packages are the HP 18186A and the HP 18153A.

The analysis packages are said to eliminate the need to hand-decode the bit-packed fields presented by analyzers equipped with lower level Synchronous Data Link Control (SDLC) formats. Using the SNA analysis software, HP protocol analyzers extract the upper level information field by field from SDLC I frames and display it in SNA terms, the company reported.

The HP 18186A/4951 is a portable SNA testing tool that is said to provide information needed to locate problems, particularly between cluster controllers and the SNA network where FID Type 2 communications are used. The software displays the transmission header, the request/response unit and the function-management header in high-level mnemonics.
